T O T H E

FOURTH VOLUME OF THE SECOND EDITION.

THE general nature and design of the BIOGRAPHIA BRITANNICA have been sufficiently explained in the Prefaces to the preceding volumes. What, therefore, I consider as at this time principally necessary, is to mention some circumstances more immediately relative to the volume which is now presented to the public.

Perhaps the great length of Captain Cook's article may seem to require some observation. It never was my intention to give a short account of that illustrious Navigator, whose discoveries and adventures furnish such a copious fund of instruction and entertainment. If the narrative had been written solely for the Biographia, I do not think that it would have been much shorter than it now is. Having, however, been requested to publish a separate life of the Captain, I determined to insert it in the present work, without mutilation. In fact, long as it is, it is only an abridgement of what is contained in a great number of large volumes. But to have given an abridgment of an abridgment would have rendered the article jejune and imperfect, and would have deprived my readers of what they had a right to expect:—such an exhibition of the real character and the important transactions of Captain Cook, as is suitable to the nature and design of our undertaking.

With regard to the length of this and other articles, it deserves particularly to be considered, that the Biographia is not intended for the present age alone, but also for posterity. Narratives, which, on account of their recording recent facts that are generally known, may be thought by some critics to be too much extended, will become of more and more consequence in process of time. The numerous volumes of Captain Cook's Voyages, for instance, with their minute nautical details, will be less studied, by the generality of readers at least, in a future course of years, than at present, when the transactions they relate are fresh in the memory, and have excited an universal attention. But many persons of the next and succeeding generations, will be satisfied with shorter accounts, and be pleased with such a history as is here offered to the public; and which, though no more than an abridgment, is, nevertheless, purposely rendered so large as to satisfy their curiosity, and to enable them fully to conceive how extraordinary were Captain Cook's Discoveries, and how eminent his abilities and character.

The observations now made will apply to another article, of very considerable extent, which is that of Chatterton. The question whether this wonderful young man was the author of the poems that have been ascribed to Rowley, is one of the most curious literary questions that has been agitated in any age or country. But the discussion of it is diffused through a number of publications and pamphlets, that in time will become scarce. It will, therefore, be no small gratification to posterity to find such an ample history of the controversy in the Biographia Britannica.

Upon the same principle, it is part of our plan to give copious accounts of the writings of learned men, if they have been in any degree eminent. This is the only way of doing them that full justice, to which, by their merits, they are entitled. From the accumulation of new books, and the revolutions of literary fashion, even works of no small reputation come to be neglected. I could produce numerous proofs of the truth of this assertion, were it my present business

to enlarge upon the subject. Many valuable productions which, in my youth, it would have been a disgrace to a man of education not to have read, are now, in a considerable degree, laid aside. They have been displaced by others, that will share the same fate. The works that are ever fresh, and ever young, are, comparatively speaking, small in their number, and limited in their objects. It is in repositories like ours, that our descendants will see the worth of their predecessors, and the figure they made in their day.

I should have added with respect to Chatterton, that Mr. Croft, who originally proposed to write his life, was too much engaged in his own grand undertaking, to be able to do it in the time I wished; and the matter could not be delayed any longer. I applied, therefore, to my ingenious and learned friend, the Rev. Dr. George Gregory, to take the task upon him; and I may venture to say, that he has discharged it in a manner that will give universal satisfaction. The fairness and candour with which he has stated the evidence on both sides, is entitled to particular praise. Mr. Croft will discern, with pleasure, the aid that has been derived from his "Love and Madness" in drawing up the article.

As I proceed in the work, I have still greater and greater reason to mention with gratitude the assistance which I continue to receive. The names of several respectable Gentlemen will occur in their proper places. To Michael Collinson, Esq; the Rev. Dr. Conybeare, Sir Joseph Banks, Sir Hugh Palliser, the Rev. Mr. Huntingford, the Earl of Buchan, and a Gentleman who wishes to conceal his favours, my thanks are particularly due.

For communications of a more general nature, I am greatly indebted to Lord Arden. His Lordship has most obligingly permitted me to have the inspection of the Manuscript Biographical Collections of his noble grandfather, the first Earl of Egmont. The use I have already been able to make of these valuable materials, will be seen in the Addenda and in other places. By the continued favour of Lord Arden, great advantage may be derived to the Biographia, with regard to future articles.

I must here express, with the sincerest concern, the loss which this work has sustained, by the decease of two excellent and learned friends, the Rev. Mr. Duncombe of Canterbury, and John Baynes, Esq; of Lincoln's Inn. Mr. Duncombe watched over the Biographia with a kind of parental tenderness. The Corrigenda and Addenda will display the attention that he paid to the last volume.

There are three lives in the present volume, for which I am wholly indebted to the gratuitous communications of my friends. Mr. Richardson, Professor of Humanity in the University of Glasgow, well known by several elegant publications, and especially by his admirable Essays on some of the Characters of Shakespeare, has favoured me with the article of Craig, a late excellent Divine in Scotland. Mr. Hayley, whom I must ever mention in terms of the highest affection and respect, has given me the Life of Crashaw the Poet. Through the good offices of my worthy and ingenious friend Mr. Christie, I have obtained from Mr. Chalmers, of Throgmorton Street, an account of Alexander Cruden. All these articles will speak for themselves, and show that they constitute valuable ornaments of the work. With respect to the Life of Cruden it must be mentioned, that having happened to put it into a wrong drawer, it slipped my memory when it should have been introduced in p. 544. I have, therefore, annexed it to Chatterton, in the Appendix to Letter C.

The Preface to the present volume cannot be dismissed without saying something concerning the long delay of its appearance; and the rather, as I formerly expressed so strong a belief of a more speedy publication. What I then advanced, was written with the greatest sincerity; but unexpected hindrances have occurred. In the first place, I beg leave to recite a remark which I have made in my Life of Dr. Lardner. It is as follows: "Those who are not themselves engaged in important and extensive literary undertakings, can have but an imperfect conception of the difficulties to be surmounted, the disappointments to be incurred, the books to be procured and waited for, the dates to be settled, the facts to be ascertained, and the various other causes which often

“ occasion delays, that must be far more unpleasant to the writer than they
“ can possibly be to any reader whatever.”

In the second place, I must request that the immense quantity of new matter now published may be taken into consideration. This fourth volume includes only 218 pages of the old work. The fresh materials occupy considerably more than two thirds of the book; and the vast disproportion of what has been furnished by myself will strike every reader. The additions to the former articles, which, in many cases, will be found so great, are, with the exception of a single instance, entirely my own. This, I must be permitted to say, is a very important and difficult part of the undertaking; and whoever should attempt to conduct the *Biographia* without particularly attending to so weighty an object, would deprive it of the perfection and usefulness to which it ought to be carried. The mere insertion of new lives would not atone for so capital a defect.

Thirdly, I should still have been able to have finished the volume much sooner, if it had not been for a particular circumstance. Partly with a view to accelerate the work, I gave up an employment I had long held, as one of the Tutors in Coward's Academy, then subsisting at Hoxton. But, since that time, another institution, of a more extensive and important nature, having been formed amongst the body of people with whom I am immediately connected, my assistance in it was thought to be desirable. Accordingly, it hath demanded my time and my labour, and will continue to demand my principal attention. Whatever part, therefore, I may hereafter take in the *Biographia*, I will no longer make any promises concerning it, or be amenable to the public, with regard to the appearance of the succeeding volumes. But no delay of the work is hence to be apprehended: for the proprietors have determined to call in such effectual aid as shall entirely preclude disappointment and complaint.

A. K.

The first of these is the fact that the present work is a new edition of a book which has been published in many forms and under many titles. It is a book which has been read and re-read by many generations of students and scholars, and which has been the subject of many discussions and controversies. The present edition is a new and revised edition of the book, and it is hoped that it will be found to be a more complete and accurate edition than the previous ones. The book is divided into two parts, the first of which contains the history of the book, and the second of which contains the text of the book. The history of the book is given in the first part, and it is hoped that it will be found to be a more complete and accurate history than the previous ones. The text of the book is given in the second part, and it is hoped that it will be found to be a more complete and accurate text than the previous ones.

FARTHER
CORRIGENDA AND ADDENDA

TO THE

First Volume of the Biographia Britannica.

ADDISON (JOSEPH), p. 63.

IN Sir John Hawkins's Life of Dr. Samuel Johnson, there is the following passage concerning Addison. "I find an opinion gaining ground not much to the advantage of Mr. Addison's style, the characteristics *whereof* are feebleness and inanity. I speak of that alone, for his sentiments are excellent and his humour exquisite. In some instances he adopts vulgar phrase, as when he calls an indiscreet action *a piece* of folly, and too often uses the expletive verb *along*, thus, Come *along* with me. Yet I am not willing to deprive him of the honour implied in Johnson's testimony, 'that his prose is the model of the middle style.' But if he be but a mediocrity, he is surely not a subject of imitation; it being a rule, that of examples the best are always to be selected (a)." Sir John Hawkins, whenever he spoke of Addison, seemed doomed to be unfortunate. That he should be so ignorant of the distinctions of language laid down by all the rhetoricians, as to suppose that Dr. Johnson intended to characterize Mr. Addison as a mediocrity in composition, would be incredible, were it not ascertained by the fact.

(a) Life of Dr. Samuel Johnson, p. 270, 271.

Mr. Heron, in his "Letters of Literature," has made some remarks upon Mr. Addison's Critical Errors. But, at the same time, he acknowledges that Addison is one of his most favourite writers, and that nothing but his sacred love of critical equity could have induced him to execute the ungrateful task he had undertaken. "The best writers," adds Mr. Heron, "are perhaps the most liable to faults of a certain kind, in like manner as fertile ground is, where no grain is sown, fertile of weeds. Strong weeds speak a rich soil, nearly as much as strong corn; yet they ought to be rooted up that they may not injure the harvest (b)." In a preceding letter, Mr. Heron declares, that Addison is a prose writer of the first rank (c). The opinion of this author, who is not usually lavish of his praises, forms a contrast, that does no honour to the judgment of Sir John Hawkins.

(b) Letters of Literature, p. 420—428.

(c) Ibid. p. 419.

Warburton, in a letter to Mr. Concanen, inserted in the Supplement to Shakespeare, has pointed out some places in which Mr. Addison has taken the sentiments of his Cato from the works of Cicero (d).

(d) Supplement to Shakespeare, vol. i. p. 223, 224.

Lord Egmont, in his manuscript collections, has related an instance of Mr. Addison's jealousy with regard to his reputation. Having heard that a Gentleman had for his diversion turned eight lines of Cato into burlesque, he could not rest, till, by the interposition of a friend, he prevailed upon the author to burn them. As to Mr. Addison's principles, he told Lord Egmont, that an honest Englishman is a Tory in church matters, and a Whig in politics.

ADRIAN IV. p. 67.

In Mr. Berington's History of the Lives of Abeillard and Heloisa, there is an entertaining account of this Pope. The conclusion is as follows: "Thus, in the midst of an agitated ocean, of which he himself was the principal mover, comfortless and dissatisfied, lived Adrian the Fourth. He saw the end of four years and nine months, when he died in 1159, esteemed by the Roman Court, whose patrimony he had increased by some considerable acquisitions, and praised for his disinterestedness, which he carried to a pitch of affected insensibility; for he permitted his mother, who saw him raised to the Popedom, and who survived her son, barely to subsist on the alms she collected in the church of Canterbury (a)."

(a) History, &c. p. 353—360.

CORRIGENDA AND ADDENDA

AKENSIDE (MARK), p. 107.

Sir John Hawkins, in his *Life of Johnson*, has drawn Dr. Akenfide's character somewhat at large; and it is, with a few exceptions, highly to the Doctor's advantage. "Akenfide," says Sir John, "was a man of religion and strict virtue, a philosopher, a scholar, and a fine poet. His conversation was of the most delightful kind, learned, instructive, and, without any affectation of wit, chearful and entertaining (a)."

(a) *Life of Johnson*, p. 242—243.

ANDREWS (LAUNCELOT), p. 188.

In the British Museum, is a manuscript discourse, by Bishop Andrews, against a second marriage, after sentence of divorce with a former match, the parties then living. It was written in 1601 (a).

(a) Ayscough's Catalogue, p. 291.

ANSON (GEORGE), p. 221.

In this article, p. 216, we have spoken of the *History of Anson's Voyage* as having been written by Mr. Robins, though it was published under the name of Mr. Walter, Chaplain to the Centurion. A general and uncontradicted report had for many years prevailed, that the work was drawn up by Mr. Robins. Nor was this report one of those vague rumours the original and foundation of which cannot be ascertained; for it was grounded on positive testimony. Dr. James Wilson had publicly asserted the fact, in the short account of Mr. Robins, which he prefixed to his edition of the mathematical tracts of that ingenious writer. We have not the book at hand; but the following extract from the *Monthly Review* for November, 1761, will be sufficient for our purpose. "But that literary performance of Mr. Robins, which obtained the greatest share of public notice, though the real writer did not appear, was the complement of Lord Anson's Voyage to the South Seas, published in the name of Mr. Walter, Chaplain to the Centurion. Mr. Walter, it is true, had compiled, as we are now informed, a detail of this important voyage; but, upon inspection, it being found to be little more than extracts from the Journals, Mr. Robins was employed to compleat an entire new work; which is the voyage in the present form; and which is deservedly and universally considered as a Master-piece (a)."

(a) *Monthly Review*, vol. xxv. p. 335, 336.

Thus has the matter hitherto stood. But so late as the present year (1789), and a few days previously to the writing of this note, a letter upon the subject has been put into our hands by Mr. John Walter, Bookseller at Charing Cross. It is addressed to that Gentleman by Mrs. Walter, the widow of the publisher of the voyage, and is as follows:

"SIR,

"I am informed that the *Biographia Britannica* insinuates that Mr. Robins, and not Mr. Walter, was the writer of Lord Anson's Voyage round the world. I shall therefore take it as a favour, if you will put me in the way of correcting so great a mistake. During the time of Mr. Walter's writing that voyage, he visited me almost daily previous to our marriage, and I have frequently heard him say how closely he had been engaged in writing for some hours to prepare for his constant attendance upon Lord Anson at six every morning for his approbation; as his Lordship overlooked every sheet that was written. At some of those meetings Mr. Robins assisted, as he was consulted in the disposition of the drawings; and I also know that Mr. Robins left England (for he was sent to Bergen-op-zoom) some months before the publication of that book; and I have frequently seen Mr. Walter correct the proof sheets for the printer.

"You may perhaps wonder that Mr. Walter never took any steps to contradict the assertion; but that wonder will cease, when I tell you that for four years before his death (which was in 1785) he laboured under very severe and painful illnesses, and therefore never heard any thing but newspaper squibs, which he looked upon with contempt. But as it now appears to be published in a work that will be handed down to posterity—that Mr. Walter was not the real author; I think it a duty incumbent upon me to endeavour to clear his memory from any imputation of duplicity. Nor can it be supposed that any man would write a book for another to share the greatest part of the advantages. These and many other reasons make me apply to you, as I should suppose that, as a relation to the deceased, you would be anxious for his fame, as well as,

"SIR,

"Your most humble servant,

"June 16th, 1789.

"JANE WALTER."

TO THE FIRST VOLUME.

We shall make no other comment on this letter than to observe, that it is highly worthy of attention. If it shall give such full satisfaction to our readers, as to convince them that Mr. Walter was the writer of the voyage in its present form, we shall rejoice in having had an opportunity of doing justice to an injured character.

ATTERBURY (FRANCIS), p. 348.

In 1787, Mr. Nichols published a fourth volume, in octavo, of "The epistolary Correspondence, Visitation Charges, Speeches, and Miscellanies, of the Right Reverend Francis Atterbury, D. D. Lord Bishop of Rochester. With Historical Notes." From this publication several farther particulars may be learned concerning that eminent Prelate.

Lord Egmont, upon the authority of Bishop Sherlock, relates, that Atterbury, in early life, was of Whig principles, and that the first person who diverted him from his bias to those principles was Bishop Burnet, who, in King William's reign, prevented his being made Chaplain to the Earl of Portland. Some time after the accession of King George the First, when a breach fell out between the Earl of Sunderland and Lord Townshend, Dr. Atterbury entered into connections with the former Nobleman, and promised to support all his measures, on condition of his succeeding to the Bishopric of Winchester, on the death of Sir Jonathan Trelawny. When that event happened, Atterbury was with Lord Sunderland at five o'clock in the morning, to claim his promise. The Earl, it seems, either could not or would not keep his word; for Trimnell obtained Winchester; and the Bishop of Rochester so deeply resented the disappointment, that he threw himself entirely into the worst of the Tory schemes. This Dr. Sherlock said he knew to be true; to which he added, that Atterbury, from his youth, set out with a resolution to be a great man at any rate.

Some extraordinary effects are related, by Lord Egmont, of this Prelate's restless temper. When he was in the Pretender's service, he procured to himself the charge of paying the pensions allowed to the Chevalier's half-starved adherents at St. Germain's. This was a very poor and unthankful office; and yet, because he could not be easy without some employment or other, he did not rest till he got General Dillon displaced, who had it before; representing, by sundry letters to his Master, that Dillon defrauded these persons. Nay, there was not a nurse wanting to any of the Pretender's children, then at Rome, but the Bishop would take upon him, from France, to recommend a woman, describing her temper, complexion, hair, and other circumstances. Lord Egmont justly observes, that these are things which were scarcely to be believed, excepting by those who were in the same place with him when the transactions passed.

BARCLAY (JOHN), p. 589.

A sketch of the Life of John Barclay has been composed by Sir David Dalrymple, Bart. Lord Hailes. Not having had the good fortune to meet with it, we cannot, at present, make that use of the respectable and learned Author's production which we could have wished to have done.

K.

FARTHER

CORRIGENDA AND ADDENDA

TO THE SECOND

Volume of the Biographia Britannica.

BAXTER (ANDREW), p. 27.

A Valuable correspondent, with a particular reference to note [D], has sent us the following remarks upon this article.

“ No one likes scepticism less than I do, and yet the life of *Andrew Baxter*, from the information of his son, makes one a sceptic. I knew his manner of life so well, that I was confounded at seeing that he spake German and Dutch with ease, that he was elegant in his dress, and that the Ladies at Utrecht were much pleased with his conversation. He understood Low Dutch, which he told me was a good language, but hardly ever spake a word of it; and, I dare say, never uttered a sentence of German in his life. His dress was plain and simple, not that of a priggish Frenchman, but of a mathematician who was not a floven. I am pretty well persuaded, that while in the Low-Countries, he never had any conversation with women, of lower or higher degree, unless it were to ask for the bill, at an ordinary, or desire the servant-maid to bring up turf for his chimney. As to his *presiding* at an ordinary, *that* also is a mere illusion—his son did not know Mr. Baxter so well as I did, while he resided at Utrecht. I remember very well that his son only saw him for a few days, whereas I saw him daily for more than two years. I do not think that he was afflicted with the gout at all: he generally observed a regimen on account of the gravel, for he suffered much by what has been termed *flagellum eruditorum*. In short he was a plain, decent, good-humoured man, who past all his time, but what was bestowed at his meals, in meditation and study; and his manner of life was, on the whole, the reverse of what his son, from imperfect and transient observation, supposed it to have been.”

BEAUMONT (LEWIS), p. 86.

Mr. Hutchinson, in his History and Antiquities of the County Palatine of Durham, has given a copious account of this Prelate (a). The Bishop's interest was powerful; but, throughout the whole of his life, he appears to have been in himself a very insignificant character, both in Church and State (b).

(a) Vol. i. p. 266

(b) Ibid. p. 275.

BEAUMONT AND FLETCHER, p. 100.

In the Supplement to the Edition of Shakespeare's Plays published in 1778, it is ingeniously and decisively shewn by Mr. Steevens, that Shakespeare had no hand in writing the play of the “Two noble Kinsmen.” It has not been proved, by evidence of any kind, that he had the slightest connection with Beaumont and Fletcher (a).

(a) Vol. ii. p. 169, &c.

BEK (ANTHONY), p. 148.

A large account of this Prelate may be seen in the first volume of Hutchinson's History and Antiquities of Durham, p. 228—258.

CORRIGENDA AND ADDENDA

BENNET (HENRY), EARL OF ARLINGTON, p. 193.

In the Supplement to the third volume of "State Papers collected by Edward, Earl of Clarendon," is a more copious account of Sir Henry Bennet's character than that which is given in the noble Historian's Life and Continuation (a). It is too long to be inserted in this place. (a) Supplement, p. lxxx—lxxxiv.

BENTLEY (RICHARD), p. 247.

"Let me now gather," says Mr. Boswell, in his Journal of a Tour to the Hebrides, (p. 201) "some gold dust,—some more fragments of Dr. Johnson's conversation.—He said, he thought very highly of Bentley; that no man now went so far in the kinds of learning that he cultivated; that the many attacks on him were owing to envy, and to a desire of being known, by being in competition with such a man; that it was safe to attack him, because he never answered his opponents, but let them die away. It was attacking a man who would not beat them, because his beating them would make them live the longer. And he was right not to answer; for, in his hazardous method of writing, he could not but be often enough wrong; so it was better to leave things to their general appearance, than own himself to have erred in particulars."

BERKLEY (GEORGE), p. 262.

A few strictures on Bishop Berkley's system of ideas occur in the first volume of Lord Monboddo's "Origin and Progress of Language (a);" and a very elaborate examination of that system may be seen in the ingenious and worthy Dr. Reid's "Essays on the Intellectual Powers of Man (b)." (a) P. 119-122. 134.

BIRCH (THOMAS), p. 323.

Sir John Hawkins, in his life of Johnson, has given a short account of Dr. Birch, favourable as to character, but severe with respect to his style (a). The Doctor's language, it is true, was not studiously elegant, nor indeed very animated; but, in general, it was natural, easy, and unaffected. It is pleasant enough, and a curious circumstance in the history of the human mind, that Sir John Hawkins should have presumed to criticize the style of our writers. (a) P. 206—210.

BORLASE (WILLIAM), p. 426.

In the Addenda prefixed to our third volume, we have said, upon the authority of the Gentleman's Magazine, that Dr. Borlase was Vice-Warden of the Stannaries. But the Rev. Mr. Penneck hath informed us that this is a mistake. It was the Rev. Walter Borlase, Doctor of Laws, the elder brother, who was Vice-Warden of the Stannaries. The Rev. William Borlase, the subject of our article, never held that office: neither was he Doctor of Laws, as is asserted, p. 424, but Doctor of Divinity.

BOYD (MARK ALEXANDER), p. 459.

Lord Hailes has written a Life of Mark Alexander Boyd, in which he appears with less splendour than in the accounts that have been given by Sir Robert Sibbald and other writers. In this respect his Lordship displays greater accuracy and greater judgment. With regard to Boyd's "Epistolæ Heroidum," Lord Hailes thinks that they are puerile, flimsy, and incorrect; but of the "Hymni" he entertains a better opinion. These he owns to be a work of merit, and that the beauties of the performance do more than atone for its defects. In Boyd's Copy-Book of Letters, preserved in the Advocate's Library at Edinburgh, there is one very remarkable, concerning theological subjects, addressed to a young friend. His Lordship gives an extract from it, and declares, that if there were nothing of the works of Boyd extant but this Letter, he might still be pronounced to have been a man of genius. "His Life," says Lord Hailes, "affords an important lesson, and which cannot be too frequently inculcated on young minds, that perseverance in study is necessary for all who aim at becoming useful."

BOYLE

TO THE SECOND VOLUME.

BOYLE (JOHN), EARL OF CORK AND ORRERY, p. 527.

Of this Nobleman Dr. Johnson said, that he was a feeble-minded man. Upon the publication of Dr. Delany's *Remarks* on his Book concerning Swift, he was so much alarmed that he was afraid to read them. Dr. Johnson comforted him, by telling him that they were both in the right; that Delany had seen most of the good side of Swift,—Lord Orrery most of the bad.—If his Lordship had been rich, Dr. Johnson declared that he would have been a very liberal patron. “His conversation was like his writings, neat and elegant, but without strength. He grasped at more than his abilities could reach; tried to pass for a better talker, a better writer, and a better thinker, than he was.” (a). It will be remembered, that Dr. Johnson was perhaps too ready to depreciate the abilities of those persons whose minds were not so energetic as his own.

(a) Boswell's
Journal of a Tour
to the Hebrides,
p. 291, 292.

BOYS (JOHN), p. 531.

By the favour of the Rev. Dr. Pollok, of Grittleton, near Chippenham, Wilts, we are enabled more accurately to specify the work of Mr. Boys mentioned in note [G]. The Doctor has a copy of this very scarce book, which is in 12mo. and the title of which is, “*Veteris Interpretis cum Beza aliisq; recentioribus Collatio in Quatuor Evangeliiis et Apostolorum Actis, in qua annon sæpius (*) ———— justa satis Causa hi ab illo discefferint Disquiritur. Autore Johanne Boisio, Ecclesiæ Eliensis Canonico. Opus Auspiciis Reverendi Præfulis, Lanceloti, Wintoniensis Episcopi, τὸ μακαρίτη, cæptum et perfectum.*” Londini Typis T. Roycroft, Impensis R. Beaumont, 1655.

(*) The word
happens to be
torn in Dr. Pol-
lok's Paper.

Dr. Pollok has farther informed us, that J. C. Wolfius, in his *Curis Philolog. T. i. Prefatio*, p. 11. says of this book, “*Liber infrequentissimus et rarissime occurrens.*” See, likewise, Vogt. Cat. Lib. rar.

BRIGGS (HENRY), p. 589.

Dr. Charles Hutton, in his Introduction to his “*Mathematical Tables*,” has made a curious and important discovery, highly to Mr. Briggs's honour. It is, that he was the inventor of the famous *binomial Theorem*, hitherto universally ascribed to Sir Isaac Newton, and also of the *differential Calculus*, which, in England at least, has always been given to the same author; but which John Bernoulli, after disputing the claim of Sir Isaac, gave to M. Pascal, who was not born till long after it had been taught by Mr. Briggs. That Sir Isaac Newton looked on these two Discoveries as his own, cannot be justly disputed; and Dr. Hutton seems fully satisfied that he was utterly ignorant of what had been done, on these heads, by Briggs. The Doctor assigns, as a reason for supposing so, that Newton owed almost every thing to genius, and very little to reading; which is undoubtedly the case (a).

(a) Monthly
Review, vol.
lxiv. p. 314.

BROUGHTON (HUGH), p. 613.

From Mr. Ayscough's Catalogue it appears, that many Theological Manuscripts by Hugh Broughton are preserved in the British Museum (a).

(a) Catalogue,
p. 25—27.

BROWNE (SIR THOMAS), p. 637.

In the British Museum are a great number of Sir Thomas Browne's Manuscripts, on different subjects. The titles of them may be seen by referring to Mr. Ayscough's Catalogue; and they will serve still farther to evince the extent and variety of Sir Thomas's learning. There are, likewise, in the same noble repository, several manuscripts of his son's, Dr. Edward Browne.

BROWNE (SIMON), p. 647.

Some manuscripts by Mr. Simon Browne are in the British Museum; and among the rest, a Version of the Psalms, from the first to the thirteenth (a).

(a) Ayscough's
Catalogue, p. 27.

BUCHANAN (GEORGE), p. 688.

Testimonies without end might be collected, to the excellency of Buchanan as a scholar. We shall content ourselves with adding one short passage, from Dr. Johnson's Journey to the

CORRIGENDA AND ADDENDA, &c.

the Western Islands of Scotland, p. 5, 6. " At an hour somewhat late we came to St. Andrews, a city once archiepiscopal; where that University still subsists in which philosophy was taught by Buchanan, whose name has as fair a claim to immortality as can be conferred by modern latinity, and perhaps a fairer than the instability of vernacular languages admits."

BULL (JOHN), p. 695.

In the third volume of Dr. Burney's admirable History of Music, very lately published, some account is given of Dr. John Bull. His abilities on the organ and virginal appear to have been truly wonderful. It is remarkable that Dr. Bull is the only person on the list of Music Professors at Gresham College, who seems to have been able to inform by theory, or amuse by practice, those who attended the musical lectures (a). A striking perversion of this of a noble institution! and highly to the dishonour of the electors.

(a) Gen. History of Music, vol. iii. p. 106, 107.

We refer to Dr. Burney's work for an account of William Bird, an excellent musical composer and practitioner in the reigns of Queen Elizabeth and King James the First (b). This eminent Musician would have had an article in the Biographia, if the editor, at the time of the publication of the second volume, had been sufficiently acquainted with his merit.

(b) Ibid. p. 83 —98.

K.

CORRIGENDA AND ADDENDA

TO THE THIRD

Volume of the Biographia Britannica.

BURNET (THOMAS), p. 20.

A Gentleman, who has not informed us to whom we are indebted for the obligation, has favoured us with the following stricture upon this article.

“ The authors of the Biographia Britannica have fallen into a small mistake with respect to the editions of Burnet’s *Archæologiæ Philosophicæ*. The original writer of the life having asserted that the second edition was printed in 1733, Dr. Kippis was naturally led to conclude that the dialogue between Eve and the Serpent appeared only in the first edition: The fact is, the second edition, which is in my possession, bears date 1728, and contains the offensive dialogue in question, which has, therefore, probably been read by more persons than Dr. Kippis apprehends. This edition of 1728 contains also the two letters *ad virum clar. A. B.* in which the author professes his willingness to give up every halty and indiscreet expression which may be found in his work: and adds, *Et colloquium illud inter Evam et Serpentem, quod nonnullis displicere audio; vel siquid sit præterea cognatæ indolis, amputari et abscindi sine dolore patiar.* It seems that in 1733 he kept his word. The dialogue is indeed ridiculous enough, and I do not wonder at its giving offence to the greater part of the Clergy of his day. At present, I suppose, his remarks will be deemed acute and sensible.”

BURNET (GILBERT), p. 41.

To the account of Bishop Burnet’s writings it may be added, that he was the author of a pamphlet in Defence of the Partition Treaty, for which Lord Somers was impeached (a).

In p. 38, we have said, that we know not what became of the Bishop’s two daughters, Mary and Elizabeth. This defect, by the aid of that valuable correspondent whom we have so often mentioned, we are now able to supply. Mary was married to David Mitchel, Esq; the nephew of Admiral Mitchel, well known in the days of King William. She was a woman of a singular genius; what in French would be called *naïve*, and in English, an *oddity*. Her temper was friendly and benevolent; she spake what she thought strongly; and was not free from prejudices of the Whig kind. The children she had are all now deceased. Elizabeth, the Bishop’s other daughter, became the wife of Mr. West, Chancellor of Ireland in the reign of George the First, and was the mother of Richard West, Esq; the companion of Mr. Horace Walpole and Mr. Gray. There are no descendants left of Bishop Burnet. The last was honest Captain Burnet of the Navy, and he was only a natural son of Governor Burnet’s. But he had an *animus paternus* to the Burnet family.

Sir Thomas Burnet was distinguished for the evenness of his temper; of which the following instance is recorded. Dining with a friend, the coachman, who was waiting, spilt some soup or gravy on his cloaths. While they were rubbed, he said, with great good humour, “ Let me advise you, friend, for the future, to *grease* nothing but your wheels (b).”

Notwithstanding the large additions that have been made to Bishop Burnet’s Article, it might still be increased, were we to accumulate all the various strictures which have been made on this Prelate and his writings. We shall content ourselves with taking notice of what has been said by a few recent authors. Dr. Warton, in his Essay on Pope, (vol. ii. p. 293, 294) has quoted, without disapprobation, a very severe, but, in our opinion, a very unjust character, which is given of the Bishop’s History of his own Time, by the late Mr. Hampton, the translator of Polybius.

Dr. Johnson thought more candidly upon the subject. Taking up the Bishop’s history, he said, “ The first part of it is one of the most entertaining books in the English language;

VOL. IV.

* c

“ while

(b) From the communications of Mr. Duncombe.

(a) From the information of the Rev. Dr. Flexman.

CORRIGENDA AND ADDENDA

“ while he went about every where, saw every where, and heard every where. By the first part, I mean so far as it appears that Burnet himself was actually engaged in what he has told; and this may be easily distinguished (c).”

(c) Boswell's Journal, p. 353.

Mr. Alexander Cunningham appears to have had the utmost dislike to Burnet. Indeed, in his History of Great Britain, lately published, he always expresses himself with so much malignity concerning our Prelate, that it confutes itself, and clearly proves that, in this case, he did not write from a regard to truth, but from personal enmity.

BURTON (JOHN), p. 49.

“ As to Dr. Burton of Eton,” says our correspondent, “ the way in which he became the husband of Mrs. Littleton was well known at the time. He found the widow and her daughters at the parsonage house, and desired them to remain there. Some time after, a neighbouring clergyman happened to call on him, and found Mrs. Littleton shaving John Burton. He told him that the thing was indecent, and ought to be set to rights. Burton proposed marriage, and was accepted. From my memory of the Lady, she was not young; a faded genteel little woman. In some of his Greek effusions he calls her *φαιδριον*.”

BUSBY (RICHARD), p. 56.

Busby's face, on his monument, is said to have been copied from a cast taken after his death, as he would never fit for his picture (a).

Once, in a large company, Dr. Busby sat at table between Mrs. South and Mrs. Sherlock. The conversation turned upon wives. Dr. Busby said that he believed wives, in general, were good; “ though, to be sure, there might be a bad one *here*, and a bad one *there* (b).”

(a) From Mrs. Duncombe's communications.

(b) From our other correspondent.

BUTLER (JAMES), DUKE OF ORMOND, p. 80.

Among the various letters of the Marquis of Ormond, that occur in the Clarendon State Papers, there is a very curious one to Sir Edward Hyde, relative to the character of King Charles the Second, in the time of his exile. It is dated on the 27th of January, 1657-8, and is as follows: “ I must now freely confess to you, that what you have written of the King's unseasonable impatience at his stay at Bruges, is a greater damp to my hopes of his recovery than the strength of his enemies, or the weakness and backwardness of those that profess him friendship. Modesty, courage, and many accidents may overcome those enemies, and unite and fix those friends; but I fear his immoderate delight in empty, effeminate, and vulgar conversations, is become an irresistible part of his nature, and will never suffer him to animate his own designs and other's actions with that spirit which is requisite for his quality, and much more to his fortune.

(a) Clarendon's State Papers, vol. iii. p. 387.

“ This to any but to you or him, from any (unless a very few) but from me, or from me at any other time were too bold a lamentation, for so God knows it is. *That* God blefs him, and fit him for his work (a).”

Unhappy indeed was the situation of such virtuous men as Ormond, Hyde, and Nicholas, in the service of so profligate a master. While they suffered exile and poverty for their adherence to his cause, they had no consolation arising from his good qualities; and in the prospect of his restoration, they had few hopes of an useful and honourable reign.

BUTLER (SAMUEL), p. 93.

In the European Magazine, for September, 1788, (p. 175, 176) is the following anecdote concerning this writer. “ Butler, the author of Hudibras, though he was a man of extraordinary wit and fancy, though his merits deserved a much better fate, is said to have starved; which extremity of poverty was owing to his own pride and folly. His necessities were too well known to all his acquaintance, to leave him a possibility of concealing them from them; and yet his pride was so intolerable, that it was the most difficult thing in the world to compel him to accept of any assistance, though offered in the most friendly and genteel manner.—There was a Gentleman of his acquaintance, and of a considerable fortune, who over a bottle one night had made a cleanly conveyance of a purse of a hundred guineas into his pocket, which he did not at all perceive. The next morning Butler, finding it there, was extremely uneasy, and considered what company he was in the day before, and found that it could be nobody but the very

“ Gentle-

TO THE THIRD VOLUME.

" Gentleman that did it. He dressed himself, and went to his chambers, and carried
" with him the money; charged him with the affront, and went away in a pet, leaving
" the money behind him."

This story is extracted, by the Editor of the European Magazine, from a book now rather uncommon, entitled, " Miscellania Aurea, or the Golden Medley," printed in 1720.

Some of the inhabitants of the parish of St. Paul's, Covent Garden, having lately heard that so eminent a man as Butler had been buried in the church-yard, and regretting that neither stone nor inscription recorded the event, entered into a subscription to erect something to his memory. Accordingly, they have had a monument put up in the portico of the church, bearing the Poet's bust, which was taken from that erected by Alderman Barber, in Westminster Abbey. The following lines were contributed by Mr. O'Bryen, and are engraved on the stone beneath the medallion.

" A few plain men, to pomp and pride unknown,
" O'er a poor bard have raised this humble stone,
" Whose wants alone his genius could surpass,
" Victim of zeal! the matchless Hudibras!

" What tho' fair freedom suffered in his page!
" Reader, forgive the author—for the age—
" How few, alas, disdain to cringe and cant,
" When 'tis the mode to play the sycophant!

" But oh! let all be taught from Butler's fate,
" Who hope to make their fortune by the great,
" That wit and pride are always dangerous things,
" And little faith is due to Courts and Kings (a)."

(a) Gentleman's Magazine, for 1786. p. 1145.

BUTLER (JOSEPH), p. 103.

We have said (p. 101, 102) that our Prelate's charge, printed at Durham, is the only one of his publications which ever produced him a direct literary antagonist. This, however, does not appear to be strictly true; for, in the year 1737, there was published a pamphlet, entitled, " Remarks on Dr. Butler's sixth Chapter of the Analogy of Religion (a)."

(a) Gentleman's Mag. vol. vii. p. 374.

Another mistake into which we were led, was the saying, that the Rev. Dr. Nathaniel Forster was the Bishop's Executor and *Residuary Legatee*. He was Executor, but not Residuary Legatee. What remained, after the five hundred pounds given to the Society for propagating the Gospel, was ordered to be equally divided among all the Bishop's nephews and nieces by consanguinity, and their children. His direction for the burning of his manuscripts was thus expressed: " It is my positive and express will, that all my
" Sermons, Letters, and Papers whatever, which are in a deal box directed to Dr. Forster,
" and now standing in my Library at Hampstead, be burnt without being read by any
" one, as soon as may be after my decease (b)."

(b) From the information of the Rev. Peter Forster, of Hedenham, Norfolk.

A second edition of our Prelate's Charge to his Clergy, was published in 1786, by Dr. Halifax, then Lord Bishop of Gloucester, but now of St. Asaph; together with a large Preface, giving some account of the character and writings of the author. In this Preface, which contains many useful and important observations, the Right Reverend Editor has entered into an elaborate defence of Dr. Butler, against the accusation of his having died in the Communion of the Church of Rome. We thought it sufficient, very briefly to take notice of a calumny, which originated in bigotry and folly, and which had almost ceased to be remembered; and we think so still. If we had entertained a different opinion, it was in our power to have related several particulars concerning the controversy, which were not known to the Bishop of St. Asaph.

BYROM (JOHN), p. 123.

As the Fellows of Trinity College, in Cambridge, are allowed to hold their Fellowships, without taking orders, eight years, it is probable that Mr. Byrom did not quit his so soon as is represented in p. 121, but that he held it till his marriage (a).

(a) From Mr. Duncombe's communications.

CALAMY (DR. EDMUND), p. 145.

To the account of the French Prophets it may be added, that one of them went to Sir Thomas Parker, Chief Justice of the Court of King's Bench, and told him, from the *Lord*, that

CORRIGENDA AND ADDENDA

that he was to issue a *Noli prosequi*, with regard to some of his brethren. The answer was, that if he had come from the *Lord*, he would have been directed to the Attorney-General, whose business it was to do such things.

Several compositions of Mr. Nicholas Fatio, chiefly of an astronomical nature, may be seen in the seventh and eighth volumes of the Gentleman's Magazine.

CAMDEN (WILLIAM), p. 175.

This year (1789) has appeared, in three volumes, folio, an edition of Camden's *Britannia*, translated from the edition published by the author in 1607, enlarged by the latest discoveries, and illustrated with a new set of maps, and other copper-plates, by Richard Gough, Esq. The work is the result of many years travel, inquiry, and labour. Of Mr. Gough I have no reason to speak with personal respect: but not any circumstance of that kind shall ever induce me to depart from the exercise of justice or of candour; or prevent my declaring, that, from his eminent character as an Antiquary, and the extent of his topographical knowledge, there can be no doubt but that his edition of the *Britannia* is a performance of great consequence and value.

CAMPBELL (JOHN), DUKE OF ARGYLE, p. 208.

The circumstance of his falling out of a window, mentioned in p. 200, is certain. He was then at Lethington, in Lothian, where his grandmother, the Duchess Dowager of Lauderdale is understood to have resided. The Duke of Argyle had but an imperfect recollection of the accident. All that he could remember was as follows: "He had been taken to visit his grandfather while in prison. The harsh sound of iron bolts, when the prison doors were opened and shut, affected him much. Having been left in a room at Lethington by himself, he heard some sound of the opening of a door like that which he had heard in prison. This terrified him, and in his confusion, he flew to an open window, and fell over." That this happened at the very hour of his grandfather's execution, is probably no other than a popular and superstitious story.

The Duke of Argyle's monument was erected by his widow, and cost three times the sum that had been left by Sir Henry Fermer (a).

In p. 202, read, "by the losses sustained at the battle of Almanara."

(a) From our former correspondent.

CAMPBELL (ARCHIBALD), EARL OF ISLAY, AND DUKE OF ARGYLE, p. 209.

He sold his regiment, and with the price was allowed to purchase the office of Justice-General for Scotland, held by the old Earl of Cromerty.

In p. 209, for "Highlanders," read "Highland Gentlemen who had been engaged in the Rebellion." "It is fit," says our valuable correspondent, so often referred to, "that impartial historians should reprobate the cry of the day as to *Highlanders* and *Rebels* being synonymous. More Highlanders appeared in arms, during the Rebellion in 1745, for Government than against it. Had the Highlanders been unanimous on the side of the Pretender, he would have marched with 20,000 men, instead of 5,500, into England."

It is added by our correspondent, that Lord Chatham took credit to himself, in Parliament, for the measure of employing in the Royal Army the natives of the Highlands who had been formerly disaffected; and that "Something might have been made of so mixed a character as that of Archibald, Duke of Argyle, in which there were great abilities with great weaknesses; ambition, checked by caution; activity, overpowered by indolence; and a spirit of minuteness, little consistent with extensive knowledge."

CAMPBELL (JOHN), DR. p. 215.

Dr. Campbell looking once into a pamphlet at a Bookseller's shop, liked it so well as to purchase it; and it was not till he had read it half through, that he discovered it to be his own composition. This he told the late Mr. David Hume (a).

Dr. Johnson, in a conversation during his Tour, said, "I think highly of Campbell. In the first place, he has very good parts. In the second place, he has very extensive reading; not, perhaps, what is properly called learning, but history, politics, and, in short, that popular knowledge which makes a man very useful. In the third place, he has learnt much by what is called the *Vox viva*. He talks with a great many people."

(a) From the same correspondent.

Dr.

T O T H E T H I R D V O L U M E.

Dr. Johnson one day called on Dr. Campbell, and they talked of Tull's Husbandry. Dr. Campbell said something, and Johnson began to dispute it. "Come," said Dr. Campbell, "We do not want to get the better of one another: we want to increase each other's ideas." This Dr. Johnson took in good part, and the conversation then went on coolly and instructively (a).

(a) Boswell's
Journal, p. 405,
406.

C A P E L (ARTHUR), LORD CAPEL, p. 226.

This Nobleman ordered that his heart should be preserved and kept at Haddam-Hall, till his Royal Master was buried with due funeral honours, which he was sure must soon happen from the restoration of his son. His Lordship directed that then his heart should be laid at Charles the First's feet. When Haddam-Hall was in part pulled down, about the year 1701, the heart was found in a silver box, embalmed with spices; and, by the direction of the second Earl of Essex, it was buried as near Lord Capel's body as possible (a).

(a) Communicated by the late Dr. Paul Wright, from the papers of the late Pulter Forrester, Esq.

C A P E L (ARTHUR), EARL OF ESSEX, p. 232.

Paul Bomeney, who is represented, p. 228, as a French servant, that was supposed to have murdered the Earl of Essex, is said by others to have been an Italian, and that his proper name was Bomini (a).

(a) From Mr. Duncombe's communications.

C A R T E (THOMAS), p. 269.

"Carte's life of the Duke of Ormond," said Dr. Johnson, "is considered as a Book of Authority, but it is ill written. The matter is diffused in too many words; there is no animation, no compression, no vigour. Two good volumes in duodecimo might be made out of the two in folio (a)."

(a) Boswell's
Journal, p. 367.

C A R T E R E T (JOHN), LORD CARTERET, EARL GRANVILLE, p. 280.

Earl Granville, amidst all his struggles for place and power, had an affectation of saying, "I love my fire side;" which humour was well exposed by Mr. Hawkins Browne, in a copy of verses, entitled, "The Fire Side: a pastoral soliloquy." Lord Carteret's letter on the Battle at Dettingen was much ridiculed at the time, and the only excuse for it was his Lordship's intoxication—not merely with joy (a).

In giving his judgment concerning men of high office in the state, Earl Granville sometimes spoke too incautiously for a politician. Having been asked who wrote the King's speech in a certain year, he said, "Do you not see the blunt pen of the old Attorney?" meaning Lord Hardwick.

(a) From Mr. Duncombe's communications.

It was not always in his power to conceal the pangs of disappointed ambition. He made a present of a copy of the Polyglot Bible, which the Doctor got bound in an elegant manner. When Lord Granville saw the book in its new dress, he said, "You have done with it as the King has done with me: He made me fine, and he laid me by (b)."

In Lord Egmont's manuscripts are some curious traits of Earl Granville's character. He was one of those politicians who make religion subservient to the state. The considering the kingdom of Christ as a separate kingdom from those of this world he counted absurd. On the contrary, he maintained that Christianity is incorporated with civil government as sand with lime, each of which by itself makes no mortar. Where he imagined that the public interest might receive prejudice by Christianity, he was against its being taught. He hoped, therefore, never to see our Negroes in America become Christians, because he believed that this would render them less laborious slaves. On the same principle, he was against any attempts to convert the American savages. In learning Christianity, they would fall into the use of letters, and a skill in the arts being the consequence, they would become more formidable to the plantations. Pursuing a similar train of reasoning, Lord Granville wished to God that the Pope might never turn Protestant, or the Italians cease to be Papists, for then we should sell them no fish. He was glad that the Clergy sent abroad to our Plantations were immoral and ignorant wretches, because they could have no influence over the inhabitants, as better and wiser men would have; and who would use that influence, for the purpose of inspiring the Planters with a spirit of independence on their mother country. He was hostile to the scheme of sending Bishops to America. These, he thought, would labour to bring the several sects to one religion; whereas the security of that people's dependence on England he conceived to arise from

(b) From the communications of our other correspondent.

CORRIGENDA AND ADDENDA

their mutual divisions. He was an enemy, likewise, to the improvement of our Colonies in learning. This, he said, would take off their youth from wholly attending to trade, fill them with speculative notions of government and liberty, and prevent the education of the sons of rich Planters in England, where they contract a love to this kingdom, and when grown old, come back and settle, to the great increase of our wealth. Even at home he was against charity schools, and was not for having the vulgar taught to read, that they might think of nothing but the plow, and their other low avocations. Such were Earl Granville's political sentiments, concerning which our readers will make their own reflections.

CHAUCER (GEOFFREY), p. 481.

We learn, from the European Magazine, that, in a periodical work, called "The Universal Visitor, or Monthly Memorialist," conducted by Christopher Smart and Richard Rolt, there was printed a life of Chaucer, by Dr. Johnson. In this piece the Doctor declares, that Chaucer, if not the greatest, was, without controversy, the most universal genius that ever existed. Whether he wrote in prose or verse, seriously or humorously, he was equally himself; equally incomparable: and when we reflect, that he had the language in a manner to make as he wrote it, what amazement does it afford! There is not a single species of poetry in which this great man has not left some specimens of his excellency. Dr. Johnson then proceeds to confirm his assertion by particular instances (a).

(a) Europ. Mag.
vol. vii. p. 83.
178, 179.

CHEYNE (GEORGE), p. 499.

It was in consequence of Dr. Pitcairn's advice, that Mr. Cheyne was induced to quit the study of theology for that of physic. He was at that time a Tutor in a private Gentleman's family (a).

(a) From the
correspondent so
often mentioned.

CHICHLEY (HENRY), p. 505.

The small figures of the Apostles and Cardinal Virtues, on Archbishop Chichley's tomb in Canterbury Cathedral, are supposed, from the elegance of the sculpture, which is superior to any then known in England, to have been carved in Italy (a).

In 1783, a Life of Henry Chichelé, accurately and neatly written, founded on the best authorities, and containing an appendix of original papers, was published by Mr. Spencer, Fellow of All Souls College. The last section concludes with a brief, but elegant summary of the Archbishop's character.

(a) From Mr.
Duncombe's
communications.

CHUBB (THOMAS), p. 532.

It has been suggested to us, by our valuable correspondent, that Whiston's Memoirs ought to have been quoted. We have referred to them for a particular fact; but it might have been added, that they contain Mr. Whiston's view of Chubb's character and writings.

CHURCHILL (JOHN), DUKE OF MARLBOROUGH, p. 565.

Page 554. Battle of Malplaquet. It has been objected to the Duke of Marlborough, that he might have attacked the French sooner, before they had entrenched themselves so strongly, by which he would have rendered the victory less bloody. But this objection will vanish, when it is known that such was his Grace's intention and proposal, but that he waved it in deference to Prince Eugene, who insisted on their waiting for the troops that had been employed in the siege of Tournay. The event, however, did credit to the Duke's judgment; for though those troops were near enough to have joined them, yet they actually did not, as they were not wanted till after the victory was gained. Of this Mr. Duncombe was assured, by Colonel King, who was present.

Page 565. When Sarah, Duchess of Marlborough, desired two poets, Mallet and Glover, to write the Duke's History, she added a sarcastic, but needless proviso, that none of it should be in verse. One trait of her character was her reprinting and dispersing, among the Electors of St. Alban's, a large edition of a foolish comedy, entitled, "Love in a Hollow Tree," of which the noble author (Lord Grimston) had called in all the copies (a).

(a) From Mr.
Duncombe's
communications.

T O T H E T H I R D V O L U M E .

In the "Sylva, or the Wood," a recent and agreeable publication, are printed, as curiosities, without alteration of grammar, orthography, or punctuation, two letters of the Duchess, from her own hand-writing. "She was of a strong understanding and uncommon sagacity," says the author, "which I premise to justify my wonder at the strange neglect of education among the females; for her woman would have written as well, and perhaps better." According to the same author, the Duchess, though oppressed with the infirmities of age, and almost bed-ridden, would continue speaking to Mr. Hooke the Historian, for six hours together. "She delivered to him, without any notes, her account in the most lively as well as the most connected manner: and, though the correction of the language was left to Hooke, yet the whole is plainly animated with her spirit; and, as some philosophers have said of soul with regard to body, she was

(b) Sylva, p. 241
—245.

C I B B E R (COLLEY), p. 592.

Page 584. The Nonjuror. "It has justly been observed," says Mr. Duncombe, "and should have been repeated, that the character of a Nonjuror is here strangely mistaken, and is as far from being a just object of ridicule as hypocrisy is from conscience."

To the poetical squibs that were thrown at Colley may be added the following lines:

" In merry old England it once was a rule,
" The King had his Poet, as well as his Fool.
" But now we're so frugal, I'd have you to know it,
" That Colley can serve both for Fool and for Poet."

But Colley was no more a Fool than he was a Poet (a).

In Davies's Life of Garrick, and especially in his "Dramatic Miscellanies," a great deal is said concerning Colley Cibber. The concluding chapter of the last mentioned work is wholly devoted to this subject (b).

(b) Dramatic Miscellanies, vol. iii. p. 409—482.

C L A R K E (SAMUEL), p. 610.

Our ingenious and worthy friend, the Rev. Mr. Hall, has favoured us with a number of original letters, written to Dr. Clarke, by several learned men of his time. The shortest of them, and the only one which is in Latin, we shall transcribe. It contains a very zealous approbation of the Doctor's scriptural doctrine of the Trinity.

" Domine doctissime!

" Scripturalem tuam Doctrinam de Trinitate perlegi, nec in re quapiam aut S. Scripturæ aut rectæ rationi inveni dissonam, sed utrique maxime consentaneam: Firmissime credo veritatem te depinxisse unicam, ideoque reddo tibi gratias immortales pro præstantissimo illo libro, et ut tota ecclesia Anglicana eandem agnoscat et profiteatur fidem, semper fuerit votum et preces,

Data sunt 2^{do} die,
Februarii, A. D. 1719^{no}.

" Devinctissimi et humillimi tui servi,

" ROBERTI BLAKEWAY."

C L E I V E L A N D (JOHN), p. 633.

In note H, p. 630, there is a considerable mistake in the extract from the Critical Review. The author confounds *David Lesley*, a Gentleman of noble birth, and who could write better than most of his contemporaries, with *Alexander Lesley*, an illiterate soldier of fortune, although a much abler man than the other (a).

(a) From the communications of our correspondent.

C L I F F O R D (GEORGE), EARL OF CUMBERLAND, p. 642.

In Skipton Castle, there are a variety of pictures, on the borders of which are descriptions of the persons painted. These pictures include the principal persons and connections of the Clifford family, and the descriptions throw a good deal of light on the history of that family. In some of the portraits, books are represented standing or lying. From the titles of these books, and from the catalogue of those contained in Lady Anne Clifford's library, (a copy of which we have been favoured with by Sir William Musgrave) may be collected what was the kind of reading that prevailed among people of rank at that time.

The

CORRIGENDA AND ADDENDA, &c.

The larger number of the works mentioned are devotional, moral, and poetical. Historical books and romances occupy but a small part of the catalogue.

A large and elegant encomium on Anne, Countess of Dorset, Pembroke and Montgomery, is given, by Mr. Gilpin, in his "Observations chiefly relative to picturesque beauty, made in the year 1772, in several parts of England, particularly the mountains and lakes of Cumberland and Westmoreland."

CLIVE (ROBERT), LORD CLIVE, p. 663.

Several anonymous strictures, we understand, have been made upon this article. All we shall say is, that it is not our custom specifically to relate facts without express and positive authority. If any Gentleman of character can give us farther information concerning Robert Lord Clive, and will authenticate it with his name, he will find that we are not afraid of recording truth.

COKE (SIR EDWARD), p. 702.

In the late edition of Coke upon Littleton, by Mr. Hargrave and Mr. Butler, will be found a compleat delineation of our great Lawyer's abilities and character as a legal writer.

TABLE of the LIVES

CONTAINED IN THE

FOURTH VOLUME.

[Those with this Mark * * prefixed are new Lives. Those with this Mark † have some Addition made to them.]

COLE (HENRY), a person of considerable learning in the XVIth century, was born at Godshill in the Isle of Wight, and educated in Wykeham's School near Winchester (a). From thence he was chosen into New-College, Oxon, of which he became perpetual Fellow in 1523, and there studying the Civil Law, took the degree of Bachelor in that faculty, March 3, 1529-30 (b). Then he travelled into Italy, and improved himself in his studies at Padua, being a zealous Roman Catholic. Notwithstanding this, upon his return to England, he acknowledged King Henry VIII. to be the supreme head of the Church of England (c). In 1540, he took the degree of Doctor of the Civil Law (d); and the same year resigned his Fellowship, being then settled in London, an Advocate in the Court of Arches, Prebendary of Yatminster Secunda in the church of Sarum, and about the same time made Archdeacon of Ely (e). On the 11th of September, 1540, he was admitted to the Rectory of Chelmsford in Essex; and October the 5th following, collated to the Prebend of Holborn, which he resigned April 19, 1541; and was the same day collated to that of Sneating, which he voiding by cession on or before March 22d next ensuing, was on that very day collated to the Prebend of Wenlakesbarne (f). In 1542, October the 4th, he was elected Warden of New-College; and in 1545, made Rector of Newton Longville in Buckinghamshire (g). Soon after, when King Edward VI. came to the crown, Dr. Cole outwardly embraced, and preached up the Reformation, frequented the Protestants service, and communicated with them. However, altering his mind, or being disgusted at some of the proceedings then taken, he resigned his Rectory of Chelmsford in 1547; and in 1551, his Wardenship of New-College; and the year following, his Rectory of Newton Longville (h). After Queen Mary's accession to the crown, he became again a zealous Roman Catholic; and in 1554, was made Provost of Eton College, of which he had been Fellow (i). The same year, June 20, he had the degree of Doctor in Divinity conferred on him (k); and was one of the Divines that disputed publicly at Oxford with Archbishop Cranmer, and Bishop Ridley (l). He also preached the funeral sermon before Archbishop Cranmer's execution (m). Moreover, he was appointed one of the Commissioners to visit the University of Cambridge; was elected Dean of St. Paul's the 11th of December, 1556; made (August 8, 1557) Vicar-General of the Spiritualities under Cardinal Pole, Archbishop of Canterbury;

and the 1st of October following, Official of the Arches, and Dean of the Peculiars; and in November ensuing, Judge of the Court of Audience. In 1558, he was appointed one of the Overseers of that Cardinal's Will (n). In the first year of Queen Elizabeth's reign, he was one of the eight Catholic Divines who disputed publicly at Westminster with so many Protestants [A], when that Queen was about to settle a reformation in the Church of England (o). He distinguished himself then, and afterwards, by his writings in favour of Popery [B]. But that disputation, wherein Dr. Cole was spokesman, coming to nothing, he was deprived of his Deanery (p), fined five hundred marks, and imprisoned (q). He died in, or near, Wood-street Compter in London, in December 1579 (r). The famous Leland hath eternized his memory among other learned men of our nation (s). He is elsewhere called, 'A person more earnest than wise (t).' But R. Ascham highly commends him (u) for his learning and humanity [C].

(t) Strype, *ubi supra*, p. 144.

[A] He was one of the eight Catholic Divines who disputed publicly at Westminster with so many Protestants. Those eight Roman Catholic Divines, were, White, Watson, Baine, and Scot, Bishops of Winchester, Lincoln, Coventry and Litchfield, and Chester; and the Doctors Cole, Dean of St. Paul's, Langdale, Harpsfield, and Chedsey, Archdeacons of Lewis, Canterbury, and Middlesex. The Protestant Divines, were, John Scory, late Bishop of Chichester, David Whitehead, John Jewell, John Aylmer, Richard Cox, Edmund Grindal, Robert Horne, and Edmund Guest (1). The points then disputed upon, were, 1. Prayers in an unknown Tongue. 2. The Church's Authority to appoint, change, and take away Ceremonies. 3. Whether in the Mass there was a propitiatory Sacrifice (2).

(1) Annals of the Reformat. &c. by J. Strype, vol. i. as above, p. 87.

(2) Ibid. p. 89. 91, &c. Fox, Acts and Monuments, vol. ii. Burnet's Hist. of the Reformation, P. ii. B. iii.

(3) Both printed in Fox's Acts and Monuments, as above.

[B] He distinguished himself by his writings in favour of Popery. They were, I. Disputation with Archbishop Cranmer, and Bishop Ridley, at Oxford, in 1554. II. Funeral Sermon, at the Burning of Dr. Thomas Cranmer, Archbishop of Canterbury (3).

III. Letters to John Jewell, Bishop of Salisbury, upon Occasion of a Sermon that the said Bishop preached before the Queen's Majesty and her honourable Council, anno 1560. Lond. 1560, in a thick 8vo. printed afterwards among Bishop Jewell's works. IV. Letters to Bishop Jewell, upon Occasion of a Sermon of his preached at Paul's-Cross on the second Sunday before Easter in 1560. V. Answer to the first Proposition of the Protestants, at the Disputation before the Lords at Westminster (4).

[C] But R. Ascham highly commends him for his learning and humanity. In the following words. *Tantum ego & communi omnium voci de tua eruditione, & frequenti Morysini sermoni, de tua humanitate semper tribui, doctissime humanissimeque Cole, ut imperitus ipse si te non colerem, & inhumanus si non amarem, merito videri possim* (5), i. e. 'I have heard so much by common fame of your learning, and by Mr. Morysin of your humanity, that I must renounce all pretensions to learning if I did not esteem you, and be altogether inhuman if I did not love you.' M.

(4) Printed in the Collection of Records, at the end of Bishop Burnet's Hist. of the Reformat. P. ii. B. iii. No. 4; and in Collier's Eccles. Hist. vol. ii. edit. 1714, p. 414, &c.

(5) Epistol. R. Ascham, lib. iii. Epistola D. Colo.

(a) Wood, Ath. edit. 1721, vol. ii. col. 680.

(b) What it was, is not expressly mentioned any where.

COLES (ELISHA), author of the Dictionary, was born in Northamptonshire about the year 1640 (a). Towards the end of the year 1658, he was entered into Magdalen College in Oxford, but left it without taking a degree; and retiring to London, taught Latin there to youths, and English to foreigners, about 1663. Afterwards he continued that employment with good success in Ruffel-street, near Covent-Garden; and at length became one of the Ushers of Merchant-Taylors School. But being there guilty of a very great fault (b), he was forced to withdraw into Ireland, from whence he never returned. He was a curious and critical person in the English and Latin tongues, did much good in his profession, and wrote several useful and necessary books for the instruction of beginners. The titles of them are as follows: I. 'The Compleat English Schoolmaster: or, the most natural and easy Method of spelling and reading English according to the present proper Pronunciation of the Language in Oxford and London, &c.' Lond. 1674, 8vo. II. 'The newest, plainest, and shortest Short-hand, containing, first, A brief Account of the Short-hand already extant, with their Alphabets and fundamental Rules. Secondly, A plain and easy Method for Beginners, less burdensome to the Memory than any other. Thirdly, A new Invention for contracting Words, with special Rules for contracting Sentences, and other ingenious Fancies, &c.' Lond. 1674, 8vo. III. 'Nolens Volens: or, you shall make Latin whether you will or no, containing the plainest Directions that have been yet given upon that Subject.' Lond. 1675, 8vo. With it is printed, IV. 'The Youth's visible Bible, being an Alphabetical Collection (from the whole Bible) of such general Heads as were judged most capable of Hieroglyphics; illustrated with twenty-four Copper-Plates, &c.' V. 'An English Dictionary, explaining the difficult Terms that are used in Divinity, Husbandry, Physic, Philosophy, Law, Navigation, Mathematics, and other Arts and Sciences. Containing many Thousands of hard Words (and proper Names of Places) more than are in any other English Dictionary or Expofitor: Together with the Etymological Derivation of them from their proper Fountains, whether Hebrew, Greek, Latin, French, or any other Language.' Lond. 1676, 8vo. reprinted several times since. VI. 'A Dictionary, English-Latin, and Latin-English [A]; containing all Things necessary for the translating of either Language into

(1) Preface to his Thesaurus Linguae Latinae Compendarius.

[A] A Dictionary, English-Latin, and Latin-English. Mr. Robert Ainsworth (1) gives the following character of that book. 'He [the author] hath indeed considerably enlarged the English-Latin part, which containeth many more English words and phrases than any Latin Dictionary published before his time. But not a few of those words are now entirely obsolete, many of them interpreted in a wrong sense, and worse translated into Latin. And

the Latin-English part is very defective both with regard to the several senses of the Latin words, and the citation of the Roman writers proper to fix their authority.' M.

* * [Coles's Dictionary continued to be a school-book in very general use, for some time after the publication of Ainsworth's Thesaurus. But it hath fallen, I believe, almost into total neglect, since abridgments

‘into the other. To which End many Things that were erroneous are rectified, many Superfluities retrenched, and very many Defects supplied. And all suited to the meanest Capacities, in a plainer Method than heretofore: Being for Ease reduced into an Alphabetical Order, and explained in the Mother-tongue. And towards the completing the English Part, (which hath been long desired) here are added a thousand of Words, Phrases, Proverbs, proper Names, and many other useful Things mentioned in the Preface to this Work.’ *Lond.* 1677, 4to. reprinted several times in 8vo. the 12th edition was in 1730. VII. ‘The most natural and easy Method of learning Latin, by comparing it with English: Together with the holy History of Scripture-War, or the Sacred Art Military, &c.’ *Lond.* 1677, 8vo. VIII. ‘The Harmony of the Four Evangelists in a metrical Paraphrase on the History of our Lord and Saviour Jesus Christ.’ *Lond.* 1679, 8vo. reprinted afterwards. IX. ‘The Young Scholar’s best Companion: or, an exact Guide or Directory for Children and Youth, from the A, B, C, to the Latin Grammar, comprehending the whole Body of the English Learning, &c.’ *Lond.* 12mo. (c).

(c) Wood, Ath. ubi supra, col. 680, 681.

abridgments of Ainsworth have appeared, by Mr. Thomas and other persons. The men, however, who have been benefactors to the cause of learning, ought to be remembered with gratitude, though their writings may happen to be superseded by more perfect productions. It is no small point of honour to be the means of paving the way for superior works.

There was an Elisha Cole, or Coles, contemporary with the compiler of the Dictionary, who was a Nonconformist Divine, and wrote a treatise on God’s Sovereignty. I do not introduce him because I think either the author or the book worthy of particular notice, but to mention a circumstance relating to myself. The work, which is composed in the

highest strain of Calvinism, upon what is called the superlapsarian scheme, was put into my hands, when thirteen or fourteen years of age, by some zealous friends, to instruct and confirm me in the doctrines it contained. The reading of it, however, produced a contrary effect. The author stated the objections to his opinions concerning absolute election, reprobation, and other points, and endeavoured to remove them: but to me his objections appeared stronger than his answers; so that I owe to Cole on God’s Sovereignty my first renunciation of Calvinism. The book is yet in some vogue, amongst readers of a certain class.] K.

(c) Knight, *ibid.* p. 8. Stow and Strype, *ubi supra*, B. ii. p. 120, 121. Dr. Knight is mistaken when he says, ‘That this school bore the name of his own parish,’ p. 8. for the one was St. Anthonine, and the other St. Anthony. This St. Anthony’s School was in Threadneedle-street, near the place where the French Church now stands. Stow, *ubi supra*, B. i. p. 163.

(4) *Ibid.* and Knight, p. 7.

(5) Survey of London, &c. as above, B. iii. p. 16.

COLET (JOHN), a very learned Divine, and founder of St. Paul’s School, London, was the eldest son of Sir Henry Colet, Knt. [A], twice Lord-Mayor of London, by Christian his wife, a gentlewoman of good birth, probably of the family of Knevet (a). He was born in the parish of St. Anthonine’s, now better known by the name of St. Antholin’s, within the city of London, in the year 1466 (b). It is taken for granted, that he had his first education at St. Anthony’s School, then the most eminent in London, but now utterly decayed (c). In 1483, he was sent to the University of Oxford, and in all probability to Magdalen-College, where there were, at that time, one or more of his surname (d). After having spent seven years in the study of Logic and Philosophy, he took his degrees in Arts, being then thoroughly acquainted with M. T. Cicero’s works, which he had most carefully perused; and also no stranger to Plato and Plotinus, which he not only read, but compared, making the one serve as a commentary to the other [B]. He was moreover skilled in every branch of the Mathematics (e). Having thus laid a good foundation of learning at home, he went and travelled abroad, for his farther improvement; first to France, and then to Italy: and seems to have continued in those two countries from the year 1493 to 1497 (f). But before his departure, and indeed when he was but of two years standing at the University, being nineteen years of age, and only in the order of an Acolythe, namely, on the 6th of August, 1485, he was instituted to the Rectory of Denington in Suffolk [C], to which he was presented by Sir William Knevet, Knt. and his Lady, and kept it to his dying day (g). He was also presented, by his own father, on September 30, to the Rectory of Thyrning in Huntingdonshire, to which he had institution, October 2, 1490 (h); but he resigned it before the latter end of the year 1493 (i), probably before he set out on his travels. Being come to Paris, he improved himself there by the conversation of learned men; particularly of Robert Gaguin, the

(8) Knight, p. 21

[A] Was the son of Sir Henry Colet, Knt.] Sir Henry Colet was a younger son of Robert Colet, of Wendover, in Buckinghamshire, Esq; and born in that county at the manor of Hale. He was bred a Mercer in London, where he got very considerable riches (1). In the year 1477, he was the elder of the two Sheriffs of London; and in part of the years 1486, and 1487, Lord-Mayor of that city: as he was again, a second time, in part of the years 1495, and 1496 (2). By his wife Christian, he had two and twenty children, eleven sons, and eleven daughters (3). He died in 1510, and was buried at Stepney: but his widow lived to bury her only son the Dean, being then above ninety years of age (4). Sir Henry was a great benefactor to his parish church of St. Anthonine’s; and, in Mr. Stow’s time, the pictures of him, and his wife, ten sons, and ten daughters, were in the glass window on the north side of that church (5). John, who is the subject of this article, was the first-born;

and within a few years became the only surviving comfort to his parents (6).

[B] He was no stranger to Plato and Plotinus, which he not only read, but compared, &c.] But he was forced to read them only in their Latin translations (7). See below, note [D].

[C] When he was but nineteen years of age, and only in the order of an Acolythe—he was instituted to the Rectory of Denington, &c.] This practice of taking livings, while thus under age, has generally prevailed in the Church of Rome, and was one of those many abuses, which have been removed by the Reformation. But if Mr. Colet did enter upon a cure of souls before he could sufficiently consider the weighty charge belonging to it, he atoned for it, by his extraordinary care, when he came to a more mature age (8). The order of an Acolythe is one of the seven orders in the Church of Rome, as may be seen in all the rituals.

Historian,

Historian, who raised in him an earnest desire of being acquainted with Erasmus, the honour of his age. He became also acquainted with the celebrated Budæus, and Mr. De-loine, who procured him what he wished, by recommending him to Erasmus (k). In Italy, he contracted a friendship with several eminent persons; especially with his own countrymen, William Grocin, Thomas Linacre, William Lilly, and William Latymer, who were learning the Greek tongue (then but little known in England) under those great masters, Demetrius, Ang. Politianus, Hermolaus Barbarus, and Pomponius Sabinus (l). As he knew himself very little of it when he left Oxford (m), he undoubtedly embraced the opportunity of perfecting himself in that language [D]. And, having devoted himself to the study of Divinity, he read, whilst abroad, the best of the ancient Fathers, particularly Dionysius, Origen, Cyprian, Ambrose, and Jerome (n). But he very much despised St. Augustin, which showed his good sense and judgment (o). In the course of his studies, both at home and abroad, he sometimes looked into D. Scotus, and T. Aquinas, and other school Divines. He also studied both the Civil and Canon Law. Moreover, there was not one book relating to the History and Constitution of Church and State, which he did not carefully peruse. And, in order to polish and improve his style, and qualify himself for an elegant Preacher, he frequently read such English Poets as were then extant (p). During his travels, he was presented to the Prebend of Botevant, in the cathedral church of York, into which he was installed by proxy, March 5, 1493-4 (q). He was also made Canon of St. Martin's Le-Grand, London, and Prebendary of Good-Easter, in the same church (r). Upon his return to England in 1496, or 1497, he was ordained Deacon December 17, and Priest the 26th of July following (s). He had, indeed, before he entered into orders, great temptations, both from his natural disposition, and otherwise, to lay his studies aside, and give himself up to all the gaieties of the Court [E]: but he curbed these idle inclinations (t); and, after having staid a few months with his father and mother at London and Stepney (u), he retired to Oxford (w). Here he did not spend his time in idleness, but undertook to read public lectures, without any stipend or reward, on St. Paul's Epistles [F], which were crowded with hearers, and much admired (x). And in this place he had the pleasure of contracting an acquaintance with the immortal Erasmus, (who came to Oxford about the end of the year 1497) which ended in the strictest intimacy imaginable, and continued to the end of their lives (y). The time when Mr. Colet expounded St. Paul's Epistles, was in the years 1497, 1498,

[D] As he knew very little Greek when he left Oxford, he undoubtedly embraced the opportunity of perfecting himself in that language.] For at school he had no opportunity of learning the Greek tongue, nor scarcely in the University, at his first coming thither. Such was the infelicity of those times of ignorance, that the Greek language was not taught in any of our grammar-schools; nor was there imagined to be any great need of it in the two Universities, by the generality of scholars. Even to love or encourage the study of it, was looked upon as heresy. Hence the proverb (9), *Cave à Græcis, ne fias Hæreticus. Fuge literas Hebræas, ne fias Judæorum similis*, i. e. 'Take care of Greek, lest you become a heretic. Avoid Hebrew, that you may not become like the Jews.' And for this reason those very few that understood Greek were afraid to teach it, lest they should be thought to propagate heresy (10). As for Oxford, nothing was known there but Latin, and that in the most depraved style of the schoolmen. Cornelius Vitellius, an Italian, was the first who taught Greek in that University; and from him the famous Grocin learned the first elements thereof. In Cambridge, Erasmus was the first who taught the Greek grammar. And so very low was the state of learning in that University, that in 1485, nothing was taught there but Alexander's *Parva Logicalia*, the old axioms of Aristotle, and the questions of Scotus, all in Latin; till in process of time, the Mathematics were brought in, and Aristotle in Greek, with several authors, whose names had not been heard of before (11). Linacre and Grocin were the only two Englishmen then able to teach Greek. Soon after, Bernard André, a native of Tholouse, opened a school for that language in London. But the first Englishman who, in any public school, taught Greek as well as Latin, was William Lilly, in St. Paul's School; the founder whereof, Dean Colet, seeing the necessity of having a tolerable knowledge of the Greek tongue, in order to proceed the better in his theological studies, did shun no pains, nor thought himself too old to learn it, or at least to improve himself therein (12).

the Court.] And, indeed, he was endued with some natural propensities, that seemed fitter for a public life at large, than for the confinement of a college, or a gown. For he had naturally a spirit exceeding high, and impatient of the least injury and affront. He was too much addicted to love, and luxury, and sleep, and mightily disposed to an air of freedom and jocoseness, and had a tincture of avarice in him. But he conquered himself, and brought his high spirit to be subject to reason; so that he could bear a reproof even from his own servant. His disposition to love, sleep, and luxury, he restrained by a continual abstinence from suppers, a strict sobriety, a close application to his studies, and by a serious and religious conversation. So that by his philosophy, his sacred studies, his watchings, and fastings, and devotions, he preserved himself every step of his whole life from the pollutions of the world. And yet whenever opportunities offered themselves, either of jesting with facetious persons, or talking familiarly with the female sex, or of appearing at feasts and entertainments, there nature would break forth. For which reason, he very much forbore acquaintance with laymen, and especially all public entertainments: where, if necessity brought him, he picked out some learned friend, and talked Latin with him, to avoid the prophane discourse of the table. And in the mean time he would eat but of one dish, and take but one or two draughts of beer, refraining commonly from wine: which yet he relished, if very good. There never was a more flowing wit; and, for that reason, he delighted in the like society: but even then, he chose rather to divert to such discourses as favoured most of religion. He was a great lover of little children, admiring their pretty innocence and simplicity (13).

[F] He undertook to read public lectures, without any stipend or reward, on St. Paul's Epistles.] And though he had neither taken nor desired any degree in Divinity, there was not a Doctor in Divinity, or Law, no Abbot, nor any other dignitary, but came gladly to hear him, and took notes of his lectures (14). For, at this time, it was a new thing to have any readings upon the Scriptures (15).

(13) Erasmi Epistola Jodoco Jonæ.

(14) Ibid.

(15) See Knight, p. 50, &c.

(m) Wood, *ubi supra*. 1499, &c. (z). In the year 1501, he was admitted to proceed in Divinity, or to the reading of the sentences (a). In 1502, he became Prebendary of Durnesford, in the church of Sarum: and on the 20th of January, 1503-4, he resigned his Prebend of Good-Easter (b). In 1504, he took the degree of Doctor in Divinity (c); and May 5, 1505, was instituted to the Prebend of Mora, in the cathedral church of St. Paul (d). The same year and month, he was made Dean of that church (e), without the least application of his own (f); at which time he resigned the Vicarage of Stepney, the date of his admission to which doth not appear (g). Being raised to this station, he reformed the decayed discipline of his cathedral church, and brought in a new practice there, the preaching himself upon Sundays, and all solemn festivals. In this course of preaching, he did not take a desultory text out of the Gospel or Epistle for the day, but chose a larger subject; as St. Matthew's Gospel, the Creed, or the like, and made successive sermons upon them, till he had gone through the whole. That his church might be constantly supplied, he called in to his assistance other learned and able persons, particularly William Grocin, and John Sowle, who read Divinity-Lectures. At last he procured a settlement for ever, for such a lecture to be constantly read in St. Paul's cathedral, three days in every week, by the Chancellor of the church, or his sufficient deputy (h). These Divinity-Lectures raised in the nation an enquiry after the Holy Scriptures, which were, in a manner, laid aside for the School-Divinity, and so prepared a way for the Reformation. And what helped to promote it, was the contempt which Dean Colet expressed for the religious houses, the abuses he shewed were in them, and the danger of imposing celibacy on the Clergy (i). This way of thinking, and the Dean's free manner of communicating his thoughts, which were then looked upon as heretical and impious, exposed him to the hatred of the Clergy, and to a persecution from Dr. Fitz-James [G], Bishop of London (k). For, preaching frequently at St. Paul's, and before the King, and in other populous assemblies, he would not refrain from speaking, with some freedom and boldness, against the vulgar superstitions and prevailing corruptions in the church; whereby he incurred the indignation of the Bishop, who was a rigid and superstitious man, and had for a long while looked upon him with an evil eye (l). But the Dean's troubles and persecutions seemed only to have rendered him more devout and charitable, and weaned him from the world. Having therefore a plentiful estate, without any very near relations, and having already dispensed the yearly produce of it in the occasional demands of piety and charity, he resolved, in the midst of his life and health, to consecrate the whole property of it to some standing and perpetual benefaction (m). And this he performed, by founding St. Paul's School in London [H], which hath produced several learned and ingenious men (n).

[G] *The Dean's free manner of communicating his thoughts—exposed him to—a persecution from Dr. Fitz-James.* His Lectures and Sermons being chiefly employed in opening the sense of the Scriptures, then called the New Learning, he came to be counted a perverse Heretic, at least to be suspected of the crime of heretical pravity. The Bishop, upon this score, accused him to Archbishop Warham, as a dangerous man; and calling in the assistance of two other Bishops, of equal bigotry, and no less virulence, he began to create Dean Colet a great deal of trouble and vexation, using no other weapon but that of the charge of heresy, then reckoned the most fatal engine for the destruction of an enemy. So the Bishop drew up the following Articles against him. I. That the said Dr. Colet had taught, that images were not to be worshipped. II. That he had preached against the temporal possessions of the Bishops, by denying that the repeated exhortation of Christ to Peter, to feed his sheep, could be at all meant of hospitality, but of an exemplary life, and good doctrine; because the Apostles were then poor, and not able to be hospitable. III. That he had preached against some men's reading their sermons in a cold unaffected manner, whereby he must needs mean to reflect upon the Bishop himself, who, by reason of his old age, had taken up that way of preaching. But Archbishop Warham, who knew the integrity and worth of Dr. Colet, dismissed him, without giving him the trouble of putting in any formal answer. However, the Bishop not satisfied with that fruitless attempt, endeavoured afterwards to stir up the King, and the whole Court, against Dean Colet (16). Nay, we are told, that he was not only in trouble, but should have been burnt, if God had not turned the King's heart to the contrary (17); and that, some years after his decease, his body had like to be taken up, and burnt (18).

VOL. IV.

[H] *And this he performed, by founding St. Paul's School in London.* This school was founded between the years 1508 and 1512, some years being taken up in purchasing the site, removing the incumbrances, erecting the new pile of buildings, providing suitable masters, and settling the endowment in trust for ever (19). This is the reason why our Historians vary so much about the exact year of its foundation: for some (20) place it under the year 1508; others in 1509 (21); others in 1510 (22); and, finally, others in 1512 (23). The worthy founder dedicated it to the honour of Christ Jesus in his childhood: and ordained, that there should be in it, an High-master, a Sur-master, and a Chaplain, who should teach gratis one hundred and fifty-three children, divided into eight classes. He endowed it with one messuage, and two shops, in Soper's-lane; six tenements in St. George's parish in Pudding-lane; two messuages in Bridge-street, in the parish of St. Magnus; four shops; some tenements without Aldgate, and all their appurtenances; manors, lands, and tenements in Buckinghamshire; the manor of Vach in Barton, and that of Berwicke; lands in Colchester; several fields and tenements, the places where they lie not expressed, only the occupiers names; a barn; four acres of land, the backside of White-hart-street; eight acres in London-field; nine acres, and gardens near it, with several tenements, amounting then in all to 122*l.* 4*s.* 7*d.* $\frac{1}{2}$ a year, but now much improved. The Company of Mercers were appointed Trustees (24). The High-masters of this School, from the first to this time, have been these:—1. William Lilly, appointed by the founder in 1512.—2. John Rightwyfe, chosen in 1522.—3. Richard Jones, in 1532.—4. Thomas Freeman, in 1549.—5. John Cook, M. A. in 1559.—6. William Malin, or Malim, in 1573.—7. John Harrison, M. A. in 1581.—8. Richard Mulcaster, in 1596.—9. Alexander Gill, senior, in 1608.—10. Alexander

For the use of this school, he drew up some rudiments of grammar, with an abridgment of the Principles of Religion, of which we shall give an account below among the rest of his works (o). Besides his dignities and preferments already mentioned, he was Rector of the Fraternity or Gild of Jesus in St. Paul's Church (p), for which he procured new Statutes; and also Chaplain, and Preacher in Ordinary to King Henry VIII. and (if Erasmus is not mistaken) one of his Privy-Council (q). When he came to about the fiftieth year of age, he grew so weary of the world, that he fully purposed to throw himself into some monastery, and there end his days in quiet and solitude (r). In pursuance of this resolution, he built a convenient and handsome house within the precinct of the Charter-House, near Richmond Palace in Surrey, where he intended to retire in his old age, when broken with infirmities, and unable to discharge the duties of his function (s). But death prevented him: for having been seized by the sweating sickness at two several times before, and relapsing into it a third time, he fell into a consumption that carried him off on the 16th of September, 1519, in the fifty-third year of his age (t). He was buried on the south side of the choir of St. Paul's, with an humble monument prepared by him several years before, and having no other inscription but his bare name (u). But afterwards a handfomer monument was set up for him by the company of Mercers [I] (w). He wrote several things, of which there is an account in the note [K]. As to his person

Alexander Gill, jun. in 1635.—11. John Langley, in 1640.—12. Samuel Cromleholme, in 1657.—13. Thomas Gale, D. D. in 1672.—14. John Postlethwayte, M. A. in 1697.—15. Philip Ascough, M. A. in 1713.—16. Benjamin Morland, F. R. S. in 1721.—17. Timothy Crumpe, M. A. in 1733.—18. Mr. Charles, in 1736-7 (25).

[I] But afterwards a handfomer monument was set up for him, by the Company of Mercers.] It was destroyed, with St. Paul's cathedral, in the general conflagration in 1666. But the representation of it is preserved in Mr. William [afterwards Sir William] Dugdale's History of St. Paul's; and in Dr. S. Knight's Life of Dr. John Colet (26). On the two sides of the bust was this inscription. 'John Colet, Doctor of Divinity, Dean of Pauls, and the only founder of Pauls-school, departed this life, anno 1519, the son of Sir Henry Colet, Knt. twice Lord Mayor of the cyty of London, and free of the Company and Mistery of Mercers.' Lower, there were other inscriptions in Latin. About the year 1680, when the church was taking down, in order to be rebuilt, his leaden coffin was found inclosed in the wall, about two feet and a half above the floor. At the top of it was a leaden plate fastened, whereon was engraved the Dean's name, his dignity, benefactions, &c. (27).

[K] He wrote several things, &c.] Those which he published himself, or that have been printed since his decease, are as follows. I. *Oratio habita à Doctore Joanne Colet, Decano Sancti Pauli, ad Clerum in Convocatione*, anno 1511. Printed the same year by Richard Pynson, in three sheets, 4to. This is very scarce, being hardly to be met with, excepting in the Bodleian Library, Oxon, among Archbishop Laud's MSS. It is reprinted by Dr. S. Knight, in his Appendix to the Life of Dr. John Colet (28). In the same book is also reprinted, an old English translation of it, intituled, 'The Sermon of Doctor Colete, made to the Convocation at Pauls.' Printed first by Thomas Berthelet; and supposed, by Dr. Knight, (29) to be done by the author himself. It was reprinted in 1661, 12mo. by Thomas Smith, of Christ's College, with notes; under this title, 'A Sermon of Conforming and Reforming, made to the Convocation at St. Paul's Church in London, by John Colet, &c.' It was reprinted again in the Phoenix, Vol. I. 8vo. and lately in a collection of 'Select Sermons,' fol. II. *Rudimenta Grammatices à Johanne Colet, Decano Ecclesiæ sancti Pauli London. in usum Scholæ ab ipso institutæ* (30); commonly called *Paul's Accidence*. Lond. 1539, 8vo. III. The construction of the eight parts of speech, intituled, *Absolutissimus de octo Orationis partium constructione Libellus*; which, with some alterations, and great additions, makes up the syntax in Lilly's Grammar. Antwerp, 1530, 8vo. IV. 'Daily Devotions: or the Christian's Morning and Evening Sacrifice, &c.' Printed at London several times in 12mo. and 16mo. This is said not to be all of his composition (31). V. 'Monition to a godly Life.' Lond. 1534, 1563, &c. This Mr. Wood supposes (32) to be the same with, 'A right fruitful

Admonition concerning the Order of a good Christian's Man's Life, &c.' Lond. 1577, 8vo. VI. *Epistolæ ad Erasmus*. Many of them are printed among *Erasmi Epistolæ*; and some at the end of Dr. S. Knight's Life of Dean Colet.—The following pieces remain in manuscript. VII. *Commentarii in Epistolâ D. Pauli ad Romanos & Corinthios*, i. e. Commentaries on St. Paul's Epistles to the Romans and Corinthians. Given to the public library at Cambridge by Archbishop Parker. In the same volume are several pieces of Dean Colet, viz. VIII. *De Angelis cælestique hierarchia*, being a commentary in *Ecclesiasticam D. Dionysii Hierarchiam*. And IX. *Epistola Abbati Winchincobensi*, printed by Dr. Knight, at the end of the Dean's Life. The Commentaries upon the Epistles to the Corinthians, are also in manuscript, in Emmanuel-College Library, given thereto by Dr. Anthony Tuckney; and in that of Benet-College, the gift of Archbishop Parker. At the end of this last, there is the *Beginning of a Commentary on Genesis*, no where else to be met with. X. One of the Dean's own manuscripts, being an *Analytical Commentary on the Apostolical Epistles*; and a summary of his larger Comments was in the possession of Roger Gale, Esq. It is the fairest, and indeed the only one manuscript of Dr. Colet's, of that kind, extant (33). Bale and Pits mention also these books of his. 1. *Commentaria in Proverbia Salomonis*. 2. *In Evangelium S. Matthæi*. 3. *In Precationem Dominicam*; translated, as Mr. Wood tells us (34), into English. 4. *In Symbolum fidei*. 5. *Breviloquium doctorum Christi*. 6. *Responsio ad argumenta Erasmi de tædio & pavore Christi* (35); called by Bale and Pits, *Ad argumenta Erasmi*; and, *De reformatione Christi*; and made two different books. 7. *Conciones ordinariæ, & extraordinariæ*. Among which were two sermons on war, preached before King Henry VIII. 8. *Vita hominis Christiani*. 9. *Excerptiones doctorum*. 10. *Epistolæ ad Taylerum*. 11. *Ortolanus*. 12. *De moribus componendis*. 13. *De puerili institutione*. These two last seem to be the same as his *Rudimenta Grammatices* (36). As the Dean had an inaccuracy and uncorrectness in his way of writing (37), that was like to expose him to the censures of the Critics; and, besides, was no perfect master of the Greek tongue, without which he thought a man was nothing, that is, no scholar (38): it is therefore probable he had no intention of publishing any thing. The pieces mentioned above were found, after his death, in a very private corner of his study, as if he had designed they should lie buried in oblivion (39). Besides, they were written in such a manner, as if he intended nobody should understand them but himself (40). With regard to sermons, he wrote but few, for he generally preached without notes (41). M.

* * [Colet's practice, when young, of reading the English Poets which were then extant, in order to polish and improve his style, and to qualify himself for an elegant Preacher, is worthy of observation. The method he took was well adapted to his purpose. Nothing

person and character, they are thus described. He was tall, comely, and very graceful: there was something in his mien and carriage extremely becoming; as was every thing he said

Nothing tends more to give a copiousness, freedom, and gracefulness of language, than an acquaintance with the Poets; and few writers have attained to elegance of composition, who had not a taste for poetry. Colet's advantages in this respect were very small, compared with those of the present age; but it was wise in him to make use of the aid which the times afforded. The dislike he had against attending to the exact rules of grammar is not to be commended. Such an attention ought not to be dispensed with in any genuine scholar; and, under proper direction, it will be so far from obstructing, that it will add to the beauty and dignity of style.

The life of Dean Colet, as written by our learned predecessor, Mr. Morant, is accurate, and he is exact and copious in his references to his authorities. But, with these excellencies, there is a driness of manner in his narration, which prevents us from having that full exhibition of the Dean's conduct and character which might have been attained, and which appears in Dr. Knight's account. As some things likewise are omitted, which may be thought to merit a place in the *Biographia*, we shall endeavour in part to supply the defect.

The beginning of Colet's acquaintance with Erasmus, which was a principal æra in the Dean's life, deserves to be related. He had heard a great character of Erasmus at Paris, and from that time was very desirous of an intimacy with him. No opportunity, however, offered of commencing it till that eminent man came to England; and then the foundation of their friendship was laid, not by a personal introduction to each other, but by letter. Erasmus, in the beginning of the year 1498, was at Oxford, whither he had been recommended by the Prior and Canons of St. Genesee at Paris, to Father Richard Charnock, Prior of the Regulars of the Order of St. Austin, in the College of St. Mary the Virgin. Here he was received, and accommodated with diet and lodging, in the most courteous and hospitable manner. Father Charnock, after a short trial of the parts and good qualities of his new guest, described him to Colet, as, in his opinion, a very excellent person, and of singular worth and goodness. With this character Colet was so much pleased, that he had not patience to wait for seeing the learned stranger; but, though he was himself then resident at Oxford, chose to make his first address with his pen, and sent to him, from his own chamber, an agreeable and elegant epistle, drawn up in such an obliging turn of sentiment and expression, as shewed the writer to be a scholar, a traveller, and a gentleman. He tells Erasmus, that his friend Brome had heartily recommended him by letter; but that he stood before highly commended to him by the fame of his reputation abroad, and by his works: that, whilst he was at Paris, he found the name of Erasmus not a little celebrated by learned men; and that he had read there an epistle of his to Gaguinus, which seemed to him the specimen of a perfect writer, both for literature and the knowledge of the world. But still the best recommendation of him was, that the venerable Prior with whom he resided, had the day before told Colet, that his new guest was a most excellent person, and endued with singular virtues. "For this reason," says Colet, my Erasmus, as far as learning and an acquaintance with things, and a sincere goodness can make an impression upon a man who rather wishes for these talents, than pretends to the possession of them, so far, by virtue of such accomplishments, you must always be most acceptable to me. When I shall see you, I shall do that for myself, in my own person, which others have done for you in your absence. They have improperly recommended you to me; whereas I shall commend myself to you, to be instructed by your wisdom: for the less ought to be commended to the greater, and the ignorant to the more learned. But if there be any thing in a person so inconsiderable as I am, wherein I can either be acceptable

or useful to you, I am entirely devoted to your service. I rejoice at your arrival in England, and wish that this island may be as pleasant to you, as I am persuaded you will be serviceable to it, by your great learning. I owe, and shall always owe, every thing to one whom I regard, not only as the most learned, but likewise as the best of men. Farewell (42)."

(42) Knight's
Life of Colet,
p. 31-34.

To this letter Erasmus immediately returned a very suitable answer, in which he said, that, could he find any thing commendable in himself, he should be proud of being commended by such a worthy person, to whose judgment he allowed so great a weight, that his silent esteem alone was preferable to all the applauses of a Theatre at Rome. The commendations, however, he added, that were given him by such a man, were so far from exalting him in his own opinion, that he was rather humbled by them; since they only served to put him in mind not of what he was, but of what he ought to be. For his part, he best knew his own deficiencies; and, therefore, he would take the liberty to give a character of himself. "You have in me, says he, a man of little or no fortune, a stranger to ambition, a warm devotee to friendship, and an ardent admirer of learning, though but slenderly acquainted with it; one who with the profoundest veneration for excellence in others, is conscious of the want of it in himself; who can easily yield to any person in literature, but to none in integrity; who is sincere, open, free, averse to falsehood and dissimulation; whose mind, though somewhat timid, is upright; and in whom nothing is to be expected besides an honest heart. If, my dear Colet, you can love such a man, you may count me as entirely your own as the very money you possess. Your country of England is most agreeable to me on many accounts, but especially on this; that it abounds with what above all things is delightful to me, men of admirable learning, among whom no one will be displeased that I reckon you as the chief. Indeed, such is your literature, that were it not accompanied with probity of manners, you would be deserving of universal admiration; and such is the sanctity of your life, that, were you devoid of acquired knowledge, you would justly be loved, respected, and venerated by every man." Erasmus then goes on highly to commend Colet's style, after which he thus concludes: "You speak whatever you mean, and mean all that you speak. Words arise from your heart, not from your lips; they arise from your sentiments, without giving them any assistance. In short, you have so happy a facility, that you can deliver without pains what another could scarcely express with the greatest labour. But to yourself I refrain from your praises, that I may not offend against decency; knowing how unwilling those are to be praised who are the most entitled to applause (43)."

(43) *Ibid.* p. 34
—37.

The foundation of friendship, which was thus laid between Colet and Erasmus, ended in the strictest possible intimacy, and continued to the end of their lives. Being now happy in each other's acquaintance, they were solicitous to improve it to their mutual benefit. At a public dinner at the University, after a Latin sermon, where the discourse was scholastical and theological, Colet sat as moderator. Among other discourse Colet said, that Cain's greatest offence, and what was most odious in the sight of God, was his distrusting the bounty of the great Creator, and placing too much confidence in his own art and industry, which induced him to till the ground; whilst his brother Abel, content with the natural productions of the earth, employed himself only in feeding sheep. Upon this question, which at present would be regarded as a very insignificant one, the company engaged; the Divine arguing by strict syllogisms, whilst Erasmus opposed in a more loose and rhetorical manner. But in truth, says Erasmus, this one Divine (Colet) was more than a match for us all.

(x) *Erasmi Epist. Jodoco Jonæ, & Geo. Lilius, ubi supra.*

said or did (x). His learning and piety were above the pitch of the times he lived in: but what made him most renowned, was his public spirit (y). In his writings, his style was

(y) Knight, p. 264, 265.

all. He seemed to be inspired from above, and to have in him somewhat more than human: he spoke not only with his voice, but with his eyes, his countenance, and his whole demeanour. When the disputation grew rather too long and severe for a cheerful entertainment, Erasmus broke it off, by telling a story of Cain, from pretended ancient writers, which was entirely an invention of his own, for the diversion of the company (44).

(44) *Ibid.* p. 44.

The fidelity of Colet's friendship for Erasmus appeared in his rebuking him for some fault or omission of which he had been guilty. Nor was this liberty disliked by Erasmus. It had a good effect upon him, and he thought that such admonitions were rather an establishment than a breach of friendship (45).

(45) *Ibid.* p. 47.

The strong sense of Colet led him wholly to despise the schoolmen. The Scotists he abhorred, because they pretended to be Divines, without so much as reading the Scriptures; nor had he a better opinion of the celebrated Aquinas. Erasmus relates, that he himself once took occasion to commend Thomas Aquinas as not contemptible among the later schoolmen, because he seemed to have studied the Scriptures, and to have consulted the primitive writers. Upon this occasion Colet maintained a profound silence. At another time, Erasmus having enlarged still more strongly upon the praises of Aquinas, Colet looked earnestly upon him, and asked him whether he spoke seriously, or was only in jest. Finding that he was in earnest, he broke out with great ardour, and said, why do you talk to me of that schoolman, who, if he had not been possessed of the greatest arrogance, could never have reduced all things into such positive and dogmatical definitions; and who, if he had not been endued with a worldly spirit, could not have so totally corrupted the pure doctrine of Christ by his profane philosophy. Erasmus, being struck with the enthusiasm of Colet, betook himself to a more diligent perusal of Aquinas's writings; the consequence of which was, that his admiration of that eminent schoolman was very much abated (46).

(46) *Ibid.* p. 52
—56.

The aversion which the Monks had at that time to Grecian literature, is manifest from the following story. A Divine, preaching at Court, took upon him to rail at Greek learning, and at new interpretations of Scripture. Pace, who was present, cast his eye upon the King, to observe how his Majesty was affected with the discourse. Henry smiled upon Pace by way of contempt; and, when the sermon was ended, sent for the Preacher, and appointed a debate to be held in his own presence, concerning the use of the Greek tongue. When the time came, Mr. (afterwards Sir Thomas) More delivered an eloquent vindication of that ancient language. The Divine, instead of making a suitable answer, fell upon his knees, and begged pardon for the offence he had given in the pulpit; alledging in excuse, that what he had done was by the impulse of the spirit. Not the spirit of Christ, says the King, but the spirit of infatuation. His Majesty then asked him, if he had read any thing of Erasmus, to which he replied, that he had not. Why then, returned Henry, you are a very foolish fellow, to censure what you have never read. I have read, says the Preacher, something they call *Moria*. Yes, answered Pace, such a subject is fit for such a reader. At last, the Divine, to soften the resentment against him, declared that he was now better reconciled to the Greek tongue, because it was derived from the Hebrew. The King, being astonished at the ignorance of the man, dismissed him, upon this condition, that he should never again presume to preach at Court (47). We may observe by

(47) *Ibid.* p. 58,
39.

the way, that the poor Divine was not so much mistaken in his notion of the origin of the Greek tongue as the disputers with him imagined. There was some truth in his assertion, though he spoke with an entire ignorance of the subject. It is a fact, that many Greek words are derived from the Hebrew, or at least from the Oriental languages, of which the

Hebrew is a part; but this was a matter which had not at that time been investigated by the learned.

Dean Colet's clemency to Heretics, shews how much he rose above the spirit of the times. In that age, if any man, from a principle of humanity and goodness, was a favourer or reliever of those who rejected the doctrines of Popery, it was sufficient, in the eye of the Church, to render him a partaker of their crimes. Colet, in consequence of his tenderness and compassion for the honest people called Lollards, could not escape this imputation. One of them, who had been censured and condemned in the Spiritual Court, was committed to a prison of his Majesty's, and given up to the civil magistrate as an obstinate offender. But the Dean had the courage to interpose for him with the King himself, and by his own single interest obtained the poor man's life and liberty (48).

(48) *Ibid.* p. 94,
95.

So low was the state of literature in England when St. Paul's School was founded, that there was no little difficulty in procuring a second master, under William Lilly. Erasmus, being then at Cambridge, was requested by Dean Colet to look out for a proper person. He enquired among the Masters of Arts in that University, but could meet with none among the few who might be thought fit for the employment, that would choose to accept it. They did not relish so laborious an undertaking, however honourable the terms might be; and one of the seniors said, in a sneering way, "Who would lead a slavish life among boys, in a school, if he could find any other mode of living?" Erasmus defended the office of instructing youth in learning and good manners, as highly honourable and useful; and what he advanced upon the subject was extremely just, and indeed unanswerable. He spoke, however, to no purpose; for the Monks were incapable of attending to the voice of reason and argument (49).

(49) *Ibid.* p. 167
—169.

Dean Colet's enemies sought frequent occasions of ruining him in the opinion of the King. Henry having resolved upon hostilities with France, it was suggested to his Majesty, that the Dean, at this juncture, advanced the false doctrine, "that the most dishonourable peace was preferable to the justest war." The accusers were two Franciscan Friars, Standish and Bricot. The King, however, gave a signal instance of prudence and moderation. Sending for Colet, he advised him to proceed in reforming a corrupt and dissolute age, and in letting his light shine in the midst of so much prevailing darkness. Henry offered, at the same time, by humbling Colet's adversaries, to let all the world see that those who struck at him should not go unpunished. But the good Dean entreated that his enemies might by no means suffer on his account; saying, that he would rather give up his Deanery, and live altogether in privacy and retirement (50).

(50) *Ibid.* p. 202,
202.

At another time, Colet, being appointed to preach before the King on a Good-Friday, treated of Christ's victory over death and the grave, and exhorted his hearers to fight manfully under this captain of their salvation, and to come off more than conquerors. In the prosecution of his discourse, he spoke somewhat concerning reconciling the differences between Christian States and Princes, and endeavoured to persuade his auditors to conquer those lusts, whence come wars and fightings among men. Those worldly wicked persons, he said, who fought with each other from hatred and ambition, and who were hurried on to mutual slaughter and destruction, did not fight under the banners of Christ, but under the ensigns and tokens of the devil. He shewed how hard it was to die a christian death in a day of battle; how few undertake a war but from the most unwarrantable passions; and how inconsistent the imbruing the hands in blood, was with that fraternal charity without which no man shall see the Lord. In conclusion, he exhorted those who were finishing their warfare under the banner of their Saviour, not to imitate the Alexanders, the Cæsars, and other victorious Princes, but their

was plain and unaffected, but it had always something weighty and pungent. And this, which some might call carelessness, did not proceed from a want of what goes under the name

their own humble Lord and master Jesus. With this doctrine the King was not a little disturbed. He was afraid that such a powerful dissuasive from war might cool the minds of his subjects, and even intimidate the soldiers, at the very juncture of his commencing hostilities with France. He sent, therefore, for the Preacher, immediately after sermon, and upon his appearing, Henry ordered all his attendants to withdraw. Colet's enemies were now not a little elated, and had no other expectation but that he would instantly be sent from the Court to the Tower. But the King, on the contrary, spoke to him in the following friendly manner: "Mr. Dean, that you may fear no harm, I did not send for you to interrupt your holy labours in preaching, which I would rather encourage and promote; but to disburthen my own conscience of some scruples, and by your spiritual advice to direct myself in the present posture of my affairs." His Majesty then informed Colet, that he was now engaged in a war with the French King; not at his own desire, but by force and urgent necessity, for the defence of his dominions. Therefore, though the Doctor, in his truly christian sermon, had spoken admirably well of brotherly love and charity, and of laying aside the thoughts of revenge, and had almost reconciled him to his greatest enemies the French; yet since the hostilities he had commenced were not the result of choice, but of necessity, and undertaken to repel force with force, he must desire him, in another discourse, to vindicate the lawfulness of such a war as was defensive, and should be entered upon for the honour and safety of our country. Dean Colet, with all dutiful readiness, obeyed the King's command, and, at the next opportunity, spoke, in the same grave and eloquent way, of the grounds of a lawful war among Christian Princes and States, with such strength of reason and scripture, that he not only confirmed Henry and his Nobles in their intended enterprise, but even raised the spirits of the common people, who were before cool and indifferent in the matter. When the sermon was ended, the King thanked the Dean publicly before all the assembly, and said to his nobility, who stood around him; "Well, let every one choose his own Doctor; but this shall be my Doctor, before all others whomsoever." His Majesty, then taking a glass of wine, drank very graciously to Colet, and dismissed him with the highest marks of affection (51).

(51) *Ibid.* p. 203
—208.

A story, which displays the natural warmth of the Dean's temper, and the command he obtained over it, is related by Erasmus. Archbishop Warham's house and table were always open to men of learning, as well foreigners as natives of his own country, and none were more encouraged to accept of the civilities there bestowed than Erasmus and Colet, who often went to Lambeth, and returned together. Now the Dean had an old uncle, so froward and perverse in his disposition, that he could never agree with him; besides which, there was a suit, or quarrel, depending between them, for a sum of money which would have been considerable enough to have created a war between a father and a son. Colet going one day to dine with Warham, and taking Erasmus in the boat with him, he read, as he sat there, that part of his friend's Enchiridion which prescribed a remedy against anger and passion; not intimating why he was so intent upon the subject. It happened, at the Archbishop's table, that the Dean was seated opposite to his uncle, and was so troubled in his own mind, that he could not either talk or eat. The Archbishop had an admirable art of making all his company easy and chearful, by framing his discourse in such a manner as was suitable to their humours and inclinations. At this time he began to talk of ages; who were old, and who were young. The topic suited several who were present, and who had not spoken before; so that they began to be very free and familiar. Colet's uncle, in particular, like a true old man, boasted what he could do at his years. After

VOL. IV.

dinner, Warham conversed in private with the uncle and nephew, and brought them to terms of agreement. As Colet and Erasmus were returning in the boat, the former said to the latter, "Well, you are a very happy man, and have done me a great deal of service." Erasmus being surprized at this language, the Dean informed him, that he had been extremely incensed against his uncle, and had almost resolved to put off the kinsman, and even the Christian, and wage open war with him; but that, under this commotion of mind, he had taken the Enchiridion with him, and read over the advice for restraint of anger; which had done him so much good that he had commanded himself at table, and returned to such a temper with his old relation, that, presently after dinner, by the Archbishop's interposition, the whole affair had been made up. Erasmus used to relate this story to people who had differences, and were not easy to be reconciled (52).

(52) *Ibid.* p. 245
—248.

Notwithstanding Dean Colet's excellent understanding, he had some peculiarities of sentiment, that were contrary to sound sense, but which may be accounted for, from considering the superstition of the age wherein he lived. In his comment on the sixth chapter of the first Epistle to the Corinthians, he scarcely permits the going to law; and in treating upon the seventh chapter of the same Epistle, he does not allow marriage to be lawful, but only regards it as a remedy *contra incontinentiam; ut ubi non sentitur illa infirmitas, ibi illa ad nuptias licentia non est usurpanda*. Neither did he think it necessary that Christians should marry for the sake of begetting children; "for that, saith he, might be left to the Gentiles—But what if the Gentiles should be wholly converted? Then, he adds, the kingdom of God would come: then would the world be *sanctus & animo & corpore*: then would the end take place, "and God be all in all (53)." It is possible, that these were not so much settled opinions, as notions hastily thrown out: it is certain, that they were not well digested. At another time, Colet entertained a juster idea of marriage. He used to say, that he never found better or purer manners than among the married men, whose natural affection to their wives, care of their children, and government of their families, kept them within the bounds of moderation and chastity (54).

(53) Knight's
Life of Dean
Colet, Introduc-
tion, p. xii.

According to the general temper of the age, Colet and his schoolmasters carried severity to their scholars to an undue length. It was the Dean's opinion, that there was a necessity for harsh discipline to humble the spirit of boys, to enure them to hardships, and to prepare them for the mortifications, sufferings, and afflictions they would meet with in the world. Erasmus, on the other hand, pleaded strongly for a gentle treatment of children. The same great author relates a story, understood to refer to the Dean, which places him in a very disagreeable light. We shall insert it in the original Latin; for if any tender mother were to read it, Colet would never be forgiven by her. "Novi theologum quendam, & quidem domesticæ, maximi nominis, cujus animo nulla crudelitas satisfaciebat in discipulos, quum magistros haberet strenue plagosos. Id existimabat unice, & ad deiciendum ingeniorum ferociam, & ad edomandam ætatis lasciviam pertinere. Nunquam agitabat convivium apud gregem suam, nisi quemadmodum comœdiæ exeunt in lætam catastrophem, ita post cibum sumptum, unus aut alter protraheretur virgis lacerandus; & interim sæviebat & in immeritos, nimirum, ut affluerent plagis. Ipse quondam adstiti proximus, quum à prandio ex more puerum avocaret, annos natum, ut opinor, decem. Recens autem à matre venerat in eum gregem. Præfatus est, illi matrem esse cum primis piam fœminam, ab ea sibi puerum studiose commendatam: mox, ut haberet occasionem cædendi, cœpit objicere nescio quid ferociæ, quum nihil minus præ se ferret puer; & innuit illi cui collegii præfecturam commiserat, huic ex

usque ad pueri syncopen. Mox theologus versus
ad nos, *nihil commovit*, inquit, *sed erat humilian-*
dus; nam hoc verbo est usus. Quis unquam ad
eum modum eruditur mancipium; imo quis asi-

num (55)?"
Dr. Jortin hath recited this story, as well as Dr.
Knight. They both of them, likewise, take notice
of the improper conduct of Mr. Collier, with regard
to Dean Colet. That bigoted writer, in his Ecclesi-
astical History, leaves out all the Dean's preaching
against image worship, and other corruptions of the
Church of Rome, and only gives an account of his
Lent Sermons, concerning war. With respect to
these last, he describes them as if they had been de-
livered in the reign of King Henry the Seventh;
whereas it is evident, from the occasion of them, that
they could not be preached before the preparations
which Henry the Eighth was making for hostilities
with France, in the year 1512. What is more extra-
ordinary still, Collier hath not so much as mentioned
Dean Colet's name in his Historical Dictionary (56).

Dr. Birch, speaking of the Dean's Convocation
Sermon, observes, that it is not contemptible either
for style or argument (57). As the translation of it
is understood to have been made from the Latin ori-
ginal, by Colet himself, we shall insert a specimen
of it, which may serve to display something of the
manners of the times, and to shew his turn of sen-
timent and composition.

"To exhort you reverent fathers to the endeavour
of reformation of the churches estate: because that
nothyng hath so disfigured the face of the church,
as hath the facion of secular and worldly lyuynge in
clerkes and pristes: I knowe nat where more conue-
niently to take begynnyng of my tale, than of the
apostle Paule, in whose temple ye are gathered to ge-
ther. For he writyng unto the Romanes, and vnder
their name vnto you saith: Be you not conformed to
this worlde: but be you reformed in the newnes of
yours understandyng, that ye may prove what is
the good wyll of god well pleasing and perfecte.
This dyd the apostle wryte to all christen men, but
most chiefly unto pristes and bysshops. Pristes and
bissshops are the lyghte of the worlde. For vnto them
sayde our sauour: you are the lyghte of the worlde.
And he sayde also: If the lyghte that is in the be
darkenes, howe darke shall the darkenes be? That is
to say, if pristes and bysshops, that shulde be as lyghtes
ronne in the darke way of the worlde, howe darke
than shall the secular people be? Wherefore saynt
Paul sayde chiefly unto pristes and bissshops: Be you
nat conformable to this worlde, but be ye reformed.
In the whiche wordes the apostle dothe two thinges.
Fyrst he doth forbyd that we be nat conformable to
the worlde and be made carnall. Farthermore he
doth command that we be reformed in the spyryte of
god, where by we are spirituall. I entendyng to
followe this order, I wyl speke fyrst of conformation,
than after of reformation. Be you nat (sayth he)
conformable to this worlde. The apostle calleth the
worlde, the wayes and maner of secular lyuynge: the
whiche chiefly dothe reste in foure euylles of this
worlde: that is to say in diuylishe pride, in carnall
concupiscence, in worldly couetousnes, in secular bu-
synes: These are in the worlde, as saynt John the
apostle witnesseth in his pitell canonicall. For he
saythe: All thyng that is in the worlde, is either the
concupiscence of the fleshe, or the concupiscence of
the eies, or pryde of lyfe. The same are now and
reynge in the church, and in men of the church,
that we may seme truly to say, all thyng that is in
the church, is either concupiscence of fleshe, or eies,
or pryde of lyfe. And fyrste for to speake of pryde
of lyfe, howe moche gredynes and appetite of honour
and dignitie is now a dayes in men of the church?

Howe ronne they, ye almost out of brethe from one
benefice to an other: from the lesse to the more, from
the lower to the hygher? who seethe nat this? who
seyng this sorowethe nat? More over these that are
in the same dignities the moost parte of them doth go
with so statly a countenance and with so hyghe lokes,
that they seme nat to be put in the humble byshoprike
of Christ, but rather in the high lordship, & power
of the worlde, nat knowynge, nor aduertisinge, what
Christe, the mayster of all mekenes, sayd unto his
disciples, whome he called to be byshoppes and
pristes: The princis of people (sayth he) haue lord-
shipp of them: and those that be in auctorite haue
power: but do ye nat so: but he that is greater
amonge you, let him be minister. He that is highest
in dignitie, be he the seruant of al men. The sonne
of man came nat to be mynstred vnto, but to mi-
nystre. By whiche wordes our sauour dothe playnly
teache, that the maistry in the church, is none other
thyng than a ministracion: And the hygh dignitie
in a man of the church to be none other thing than
a meke seruice.

"The seconde secular euyl is carnal concupiscence.
Hath nat this vice so growen and waxen in the church
as a fludde of theyr luste? so that there is nothyng
looked for more diligently, in this moost besy time,
of the moost parte of pristes, than that that dothe de-
lite & please the senses? They gyve them selfe to
feastes and bankettyng: They spend them selfe in
vaine bablyng: They gyue them selfe to sportes &
plays: They applye them selfe to huntynge and
haukyng. They drowne them selfe in the delytes
of the worlde. Procurers and fynders of lustes they
set by. Against the whiche kynd of men, Judas the
apostle crieth out in his pistle, sayeng: wo vnto them,
whiche haue gone the way of Cain. They are foule
& bestly festing in their meates without feare feadyng
them selfe: fluddes of the wylde see, fomyng out
their confusions: vnto whom the storme of darknes
is reserued for euerlastyng.

"Couetousnes is the thyrde secular euyl: the
whiche saynt John the apostle calleth concupiscence
of the eies: Saynt Paule calleth hit idolatry. This
abominable pestilence hath so entred in the mynde,
almost of all pristes, and so hath blynded the eies
of the minde, that we are blynde to all thynges, but
onely vnto those, which seme to bryng vnto us some
gaynes. For what other thyng seke we now a
dayes in the church, than fatte benefices and hygh
promotions? ye & in the same promotions, of what
other thyng do we passe upon, than of our tithes and
rentes? That we care nat howe many, howe charge-
ful, howe great benefices we take, so that they be of
greate valure. O couetousnes: saint Paule iustly
called the the roote of all euyl. Of the cometh this
heaping of benefices upon benefices: Of the so great
pensions assigned of many benefices resygned: Of
the, all the suyng for tithes, for offryng, for mor-
tuaries, for delapidations, by the ryght and title of
the church: For the whiche thing we stryue no lesse
than for our owne life: O couetousnes: of the cometh
these chargeful visitations of byshops: Of the
cometh the corruptnes of courtes and these daily
newe inuentions: where with the fely people are so
fore vexed. Of the cometh the besyfte and wanton-
nes of officials. O couetousnes mother of all ini-
quitie. Of the cometh this feruent study of ordina-
ries to dilate theyr iurisdiccions: Of the cometh this
woode and ragenge contention in ordinaries, of the
insinuation of testaments: of the cometh the vndewe
sequestration of frutes: Of the cometh the supersti-
tious obseruyng of all those lawes, that founde to any
lucre, settyng a fyde and dispisyng those that con-
cerne the amendment of maners. What shuld I re-
herse the reste? To be shorte, and to conclude at one
worde: All corruptnes, all the decaye of the church,
all the offences of the worlde, come of the coue-
tousnes of pristes. Accordyng to that of saynt Paule,
that here I repete agayne, and beate in to your eares:
Couetousnes is the roote of all euyl.

The

of grammar : which, he often said, did rather obstruct the purity of the language, not to be obtained but by reading the best and purest authors. This contempt of grammar-rules made him sometimes fall under the censure of the Critics (a). He was, however, a great master of style and language ; so that, though his preaching was popular, and adapted to vulgar capacities, yet withal it was agreeable to the better judgment of men of wit and

(a) *Idem*, p. 198.
Erasmi Epist. Jo-
doco Jones.

“ The fourthe secular euyl, that spotteth and maketh euyl fauored the face of the church, is the continuall secular occupation : wherein priests and byshops nowe a days doth besy them selfe, the seruantes rather of men than of god : the warriours rather of this worlde than of Christe. For the apostle Paule wryteth vnto Timothe : No man beinge goddes fouldiour, turmoyle hym selfe with seculare busynes. The warrynge of them is nat carnall but spirituall. For oure warrynge is to pray, to rede and study scriptures, to preache the worde of god, to mynister the sacraments of helth, to do sacrifice for the people, and to offere hostis for their sinnes. For we are mediators and means vnto god for men : The whiche saynt Paule wytnesse the, writinge to the Hebrewes : Euery byshoppe (sayth he) taken of men, is ordeyned for men in those thynges that be unto god, that he may offer gyftes and sacrifices for synnes. Wherefore those apostles, that were the fyrst priests and bisshops, dydde so moche abhorre from all maner of medlyng of secular thinges, that they wolde nat mynister the meate, that was necessarye to poore people, all though that was a great worke of vertue : but they sayd : it is nat mete, that we shulde leaue the worde of god, and serue tables : we wyll be continually in prayer, and preachynge the worde of god. And saynt Paul cryeth vnto the Corinthians. If you haue any secular besynes, ordeyne them to be iuges, that be mooste in contempt in the church. —

“ These be the foure euyls that I haue spoken of, O fathers, O priests, by the whiche we are conformable to this worlde, by the whiche the face of the church is made euyl fauored, by the whiche the state of it is destroyed, truly moche more than it was in the begynnyng by the persecution of tyrants : or afterwarde by the inuasion that folowed of heretykes. For in the persecution of tyrantes, the church beyng vexed was made stronger and bryghter : In the inuasion of heretykes the church beyng shaken, was made wyser and more cunning in holy wrytte. But sens this secularitie was broughte in, after that the secular maner of luyng crepte in, in the men of the church : the roote of all spiritual lyfe, that is to say, charite was extincte : The whiche taken awaye, there can nother wyse nor stronge church be in god (58).”

(58) *Life of Colet*, ubi supra, p. 291—296. 298.

Mr. Granger's short, but animated, character of Dean Colet must not be omitted. “ No higher testimony, says he, need to be given of the merit of Colet, than his great intimacy with Erasmus. There was a similitude of manners, of studies, and of sentiments in religion, betwixt these illustrious men, who ventured to take off the veil from ignorance and superstition, and expose them to the eyes of the world ; and to prepare men's minds for the reformation of religion, and restoration of learning. Erasmus, who did him the honour to call him his master, has given us a hint of his religious sentiments in his famous colloquy, intitled, *Peregrinatio Religionis ergo*, in which Colet is the person meant, under the name of Gratianus Pullus.

“ Colet, Lynacre, Lilly, Grocyn, and William Latimer, were the first that revived the learning of the ancients in England (59).”

(59) *Biographical History of England*, vol. i. p. 97. Second edition.

Mr. Granger hath mentioned nine engraved prints of Dean Colet (60).

(60) *Ibid.* p. 96.

In note [H], a list is given of eighteen high Masters of St. Paul's School, ending with Mr. Charles, who was elected in 1736-7. The gentlemen who have since been appointed to this important office, have maintained the character of the school with great ability ; and under the government of the present learned master, Dr. Roberts, it continues to be in a very flourishing condition.

Dr. Knight, who, in his Appendix to the Life of

Dean Colet, has given a short history of the high Masters of St. Paul's School down to Mr. Morland, has, likewise, added a brief account of the distinguished scholars that have been educated in this seminary. The catalogue is principally confined to those persons who either were writers, or who rose to considerable eminence in Church or State. It will appear, from the following names, that the School hath produced several illustrious men. Thomas Nightingale. He was educated under Lilly, and was admired at Oxford for his wit. He wrote a Latin Poem on the decease of Colet, and Elegies, in the same language, on the death of Lilly. Thomas Lupset, another disciple of the same master, became famous at Oxford for teaching the Greek tongue. He died in 1531. Sir Anthony Denny, a great Mecenas to learned men, and Privy Counsellor to King Henry the Eighth. Sir William Paget, a favourite with the same Monarch, and raised by him to many dignities ; created Baron of Beaufort in Edward the Sixth's reign, and Privy Counsellor to four successive Princes. Sir Edward North, afterwards Edward Lord North, Baron of Kirtling in Cambridgeshire. John Leland, Dr. William Whitaker, King's Professor of Divinity at Cambridge, and a great champion of the Protestant cause. William Camden. William Burton, a learned Divine and Antiquary. Edward Lane, M. A. author of several theological works. John Milton. Sir Peter Pett, an eminent Civilian. Sir Charles Scarborough, a celebrated Anatomist and Physician. Samuel Pepys, Esq; Author of the Memoirs relative to the State of the Navy, and bequeather of the Pepysian Library, to Magdalen-College, Cambridge. Samuel Johnson, noted for his political writings and sufferings. Dr. Benjamin Calamy. Dr. Richard Meggot, Dean of Winchester, and Canon of Windsor. Dr. Edward Reynolds, Archdeacon of Norwich, and Prebendary of Worcester. William Corker, M. A. senior Fellow of Trinity-College, Cambridge, the friend of Barrow, and a benefactor to the library of St. Paul's School. Thomas Smith, M. A. Public Librarian at Cambridge. Thomas Gipps, Fellow of Trinity-College, in the same University. Dr. William Nicholls, author of a “ Conference with a Theist,” and other theological works. Richard Blondel, an able Surgeon. Sir Thomas Davies, Sheriff and Lord-Mayor of London, and distinguished for his skill in the European languages. Dr. Humphrey Gower, Master of St. John's-College, Cambridge, and Margaret Professor of Divinity. Robert Nelson, Esq. Dr. Richard Cumberland, Bishop of Peterborough. George Doddington, Esq; uncle to the late Lord Melcombe. Dr. Thomas Tooke, an eminent School-master at Bishop Stortford. Samuel Rosewell, M. A. a dissenting Minister in London, and son of the Mr. Thomas Rosewell, whose trial by Lord Chief Justice Jefferies ranks among the most infamous proceedings of that execrable Judge. Roger Cotes, Plumian Professor of Astronomy at Cambridge. Sir John Trevor, Master of the Rolls, and Speaker of the House of Commons. Archibald, Earl of Forfar. Charles, the first Duke of Manchester. John Churchill, Duke of Marlborough. Sir Edward Northey, Attorney-General. Dr. George Hooper, Bishop of Bath and Wells. Dr. Samuel Bradford, Bishop of Rochester. Dr. John Leng, Bishop of Norwich. Spencer Compton, Esq; Speaker of the House of Commons, and afterwards Earl of Wilmington. Spencer Cowper, Esq; Chief Justice of Chester. To these names we must not omit adding, Dr. Samuel Knight, Prebendary of Ely, from whom we have derived almost the whole of our information with regard to Dean Colet (62) ; and Dr. Arthur Ashley Sykes, the author of a great number of valuable publications, and one of the most eminent and learned Divines in the present century.] K.

(62) Knight's Life of Colet. Appendix, No. VII. p. 389—434.

learning,

c) Scotistas, stupidos omnino, ac sine ingenio homines judicabat: Thomistas, lymphatico spiritu arrogantes, i. e. He counted the Scotists stupid, senseless fellows; and the Thomists, mad. Balei Script. Brytanniae Centuria VIII. n. 63. p. 648. He abhorred the Scotists because they would be Divines, without so much as reading the Scriptures: Erasmus J. Jonæ.

(d) Knight, as above, p. 60, 61. 72.

learning, and was much admired by the great Sir Thomas More (b). He was, likewise, a great lover and encourager of the Greek tongue. With regard to *some of his notions*, he was a very eminent forerunner of the Reformation; and he and Erasmus jointly promoted it; not only by pulling down those strong holds of ignorance and corruption, the Scholastical Divinity, and routing entirely both the Scotists and Thomists, who had divided the Christian world between them (c), but also by discovering the shameful abuses of Monasteries, and the dangers of imposing celibacy on the Clergy: to which places, Colet gave little or nothing while he lived, and left not a farthing when he died; not so much out of hatred to their several orders, as because he found that few or none of them lived up to their vows and professions (d). He thought simple fornication in a Priest more excusable than pride and avarice; and was with no sort of men more angry, than with those Bishops, who, instead of shepherds, acted the part of so many wolves: he thought none more execrable than they, because, under the pretence of devotions, ceremonies, benedictions, and indulgences, they recommended themselves to the veneration of the people, while, in their own hearts, they were slaves to the world; that is, to glory and gain (e). He condemned auricular confession; and was content to say mass only upon Sundays and great festivals, or at least upon a very few days besides. He had gathered up several authorities from the ancient Fathers against the current tenets and customs of the Church; and though he did not care to fly in the face of the governors, yet he could not but favour those who disliked the way of worshipping images (f). As to his other qualifications, he was a man of exemplary temperance, and all other virtues. The Dean's table, which, under the name of hospitality, had before served to luxury, he contracted to a more frugal way of entertaining: and it having been his custom, for many years, to eat but one meal, that of dinner, he had always the evening to himself. As he dined late, he had but few guests; and the fewer, because his provision was frugal, though neat. The sittings were short, and the discourses such as pleased only the learned and the good. As soon as grace before meat was said, a boy read, with a loud voice, and distinctly, a chapter out of one of St. Paul's Epistles, or the Proverbs of Solomon. When it was finished, the Dean raised, from some particular part of it, a subject matter of discourse. He was so impatient of whatsoever was foul or indecent, that he could not bear with an improper way of speaking. He loved to be neat and clean in his goods, furniture, entertainments, apparel, and books, and whatever belonged to him; but he despised all state and magnificence (g), there being in his demeanour the most unaffected simplicity imaginable (h).

(h) Knight, p. 266.

COLLIER (JEREMY), son of Jeremy Collier, was born at Stow Qui, or Quire, in Cambridgeshire, September 23, 1650. His father was a Divine, and considerable Linguist, and some time Master of the Free-school at Ipswich, in the county of Suffolk. His grandfather likewise was a Clergyman, settled at Bradford in Yorkshire, where he lived in esteem for his function. He was born at Yeadon, near Bradford, and descended from a gentleman's family of that name, seated at Thrusk, in the same county, in the reign of Henry VIII. His mother was Elizabeth Smith, of Qui, in Cambridgeshire, where her family were possessed of a considerable interest, and related to the Sternes of that town, being by her mother descended from the Keys, or Cays, of Yorkshire and Lincolnshire. He was educated under his father at Ipswich, whence he was sent to Cambridge, and admitted a poor Scholar of Caius-College, under the tuition of Mr. John Ellys. His admission bears date April 10, 1669, in the eighteenth year of his age. He took the degree of Bachelor of Arts in the year 1672-3, and that of Master of Arts in 1676, being ordained Deacon on the twenty-fourth of September the same year, by Dr. Peter Gunning, Bishop of Ely, and Priest February 24, 1677, by Dr. Henry Compton, Bishop of London. Having entered into Priest's orders, he officiated some time at the Countess Dowager of Dorset's, at Knowle, in Kent, whence he removed to a small Rectory at Ampton, near St. Edmundsbury, in Suffolk, to which he was presented by James Calthorpe, Esq; and instituted by Dr. Anthony Sparrow, Bishop of Norwich, Sept. 25, 1679. After he had held this benefice six years, he resigned it, and came to reside in London in 1685, and was, some little time after, made Lecturer at Gray's-Inn. But the Revolution coming on, the public exercise of his function became impracticable (a). He did not, however, think it compatible with his principles, at that critical conjuncture, to sit down contentedly, and say nothing; but finding, in that confusion which arose upon King James's going to France, that the Convention was, in a great measure, influenced by the papers written by a Clergyman who came over with the Prince of Orange, he thought the same liberty might be taken by a Clergyman who conceived differently from him, and accordingly broke the ice, and published the first pamphlet that appeared in defence of the cause which he espoused (b), and a very sharp piece it was [A]. When the government was

(b) From the information of a gentleman, who was intimately acquainted with Mr. Collier.

(a) Thus far this article was (except some dates) drawn up by Mr. Collier himself.

[A] And a very sharp piece it was.] As this article cannot be rendered perspicuous, indeed hardly intelligible, without explaining the political and literary controversies in which this writer was engaged, we

shall endeavour to give as clear and concise an account of them as possible. In the month of December, 1688, the famous Dr. Gilbert Burnet, afterwards Bishop of Salisbury, sent abroad a very succinct, and well-written pamphlet,

was settled, by placing King William and Queen Mary upon the throne, Mr. Collier remained firm to the principles he had embraced, and continued not only to abstain from taking the oaths which the new legislature had imposed, but laboured all that in him lay to prevent others, more especially such members of the Church of England, from owning, or so much as complying with them. It was to this end that he wrote several warm and bitter pieces, which in those days had their effect, and consequently procured their author, in the opinion at least of those who were of his own party, the character both of a solid and shining writer [B]. There is no doubt but this conduct of his occasioned an eye to be kept over his proceedings, nor could it be supposed that any government would forbear the opportunity that occurred of giving some check, to so active, so industrious, and so dangerous a man. It was not long before such an occasion offered itself. Information was given to the Earl of Nottingham, at that time Secretary of State, that Mr. Collier, with one Mr. Newton, another Nonjuring Clergyman, was gone down to Romney-Marsh; which was enough to fix a suspicion, that they were either endeavouring to send intelligence to, or were labouring to receive it from, the other side of the water. Upon this, about the latter end of the year 1692, Messengers were sent down into Kent to apprehend them; which they accordingly did, and brought them to London, where, after a short examination before the Earl of Nottingham, who charged them with being in a design against the government, they were committed to the Gate-House (c). But, as no evidence of their being in any such design could be found, they were admitted to bail. So strict, however, were Mr. Collier's principles, that he had not long been at liberty, before he began to question the consistency of his own conduct in giving bail; upon which he went before the Lord Chief Justice Holt, surrendered in their discharge, and was committed to the King's Bench prison; but upon the application of some of his friends to that most upright and impartial Judge, he was discharged in a week or ten days (d). Yet even this

(c) As appears from the Contents of the Papers afterwards mentioned.

(d) As may be collected from the dates of several Papers mentioned in the note.

pamphlet, under the title of *An Enquiry into the present State of Affairs, and in particular whether we owe Allegiance to the King in these Circumstances, and whether we are bound to treat with him, and call him back again, or not? Published by Authority* (1). In this piece, the Doctor gives his sentiments very freely, as to the behaviour of King James, and the conduct that was to be observed towards him, as the reader will see from the following short quotation. 'In all

(1) See the Collection of Tracts written by Dr. Gilbert Burnet, afterwards Bishop of Salisbury.

' that I have said concerning his desertion, I limit my reflections to his first leaving of Whitehall; for the accident at Feversham, and what followed after that, cannot be called a return to his people; and since the seals never appeared, and the King never spake of a Parliament, nor altered his measures in any thing, but still prosecuted his first design by his second escape, his deserting is still to be dated from his first going from Whitehall; and he having given that just advantage against himself, which came after all that series of injustice and violence, that had gone before it, no man can think, that it was not very fitting to carry it as far as it would go, and not to treat with him any more upon the foot of acknowledging him King (2). It was in answer to this treatise, and particularly to the argument insisted upon in this passage, that Mr. Collier wrote the piece mentioned in the text, and which was intitled,

(2) Enquiry into the present State of Affairs, p. 9.

I. *The Desertion discussed, in a Letter to a Country Gentleman.* Lond. 1688, 4to. He labours in this short pamphlet to shew, that the King, before his withdrawing, had sufficient grounds to be apprehensive of danger; that his leaving any representative behind him was impracticable at that juncture; and that there were no grounds, either from the laws of the realm, or of nature, to pronounce the throne void from such a retreat. To this pamphlet of Mr. Collier's, an answer was written by Edmund Bohun, Esq; in which he gives them the following character (3). 'The author of it is my acquaintance, and a person for whom I have a great esteem, both on the account of his profession, and of his personal worth, learning, and sobriety; so that I cannot believe he had any ill design, either in the writing, or the publishing of it; his zeal for the Church of England's loyalty, and the difficulty, and the unusualness of the present case, having been the occasions, if not the causes, of his mistake; and therefore I will endeavour to shew him, and the world, his error, with as much candour and sweetness, as he himself can wish; because I have the same design

(3) State Tracts in the Reign of King William, vol. i. p. 116.

' for the main that he had, viz. the honour of the Church of England, and the safety of government, and especially our monarchy.' But this was not the only answer Mr. Collier received; for his performance gave such offence, that after the government was settled, he was seized and committed to Newgate, where he continued a close prisoner for some months; but was at length discharged, without being brought to a trial. He afterwards wrote the following pieces, viz.

III. *Vindiciæ Juris Regii, or Remarks upon a Paper, intitled, An Enquiry into the Measures of Submission to the supreme Authority.* Lond. 1689, 4to. The author of this *Enquiry*, was also Dr. Burnet, afterwards Bishop of Salisbury.

IV. *Animadversions upon the modern Explanation of Hen. VII. cap. 1. or a King de Facto,* 1689, 4to.

[B] *The character both of a solid and shining writer.* As Mr. Collier was now embarked in an avowed opposition to the government, he laboured as much as in him lay to enlarge the strength of the party which he had joined; and with this view he continued to write, as the reader will see in the following catalogue of his works, during the space of less than two years.

V. *A Caution against Inconsistency, or the Connection between praying and swearing, in relation to the civil Powers,* 1690, 4to. This discourse is a dissuasive from joining in public assemblies.

VI. *A Dialogue concerning the Times, between Philobellus and Sempronius,* 1690, 4to. There was another dialogue, with much the same title, printed in 1692, and called a *second part*, but it was not Mr. Collier's, being a narrative of the *Revolution*, whereas Mr. Collier's relates chiefly to the authority of the *Convention*.

VII. *To the Right honourable the Lords and to the Gentlemen convened at Westminster,* October 1690, half sheet; it is a petition for an enquiry into the birth of the Prince of Wales.

VIII. *Dr. Sherlock's Case of Allegiance considered, with some remarks upon his Vindication,* Lond. 1691, 4to.

IX. *A Brief Essay concerning the Independency of Church Power,* 1692, 4to. The design of this essay is to prove the public assemblies guilty of schism, upon account of their being held under such Bishops, as had assumed, or owned such, as had assumed the fees of those, that were deprived for not complying with the government, &c.

did not content him, as appears by several pieces of his written upon this subject [C]. In the space of some years following, there happened nothing that so far engaged this gentleman's attention, as to induce him to write against the transactions of the State, which were, generally speaking, the subjects that employed his pen. But upon the breaking out of that which was called the Assassination Plot, and the conviction of Sir John Friend and Sir William Perkins, an incident happened which made a very great noise, and deeply affected Mr. Collier his whole life after. The fact was this: Mr. Collier, with Mr. Cook and Mr. Snatt, both Clergymen of his own opinion, attended those unhappy persons at the place of execution, where Mr. Collier solemnly absolved the former, as Mr. Cook did the latter, and all three joined in the imposition of hands upon them both (e). This, as might be very well expected, made a very great noise, and was looked upon as a very high insult on the Civil and Ecclesiastical government; for which reason they fell under a severe prosecution on one side, in consequence of which Mr. Cook and Mr. Snatt were sent to Newgate, but afterwards were released without being brought to a trial; and Mr. Collier having still his old scruple about putting in bail, absconded, and was outlawed, under which incapacity he remained as long as he lived (f). On the other hand, both the Archbishops, and ten of their suffragans, viz. the Bishops of London, Durham, Winchester, Coventry and Litchfield, Rochester, Hereford, Norwich, Peterborough, Gloucester, Chichester, and St. Asaph, published a very strong Declaration of their sense of this scandalous and irregular proceeding (g). To this our author wrote an answer with his usual vigour, and after that several other pieces, in support of his own and his brethren's conduct in this affair [D]. After this storm was a little over, Mr. Collier employed himself in reviewing and

(e) Compl. Hist. of England, vol. iii. p. 719. Oldmixon's Hist. of the Stuarts, vol. ii. p. 143.

(f) From the information before mentioned.

(g) This Declaration is to be found at large in the Appendix to the third Vol. of the State Tracts in the time of King William.

[C] As appears by several pieces of his written upon this subject. It seems that Mr. Collier had occasionally read Law, and this it was that induced him to make a scruple of remaining upon bail, because he apprehended that the very recognizance, by which bail was taken, carried in it an acknowledgment of the jurisdiction of the court, in which the bail was taken, and by consequence of the power whence the authority of that court was derived. In support of these principles, and in justification of his own conduct, he wrote the following pieces, of which it is said, there were only five copies printed.

X. *The case of giving bail to a pretended authority examined, dated from the King's Bench, November 23, 1692, with a preface dated December 1629, and a letter to Sir John Holt, dated November 30, 1692. And also a reply to some remarks upon the case of giving bail, &c. dated April 1693.* He wrote, soon after this,

XI. *A Persuasive to Consideration, tendered to the Royalists, particularly those of the Church of England.* Lond. 1693, 4to. It was afterwards reprinted in 8vo. together with his vindication of it, against a piece entitled, *The Layman's Apology*, &c. written in confutation of that part of the Persuasive, which relates to the controversy about the frequenting the public assemblies.

XII. *Remarks upon the London Gazette, relating to the Straits Fleet, and the battle of Landen in Flanders, 1693, 4to.*

[D] In support of his own and his brethren's conduct in this affair. In order to form some notion of this transaction, it will be requisite to see that part of the Prelate's Declaration which relates to the conduct of these Clergymen, and in which they shew, that their proceeding was not to be justified by the doctrines or practice of the Church of England. Their words are these (4):

'For those Clergymen that took upon them to absolve these criminals at the place of execution, by laying all three together their hands upon their heads, and publicly pronouncing a form of absolution; as their manner of doing this was extremely insolent, and without precedent either in our Church, or any other that we know of; so the thing itself was altogether irregular.—The rubrick in our Office of the Visitation of the Sick, from whence they took the words they then used, and upon which, if upon any thing in our Liturgy, they must ground this their proceeding, gave them no authority nor pretence for the absolving these persons; nay, as they managed the affair, they acted, in this absolution, far otherwise than is there directed. That rubrick is concerning sick persons; and it is there required, First, *That the sick person shall be moved to make a special confession of his sins,*

if he feel his conscience troubled with any weighty matter; and then, after such confession, the Priest shall absolve him, if he humbly and heartily desire it. But here they absolved, and that publicly, persons condemned by law for execrable crimes, without so much as once moving them, at that time, to make a special confession of their sins, at least of those sins for which they were condemned. And on the other side, here were persons absolved that did not humbly desire absolution, as feeling any such weighty matter to trouble their conscience; but, on the contrary, in Sir John Friend's paper it is declared, that he had a great deal of satisfaction in suffering for that cause, which he firmly believed to be the cause of God and true religion. If these Ministers knew not the state of these men's souls before they gave them absolution, as it is manifest two of them, Mr. Snatt and Mr. Cook, did not as to Sir William Perkins, (they having since declared that they had not spoke with Sir William, till they were at the place of execution) how could they, without manifest transgression of the Church's order, as well as the profane abuse of the power Christ hath left with his Ministers, absolve them from all their sins? If they were acquainted with these men's sentiments declared in their papers, then they must look upon them either as hardened impenitents or as martyrs. We are so charitable to believe, that they would not absolve them under the former notion, for that had been in effect sealing them to damnation; but if they held these men to be martyrs, then their absolving them in that manner was a justification of those grievous crimes for which these men suffered, and an open affront to the laws both of Church and State. Upon the consideration of these things, and for the doing of right to our Church, which may otherwise suffer amongst such as are strangers to our constitution, by the evil principles and practices, both of the aforesaid criminals, and the three Clergymen that assisted them, who all pretended to be members of the Church of England, we do declare, that we disown and detest all such principles and practices, looking upon them as highly schismatical and seditious, dangerous both to the Church and State, and contrary to the true doctrine and spirit of the Christian religion. And we also take this occasion to warn and exhort all the people committed to our charge, to beware of such seducers, and to avoid them, lest, as the Apostle St. Peter speaks, *They be led away with the error of the wicked,* and fall from their steadfast adherence to the principles of the true Church of England, as it was established at the blessed Reformation of religion, and as, by God's especial Providence, it continues to this day.' What was farther done in this matter, will

(4) State Tracts in the Reign of King William, vol. iii. in the Appendix.

(b) See the particular subjects upon which they were written in the note.

and retouching several miscellaneous pieces of his, to which he added some others, and published them in a volume; and these were so well received, that about seven years afterwards he published another, and several years after that a third. These pieces of his were written upon religious, moral, and entertaining subjects, with such a mixture of learning and wit, and in a style so easy and flowing, that notwithstanding the prejudice of party which could not but be strong against him, they were generally well received, and have run through many editions since. One must indeed allow, that very few books had fairer for universal approbation, in an age, which, if not strictly virtuous, was at least highly decent; and when every body affected a concern for promoting whatever had a tendency to make men wiser, better, or more polite, all which ends were prosecuted with great effect in this collection of Essays (b) [E]. The very next year after the publication of the first volume of these Miscellaneous Discourses, Mr. Collier made an attempt to reform the Stage, which involved him in a very brisk controversy with several of the greatest wits, and ablest writers of the age; in which he acquitted himself with so much force and vivacity, that the most considerable of his antagonists were obliged, not only to quit the field of battle, but to confess that they were vanquished; and though some of them did not do this with the best grace, yet as their failing in point of manners ought to be attributed to the smart of their wounds, it is very far from reflecting upon the merit of our author, whose animadversions actually produced both repentance and amendment (i), and were the original cause

(i) Oldmixon's Hist. of the Stuarts, vol. ii. p. 192.

(c) Compl. Hist. of England, vol. iii. p. 719; Burnet's Hist. of his own Times, vol. ii. p. 174.

will best appear from Bishop Kenner's account, which runs thus (c): 'On April the 27th, the Lord Chief Justice (Holt) of the King's Bench, did likewise present to the Grand Jury, the shameful and pernicious practice of those three absolving Priests. Whereupon the Jury made a presentment to the Court, that Collier, Cook, and Snatt, Clerks, did take upon them to pronounce and give absolution to Sir William Perkins, and Sir John Friend, at the time of their execution at Tyburn, immediately before they had severally delivered a paper to the Sheriff of Middlesex, wherein they had severally endeavoured to justify the treasons for which they were justly condemned and executed. And that they, the said Collier, Cook, and Snatt, had thereby countenanced the same treasons, to the great encouragement of other persons to commit the like treasons, and to the scandal of the Church of England established by Law, and to the disturbance of the peace of this kingdom. Upon which the court ordered an indictment to be preferred against them, and on May the 8th, Mr. Cook and Mr. Snatt were committed to Newgate, for suspicion of high-treason and treasonable practices. But such was the lenity of the government, that no manner of punishment was inflicted on them; and Mr. Collier, with great assurance, published several papers to justify his practice.' The writings to which this Prelate referred were these:

XIII. *A defence of the Absolution given to Sir William Perkins at the place of execution, April 3d, with a farther Vindication thereof, occasioned by a paper entitled, A declaration of the Sense of the Archbishops, and Bishops, &c. The first dated April the 9th, 1696, the other April the 21st, 1696. To which is added a Postscript, in relation to a paper called an Answer to his Defence, &c. dated April 25. Also a Reply to the Absolution of a Penitent, according to the Directions of the Church of England, &c. dated May 20, 1696; and An Answer to the Animadversions on two Pamphlets lately published by Mr. Collier, &c. dated July 1, 1696, 4to.*

[E] All which ends were prosecuted with great effect, in this collection of Essays.] We have in the text, spoken in general of the several volumes of this collection, as if it had been composed in the same manner with other books of that kind; whereas, instead of being made up of detached discourses, it is rather composed of a variety of small pieces on different topics, which fell from the author's pen at a great distance of time; and after wandering most of them singly through the world, were at last drawn thus into a body to prevent their being lost. The title given them in their last edition is,

XIV. *ESSAYS upon several Moral Subjects, by Jeremy Collier, M. A. in three volumes, 8vo.* In order to give the reader a clear account of the contents of these volumes, which are not commonly understood to comprehend so large a part of their author's works as they really do, it is necessary to enter a little into particulars. The first volume is divided into two

parts, which were published separately. The first part consists of six Essays, viz. upon Pride, Clothes, Duelling, General Kindness, the Office of a Chaplain, and the Weakness of Human Reason. The four first are written in the way of dialogue, and with great spirit and vivacity; the two last are continued discourses. That on the Office of a Chaplain is particularly laboured, and has been looked upon as the author's master-piece, the reasoning being more close, the language more exact, and the thread of the argument better preserved, than in many of the rest. His Essay on the Weakness of Human Understanding is in some measure a declamation, but it ends with a moral reflection of great importance, and which perhaps this gentleman did not keep always in his mind (6). 'We may plainly perceive, says he, that the prejudices of education have a great stroke in many of our reasonings, and that the sentiments of men discover the colour of their original tinctures. And as there are some inbred principles impregnable against custom, so there are some customs which nature finds very difficult to deal with.'

(6) Collier's Miscellanies, vol. i. p. 240.

The second part contains seventeen discourses upon Fame, Music, the Value of Life, The Spleen, Eagerness of Desire, Friendship, Popularity, The Immateriality of the Soul, The Entertainment of Books, Confidence, Envy, The Aspects of Men, Despair, Covetousness, Liberty, Old Age, and Pleasure. Several of these are written in dialogue, but most of them are set discourses; and they are all of them calculated to inform the understanding, reform the manners, and to give a right turn to the thoughts of the reader.

The second volume contains the third part, in which, the author discourses of Pain, Revenge, Authors, Infancy and Youth, Riches and Poverty, Debauchery, Drunkenness, Usury, The Character of an Apostle, and of Solitude. Then follows a Translation of St. Gregory's Oration, in commendation of the Maccabees, Of the Unreasonableness of ill-timed Diversions, St. Cyprian's Discourse upon the Plague, His Description of the manners of the Age in which he lived, and his Discourse on Patience: it is closed by the author's Essay upon Discontent, written in dialogue. There is usually annexed to this volume, (though it was printed separately) An Essay upon Gaming, in a dialogue, which is at once an useful, entertaining, and most instructive performance. The third volume, and the fourth part, consists mostly of religious subjects, and was written after he had published the first volume of his Ecclesiastical History. In this he treats of Goodness, Honesty, Religious Temper, Lying, Fortitude, Flattery, Theft, Peace, and the Resurrection. All these topics are treated with very great plainness and freedom; and many of the thoughts are new and singular. Such as are written in dialogue, are well sustained; and if we abate the floweriness of the language, which was the fashion, I will not say the fault of that time, it will be difficult to find any essays more capable of affording a rational pleasure, than those of our author.

of

of that decorum, which has been, for the most part, observed by the modern writers of dramatic poetry. The titles of his pieces upon this occasion will be found in the notes [F]. His abilities and industry were next exercised in a much larger work than any he had hitherto undertaken, which was that of making Moreri's performance useful to the English nation; in which he laboured for many years with great success, taking all the precautions possible to be well informed as to the new articles he published; and so well were his endeavours in this kind received by the public, notwithstanding some exceptions that were taken to them, that few books have met with a better fate, or

[F] *Will be found in the notes.*] It was certainly a very bold thing in Mr. Collier, to attack at once the Wits and the Witlings of those times: among the first, were Mr. Dryden, Mr. Congreve, and Mr. Vanbrugh; amongst the latter, were Tom Durfey and many more; but he is certainly to be commended for forming so good a design, as that of reducing the stage to order, and thereby preventing the morals of mankind from being corrupted, where they ought to be amended: the first he published with this design, had the following title.

XV. *A short view of the immorality and profaneness of the English Stage, together with the sense of Antiquity upon this argument*, Lond. 1698, 8vo. It is a very methodical and learned work: he begins with shewing the immodesty and indecency of the stage, and the ill consequences that attend it; he proves next, that the Roman and Greek theatres were much more inoffensive than the English, and then produces the authorities of Ben Jonson, Beaumont and Fletcher, and the French Poet Corneille, against the modern Stage. He proceeds to open the indictment by a charge of profaneness, which he supports by instances from several pieces of Mr. Dryden, Mr. Otway, Mr. Congreve, and Vanbrugh. His second charge is the abuse of the Clergy; his third relates to immorality encouraged by the Stage: he then descends to some remarks upon Amphitryon, exposes the horrid profaneness of the comical History of Don Quixote; then criticizes the Relapse, or Virtue in Danger; he concludes with producing the opinions of the Heathen Philosophers, Orators, and Historians, the restraints imposed upon the Stage by the laws in several countries, and the sentiments of the Fathers of the Church.

In answer to this, Mr. Congreve published a little piece, intitled, *Amendments of Mr. Collier's false and imperfect citations from the old Batchelor, the Double Dealer, &c.* It must be allowed, that in this piece, the ingenious author is very hard put to it, and struggles with infinite difficulty to give a fair gloss to passages, that, in the natural sense of the words, convey a very different meaning; and besides this, there is an air of anger and resentment runs through the whole piece, which plainly shews how much the author felt the weight of that censure he endeavours to ridicule, and would be thought to despise. Mr. Vanbrugh, afterwards Sir John Vanbrugh, likewise published a small piece in support of his own performances, under the title of, *A short Vindication of the Relapse, and the Provok'd Wife*; but this was very far from dejecting, or silencing our author. He thought he had a good cause, and that he was able to manage it with as much sense and spirit as any of his adversaries; and he found by experience too, that he was as well heard as they by the public; all which encouraged him to return to the charge, and to defend what he had written, not only against these, but against several other authors, who thought fit to enter the lists on the side of the Poets, against the Priest. These pieces of his were,

XVI. *A Defence of the Short View, &c. being a Reply to Mr. Congreve's Amendments, &c. And to the Vindication of the author of the Relapse*, Lond. 1699, 8vo.

XVII. *A Second Defence of the Short View, &c. Being a Reply to a Book intitled, The Ancient and Modern Stages surveyed, &c. Lond. 1700, 8vo.* The Book here replied to, was written by Dr. Drake.

XVIII. *Mr. Collier's Dissuasive from the Play-House; in a letter to a Person of Quality, occasioned by the late calamity of the Tempest*, Lond. 1703, 8vo.

XIX. *A farther Vindication of the Short View, &c. in which the Objections of a late Book, intitled, A Defence of Plays, are considered*, Lond. 1703, 8vo.

The Defence of Plays, has Dr. Filmer for its author.

We have shewn in the text, what the event was of this long dispute, in support of which, I shall produce what Mr. Dryden says upon this subject (7). 'I shall say the less of Mr. Collier, because in many things he has taxed me justly, and I have pleaded guilty to all thoughts and expressions of mine, which can be truly arraigned of obscenity, profaneness, or immorality, and retract them. If he be my enemy, let him triumph; if he be my friend, as I have given him no personal occasion to be otherwise, he will be glad of my repentance. It becomes me not to draw my pen in the defence of a bad cause, when I have so often drawn it for a good one: yet it were not difficult to prove, that in many places he has perverted my meaning by his glosses, and interpreted my words into blasphemy and bawdry, of which they were not guilty; besides that, he is too much given to horse-play in his raillery, and comes to battle like a Dictator from the plough: I will not say the zeal of God's house has eaten him up; but I am sure, it has devoured some part of his good manners and civility. It might also be doubted, whether it were altogether zeal, which prompted him to this rough manner of proceeding; perhaps it became not one of his function, to rake into the rubbish of ancient and modern plays: a Divine might have employed his pains to better purpose, than in the nastiness of Plautus and Aristophanes, whose examples, as they excuse not me, so it might possibly be supposed, that he read them not without some pleasure. They, who have written commentaries on those poets, or on Horace, Juvenal, and Martial, have explained some vices, which, without their interpretation, had been unknown to modern times; neither has he judged impartially between the former age and us. There is more bawdry in one Play of Fletcher's, called, The Custom of the Country, than in all ours together, yet this has been often acted on the stage in my remembrance. Are the times so much more reformed now, than they were five and twenty years ago? if they are, I congratulate the amendment of our morals; but I am not to prejudice the cause of my Fellow-Poets, though I abandon my own defence. They have some of them answered for themselves, and neither they nor I can think Mr. Collier so formidable an enemy, that we would shun him. He has lost ground at the latter end of the day, by pursuing his point too far, like the Prince of Condé at the battle of Seneff. From immoral plays to no plays; *ab abusu ad usum non valet consequentia*. But being a party I am not to erect myself into a Judge.'

The first part of Mr. Dryden's apology is so very decent, and withal so very just, that one cannot help being sorry he did not rest it there; but as to what follows, it is little to the purpose: he has owned, that Mr. Collier has shewn him his faults, and yet he is out of humour that they were shewn. Was it in his power to prove his charge against the stage any other way than he has done? did not the quibbling and prevarications of his antagonists, compel him to explain things so broadly? and might not any criminal at the bar charge the Attorney-General, with being a traitor in his heart, for setting forth, and insisting upon his own treasons with the same force of argument, that is used in retorting upon Mr. Collier? The truth is, that men offend with gaiety of heart, but repent with bitterness of soul; which is the reason, that though they cannot help owning the physic has done them good, yet they cannot avoid bearing ill-will to the doctor.

(k) From the information before-mentioned.

longer maintained their credit [G]. After the accession of Queen Anne to the throne, great endeavours were used to recover Mr. Collier to the Church, by inducing him to comply with the terms prescribed by the State. All efforts of this kind, though supported not only with general promises of preferment, but with more particular assurances, were ineffectual; and Mr. Collier remained among the Nonjuring Clergy, as seeing no reason to alter his sentiments from any change that had happened, and being incapable of dissembling an alteration for the sake of temporal views (k). About the same time that he published the first volume of his Dictionary, he likewise obliged the world with a very elegant translation from the Greek, of that famous book of the Emperor Marcus Antoninus, which has done more credit to his memory than even his excellent administration of public affairs during a reign which does honour to the Roman History (l). This translation was universally well received on its first appearance, and continues to be read with all the applause, that so well written, and so useful a treatise of Moral Philosophy deserves [H]. The situation of those times, and the many worthy and generous patrons of whatever regarded the honour of this kingdom who then flourished, encouraged Mr. Collier to hope, that an Ecclesiastical History of Great-Britain, which, in the extent he intended it, had never been attempted by any Protestant writer before, might meet with general acceptance. Accordingly, proposals were published for sending abroad such a work, and the offer very well received; and such encouragements given, as induced him to prosecute with diligence the great design he had formed, and at length finished, of a copious History of Church Affairs, from the first entrance of Christianity into this Island, to the close of the reign of Henry VII. This all parties allowed to be a work of great labour and learning, methodically and elegantly written; but in other respects they differed, as might well be supposed, in their judgments concerning its merit [I]. After the pains this book had cost him,

(l) See the Life of the Emperor Marcus Antoninus, translated from the French of M. Dacier, prefixed to that work.

[G] Or longer maintained their credit.] We shall in this note give an account of the different times, in which the several parts of this Dictionary were published, and of other circumstances relating to them, that may be worth the reader's knowing.

XX. *The Great Historical, Geographical, Genealogical, and Poetical Dictionary, &c.* four volumes, fol.

The two first volumes were printed in the year 1701, and the author gave notice in his preface, that such of the articles as were of a later date than the year 1688, were composed by another hand. The third volume was published, under the title of *A Supplement, &c.* in 1705, and was reprinted in 1727. It is in the preface to this, that he answers the objections made to his conduct; and to prevent those articles being taken for his, which in this volume also, were written by another hand, they are placed under another alphabet. The fourth and last volume, which in the title page is called *An Appendix*, as in reality it is to the other three, was printed in 1721. The whole is certainly a great treasure of Historical, Geographical, and Poetical Learning; and is not only very useful and entertaining to young scholars, who may by the help of it acquire much knowledge, and enter thoroughly into the meaning of the books they read in any of these kinds of learning; but even to persons of the greatest abilities, and most comprehensive science, who have but small libraries, and live at a distance from London, and the two Universities. Yet this work is certainly capable of great improvements, and these might be made without enlarging the bulk, for it might be reduced under one alphabet; whereas at present there are four or five; and as by this means a multitude of repetitions, alterations, and corrections, might be thrown out, so this would make room for new articles, which might be easily found in the last edition of Moreri's Dictionary, now enlarged to seven volumes. The learned reader will easily discern, that this is no reflection either upon Mr. Collier's memory or his performance, since he did all that was possible to be done at the time he wrote; and the inconveniences before mentioned were unavoidable from his manner of publication, as that too, with respect to him, was a matter not of choice but of necessity.

[H] *That so well written, and so useful a treatise of Moral Philosophy deserves.*] This work of Mr. Collier's has since borne three impressions, all of them under the following title:

XXI. *The Emperor Marcus Antoninus his conversation with himself. Together with the preliminary Discourse of the learned Gataker, &c. to which is added, the Mythological Picture of Cebes the Theban.*
VOL. IV.

Translated into English from the respective originals, Lond. 1701, 8vo.

This is one of the best collections we have in the English tongue of the Morals of the Antients; and, in conjunction with the works of Plutarch, Epictetus, and Seneca, will make an admirable library of that kind. The pieces of which it is composed are very well chosen, and illustrate each other perfectly, so as to render all the passages in them clear and intelligible; and yet it is of a very moderate size, and has nothing in it redundant, or foreign to the purpose.

[I] *Concerning its merit.*] As this great work was published in two volumes at different times, it is requisite to speak of them separately. The first bore the following title:

XXII. *An Ecclesiastical History of Great-Britain, chiefly of England, from the first planting of Christianity, to the end of the Reign of King Charles II. With a brief Account of the Affairs of Religion in Ireland. Collected from the best antient Historians, Councils, and Records, fol. 1702, Vol. I. which comes down to the Reign of Henry VII.*

As the scheme of this work was in itself of large extent, it required a great knowledge in Divinity, History, and Antiquity, and a very assiduous application to the perusal of Records and manuscripts, as well as a vast variety of antient and modern authors; and the performance itself demonstrates very great care to have been taken in all these respects. The method in which this History is written is very clear and exact, his authorities are constantly cited by the author, his remarks are short and pertinent, and, with respect to the dissertations that are occasionally inserted, they are such as tend to illustrate and explain those perplexed points of which they treat, and contribute thereby to the clearer understanding of the narration. The style is very uniform and grave, which is the more remarkable, because the author, in other writings, has shewn as lively a fancy, and as much quickness of wit, as any writer of his own time; but he knew this would be improper here, and therefore it is with great judgment avoided. He speaks modestly and respectfully of most of the Historians who went before him, and if he is any where severe, he takes care that his reason shall go along with his censure. His own peculiar sentiments with respect to religion and government may be in some places discerned; but taking the whole together, it will be found as judicious and impartial a work, as the world, in doing justice to his talents, could have expected it: yet, as we have hinted in the text, it was far enough from escaping the censure of the Critics, but was still

(m) See the Preface to the third Vol. of his Miscellanies.

(n) From the information before-mentioned.

him, our author thought a season of repose necessary, or, as he himself expresses it, judged it convenient *to breathe a little after a folio* (m); yet without dropping, or so much as discontinuing his former design. But knowing that it required not only assiduity and vigilance, but the utmost prudence and circumspection likewise, he chose to act cautiously, and rather to apologize to the public for his delay, than to precipitate matters in order to hurry his work through the press. In the year 1713 he was consecrated a Bishop by Dr. George Hickes, who was himself consecrated Suffragan of Thetford by the deprived Bishops of Norwich, Ely, and Peterborough (n), Feb. 23, 1694. In the succeeding year came abroad the second volume of his Ecclesiastical History, which met with a different reception from persons of different sentiments, being applauded by some and censured by others. Of the latter there were those who made a considerable figure in the learned world, against whose objections the author thought it incumbent upon him to write [K]. As he grew in years, that great share of health which he had enjoyed was interrupted by frequent attacks of the stone, to which there is no doubt that his sedentary life might much contribute; so that from this time we hear of nothing that he published farther, excepting a collection of Sermons, of which, together with some smaller pieces prefixed to other men's works, an account will be given at the bottom of the page [L]. He lived, however, several years in an indiffe-

much happier in that respect than the second volume, in speaking of which we shall shew who these Critics were, as well as the titles of the pieces written by our author in his own defence, and in justification of his History.

[K] *Thought it incumbent upon him to write.* As the second volume of his Ecclesiastical History took in the entire account of the Reformation, and the struggles with the Puritans from their first appearance, to the overturning of our constitution in Church and State; so it must be naturally supposed, that a man of Mr. Collier's principles could never treat these delicate subjects, without affording some room, for such as were desirous of criticizing him, to take offence. Dr. Nicholson, Bishop of Derry, has treated him with great severity, not to say more, in the character he has given of his works. Bishop Burnet and Bishop Kennet, who were infinitely better judges as well as writers, have corrected him with great decency. Mr. Collier defended himself against them all, in the pieces of which we shall presently speak: but before we come to them, it may not be amiss to remark a single, and a shining, instance of his impartiality, and that is, in disculpating the Presbyterians from the false and scandalous imputations that had been thrown upon them, as if they consented to, or at least temporized in, the murder of King Charles I. from which he has vindicated them with equal perspicuity and justice; and has fully shewn, that as they only had it in their power to oppose, so to the utmost extent of that power they did oppose, and protest against that bloody fact, both before and after it was committed (8).

(8) Collier's Ecclesiastical History, vol. ii. p. 859, 860.

The pieces written by him in defence of his History are these:

XXIII. *An Answer to some exceptions in Bishop Burnet's third part of the History of the Reformation, &c. against Mr. Collier's Ecclesiastical History; together with a Reply to some Remarks in Bishop Nicholson's English Historical Library, &c. upon the same subject*, fol. Lond. 1715.

XXIV. *Some Remarks on Dr. Kennet's second and third Letters, wherein his misrepresentations of Mr. Collier's Ecclesiastical History are laid open, and his calumnies disproved*, Lond. 1717, fol. and 8vo. But in the octavo it is called *Some Considerations*, &c.

[L] *Will be given at the bottom of the page.* The collection of Sermons mentioned in the text, came abroad under this title.

XXV. *Several Discourses upon Practical Subjects*, Lond. 1725, 8vo. The last discourse of this collection had been printed separately, in 1723, with the following title. *The comparison between giving and receiving, with the reasons for preference; stated in a Sermon, preached at Whitehall, April 19th, 1687*, 4to.

XXVI. *God not the Origin of Evil, being an additional Sermon to a collection of Mr. Collier's Discourses*, &c. Lond. 1726, 8vo.

He published also *An Advertisement against Bishop Burnet's History of his own Time*, which was printed on a slip of paper, and dispersed in all the Coffee-houses in 1724, and is to be seen in the Evening Post,

No. 2254. Besides this, he wrote several Prefaces, &c. As (1.) *An Advertisement concerning the Author, and the translation of Maxims and Reflections upon Play*, in answer to a Discourse of the lawfulness and unlawfulness of Plays, printed before a late Play intitled, *Beauty in Distress*, written in French, by the Bishop of Meaux, Lond. 1669. (2.) *A Recommendatory Preface to Tully's five Books de Finibus, &c. Done into English by S. P. (Sam. Parker) Gent. Together with an Apology for the philosophical writings of Cicero, in a letter to the Translator*; by Mr. Henry Dodwell, Lond. 1702. (3.) *A Recommendatory Preface to human Souls naturally immortal, translated from a Latin MS. by S. E.* Lond. 1707. Of this Preface Mr. Norris makes honourable mention in his letter to Mr. Dodwell, concerning the immortality of the Soul of Man, and says that Mr. Collier's single remark against Mr. Locke, is, in his opinion, worth all the book besides (9). It is also upon good grounds believed, that he was concerned, amongst others, in collecting the passages referred to by Dr. Henry Sacheverell, in his answer to the articles of his impeachment. C.

(9) Mr. Norris's Letter to Mr. Dodwell, p. 107.

*. * [Though out of regard to our ingenious predecessor, Dr. Campbell, we have retained his article of Collier without alteration, and have done the same with relation to his other articles, we cannot avoid, nevertheless, expressing our disapprobation of several things which are here advanced. Respect is undoubtedly due to men of ability, character, and learning, of every party; but yet a distinction ought to be made between those who appear in the cause of absurdity, bigotry, and slavery, and those who distinguish themselves on the side of reason, moderation, and liberty. The former, however worthy they might be in private life, and however upright in their intentions, cannot be entitled to the esteem and applause which belong to the latter. They ought not to be spoken of in the same terms of approbation, or treated as if their writings were equally just and meritorious. It might be imagined, from the general tenor of Dr. Campbell's article, that Collier deserved to be ranked among the principal ornaments of this country. And yet whoever attends to the incidents of his life, and considers the list of his works, will perceive that he was engaged in defending the most flagrant absurdities, and in exercising the most determined hostilities against the civil and religious interests of these kingdoms. The very mention of several of the subjects he wrote upon, would be sufficient, in the present age, to expose the extreme narrowness of his mind. His treatment of the most respectable characters can never be justified. In a pamphlet of his, entitled, "Remarks upon some late Sermons," he reflected upon the excellent Archbishop Tillotson with uncommon bitterness and indecency; and when properly animadverted upon by Dr. John Williams, persisted in defending his conduct (10).

Collier's Essays may be reckoned among the most valuable of his writings; but yet they do not by any means deserve the praises which Dr. Campbell has bestowed

(10) Birch's Life of Tillotson, p. 344.

indifferent state of health, sometimes tolerably free, and at others grievously afflicted by his old distemper, which brought him to his grave April 26, 1726; and, three days after, his

bestowed upon them. Though not destitute of ingenuity, they are composed in a bad taste. The author is fond of point and antithesis, and his language is quaint and affected. This part of his works was, indeed, much admired and extolled for a time, but could not stand the test of just criticism. The improprieties of composition with which the essays abound, were well and amply exposed in a book now little known, though of considerable merit, written by a Mr. Constable, and the title of which is, "Reflections on the Accuracy of Style." The reputation of Collier, as a polite author, quickly subsided. Dr. Campbell, therefore, was peculiarly unfortunate in saying of his Essays, that very few books had fairer for universal approbation.

The work of Mr. Collier that has been the most celebrated, and which produced the greatest effect, was his view of the immorality and profaneness of the English stage. Dr. Johnson's account of the attention it excited, and of the controversy occasioned by it, is too interesting to be omitted. "About this time, says the Doctor, began the long-continued controversy between Collier and the poets. In the reign of Charles the first, the Puritans had raised a violent clamour against the drama, which they considered as an entertainment not lawful to Christians, an opinion held by them in common with the Church of Rome; and Prynne published *Histrio-mastix*, a huge volume, in which stage-plays were censured. The outrages and crimes of the Puritans brought afterwards their whole system of doctrine into disrepute, and from the restoration the poets and the players were left at quiet; for to have molested them would have had the appearance of tendency to the puritanical malignity.

"This danger, however, was worn away by time; and Collier, a fierce and implacable non-juror, knew that an attack upon the theatre would never make him suspected for a Puritan: he therefore (1698) published *A short View of the Immorality and Profaneness of the English Stage*, I believe with no other motive than religious zeal and honest indignation. He was formed for a Controversialist; with sufficient learning; with diction vehement and pointed, though often vulgar and incorrect; with unconquerable pertinacity; with wit in the highest degree keen and sarcastic; and with all those powers exalted and invigorated by just confidence in his cause.

"Thus qualified, and thus incited, he walked out to battle; and assailed at once most of the living writers, from Dryden to Duffey. His outset was violent: those passages which while they stood single had passed with little notice, when they were accumulated and exposed together, excited horror: the wise and the pious caught the alarm, and the nation wondered why it had so long suffered irreligion and licentiousness to be openly taught at the public charge.

"Nothing now remained for the Poets but to resist or fly. Dryden's conscience, or his prudence, angry as he was, withheld him from the conflict; Congreve and Vanbrugh attempted answers. Congreve, a very young man, elated with success, and impatient of censure, assumed an air of confidence and security. His chief artifice of controversy is to retort upon his adversary his own words: he is very angry, and hoping to conquer Collier with his own weapons, allows himself in the use of every term of contumely and contempt; but he has the sword without the arm of Scanderbeg; he has his antagonist's coarseness, but not his strength. Collier replied; for contest was his delight; he was not to be frightened from his purpose, or his prey.

"The cause of Congreve was not tenable: whatever glosses he might use for the defence or palliation of single passages, the general tenour and tendency of his plays must always be condemned. It is acknowledged, with universal conviction, that the perusal of his works will make no man better;

"and that their ultimate effect is to represent pleasure in alliance with vice, and to relax those obligations by which life ought to be regulated.

"The stage found other advocates, and the dispute was protracted through ten years: but at last comedy grew more modest, and Collier lived to see the reward of his labour, in the reformation of the theatre.

"Of the powers by which this important victory was achieved, a quotation from *Love for Love*, and the remark upon it, may afford a specimen.

"Sir Sampson. *Sampson's a very good name; for your Sampsons were strong dogs from the beginning.*

"Angelica. *Have a care—If you remember, the strongest Sampson of your name pulled an old house over his head at last.*

"Here you have the sacred history burlesqued, and Sampson once more brought into the house of Dagon, to make sport for the Philistines (11)."

The author of the Supplement to Mr. Doddsley's Preface to his select Collection of old Plays, has likewise given a short account of this controversy, which deserves to be inserted, as it contains two or three curious facts, not hitherto noticed.

"While the rival theatres were contending against each other with inveterate malice, an enemy to the very toleration of dramatic entertainments appeared, who, with considerable ability, and with all the rigid puritanical maxims of a severe sect, attacked the stage on account of its profaneness and immorality. This was the celebrated Jeremy Collier, who in 1697 (1698) published a book, containing a severe invective against the acting of plays, the profligacy of the performers, and the licentiousness of the poets; and having some truth and justice on his side, the advocates for the theatre found themselves hard pressed to answer the charges brought against their favourite diversion. It cannot be denied but that many authors, and some in great favour with the public, had written in a manner which warranted the censure of every person who professed the least regard to propriety or decency. Mr. Collier was opposed by Congreve, Vanbrugh, Dryden, Dennis, and others, with wit and humour, but without confuting the objections which had been started either against themselves individually, or against the stage in general. The public opinion ran so much against the defenders of the theatre, and in favour of their enemy, that King William considered Mr. Collier's book as a work which entitled the author of it to some lenity in a prosecution then carrying on in consequence of errors in his political conduct. This controversy produced as much as could be wished for from it. Mr. Cibber observes, the calling our dramatic writers to this strict account had a very wholesome effect upon those who wrote after this time. They were now a great deal more upon their guard; indecencies were no longer wit; and by degrees the fair sex came again to fill the boxes on the first day of a new comedy, without fear or censure.

"To forward the stage's reformation, prosecutions were commenced against some of the performers, for repeating profane and indecent words. Several were found guilty, and Betterton and Mrs. Bracegirdle were actually fined. These severities were not entirely thrown away. From this period may be dated the introduction of that more refined taste which hath done so much credit to the British theatre (12)."

An author, who seems to inherit Mr. Collier's principles concerning passive obedience and non-resistance, as well as his aversion to theatrical entertainments in general, hath lately given the following high character of his attack upon the stage. "I question, says the writer we refer to, whether any man can read Swift's Tale of a Tub, or Don Quixote's Visions, without finding himself the worse for it. In regard to all such indiscreet applications of wit, every young student may guard his mind, and rec-

(11) Johnson's Lives of the Poets, vol. iii. p. 49—53. Octavo edition, of 1783.

(12) Select Collection of Old Plays, vol. i. Second edition. Preface, p. xcviij—c.

his body was interred in the church-yard of St. Pancras. He was in the seventy-sixth year of his age, and preserved the free use of his senses to the very last. As to his character, we have already given it in the impartial history of his works, and shall therefore only add, that his morals were unexceptionable; and that, as his conduct had in it all the regularity becoming a Clergyman, so his behaviour had nothing stiff or pedantic, but all that life, spirit, and innocent freedom, which constitute the good breeding of a gentleman. His reputation as a man of letters extended beyond the bounds of his own country; for the learned and ingenious Father Courbeville, who translated into French the Hero of Balthazar Gracian, in the Preface of that work, speaks in the highest terms of praise of our author's Miscellaneous Works, which he says set him on a level with Montaigne, St. Evremond, La Bruyere, &c. The same reverend and learned person translated into French Mr. Collier's *Short View of the English Stage*, and thence takes occasion to speak of him again, with all the marks of admiration and esteem possible.

(13) Letters from a Tutor to his Pupils, p. 32.

"tify his judgment, by reading Mr. Collier's view of the profaneness and immorality of the English stage; a book which brought Dryden himself to repentance, and does indeed beggar every work upon the same argument. It is the triumph of wit over scurrility; of piety over profaneness; of learning over ignorance; and of Christianity over atheism (13)." This encomium is carried too far, and especially the assertion that Collier's book beggars every work upon the same argument. It is not to be compared with Rousseau's famous Treatise, in Answer to D'Alembert, concerning the question whether there ought to be a theatre at Geneva. Rousseau, in his reasonings against dramatic entertainments, particularly in small cities, is profound, philosophical, and discriminating; whereas Collier is harsh and violent, and doth not make the proper distinction between the use and abuse of plays.

Some of Mr. Collier's other writings have their merit and utility. He was a diligent and laborious compiler; but his Historical Dictionary does not seem at present to be in much use and estimation. It is very little service that we have hitherto been able to

derive from it in the prosecution of the Biographia.

Collier's Ecclesiastical History is not destitute of ability and learning; but it is written upon such narrow principles as must ever detract from its reputation. Bishop Burnet's character of it we apprehend to be too just to be reasonably called in question. "I shall say no more of that work, observes the Bishop, but that there appeared to me quite through the second volume, such a constant inclination to favour the popish doctrine, and to censure the reformers, that I should have had a better opinion of the author's integrity, if he had professed himself not to be of our communion, nor of the communion of any other Protestant Church (14)."

In Mr. Gutch's *Miscellanea Curiosa*, are preserved, "Observations upon the Remarks of Mr. Collier, in his Ecclesiastical History, on several passages in Bishop Burnet's History of the Reformation," by the learned Mr. John Lewis of Margate. It is apparent, from these observations, that Collier's dislike of that excellent prelate, rendered him guilty of grossly misrepresenting him, in a variety of instances.] K.

(14) Preface to Burnet's third volume of his History of the Reformation of the Church of England, p. vi.

* * [COLLINS (JOHN), a mathematician of considerable eminence in the seventeenth century, was born at Wood Eaton, in Oxfordshire, on the 5th of March, 1624 (a). He was the son of a Nonconformist divine [A]; and is said to have received such an education, "as disposed his mind to the full pursuit of truth, and formed and directed his thoughts to distinguish rightly, and to reason justly (b)." When he had attained the age of sixteen, he was put apprentice to a bookseller at Oxford; but the war between the king and the parliament breaking out soon after, he quitted that trade, and was employed in clerkship under Mr. John Marr, one of the clerks of the kitchen to the Prince of Wales, who was eminent for his skill in the mathematics, and for some excellent dials, with which the gardens of King Charles I. were adorned (c). From Mr. Marr he derived some instruction in mathematics; but was obliged to quit his employment under him, in consequence of the confusions that were occasioned by the civil war. He then went to sea for seven years, and spent the greatest part of that time on board an English merchant-man, which became a man of war in the service of the Venetians against the Turks. In this situation, having much leisure, he applied part of his time to the study of the mathematics, and merchants accounts; and, upon his return to England, taught them together with writing (d).

(b) Gen. Dict.

(c) Wood, *ubi supra*.

(d) Birch's Hist. of the Royal Society, vol. iv. p. 232.

In the year 1652, he published 'An Introduction to Merchants Accounts [B],' which had been drawn up for the use of his scholars. In 1685, he published, in 4to, his 'Sector

[A] He was the son of a Nonconformist divine.] Wood says, 'His father was a Nonconformist divine, and though not suffered to preach in churches, yet in prisons to malefactors, which, with the correcting of the press, obtained him a subsistence (1).'

(1) Fasti, vol. ii. col. 116.

Dr. Calamy mentions a Nonconformist minister, whose name was John Collins, and who might possibly be the father of our author; but whether he was, or not, we are unable to ascertain. Of this Mr. Collins, the following is Dr. Calamy's account. He was not an incumbent any where when the uniformity act took place; but was Chaplain to General Monk, when he came out of Scotland. He afterwards succeeded Mr. Mallory as pastor of a considerable Independent Church in this city. He was also one of the Lecturers at Pinners-Hall. He was a man mighty in the Scriptures, and one of a sweet temper, and very charitable to all good men, with-

out confining himself to a party. He died anno. 1687 (2). Dr. Calamy also says, 'He had a son that was educated for the ministry at Utrecht, and was fellow-labourer with Mr. Bragg in this city, and one of the Lecturers at Pinners-Hall, who died a few years since (3).'

If the John Collins, mentioned by Dr. Calamy, was father to the mathematician, he must have survived his son. But, upon the whole, it is probable that he was not, as it is not likely that Dr. Calamy would have been entirely unacquainted with it, if he had been father to a man so well known in the learned world.

[B] *An Introduction to Merchants Accounts.*] This was reprinted in 1665, but the greatest part of the impression was consumed in the fire of London the year following. A new edition was published in 1674, in folio, with additions (4).

on

on a Quadrant; or a 'Treatise concerning the Description and Use of four several Quadrants,' &c. The following year he published his 'Mariner's plain Scale new plained,' and his 'Treatise of geometrical Dialling;' and in 1664, he published, 'The Doctrine of Decimal Arithmetic, Simple Interest, &c. as also of Compound Interest and Annuities, generally performed for any time of payment (e).'

(e) Birch and Wood, *ut supra*.

After the Restoration, Mr. Collins was appointed Accountant to the Excise-Office, then kept in Bartholomew-lane, near the Royal Exchange. On the 10th of October, 1667, he had the honour of being proposed as a candidate for election into the Royal Society by Dr. Seth Ward, Bishop of Salisbury; and he was chosen a Fellow on the 17th of that month (f). The same year he communicated a paper to the Society, which was published in the Philosophical Transactions, N^o 30, for December, 1667, in which he fully explained, and demonstrated, the rule given by the learned Jesuit De Billy for 'finding the number of the Julian period for any year assigned, the cycles of the sun and moon with the Roman indiction for the year being given.' To this he added some very neatly contrived rules for the ready finding on what day of the week any day of the month falls for ever; and other the most useful and necessary kalendar rules (g).

(f) Birch, *ubi supra*.

(g) Gen. Dict.

In 1668, he had the offer of an employment in Ireland, but did not accept it, as he was not inclined to quit his own country (h). In the Philosophical Transactions, N^o 46, for April, 1669, was published a curious Dissertation, by Mr. Collins, "concerning the Resolutions of Equations in Numbers;" wherein are several hints towards some of the most considerable advances which have been since made in the refined parts of the mathematics, particularly with respect to the doctrine of differences (i).

(h) Birch, *ut supra*.

(i) Gen. Dict. Lowthorp's Abridgment of the Philosophical Transactions, vol. i. p. 60.

When Anthony, the first Earl of Shaftesbury, was Lord High Chancellor, Mr. Collins was nominated by that nobleman, in divers references concerning suits depending in Chancery, to assist in stating intricate accounts: and this service was so ably performed by him, that his reputation in that respect occasioned him to be much employed in other places, and by other persons (k). He was also appointed Accountant to the Royal Fishery Company (l). In 1671, a paper by Mr. Collins was published in the Philosophical Transactions, N^o 69, containing an elegant construction of that chronographical problem: 'The distances of three objects in the same plane, and the angles made at a fourth place in that plane, by observing each object, being given; to find the distances of those objects from the place of observation (m).'

(k) Birch, *ut supra*, p. 233.

(l) Gen. Dict.

(m) *Ibid.*

Mr. Collins did not confine his attention wholly to mathematical studies, but engaged also in other inquiries, and such as were of a public-spirited nature. In 1680, he published, at London, a small treatise, in 4^{to}. intituled, 'A Plea for the bringing in of Irish Cattle, and keeping out the Fish caught by Foreigners; together with an Address to the Members of Parliament of the Counties of Cornwall and Devon, about the advancement of Tin, Fishery, and divers Manufactures.' In 1682, he published, in 4^{to}. a 'Discourse of Salt and Fishery,' under the following heads: I. The several ways of making salts in England and foreign parts. II. The characters and qualities of good and bad of these several sorts of salts; English refined being asserted to be much better than any foreign. III. The catching and curing or salting of the most eminent or staple sorts of fish for long or short keeping. IV. The salting of flesh. V. The cookery of fish and flesh. VI. Extraordinary experiments for preserving butter, flesh, fish, fowl, fruits and roots, fresh and sweet for long keeping. VII. The case and sufferings of the salt-workers. VIII. Proposals for their relief, and for the advancement of the fishery, woollen, tin, and divers other manufactures (n).

(n) *Ibid.*

Mr. Collins did not long survive the publication of this piece. After the act at Oxford, July 10, 1682, riding from thence to Malmesbury in Wiltshire, in order to view the ground to be cut for a river between the Isis and Avon, and drinking cyder while he was hot, he contracted an asthma and consumption, which at length put a period to his life. He died at his lodging on Garlick-hill, London, on the 10th of November, 1683; and his body was interred, three days after, in the parish-church of St. James, Garlick-hill, in the south-isle just behind the pulpit (o). In the Philosophical Transactions, N^o 159, for May, 1684, a letter was published, written by Mr. Collins to the learned Dr. John Wallis, containing his thoughts about some defects in Algebra; and wherein he proposes the genuine method of describing the *Loci* of Equations, and of determining the limits and number of their roots, with various other matters (p). His 'Arithmetic in whole Numbers and Fractions, both Vulgar and Decimal, with Tables for the forbearance and rebate of Money,' &c. did not appear till some years after his death, being published in London, in 1688, in 12^{mo}. by Mr. Thomas Plant, Accountant (q).

(o) Birch and Wood, *ut supra*.

(p) Gen. Dict. and Lowthorp's Abridgment, vol. i. p. 117.

(q) Birch, p. 234.

Besides his own productions, Mr. Collins was also a great promoter of many other valuable publications of the age in which he lived. It is asserted to be owing to him that the world is indebted, for the publication of Dr. Barrow's Optical and Geometrical Lectures, his edition of the works of Archimedes, and of Apollonius's Conics; Mr. Branker's Translation of Rhonius's Algebra, with Dr. Pell's additions; Mr. Kersey's Algebra; Dr. Wallis's History of Algebra; and many other excellent works, which are said to have been procured by his unwearied solicitations (r).

(r) Gen. Dict. art. Collins, note [C].

Collins's death, all his papers, and most of his books came into the hands of Mr. William Jones, F. R. S. amongst which were found manuscripts upon mathematical subjects of Mr. Briggs, Mr. Oughtred, Dr. Pell, Dr. Scarborough, Dr. Barrow, and Mr. Isaac Newton, with a multitude of letters received from, and copies of letters sent to, many learned persons, particularly Dr. Pell, Dr. Wallis, Dr. Barrow, Mr. Newton, Mr. James Gregory, Mr. Flamsteed, Mr. Thomas Baker, Mr. Brancker, Dr. Edward Bernard, Monf. Slufius, Monf. Leibnitz, Monf. Tschirnaus, Father Bertet, and others (s). It appeared from these papers, that Mr. Collins was so solicitous in his search after useful truths, so indefatigably industrious in prosecuting these inquiries, and of a disposition so communicative, that he held a constant correspondence, for many years, with all the eminent mathematicians of his time; and spared neither pains, nor expence, to procure what was requisite to promote real science; so that the world was obliged to him for a great part of the late important discoveries (t). He was considered as a kind of register of all new improvements in the mathematics; and was constantly stimulating others to useful inquiries, and pointing out the defects in different branches of science, and the methods by which those defects might be supplied; so that he was sometimes styled the English Mersennus (u). He was certainly a man of great merit; but appears not to have met with the encouragement that he deserved, from those who had it in their power to have rewarded him [C]. It was chiefly from the papers of Mr. Collins, that the claim of Sir Isaac Newton to the invention of fluxions was clearly established, as may be seen in the *Commercium Epistolicum D. Johannis Collins & aliorum de Analyfi promotâ, jussu Regiæ Societatis lucem editum*, Lond. 1712, 4to (w).]

(t) *Ibid.*

(w) Birch, ut supra.

(s) Birch, ut supra.

(u) Gen. Dict.

[C] *Appears not to have met with the encouragement that he deserved, &c.* Dr. Birch says, that 'upon the loss of his place in the Excise-office, and that under the Commissioners of Accounts, he was recommended by Sir Philip Warwick, in a letter dated May, 1670, to Sir John Trevor, one of the Principal Secretaries of State, as long known to, and respected by him, for his great and useful parts, and greater modesty; and that, besides his knowledge of mathematics and accounts, he was a great master of trade. "I conceive," added Sir Philip, "he takes better measures of it, and knows the hinges it turns on better than any discourses I have met with, and can rectify the methods of several accounts relating to the navy and such affairs, if he be leisurely dealt with, for he neither makes noise nor shew. I find (for he is neither covetous nor greedy) he could reckon 200*l.* per annum for a reasonable subsistence: which, if his Majesty and my Lords Commissioners think fit to buy him at, sure he may be set on work immediately upon such subjects, as he will soon earn his wages, though it be an extraordinary allowance: and the next Commissioners of Appeals place, which falls in the Excise (which is now rather a bounty than a salary) may take off that extraordinary charge." Sir Philip Warwick wrote another letter in his favour, Aug. 6, 1677, to Mr. Brent, inclosing a paper recommending Mr. Collins to the Lord-Treasurer, the Earl of Danby; in which letter he styled him a man of good arts, and yet greater simplicity; able, but no ways forward; and observed, that he had deserved, when he was in employment, the small pension assigned him when he quitted that employment. Sir

Philip wrote a third letter of recommendation, Oct. 31, 1678, to Charles Bertie, Esq; Secretary to the Lord-Treasurer, mentioning, that in the small office, which Mr. Collins had in the Excise while the Earl of Southampton was Treasurer, he was very trusty to his charge, and very careful in the true stating of the accounts at Brook-house; and that he could have very ample testimonies of his services in attending the Commissioners, and more lately in his Office of Accountant to the Royal Fishery Company. "But as a man," continues Sir Philip, "that hath attended more his business than himself, he fell short of receiving those salaries, which were promised him: but I contract myself and my suit to you, and pray you to represent it, if it would do any good, in my name to my Lord-Treasurer, that he having, upon dissolving the then commission for Excise, but a poor pension of fifty pounds per ann. settled on him by Privy Seal, and of which he is now five or six years in arrear, you would be instrumental to get him such a portion, as might be comfortable for him, and whereof, I assure you, he stands in great need for his family as well as for himself, his present subsistence being only sometimes taking some intricate accounts of merchants, which are litigant, and others, who call him thereunto upon such occasions. I extend my request somewhat farther, that if my Lord-Treasurer have need of such a man's service, as he may probably upon the balance of trade or of a steady account of another nature, you would remember him, and gain him some employment; for thus he will recommend himself (5)."]

(5) *Ibid.* p. 233, 234.

COLLINS (ANTHONY), an eminent Writer of the present Century, was son of Henry Collins, Esq; a gentleman of a considerable estate; and was born at Heston near Hounslow in Middlesex, June 21, 1676 (a). He was educated in grammar learning at Eton-College near Windsor, and from thence was removed to King's College in Cambridge, under the tuition of Mr. Francis Hare (b). Upon his leaving college, he was entered a Student in the Temple; but disrelishing the study of the Law, he soon abandoned it. In 1698, he married Martha, the daughter of Sir Francis Child, Alderman of London (c), and by her had two sons, Henry and Anthony [A], and two daughters, Elizabeth and Martha (d). In 1700, our author published a tract, intitled, *Several of the London Cases considered* (e). In 1703, and 1704, he held an epistolary correspondence with the great Mr. Locke, who expressed an high regard and friendship for our author [B]. In 1707,

(a) See his epitaph in remark [P].

(c) Sir Francis was Lord-Mayor the year following.

(d) See epitaph.

(e) Catalogue of Mr. Collins's Library, written with his own hand.

(b) Afterwards Bishop of Chester.

(f) See the epitaph in the remark [P].

[A] *He had—two sons, Henry and Anthony.* Henry, the elder, died in his infancy. Anthony the younger, a youth of great hopes, and educated at Benet-College in Cambridge, died, in the 22d year of his age, lamented by all that knew him (1).

[B] *Mr. Locke expressed an high regard and friendship for our author.* This appears from Mr. Locke's letters to Mr. Collins (2). In that dated from Oates in Essex, October 29, 1703, he writes as follows. "I were now setting out in the world, I should think

(2) Published by M. Des Maizeaux in his Collection of several pieces of Mr. John Locke, &c. Lond. 1720. See Page 271, &c.

1707, he published his *Essay concerning the Use of Reason* (f) [C]. The same year, our author engaged in the controversy, then on foot between Mr. Dodwell and Dr. Samuel Clarke, concerning the *Natural Immortality of the Soul* [D]. In December 1709, came out a pamphlet (g), intituled, *Priestcraft in Perfection* [E]; and, in February the year following, another intituled, *Reflexions on a late Pamphlet, intituled, Priestcraft in Perfection*; both written by our author. The same year, he published his *Vindication of the Divine Attributes, in some Remarks on the Archbishop of Dublin's Sermon* (h). In March 1711, Mr. Collins went over to Holland, where he became acquainted with Mr. Le Clerc, and other learned men, and returned to London in November following. In 1713, he published his *Discourse of Free-Thinking* [F]; and soon after made a second trip to Holland,

(f) A second edition of it was published in 1709.

(h) Intituled, Divine Predestination and Foreknowledge conflicting with the Freedom of Man's Will, Lond. 1710.

(g) See History of the Works of the Learned, for Dec. 1709, p. 753.

‘ it my great happiness to have such a companion as you, who had a true relish of truth, would in earnest seek it with me, from whom I might receive it undisguised, and to whom I might communicate what I thought true, freely. Believe it, my good friend, to love truth for truth's sake, is the principal part of human perfection in this world, and the seed-plot of all other virtues; and, if I mistake not, you have as much of it, as ever I met with in any body. What then is there wanting to make you equal to the best, a friend for any one to be proud of? In another, dated from Oates, September 11th, 1704, he writes thus: *He that has any thing to do with you, must own that friendship is the natural product of your constitution; and your soul, a noble soil, is enriched with the two most valuable qualities of human nature, truth and friendship. What a treasure have I then in such a friend, with whom I can converse, and be enlightened about the highest speculations?* These extracts evince, that, at that time, Mr. Collins appeared to Mr. Locke in the light of an impartial, disinterested, enquirer after truth. How far that great man, who was undoubtedly a friend to Revelation, would, probably, have altered his opinion of our author, had he lived (3) to see his works (of which he had published none but his *London Cafes considered*) the readers of Mr. Collins's works will judge.

(3) Mr. Locke died the 28th of October, 1704.

[C] *His Essay concerning the use of Reason.* The title at length is: *An Essay concerning the use of Reason in Propositions, the evidence whereof depends upon human testimony.* Dr. Francis Gastrell, afterwards Bishop of Chester, being animadverted upon in this essay, with relation to some passages in his *Considerations concerning the Trinity, and the way of managing that controversy*, printed at London in 1702, he subjoined to the third edition of it, in 1707, a *Vindication of it in answer to Mr. Collins's Essay.*

[D] *He engaged in the Controversy—concerning the natural Immortality of the Soul.* Upon this subject Mr. Collins published the following pieces. I. *A Letter to Mr. Dodwell, containing some remarks on a (pretended) Demonstration of the immateriality and natural immortality of the Soul, in Mr. Clarke's Answer to a late Epistolary Discourse.* London, 1707, and 1709, in 8vo. II. *A Defence of the Argument made use of in a Letter to Mr. Dodwell.* London, 1707, in 8vo. III. *A Reply to Mr. Clarke's Defence of his letter to Mr. Dodwell: with a postscript to Mr. Milles's Answer to Mr. Dodwell's Epistolary Discourse.* London, 1707, in 8vo. A second edition of this piece, corrected, was published in 1709, in 8vo. IV. *Reflections on Mr. Clarke's second Defence of his Letter to Mr. Dodwell.* London, 1707, in 8vo. There was a second edition in 1711, in 8vo. V. *An answer to Mr. Clarke's third Defence of his Letter to Mr. Dodwell.* London, 1708, in 8vo. There was a second edition, corrected, London, 1711, in 8vo.

[E] *A pamphlet intituled Priestcraft in Perfection.* The title at length is: *Priestcraft in perfection, or, a Detection of the fraud of inserting, and continuing that clause [The Church hath power to decree Rites and Ceremonies, and Authority in Controversies of Faith] in the twentieth article of the Articles of the Church of England.* The authority of this clause had been called in question, in a book intituled, *The Peril of being zealously affected, but not well; or Reflexions on Dr. Sacheverell's Sermon preached at St. Paul's, Nov. 5; 1709* (4). And it being now again professedly attacked by Mr. Collins, several Pamphlets, Sermons, and Books were published upon the subject.

Among which, the most remarkable were the two following. I. *A Vindication of the Church of England from the aspersions of a late libel intituled, Priestcraft in Perfection: wherein the controverted clause of the Church's power in the 20th Article is shown to be of equal authority with all the rest of the Articles; and the fraud and forgery, charged upon the Clergy, upon the account of that clause, is retorted upon the accuser. With a Preface containing some Remarks upon the Reflexions on that Pamphlet.* By a Priest of the Church of England, London, 1710, in 8vo. II. *An Essay on the XXXIX Articles of Religion, agreed on in 1562, and revised in 1571, &c.* By Thomas Bennet, D.D. In answer to these two Books, Mr. Collins published his *Historical and Critical Essay on the XXXIX Articles, &c.* (5). The second and third editions of his *Priestcraft in Perfection* were printed, with corrections, at London, in 1710, in 8vo; and at the end of the third is subjoined the following advertisement. ‘Whereas in the two former impressions of *Priestcraft, &c.* A letter from Oxford is cited, giving an account of an English edition of the Articles being cut out from a volume of Miscellanies in the Bodleian Library; I have omitted that passage in this edition, upon the sight of a letter from Oxford, which assures the gentleman, to whom it was written, that my friend was mistaken. I do not know at present in what part of England he is, and therefore I cannot as yet give the reader or myself that satisfaction in the matter, which I hope to do when I hear of his return to Oxford.’

[F] *His Discourse of Free-Thinking.* The title at length is: *A Discourse of Free-Thinking, occasioned by the rise and growth of a Sect called Free-Thinkers.* It was re-printed at the Hague, with some additions and corrections, in 1713, in 12mo; though, in the title-page, it is said to be printed at London. In this edition, the translations in several places are corrected from Dr. Bentley's Remarks; and some references are made to those Remarks, and to Dr. Hare's Clergyman's Thanks. And whereas, in the former edition, the Discourse ended with these words; ‘For I think it virtue enough to endeavour to do good, only within the bounds of doing yourself no harm;’ in the Hague edition, after the words *virtue enough*, is inserted this parenthesis; *in a country so ignorant, stupid, superstitious, and destitute of all private and public virtue, as ours.* The Discourse was attacked in several pieces, particularly the following. I. *Reflections on an Anonymous Pamphlet, intituled, A Discourse of Free-Thinking.* By William Whiston, A. M. Lond. 1713. There have been three editions of this pamphlet. Mr. Whiston observes (6), that ‘though the Discourse is commonly so worded, as to seem rather meant against the Heathen Idolatry, Popish Superstition, Real Priestcraft, and Tyranny over conscience, than against Christianity itself, with its sacred books, yet that the author's real design must appear from the ill characters given of the Clergy or Christian Priesthood in general; the oblique reproaches cast upon Revealed Religion; the visible slight put upon the whole Jewish nation and the Mosaic law; the plain disregard of the great foundation of religion, the immortality of the soul; and the many insinuations visibly tending to render the sacred books, both Jewish and Christian, contemptible and uncertain.’ II. An anonymous pamphlet, intituled, *Free Thoughts upon the Discourse of Free-Thinking*, London, 1713, in 8vo. III. *Queries recommended to the authors of the late Discourse of Free-Thinking.* By Mr. Benjamin Hoadly,

(5) See the remark [K].

(4) See Page 20, 21.

Holland [G], and from thence to Flanders, where he received great civilities from the Priests, Jesuits, and others. He intended to have visited Paris; but the death of a near relation (i) obliged him to return to London, where he arrived the 18th of October, 1713. In 1715, he retired into the county of Essex, and acted as a Justice of the Peace, and Deputy Lieutenant of that county, as he had done before in the county of Middlesex, and liberty of Westminster. The same year he published, at London, *A Philosophical Enquiry concerning human Liberty* (k) [H]. In 1718, he was chosen Treasurer for the county of Essex [I]. In 1724, he married Elizabeth, daughter of Sir Walter Wrottesley, Bart. (l) by whom he had no children. The same year, he published his *Historical and Critical Essay on the XXXIX Articles of the Church of England* [K]; also his *Discourse of the Grounds*

(i) Mr. Trollope.

Hoadly, afterwards Bishop of Winchester (7). 'This ingenious writer declares (8), 'that, though some of the particulars, mentioned in his *Queries*, as 'designed plainly against the belief of Christianity, 'are produced in the *Treatise of Free-Thinking* under 'the specious pretence of their being good reasons 'and occasions for a *free and impartial examination*, 'and not expressly declared to be intended against 'the Gospel, in the same passages, in which the authors of that treatise produce them; yet he verily 'believes, that these authors themselves would inwardly laugh at any, who should suppose them to 'have had any other view in that performance.' And having placed several particulars from the *Discourse of Free-Thinking* in one view, he concludes with these words (9): *After this let any one doubt, if he can, what sort of Free-Thinking all that is produced in the first part of this treatise is designed to promote; or suppose it possible, that the chief view of these authors could be any other than the promoting that Free-Thinking, which they themselves contend to be Atheism and Infidelity.* IV. *Remarks upon a late Discourse of Free-Thinking; in a Letter to F. H. D. D. By Phileleuthernus Lipsiensis.* Lond. 1713, in 8vo. The author of this ingenious performance was the truly learned Dr. Richard Bentley; and the person to whom it is addressed, Dr. Francis Hare, afterwards Bishop of Chichester. It exposes the weakness and fallacy of the *Discourse*, with great strength of argument and sprightliness of wit. A *Second* part, and a sheet or two of a *Third*, were printed the same year at Cambridge: but the learned author proceeded no farther. The first part of these *Remarks* gave birth to a pamphlet, said to be written by Dr. Hare, intitled, *The Clergyman's Thanks to Phileleuthernus, for his Remarks on the late Discourse of Free-Thinking. In a Letter to Dr. Bentley.* Lond. 1713, in 8vo. The author concludes this piece with remarking, that 'if we have gained by Dr. Bentley's *Remarks* in one respect, we are, on the other hand, 'in danger of losing no less than an edition of all 'Tully, and, what is of more consequence, a *New Gospel*; with both which, for the advancement of 'learning and religion (their learning and their religion) The Free-thinking Club were preparing to 'oblige the world. And the last of these (says he) 'was, I am told, quite finished, and ready to be published, when your *Remarks* unluckily came out to 'shew, that they are neither *Christians* nor *Scholars*. 'And this has suppressed at least for some time, if not 'totally sunk, both these undertakings.'

[G] *He made a second trip to Holland.* This was ascribed to the general alarm caused by the *Discourse of Free-Thinking*, and the author's being discovered by his Printer Mr. John Darby. Whereupon Dr. Hare, having observed, that *the least appearance of danger is able in a moment to damp all the zeal of the Free-*

(10) Clergyman's *Thinkers*, tells us (10), 'that a bare enquiry after the Thanks, p. 18.

Printer of their wicked book has frightened them, 'and obliged the reputed author to take a *second trip* 'to Holland; so great is his courage to defend, upon 'the least appearance of an opposition. And are not 'these (adds the Doctor) rare champions for *Free-Thinking*? And is not their book a demonstration, 'that we are in possession of the liberty they pretend 'to plead for, which otherwise they durst never have 'writ? and that they would have been as mute as 'fishes, had they not thought they could have opened with impunity.'

[H] *His Philosophical Enquiry concerning Human Liberty.* Dr. Samuel Clarke wrote *Remarks* upon

this *Enquiry* (11). But Mr. Collins did not publish any Reply to Dr. Clarke upon this subject; because, we are told (12), though he did not think the Doctor had the advantage over him in the dispute, yet, as he had represented Mr. Collins's opinions as dangerous in their consequences, and improper to be insisted upon, our author, after such an insinuation, found he could not proceed in the dispute upon equal terms. The *Enquiry* was translated into French by the Reverend Mr. D****, and printed in the first volume of *Recueil de diverses Pieces sur la Philosophie, la Religion Naturelle, l'Histoire, les Mathematiques, &c. par Messieurs Leibnitz, Clarke, Newton, & autres auteurs celebres*; published by M. Des Maizeaux at Amsterdam, 1720, in two volumes, 12mo.

[I] *He was chosen Treasurer for the county of Essex.* In the discharge of this office Mr. Collins highly merited the thanks of several tradesmen and others, who had large sums of money due to them from the said county, but could not get it paid them, it having been spent and embezzled by their former Treasurer. The poorest of them, we are informed, he supported with his own private cash, and others he promised interest for their money till it could be raised to pay them. In 1722, the debts were all discharged, and by his care and management the county's debts were, from that time, discharged every three months, and with little more than half the money, which had been annually raised for upwards of twenty years before.

[K] *His Historical and Critical Essay upon the XXXIX Articles of the Church of England.* The title at length is: *An Historical and Critical Essay on the XXXIX Articles of the Church of England: wherein it is demonstrated, that this clause, The Church has power to decree Rites and Ceremonies, and Authority in Controversies of Faith, inserted in the Twentieth Article, is not a part of the Articles, as they were established by Act of Parliament in the 13th of Eliz. or agreed on by the Convocations of 1562 and 1571.* This, we have already said (13), was designed as an Answer to the *Vindication of the Church of England*, &c. and Dr. Bennet's *Essay on the XXXIX Articles*, both published against his *Priestcraft in Perfection*. In the Preface he tells us, 'he was engaged in writing this work by a *worthy Minister of the Gospel*, who knew that he had made some enquiries into the *modern Ecclesiastical History of England*; and that he was preparing *An History of the Variations of the Church of England, and its Clergy, from the Reformation down to this Time, with an Answer to the Cavils of the Papists made on Occasion of the said Variations.* But nothing of this kind, from our author's hand, was ever printed. As to the *Essay* in question, he concludes it with drawing up in brief the Demonstration, promised in the title page, and given in the book; and which is as follows: *The Articles of the Church of England are supposed to have their Convocational Authority from the Convocation of 1562, which first agreed on them; and from the Convocation of 1571, which, after having revised, and made alterations in, and additions to, them, agreed on them again. The way of passing Acts of Convocation is by the subscription of the majority of the Members of each House by themselves. The MS. Articles, which passed the Convocation in 1562, and were subscribed by the majority of both Houses, are extant; as are the MS. Articles of 1571, with the subscriptions of the Upper House. And both these manuscripts are without the clause. The Parliament in 1571 did, by a statute, intitled, An Act for the Ministers*

(11) They are extant in the Collection of Papers between Mr. Leibnitz and Dr. Clarke, &c. Lond. 1717, in 8vo.

(13) In the remark [E].

Grounds and Reasons of the Christian Religion [L], which was immediately attacked by a great number of writers [M]. The same year, likewise, appeared his *Scheme of Literal Prophecy considered* [N], which had several Answerers [O]. It is remarkable of Mr. Collins,

ters of the Church to be of sound Religion, confirm *Articles of Religion*, comprized in an imprinted English book, intituled, *Articles*, &c. put forth by the Queen's Authority. All the English printed books of the Articles extant before 1571, and while the Parliament were making this Statute, bore the title recited in the Statute, and were without the clause. Wherefore it follows, that the clause has neither the authority of the Convocation nor Parliament. The reader may see the whole state of this controversy, and a full vindication of the Church of England from the charge of forgery, in respect to the above-mentioned clause, in Mr. Collier's *Ecclesiastical History* (14), where particular notice is taken of our author.

(14) Part ii. B. vi.
p. 486—491.

[L] *His Discourse of the Grounds and Reasons of the Christian Religion.* The title at length is: *A Discourse of the Grounds and Reasons of the Christian Religion, in two Parts: The first containing some Considerations on the Quotations made from the Old in the New Testament, and particularly on the Prophecies, cited from the former, and said to be fulfilled in the latter: The second containing an Examination of the Scheme advanced by Mr. Whiston, in his Essay towards restoring the true Text of the Old Testament, and for vindicating the Citations thence made in the New Testament. To which is prefixed, An Apology for free Debate and Liberty of Writing.* The drift of this discourse is to shew, that Christianity is founded on Judaism, or the New Testament on the Old: that the Apostles prove Christianity from the Old Testament: that if the proofs fetched from thence are valid, Christianity is firmly established on its true foundation; but if invalid, Christianity is false: and that those proofs are typical or allegorical.

[M] *It was attacked by a great number of writers.* I shall mention only the most remarkable. I. *A List of Suppositions or Assertions in the late Discourse of the Grounds, &c. which are not therein supported by any real or authentic Evidence; for which some such Evidence is expected to be produced.* By William Whiston, A. M. 8vo. 1724. This piece is subjoined to the author's *Proposals for printing by subscription, Authentic Records concerning the Jewish and Christian Religion*, dated Jan. 17, 1724, and given away to all the Members of Parliament. In this piece, Mr. Whiston treats Mr. Collins, together with Mr. Toland, in very severe terms, as guilty of impious frauds and lay-craft. II. *The literal Accomplishment of Scripture Prophecies, being a full Answer to a late Discourse of the Grounds, &c.* By William Whiston, A. M. 8vo. 1724. III. *A Defence of Christianity, from the Prophecies of the Old Testament, wherein are considered all the Objections against this Kind of Proof, advanced in a late Discourse of the Grounds, &c.* By the Right Reverend Father in God Edward (Chandler), Lord Bishop of Litchfield and Coventry (15), 8vo. 1725. This is a very learned and elaborate performance, and has passed through several editions. IV. *A Discourse of the Connection of the Prophecies in the Old Testament, and Application of them to Christ.* By Samuel Clarke, D. D. Rector of St. James's, Westminster, 8vo. 1725. This was not intended for a direct answer to Mr. Collins's book, but as a supplement (occasioned thereby) to a proposition in Dr. Clarke's *Demonstration of the Principles of Natural and Revealed Religion*; with which it has since been constantly printed. V. *The Reasoning of Christ and his Apostles, in their Defence of Christianity, considered, in seven Sermons, preached at Hackney in Middlesex, 1724. To which is prefixed, a Preface, taking notice of the false Representations of Christianity, and of the Apostles Reasonings in Defence of it, in a Book, intituled, The Grounds, &c.* By Thomas Bullock, A. M. Published at the Request of the Gentlemen of Hackney, 8vo. 1725. VI. *An Essay upon the Truth of the Christian Religion, wherein its real Foundation upon the Old Testament is shewn, occasioned by the Discourse of the Grounds, &c.* By Arthur Ashley Sykes, A. M. Rector of Rayleigh in Essex, 8vo. 1725. Mr. Collins

(15) Afterwards
Bishop of Dur-
ham.

gave it as his opinion, that, 'of all the writers against the Grounds, &c. Mr. Sykes alone has advanced a consistent scheme of things, which he has proposed with great clearness, politeness, and moderation (16).' VII. *The Use and Intent of Prophecy, in the several Ages of the Church. In six Discourses delivered at the Temple Church, 1724, published at the Desire of the Masters of the Bench of the two honourable Societies.* By Thomas Sherlock, D. D. Dean of Chichester, and Master of the Temple (17), 8vo. 1725. This was not designed as an answer to the Grounds, &c. but only to throw in light upon the argument from Prophecy, attacked by our author. VIII. *A Vindication of the Christian Religion, in two Parts. The first, A Discourse of the Nature and Use of Miracles. The second, An Answer to a late Book, intituled, A Discourse of the Grounds, &c.* By Samuel Chandler, 8vo. 1725. IX. *A Supplement to the Literal Accomplishment of Scripture Prophecies, containing Observations on Dr. Clarke's, and Bishop Chandler's, late Discourses of the Prophecies of the Old Testament.* By William Whiston, A. M. 8vo. 1725. X. *Letters to the Author of the Discourse of the Grounds, &c. shewing that Christianity is supported by Facts well attested: that the Words of Isaiah, chap. vii. 14. Behold a Virgin shall conceive, and bear a Son, in their literal and only Sense, are a Prophecy of the Conception and Birth of the Messiah, fulfilled in Jesus; and that the Gospel Application of several other Passages in the Old Testament is just.* By John Greene, 8vo. 1726. XI. *A brief Defence of the Christian Religion: or, The Testimony of God to the Truth of the Christian Religion.* By Theophilus Lobb, M. D. 8vo. 1726. The reader will find an entire catalogue of all the pieces, written against the *Discourse of the Grounds, &c.* amounting in number to thirty-five, among which are *Sermons, London Journals, Woolston's Moderator, &c.* at the end of the Preface to the *Scheme of Literal Prophecy considered*.

(16) Scheme of
Literal Prophecy
considered, p. 12.

(17) Afterwards
Bishop of Salis-
bury and London.

[N] *His Scheme of Literal Prophecy considered.* The title at length is, *The Scheme of Literal Prophecy considered, in a View of the Controversy occasioned by a late Book, intituled, A Discourse of the Grounds, &c.* It was printed at the Hague by Thomas Johnson, in 1726, in two volumes 12mo. and reprinted at London, with corrections, in 1727, in 8vo. It is dated at London, November 13, 1725, and addressed to the Right Honourable * * * *. In this piece (18) Mr. Collins mentions a Dissertation he had written, but never published, against Mr. Whiston's *Vindication of the Sibylline Oracles*; in which he endeavours to shew, that those oracles were forged by the Primitive Christians, who were thence called Sibyllists by the Pagans. He also mentions a manuscript *Discourse of his upon the Miracles recorded in the Old and New Testament*.

(18) Ch. ii. p. 61.
edit. 1726.

[O] *It had several Answerers.* The principal are: I. *The Necessity of Divine Revelation, and the Truth of the Christian Religion asserted, in eight Sermons; to which is prefixed a Preface, with some Remarks on a late Book, intituled, The Scheme of Literal Prophecy considered, &c.* By John Rogers, D. D. London, 1727, 8vo. in answer to which, Mr. Collins wrote *A Letter to the Reverend Dr. Rogers, on Occasion of his eight Sermons concerning the Necessity of Divine Revelation, and the Preface prefixed to them. To which is added, A letter printed in the London Journal, April 1, 1727, with an answer to the same.* London, 1727, 8vo. II. *A Letter to the Author of the London Journal, Saturday, April 1, 1727.* It was written by Dr. Sykes, Dean of Burien, and is that answered by Mr. Collins, at the end of his *Letter to Dr. Rogers*. Dr. Sykes wrote a second letter in defence of his former, dated June 24, 1727, and printed in a pamphlet, intituled, *The true Grounds of the Expectation of the Messiah, in two Letters. The one printed in the London Journal, April 1, 1727. The other in Vindication of it; being a Reply to the Answer published at the End of A Letter to Dr. Rogers.* By Philalethes, London,

H

1727,

Collins, that his pieces were all anonymous. His health declined some years before his death, which fell out December 13, 1729, occasioned by a violent fit of the stone. He was interred in Oxford-Chapel, where is a monument, with a Latin inscription on it [P], erected to his memory by his widow. We shall say something of this remarkable gentleman's character below [Q].

1727, 8vo. III. *A Vindication of the Antiquity and Authority of Daniel's Prophecies, and their Application to Jesus Christ, in Answer to the Objections of the Author of the Scheme of Literal Prophecy considered.* By Samuel Chandler, London, 1727, 8vo. IV. *A Vindication of the Defence of Christianity, from the Prophecies of the Old Testament, in Answer to the Scheme of Literal Prophecy considered.* By the Right Reverend Father in God, Edward, Lord Bishop of Coventry and Litchfield: in two Volumes. With a Letter from the Reverend Mr. Masson, concerning the Religion of Macrobius, and his Testimony touching the Slaughter of the Infants at Bethlehem, with a Postscript upon Virgil's 4th Eclogue. London, 1728, 8vo. V. *The Reasoning of Christ and his Apostles vindicated: in two Parts. The first being a Defence of the Argument from Miracles, proving the Argument from Prophecy, not necessary to a rational Defence of our Religion. The second being a Defence of the Argument from Prophecy, proving the Christian Scheme to have a rational Foundation upon the Prophecies of the Old Testament.* By Thomas Bullock, A. M. Rector of North Creak in Norfolk. London, 1728, 8vo.

[P] *His epitaph.*] It is as follows:

H. S. E.
ANTONIUS COLLINS, Armiger;
Egregiis animi dotibus ornatus,
Præstanti Ingenio,
Acri Judicio,
Tenaci Memoria:
A Puero usque mirifica virtutis indole præditus:
Spectatissimum semper vitæ morumque exemplar:
Veritatis Amicus & Indagator Sedulus;
Quam neque ex sententiis hominum pendere,
Neque Magistratus gladio vindicandam esse existimavit:
In libris (quorum opulenta ei copia) evolvendis
Assiduus & Indefessus:
Quantum inde profecerit,
Ex Scriptis ipsius editis iudicet Lector idoneus.
Erga Reges optimos, utrumque Georgium,
Libertatis utpote Civilis & Ecclesiasticæ
Tutores & Patronos,
Fide (si quis alius) constans.
Gratam sui
Erga Conjuges Amoris,
Erga Liberos Charitatis,
Erga Servos Lenitatis,
Erga omnes Benevolentia,
Memoriam reliquit.
Calculorum valetudine diu conflictatus,
Demum fractus, obiit XIII Dec. M.DCCXXIX.
Amicorum nuper Delicia, nunc, eheu! Desiderium.

Natus est XXI Junii M.DCLXXVI.
HENRICO Patre Armigero.
In Matrimonio habuit
MARTHAM FRANCISCI CHILD Equitis filiam;
Atque, ea defuncta,
ELIZABETHAM, GUALTERI WROTTESELY Baronetti.
Ex altera quatuor liberos suscepit;
Quorum
Duos filios, HENRICUM infantem,
ANTONIUM vero ad virilem ætatem jam provectum,
Extulerat:
Duas itidem filias, ELIZABETHAM & MARTHAM,
Innuptas reliquit.
Alteram charissimo viro,
Quocum conjunctissime vixerat,
Monumentum hoc mœrens posuit.

(19) Bibliothèque
Raisonnée,
T. iv. Par. i.
p. 233.

[Q] *Something of his character.*] We are told (19), that 'the corruption among Christians, and the persecuting spirit of the Clergy, had given him a prejudice against the Christian religion, and at last induced him to think, that upon it's present footing it is pernicious to mankind: and that, as he had a

' great fund of humanity, sweetness of temper, and moderation, he saw with grief, that these virtues were banished from society, and that religion was made use of as a cloak to authorize all kinds of violence and injustice.' Mr. Whiston, in his *List of Suppositions and Assertions*, &c (20), treating our author, together with Mr. Toland, as guilty of *impious frauds and Lay-craft*, expresses himself, with regard to the former, in these terms: 'A second instance must be Mr. Anthony Collins, a gentleman, who has many years taken superabundant care not to be suspected of believing so much as the Apostles Creed, or the books of the Old or New Testament, or indeed any Divine Providence at all. Yet does he claim a right to be admitted to take an oath upon the Bible, and to receive the Holy Communion itself; and he is at this day admitted to do both, and in virtue thereof is in the commission of the peace, as a good Church-man: i. e. notwithstanding his open and professed infidelity, he ventures, in the most public and solemn manner, to declare his unfeigned acknowledgment of the Divine Providence, of the truth of the Christian religion, and of the books of the Holy Scripture, that is possible to be done among men. It is with great regret I add this example of an old friend, and one whom I still love better than he loves himself; but it is too flagrant to be omitted. This I call *gross immorality, impious fraud, and Lay-craft*.' Mr. Armand de la Chapelle, having translated this passage into French (21), observes, that the expressions are *a little too choleric*, and that Mr. Collins would have reason to triumph upon this instance of passion in his antagonist. This occasioned the sending a letter to Mr. de la Chapelle (22), in which the writer observes, that 'Mr. Whiston having accused Mr. Collins of irreligion, but being sensible that this accusation, being destitute of proof, was ridiculous, he has artfully pretended, that the latter had been his friend, insinuating thereby that Mr. Collins had disclosed to him his most secret sentiments. And yet (adds the writer) I have been assured by persons who are very well informed, that Mr. Collins never had any intercourse of friendship with him; that he never spoke to him above eight or ten times in his life, in a coffee-house or elsewhere, and always in other company; and that he has not seen him for above five years. Is this sufficient for Mr. Whiston to claim the character of a friend?' Mr. Whiston, in another place (23), speaks thus of Mr. Collins. *The reputed author of Freethinking is, for all I have ever heard, a sober man; thanks to his natural aversion to intemperance; and that is more than can be said of some others of the club: but as for any other virtue, he has told us (*) it is such as he intends shall never hurt him. And it can't be thought uncharitable, if I say it rises from no higher origin than fear; for he has himself disclaimed all nobler principles.* But, of all writers, the author of the *Guardian* (24) has treated our author's character with the greatest severity in the following passages: 'He that should burn a house, and justify the action by asserting he is a free agent, would be far more excusable than this author in uttering what he has from the right of a Free-Thinker.' Again; *This gentleman may be assured he has not a taste for what he pretends to decry, and the poor man is certainly more a blockhead than an Atheist.* Again; 'When such writers as this, who have no spirit but that of malice, pretend to inform the age, Mohocks and Cut-throats may well set up for wits and men of pleasure.' Lastly; *If ever any man deserved to be denied the common benefits of air and water, it is the author of a Discourse of Free-thinking.* But, notwithstanding the reproaches cast upon Mr. Collins as an enemy to ALL religion, impartially obliges us to remark, what is said, and generally believed to be true, that, upon his death-bed, he declared, 'That, as he had always endeavoured, to the best of his abilities,

abilities, to serve his God, his King, and his country, so he was persuaded he was going to that place, which God has designed for them that love him.' To which he added, *The Catholic religion is to love God and to love man*; and he advised such as were about him, to have a constant regard to these principles. His library, which was a very large and curious one, was open to all men of letters, to whom he readily communicated all the lights and assistance in his power, and (we are told) even furnished his antagonists with books to confute himself, and directed them how to give their arguments all the force of which they were capable. We shall only add, that he carefully avoided all the indecencies of conversation, and discouraged every the least tendency towards obscenity of discourse. B.

* * [Whatever may be thought of Mr. Anthony Collins's writings, that he was a most respectable man in private life seems to be founded upon evidence which cannot be contradicted. A few days after his decease, the following character of him was published in the newspapers.

"On Saturday last, died at his house in Harley-square, Anthony Collins, Esq. He was remarkably the active, upright, impartial magistrate: the tender husband, the kind parent, the good master, and the true friend.

"He was a great promoter of literature in all its branches; and an immoveable assertor of universal liberty in all civil and religious matters.

"Whatever his sentiments were in certain points, this is what he declared at the time of his death, viz. that as he had always endeavoured, to the best of his ability, to serve God, his King, and his country, so he was persuaded he was going to that place which God hath prepared for them that love him; and presently afterwards he said, the Catholic religion is to love God and to love man.

"He was an eminent example of temperance and sobriety, and one that had the true art of living. His worst enemies could never charge him with any vice or immorality (25)."

Mr. Thomas Hollis, writing to a correspondent at Rome, concluded his epistle as follows: "I shall now close a long letter, with a quotation from Mr. Locke's last letter to the excellent Mr. Collins, and shall bid you heartily farewell. There is no happiness equal to the consciousness of doing well." Upon this passage the able and spirited writer of Mr. Hollis's life has made a few remarks, relative to Collins's character, which cannot be omitted. "There are, we suppose, one or more classes of men who will think the term *excellent* improperly annexed to the name of Anthony Collins. It should cut off some part of the disgust, that he was the confidential friend of Mr. Locke. If he had any ill-will to revelation, a matter far from being out of doubt, suffice it to say, that he did not succeed in his efforts to disparage it. What we suppose might contribute to Mr. Hollis's esteem of him, was his avowed enmity to ecclesiastical usurpations, in the exposing of which he was not unsuccessful. For the rest, Mr. Collins was an excellent magistrate; amiable, prudent, virtuous, and humane in all domestic duties and relations; and of a benevolence towards all men, worthy of the character of the citizen of the world (26)."

The preceding assertion, that Mr. Collins's ill-will to Revelation is far from being out of doubt, may receive a slight confirmation from what we have related in the life of Lord Barrington. It is there said, that one of his lordship's publications staggered Mr. Collins's infidelity (27). However, if his infidelity was staggered, there doth not appear to be any good reason to suppose that it was ever entirely subdued. The best which can be thought concerning him is, that he might sometimes be only sceptical with regard to the truth of Christianity; and his writings furnish too much cause for considering him as, upon the whole, a positive unbeliever in our holy religion. At the same time, he was not so malignant an infidel as he hath often been represented. It has not been uncommon to connect his name with authors of atheistical principles; but this is doing a manifest injustice to his character. A worthy and respectable clergy-

man put a paper into our hands, containing two anecdotes which represent Mr. Collins as an Atheist, and as having introduced a young gentleman to a club of such persons in London. The paper, by some accident, has been mislaid; and we the less regret the loss of it, as we could not have inserted relations of things which must have been the result of mistake at least, if not of great prejudice, on the part of those by whom they were recited to our communicator.

To the list of those who wrote against the discourse on Free-Thinking, Dr. Swift is to be added. Our authority for this assertion is the Supplement to the Dean's Works, published by Mr. Nichols. We find there a tract, intitled, "Mr. Collins's Discourse of Free-Thinking; put into English, by Way of Abstract, for the Use of the Poor: by a Friend of the Author." This piece, which first appeared in 1713, is of an ironical nature. It is written in the assumed character of a whig and a Free-Thinker, and, amidst some good strokes of satire, contains no small portion of toryism, and of high-church bigotry (28). Of all the publications against the discourse on Free-Thinking, Dr. Bentley's was undoubtedly the best. It is replete with argument, learning, and wit; the objection against the New Testament, drawn from its various readings, is unanswerably refuted; and Mr. Collins's misconceptions, misrepresentations, and wrong translations of the authors he quotes, are admirably exposed.

There were several other answers to the "Discourse on the Grounds and Reasons of the Christian Religion," and to the "Scheme of Literal Prophecy considered," besides those which are mentioned by our learned predecessor. We remember to have read three treatises upon the subject, which appeared to us to have very considerable merit. One was by Mr. Moses Lowman, the author of various works which are well known in the theological world; but the book we refer to is now almost wholly forgotten. The other two were written by a Mr. Thomas Jeffreys, a dissenting minister in Essex, who, if he had not died young, would probably have ranked among the most able advocates of revelation. The writings he lived to publish, and which were in answer to Mr. Collins, are much esteemed by those judicious readers who are acquainted with them; and they were highly approved of by Dr. Kennicott, who was an excellent judge of whatever relates to the question concerning the predictions of the Old Testament. Mr. Jeffreys's first publication was, "A Review of the Controversy between the Author of the Discourse of the Grounds and Reasons of the Christian Religion and his Adversaries," 8vo. 1726; and the second was intitled, "Christianity the Perfection of all Religion, natural and revealed, wherein some of the principal Prophecies relating to the Messiah in the Old Testament, are shewn to belong to him in the Literal Sense, in opposition to the Attempts of the Literal Scheme." 8vo. 1728.

Dr. Leland, in his "View of the Deistical Writers," has devoted one letter to the consideration of Collins, and has exposed his false assumptions, and his fallacious and sophistical mode of reasoning (29). The letter contains many judicious and sensible remarks, though we do not think that it is written in the Doctor's best manner, the subject being capable of a still more masterly discussion.

Mr. Collins's attack on our holy religion has, in fact, turned out highly to its advantage; as it hath caused the subject of prophecy to be more deeply investigated, and has produced several admirable treatises, which have thrown great light on the question, and have proved, beyond all reasonable doubt, that many important predictions of the Old Testament related to Jesus Christ alone, and in him only were fulfilled. One particular benefit arising from it is, that it has occasioned some of our most learned and judicious divines to reject the double sense of prophecies. Among these Divines may be reckoned the Doctors Sykes, Benson, Gregory Sharpe, and Kennicott. Indeed, it is upon the principle adopted by these gentlemen, that we think Christianity will most rationally and unanswerably be defended, as, in one or two future articles, we shall have more ample reason to observe.

Though

Though the subject of the Old Testament predictions has received a very able discussion, we are by no means of opinion that it is entirely exhausted. There is still room for a farther elucidation of it, by some Divine, who shall unite real learning and critical sagacity with a rational and liberal mode of thinking.

We must not conclude this note without remarking, that though Mr. Collins was an amiable and worthy man in private life, he was, at the same time,

a most unfair writer. He seemed to have very little conscience in his quotations,—adapting them, without scruple, to his own purposes, however contrary they might be to the genuine meaning of the authors cited, or to the connection in which the passages referred to stood. So many facts of this kind were undeniably proved against him by his adversaries, that he must ever be recorded as a flagrant instance of literary disingenuity.] K.

* * [COLLINS (WILLIAM), a very ingenious Poet, was born at Chichester, in the county of Sussex, on the 25th of December, either in 1720, or 1721; but in which of the two years cannot now precisely be ascertained (a). His father was a Hatter, of good reputation in that city. The earliest part of his education was probably in his native place; but in 1733 he was admitted a scholar of Winchester-College, where he continued seven years, under the care of Dr. Burton. Here it was observed, that his English exercises were better than his Latin. The first effort of his poetical genius that is now known, was a copy of verses to a "Lady weeping," published in "The Gentleman's Magazine;" a repository in which several eminent men have begun their literary career [A]. In 1740, Mr. Collins stood at the head of the list of scholars, to be received in succession at New-College, Oxford; but unhappily there was no vacancy. This appears to have been the original misfortune of his life (b). In the hope that a vacancy might soon happen, he was, in the mean time, admitted a Commoner of Queen's-College, in the same University, and probably with a scanty maintenance. During his residence at Queen's, he was at once distinguished for genius and indolence; his exercises, when he could be prevailed upon to write, bearing the visible characteristics of both. No opportunity occurring of his being elected into New-College, he was recommended by his tutor to the Society of Magdalen, where he was chosen a *Demy*, in July 1741. The uncommon abilities and learning which he displayed on this occasion, principally contributed to his election. At Magdalen-College he continued till he had taken his Bachelor's degree; and, poetry being his chief pursuit, there it was that he wrote his Epistle to Sir Thomas Hanmer, and his Oriental Eclogues. The latter, under the title of Persian Eclogues, were published in 1742 (c). Notwithstanding their merit, they were not attended with any great success; a misfortune which sometimes happens to the most promising geniuses, especially when they print without a name, and have no person of consequence to introduce them to the notice of the world. It hath been objected to these Eclogues, that though the scenery and subjects of them are Oriental, the style and colouring are purely European. Of the force of this objection, Mr. Collins himself became sensible in the latter part of his life. He spoke to Dr. Warton and Mr. Thomas Warton with disapprobation of his Eclogues, as not sufficiently expressive of Asiatic manners, and called them his Irish Eclogues (d). Notwithstanding this circumstance, their poetical merit is very great; and Dr. Langhorne hath not scrupled to assert, "that in simplicity of description and expression, in delicacy and softness of numbers, and in natural and unaffected tenderness, they are not to be equalled by any thing of the pastoral kind in the English language (e)." There are Critics who do not think the Eclogues to be deficient in the delineation of Oriental manners [B].

In

[A] *A repository in which several eminent men have begun their literary career.*] Mr. Collins's first production was as follows:

To Miss AURELIA C——R,

On her weeping at her Sister's Wedding.

Cease, fair Aurelia, cease to mourn;
Lament not Hannah's happy state;
You may be happy in your turn,
And seize the treasure you regret.

With love united Hymen stands,
And softly whispers to your charms;
"Meet but your lover in my bands,
"You'll find your sister in his arms (1)."

(1) Johnson's Lives of the Poets, vol. iv. p. 317.

[B] *Who do not think the eclogues to be deficient in the delineation of Oriental manners.*] In proof of our assertion, and of the beauty of the eclogues, we shall lay before our readers the account which was given of them in the Monthly Review, when they were republished, in 1757.

"Although these Eclogues are evidently of British original, they contain many of those bold figures with which the poetry of the East abounds. The thoughts are appropriated, the images wild and local,

the language correct, and the versification harmonious. They are four in number. The first is called Selim, or the Shepherd's Moral; the scene lies in a valley near Bagdat; the time, morning. This Eclogue is not more remarkable for the morality of its sentiments, than for the personifications it gives us of Modesty, Chastity, Meekness, Pity, and Love. The second Eclogue is intitled, Hassan, or the Camel-Driver. The Poet here artfully lays the scene in the Desert, and makes mid-day the time. With what strength of colouring is the beginning of this piece wrought up!

In silent horror o'er the boundless waste
The driver HASSAN with his camel's past.
One cruise of water on his back he bore,
And his light scrip contain'd a scanty store;
A fan of painted feathers in his hand,
To guard his shaded face from scorching sand.
The sultry sun had gain'd the middle sky,
And not a tree, and not an herb was nigh;
The beasts, with pain, their dusty way pursue,
Shrill roar'd the winds, and dreary was the view!
With desp'rate sorrow wild, th' affrighted man
Thrice sigh'd, thrice strook his breast, and thus began:
"Sad was the hour, and luckless was the day,
"When first from Schiraz' walls I bent my way!"—&c.
The

In 1744, Mr. Collins quitted Oxford, and came to London a literary adventurer, with many projects in his head, and very little money in his pocket. He designed a variety of works; but his great fault was irresolution; besides which, the frequent calls of necessity might break his schemes, and not suffer him to pursue any settled purpose. "A man doubtful of his dinner, says Dr. Johnson, or trembling at a creditor, is not much disposed to abstracted meditation, or remote enquiries. He published proposals for a History of the Revival of Learning; and I have heard him speak with great kindness of Leo the Tenth, and with keen resentment of his tasteless successor. But probably not a page of the history was ever written. He planned several Tragedies, but he only planned them (f)." At times, however, his poetical genius triumphed over his indolence; in consequence of which he published, in 1746, his "Odes descriptive and allegorical." The success of this publication was inferior to that of the Oriental Eclogues. Mr. Millar, the Bookseller, gave the author a handsome price, as things were then estimated, for the copy of the Odes; but the sale of them was not sufficient to pay the expence of printing. Mr. Collins, justly offended at the bad taste of the public, as soon as it was in his power, returned Mr. Millar the copy-money, indemnified him for the loss he had sustained, and consigned the unfold part of the impression to the flames (g). Highly as Mr. Collins's Odes deserved a superior fate [C], it is not surprizing that they were

(f) Johnson, ubi
supra, p. 310.

(g) Monthly Review, vol. xxxii. p. 294.

The other parts of the poem are not less finished. In particular, what Reader does not shudder, with Hassan, at the following description?

At that dead hour the silent asp shall creep,
If ought of rest I find, upon my sleep:
Or some swollen serpent twist his scales around,
And wake to anguish with a burning wound.
Thrice happy they, the wife contented poor,
From lust of wealth, and dread of death secure!
They tempt no dangers, and no griefs they find. —

And who is not melted with the account he gives of his parting from his mistress?

O hapless youth! for she thy love hath won,
The tender ZARA, will be most undone!
Big swell'd my heart, and own'd the pow'rful maid,
When fast she dropt her tears, as thus she said:
"Farewel the youth whom sighs could not detain,
Whom ZARA's breaking heart implor'd in vain!
"Yet as thou go'st, may ev'ry blast arise,
"Weak and unfelt as these rejected sighs!
"Safe o'er the wild, no perils mayst thou see,
"No griefs endure, nor weep, false youth, like me."
O let me safely to the fair return,
Say with a kiss, she must not, shall not mourn;
O! let me teach my heart to lose its fears,
Recall'd by Wisdom's voice, and ZARA's tears.

He said, and call'd on Heav'n to bless the day,
When back to Schiraz's walls he bent his way.

The third Eclogue is not the least beautiful of the four; it is named ABRA, or the Georgian Sultana. The scene is placed in the forest; the time evening.

In Georgia's land, where Teflis's tow'rs are seen,
In distant view along the level green,
While ev'ning dews enrich the glitt'ring glade,
And the tall forests cast a longer shade,
What time 'tis sweet o'er fields of rice to stray,
Or scent the breathing maze at setting day;
Amidst the maids of Zagen's peaceful grove,
EMYRA sung the pleasing cares of love.

To do, however, justice to this, we should be obliged to transcribe the whole, which abounds with an elegant rural simplicity. If this Eclogue presents us with a pleasing picture of pastoral felicity, the fourth and last terrifies us with a lively one of Eastern desolation. The Poet introduces two Circassian shepherds, flying at midnight from their country, which the savage Tartars are supposed to have successfully invaded. Sicander being wearied with the length of his flight, thus addresses his friend on the steep side of a mountain.

O stay thee, AGIB, for my feet deny,
No longer friendly to my life, to fly.
VOL. IV.

Friend of my heart, O turn thee and survey,
Trace our sad flight thro' all its length of way!
And first review that long-extended plain,
And yon wide groves, already past with pain!
Yon ragged cliff, whose dang'rous path we try'd!
And last this lofty mountain's weary side (2)!"

Dr. Langhorne hath likewise, distinctly illustrated the beauties of the Eclogues (3).

[C] Highly as Mr. Collins's Odes deserved a far superior fate.] The subjects of the Odes descriptive and allegorical were as follows: Ode to Pity. Ode to Fear. Ode to Simplicity. Ode on the Poetical Character. Ode, written in the Year 1746. Ode to Mercy. Ode to Liberty. Ode to a Lady, on the Death of Colonel Charles Ross in the Action at Fontenoy; written in May, 1745. Ode to Evening. Ode to Peace. The Manners, an Ode. The Passions, an Ode for Music. The Criticism upon these Odes, in the Monthly Review, is so much to their honour, and is in itself so just and masterly, that we shall not scruple to insert it.

"If a luxuriance of imagination, a wild sublimity of fancy, and a felicity of expression so extraordinary, that it might be supposed to be suggested by some superior power, rather than to be the effect of human judgment, or capacity—if these are allowed to constitute the excellence of lyric poetry, the author of the Odes descriptive and allegorical, will indisputably bear away the palm from all his Competitors in that province of the Muse.

Twelve of Mr. Collins's Odes are printed in this Collection of his works, the first of which is an Ode to Pity.

The measure of this Ode is happily chosen, for the repetition of melody is calculated to express that tenderness and pathos which must be inseparable from an Ode to Pity:

By Pella's Bard, a magic name,
By all the griefs his thought could frame,
Receive my humble rite:
Long, Pity, let the nations view
Thy sky-worn robes of tenderest blue,
And eyes of dewy light.

An ordinary Painter would have been contented to represent the eyes of Pity as languishing and mild—the *dewy light* was a stroke which the happiest imagination alone could execute.

In writing an Ode on a subject of tenderness, the Poet could not possibly omit to mention his countryman Otway, who was indeed the Priest of Pity, like Collins ingenious, and like him unhappy:

But wherefore need I wander wide
To old Ilissus' distant side,
Deserted stream, and mute?
Wild Arun too has heard thy strains,
And Echo 'midst my native plains,
Been sooth'd by Pity's lute:

I

There

(2) Monthly Review, vol. xvi. p. 486—488.

(3) Collins's Poetical Works, p. 105—133.

were not popular, at their first appearance. Allegorical and abstracted poetry was above the taste of the times, and will ever be above the taste of the bulk of readers. Dr. Langhorne

There first the wren thy myrtles shed
On gentlest Otway's infant-head,
To him thy cell was shewn;
And while he sung the female heart,
With youth's soft notes unspoil'd by art,
Thy turtles mix'd their own.

The Ode to Fear is so nervous, so expressive, and so picturesque throughout, that we have seen no lyric performance superior to it in the English language. Thus it begins:

Thou, to whom the world unknown
With all its shadowy shapes is shewn;
Who seest appall'd th' unreal scene,
While Fancy lifts the veil between:
Ah Fear! ah frantic Fear!
I see, I see thee near.
I know thy hurried step, thy haggard eye!
Like thee I start, like thee disordered fly,
For, lo! what monsters in thy train appear!

The abbreviation of the measure in the fifth and sixth verses is most nervously expressive, and most happily adapted to the suddenness of the motion excited. Danger, which is properly introduced as a personage in the train of Fear, is so characteristically described, that there is no looking upon the picture without horror:

Danger, whose limbs of giant-mold,
What mortal eye can fix'd behold?
Who stalks his round, an hideous form,
Howling amidst the midnight storm,
Or throws him on the ridgy steep
Of some loose hanging rock to sleep.

Certainly it is not in the power of human invention to produce an image of greater force and propriety than that which is exhibited in the two last quoted verses, where danger is represented as sleeping on the loosely-hanging rock of a precipice. The dreadful Beings that attend him are described with equal strength of imagination:

And with him thousand phantoms join'd,
Who prompt to deeds accurs'd the mind:
And those, the fiends, who near allied,
O'er Nature's wounds and wrecks preside:
While Vengeance in the lurid air,
Lifts her red arm, expos'd and bare;
On whom that ravening brood of Fate,
Who lap the blood of Sorrow, wait;
Who, Fear, this ghastly train can see,
And look not madly wild, like thee?

The essential part which Fear bears in the drama, could not be overlooked by an Imagination like that of Mr. Collins, and he very properly refers to its effects on the Grecian theatre:

In earliest Greece to thee, with partial choice,
The grief-full Muse address'd her infant tongue:
The maids and matrons, on her awful voice,
Silent and pale in wild amazement hung.
O Fear, I know thee by my throbbing heart,
Thy withering power inspir'd each mournful line;
Tho' gentle Pity claim'd her mingled part,
Yet all the thunders of the scene are thine.

In the Antistrophe, which concludes this inimitable Ode, Fear is thus addressed:

Say, wilt thou shroud in haunted cell,
Where gloomy Rape and Murder dwell?
Or in some hallow'd feat,
'Gainst which the big waves beat,
Hear drowning seamen's cries in tempests brought.

After this he alludes to a scenery and a superstition common in some parts of England, which has great

poetical propriety in an Ode to Fear: we mean the superstition of St. Mark's eve:

Ne'er be I found, by thee o'eraw'd,
On that thrice hallow'd eve abroad,
When ghosts, as cottage-maids believe,
Their pebbled beds, permitted, leave,
And goblins haunt, from fire or fen,
Or mine, or flood, the works of men!

The allusions to scenes of ancient Enthusiasm and Poetry, in the Ode to Simplicity, are happily designed, and delightfully expressed:

By all the honey'd store
On Hybla's thymy shore;
By all her blooms, and mingled murmurs dear,
By her whose love-lorn woe,
In evening musings slow,
Sooth'd sweetly-sad Electra's Poet's ear:

By old Cephissus deep,
Who spread his wavy sweep,
In warbled wanderings round thy green retreat,
On whose enamel'd side,
When holy Freedom died,
No equal haunt allur'd thy future feet.

O sister meek of Truth,
To my admiring youth,
Thy sober aid, and native charms infuse!
The flowers that sweetest breathe,
Tho' Beauty cull'd the wreath,
Still ask thy hand to range their order'd hues.

Simplicity is essentially necessary to the perfection of every poetical work; and Mr. Collins has borne witness, by all his performances, but particularly by his Oriental Eclogues, to the truth of the following stanza:

Tho' Taste, tho' Genius bless,
To some divine excess,
Faint's the cold work, 'till thou inspire the whole;
What each, what all supply,
May court, may charm the eye,
Thou, only thou canst raise the meeting soul.

After this, how much in character is the next stanza, with which the Ode concludes?

Of these let others ask,
To aid some mighty task,
I only seek to find thy temperate vale:
Where oft my reed might sound
To maids, and shepherds round,
And all thy sons, O Nature, learn my tale.

The Ode on the poetical Character is so extremely wild and extravagant, that it seems to have been written wholly during the tyranny of imagination. Some, however, there are, whose congenial spirits may keep pace with the Poet in his most excentric flights, and from some of his casual strokes may catch those sublime ideas which, like him, they have experienced, but have never been able to express—Some, to whom Fancy

The cest of amplest power has given:
To whom the godlike gift assigns,
To gaze her visions wild, and feel unmix'd her flame.

But poetry so entirely abstracted, can only be entertaining to the few. The little Ode which follows this, and which is said to have been written in the beginning of the year 1746, will be more generally pleasing, as it is equally beautiful and simple:

How sleep the brave, who sink to rest,
With all their country's wishes blest!
When Spring, with dewy fingers cold,
Returns to deck their hallow'd mold,
She there shall dress a sweeter sod
Than Fancy's feet have ever trod.

Langhorne justly observes, that "it is in the lower walks, the plain and practical paths of the Muses only, that the generality of men can be entertained. The higher efforts of imagination are above their capacity (b)."

(b) Memoirs of Mr. Collins, ubi supra, p. xi, xii.

Whilst

By fairy-hands their knell is rung,
By forms unseen their dirge is sung;
There Honour comes, a Pilgrim grey,
To bless the turf that wraps their clay.
And Freedom shall a while repair,
To dwell a weeping Hermit there.

The Strophe in the Ode to Mercy affords the finest subject for a picture that imagination can form:

O thou, who sit'st a smiling bride,
By Valour's arm'd and awful side,
Gentlest of sky-born forms, and best ador'd:
Who oft with songs, divine to hear,
Win'st from his fatal grasp the spear,
And hid'st in wreaths of flowers his bloodless sword!

There is something perfectly classical in Mr. Collins's manner, both with respect to his imagery and his composition; and Horace's rule of *ut Picura Poetis*, was never better observed than in the above-quoted verses.

The same style of painting, though somewhat bolder, characterises the Ode to Liberty:

Who shall awake the Spartan fire,
And call in solemn sounds to life,
The youths whose locks divinely spreading,
Like vernal hyacinths in fullen hue,
At once the breath of fear and virtue shedding,
Applauding Freedom lov'd of old to view?

The Poet, after these lines, refers to that beautiful fragment of Alceus:

εν μυστῇ κλαδί, &c.

which, together with a translation, the Reader will find in the first article of our review for October, 1762.

The ruin of the Liberties and of the State of Rome are described in a most picturesque and pathetic manner:

No, Freedom, no: I will not tell,
How Rome, before thy weeping face,
With heaviest sound, a giant statue fell.
Push'd by a wild, and artless race,
From off its wide, ambitious base,
When time his northern sons of spoil awoke,
And all the blended work of strength and grace,
With many a rude, repeated stroke,
And many a barbarous yell to thousand fragments broke.

The ancient tradition that there was formerly a temple of Liberty in Britain, awakes, at once, the enthusiasm, and the patriotism of our liberal Bard. Hear with what rapture he dwells upon the thought:

Then too, 'tis said, an hoary pile,
'Midst the green navel of our isle,
Thy shrine in some religious wood,
O soul-enforcing Goddess, stood!
There, oft the painted natives feet
Were wont thy form celestial meet:
Tho' now with hopeless toil we trace
Time's backward rolls, to find its place;
Whether the fiery-tressed Dane,
Or Roman's self o'erturn'd the Fane,
Or in what heaven-left age it fell,
'Twere hard for modern song to tell.
Yet still, if Truth those beams infuse,
Which guide at once, and charm the Muse,
Beyond yon braided clouds that lie
Paving the light-embroider'd sky:
Amidst the bright pavilion'd plains
The beauteous model still remains.
There happier than in islands blest,
Or bowers by Spring or Hebe drest,

The Chiefs who fill our Albion's story,
With warlike deeds, retir'd in glory,
Hear their consoled Druids sing
Their triumphs to th' immortal string.

In the Passions, an Ode for Music, (which, if we are not mistaken, was sometime ago set by Dr. Hayes) the emotions of the soul are described, and the movements of the verse adapted to them with equal happiness:

But thou, O Hope, with eyes so fair,
What was thy delighted measure?
Still it whisper'd promis'd pleasure,
And bad the lovely scenes at distance hail!
Still would her touch the strain prolong,
And from the rocks, the woods, the vale,
She call'd on Echo still thro' all her song;
And where her sweetest theme she chose,
A soft responsive voice was heard at every close,
And Hope enchanted smil'd and waved her golden hair.

The force of the following stanza must be universally felt:

First Fear his hand, its skill to try,
Amid the chords, bewilder'd, laid,
And back recoil'd he knew not why,
Even at the sound himself had made.

It is with peculiar pleasure that we do this justice to a Poet who was too great to be popular, and whose genius was neglected, because it was above the common taste (4)."

(4) Monthly Review, vol. xxx. p. 21-26.

We cannot deny ourselves the pleasure of inserting the Ode upon the Passions at full length.

When Music, heavenly maid, was young,
While yet in early Greece she sung,
The Passions oft, to hear her shell,
Throng'd around her magic cell,
Exulting, trembling, raging, fainting,
Possess'd beyond the Muse's painting;
By turns they felt the glowing mind
Disturb'd, delighted, rais'd, refin'd.
Till once, 'tis said, when all were fir'd,
Fill'd with fury, rapt, inspir'd,
From the supporting myrtles round
They snatch'd her instruments of sound,
And as they oft had heard apart
Sweet lessons of her forceful art,
Each, for madness rul'd the hour,
Would prove his own expressive power.

First Fear his hand, its skill to try,
Amid the chords bewilder'd laid,
And back recoil'd, he knew not why,
Even at the sound himself had made.

Next Anger rush'd, his eyes on fire,
In lightnings own'd his secret stings,
In one rude clash he struck the lyre,
And swept with hurried hand the strings.

With woeful measures wan Despair—
Low fullen sounds his grief beguil'd,
A solemn, strange, and mingled air,
'Twas sad by fits, by starts 'twas wild.

But thou, O Hope, with eyes so fair,
What was thy delighted measure?
Still it whisper'd promis'd pleasure,
And bad the lovely scenes at distance hail!
Still would her touch the strain prolong,
And from the rocks, the woods, the vale,
She call'd on Echo still thro' all the song;
And where her sweetest theme she chose,
A soft responsive voice was heard at every close,
And Hope enchanted smil'd, and wav'd her golden hair.
And longer had she sung,—but, with a frown,
Revenge impatient rose,

He

(i) Johnson, *ubi supra*, p. 311.

Whilst Mr. Collins resided in London, Dr. Johnson fell into his company. "His appearance, says the Doctor, was decent and manly; his knowledge considerable, his views extensive, his conversation elegant. By degrees I gained his confidence; and one day was admitted to him when he was immured by a Bailiff, that was prowling in the street. On this occasion recourse was had to the Booksellers; who, on the credit of a translation of Aristotle's Poeticks, which he engaged to write, with a large commodity, advanced as much money as enabled him to escape into the country. He shewed me the guineas safe in his hand.⁽ⁱ⁾" Not long after this event, Mr. Collins found some consolation in changing the scene, and visiting his uncle, Lieutenant-Colonel Martin, who was then with the British army in Flanders. In a little time the Colonel died, and left his nephew about two thousand pounds; a sum which our Poet could scarcely think exhaustible, and which he did not live to exhaust. One of the first things he did after his uncle's decease, was to repay the money he had obtained from the Booksellers, on the credit of translating Aristotle's Poeticks; for he no longer thought of performing that engagement. Mr. Collins's accession of fortune came too late to be of any essential service to him. His faculties had been so long harrassed by anxiety, dissipation, and distress, that he fell into a nervous disorder, which brought with it an unconquerable depression of spirits, and at length reduced the finest understanding to the most deplorable childishness. His disorder was not alienation of mind, but general laxity and feebleness, a deficiency rather of vital than intellectual powers. What he spoke wanted neither judgment nor spirit: but a few minutes exhausted him, so that he was forced to rest upon the couch, till a short cessation restored his powers, and he was again able to talk with his former vigour. When he felt the approaches of this dreadful malady, with the usual

He threw his blood-stain'd sword in thunder down,
And, with a withering look,
The war-denouncing trumpet took,
And blew a blast so loud and dread;
Were ne'er prophetic sounds so full of woe.
And ever and anon he beat
The doubling drum with furious heat;
And tho' sometimes, each dreary pause between,
Dejected Pity at his side,
Her soul-subduing voice applied,
Yet still he kept his wild unalter'd mien,
While each strain'd ball of fight seem'd bursting from
his head.
Thy numbers, jealousy, to nought were fix'd,
Sad proof of thy distressful state,
Of differing themes the veering song was mix'd,
And now it courted Love, now raving call'd on
Hate.

With eyes uprais'd, as one inspir'd,
Pale Melancholy sat retir'd,
And from her wild sequester'd seat,
In notes by distance made more sweet,
Pour'd thro' the mellow Horn her pensive soul:
And dashing soft from rocks around,
Bubbling runnels join'd the sound;
Thro' glades and glooms the mingled measure stole,
Or o'er some haunted streams with fond delay,
Round an holy calm diffusing,
Love of peace, and lonely musing,
In hollow murmurs died away.
But O, how alter'd was its sprightlier tone!
When Cheerfulness, a nymph of healthiest hue,
Her bow across her shoulder flung,
Her buskins gemm'd with morning dew,
Blew an inspiring air, that dale and thicket rung,
The hunter's call to Faun and Dryad known;
The oak-crown'd Sisters, and their chaste-eyed
queen,
Satyrs and sylvan boys were seen,
Peeping from forth their alleys green;
Brown Exercise rejoic'd to hear,
And Sport leapt up, and seiz'd his beechen spear.
Last came Joy's ecstatic trial,
He with viny crown advancing,
First to the lively pipe his hand address'd,
But soon he saw the brisk awakening viol,
Whose sweet entrancing voice he lov'd the best.
They would have thought, who heard the strain,
They saw in Tempe's vale her native maids,
Amidst the festal sounding shades,
To some unwearied minstrel dancing,
While, as his flying fingers kiss'd the strings,
Love fram'd with Mirth, a gay fantastic round,
Loose were her tresses seen, her zone unbound,
And he, amidst his frolic play,

As if he would the charming air repay,
Shook thousand odours from his dewy wings.

O Music, sphere-descended maid,
Friend of pleasure, wisdom's aid,
Why, Goddess, why to us denied?
Lay'st thou thy ancient lyre aside?
As in that lov'd Athenian bower,
You learn'd an all-commanding power,
Thy mimic soul, O nymph endear'd,
Can well recall what then it heard.
Where is thy native simple heart,
Devote to virtue, fancy, art?
Arise, as in that elder time,
Warm, energetic, chaste, sublime!
Thy wonders, in that god-like age,
Fill thy recording Sister's page—
'Tis said, and I believe the tale,
Thy humblest Reed could more prevail,
Had more of strength, diviner rage,
Than all which charms this laggard age,
Even all at once together found
Cæcilia's mingled world of sound—
O bid our vain endeavours cease,
Revive the just designs of Greece,
Return in all thy simple state!
Confirm the tales her sons relate⁽⁵⁾!"

(5) Collins's Poetical Works, p. 81—87.

"If the music, says Dr. Langhorne, which was composed for this Ode, had equal merit with the Ode itself, it must have been the most excellent performance of the kind, in which poetry and music have, in modern times, united. Other pieces of the same nature have derived their greatest reputation from the perfection of the music that accompanied them, having in themselves little more merit than that of an ordinary ballad: but in this we have the whole soul and power of poetry—Expression that, even without the aid of music, strikes to the heart; and imagery of power enough to transport the attention, without the forceful alliance of corresponding sounds. What, then, must have been the effect of these united!" The Doctor, after illustrating some of the peculiar beauties of the Poem, concludes with observing, that, "upon the whole, there may be very little hazard in asserting, that this is the finest Ode in the English language⁽⁶⁾." In the collection of Collins's works, there are two poems we have not yet mentioned. These are, a Dirge in Cymbeline, and an Ode on the death of Mr. Thomson, both of which are very beautiful. The Epistle to Sir Thomas Hanmer is the least interesting of our author's productions. We scarcely need to inform our readers, that his various excellencies as a Poet are particularly marked out by Dr. Langhorne.

(6) Observations on the Genius and Writings of Collins; annexed to his Poetical Works, p. 178—181.

weakness

weakness of men so diseased, he eagerly snatched that temporary relief with which the table and the bottle flatter and seduce. But his health continually declined, and he grew more and more burthensome to himself. Having continued, with short intervals, in this pitiable state, till the year 1756, he died in the arms of his sister. In his last illness, he shewed to Dr. Joseph and Mr. Thomas Warton, an Ode, inscribed to Mr. John Hume, on the Superstition of the Highlands; which they thought superior to his other works, but which no search has yet found (k).

(k) Langhorne's
Memoirs, *ubi su-
pra*, p. xii—xiv.
Johnson, *ubi su-
pra*, p. 311, 312,
315, 316.

Not long after our Poet's decease, the following character of him was drawn up by Dr. Johnson: "Mr. Collins was a man of extensive literature, and of vigorous faculties. He was acquainted not only with the learned tongues, but with the Italian, French, and Spanish languages. He had employed his mind chiefly upon works of fiction, and subjects of fancy; and, by indulging some peculiar habits of thought, was eminently delighted with those flights of imagination which pass the bounds of nature, and to which the mind is reconciled only by a passive acquiescence in popular traditions. He loved Fairies, Genii, Giants, and Monsters; he delighted to rove through the meanders of enchantment, to gaze on the magnificence of golden palaces, to repose by the waterfalls of Elysian gardens. This was, however, the character rather of his inclination than his genius. The grandeur of wildness, and the novelty of extravagance, were always desired by him, but were not always attained. Yet as diligence is never wholly lost, if his efforts sometimes caused harshness and obscurity, they likewise produced, in happier moments, sublimity and splendour. This idea, which he had formed of excellence, led him to Oriental fictions, and allegorical imagery; and, perhaps, while he was intent upon description, he did not sufficiently cultivate sentiment. His poems are the productions of a mind not deficient in fire, nor unfurnished with knowledge either of books or life, but somewhat obstructed in its progress by deviation in quest of mistaken beauties.

"His morals were pure, and his opinions pious. In a long continuance of poverty, and long habits of dissipation, it cannot be expected that any character should be exactly uniform. There is a degree of want by which the freedom of agency is almost destroyed; and long association with fortuitous companions will at last relax the strictness of truth, and abate the fervour of sincerity. That this man, wise and virtuous as he was, passed always unentangled through the snares of life, it would be prejudice and temerity to affirm. But it may be said, that at least he preserved the source of action unpolluted, that his principles were never shaken, that his distinctions of right and wrong were never confounded; and that his faults had nothing of malignity or design, but proceeded from some unexpected pressure, or casual temptation.

"The latter part of his life cannot be remembered but with pity and sadness. He languished some years under that depression of mind which enchains the faculties without destroying them, and leaves reason the knowledge of right, without the power of pursuing it. These clouds, which he found gathering on his intellects, he endeavoured to disperse by travel, and passed into France, but found himself constrained to yield to his malady, and returned. He was for some time confined in a house of lunatics, and afterwards retired to the care of his sister in Chichester, where death, in 1756, came to his relief.

"After his return from France, the writer of this character paid him a visit at Islington, where he was waiting for his sister, whom he had directed to meet him: there was then nothing of disorder discernible in his mind by any but himself; but he had withdrawn from study, and travelled with no other book than an English Testament, such as children carry to the school: when his friend took it into his hand, out of curiosity to see what companion a man of letters had chosen, 'I have but one book,' says Collins, but that is the best (l).

(l) Johnson, *ubi supra*, p. 312—315.

To this character Dr. Johnson hath since added, that Mr. Collins's diction was often harsh, unskilfully laboured, and injudiciously selected. "He affected, says the Doctor, the obsolete, when it was not worthy of revival; and he puts his words out of the common order, seeming to think, with some later candidates for fame, that not to write prose is certainly to write poetry. His lines commonly are of slow motion, clogged and impeded with clusters of consonants. As men are often esteemed who cannot be loved, so the poetry of Collins may sometimes extort praise when it gives little pleasure (m).

(m) *Ibid.* p. 315, 316.

That Dr. Johnson's estimate of the genius and writings of Mr. Collins is too severe, will be allowed by most readers. A very different opinion of his poetical excellence is maintained in the notes [B] and [C]; and other testimonies may be produced to the same purpose, from Critics of undoubted reputation. Mr. Thomas Warton, speaking of Collins, calls him his lamented friend, "whose Odes will be remembered while any taste for true poetry remains (n)." "The genius of Collins, says Mr. Knox, seems in some measure to have resembled that of Tickell. Dignity, solemnity, and pathos, are the striking features of his compositions. None but a true Poet could have written the Song over Fidele in Shakspeare's Cymbeline (o)." Mr. Potter, treating of the Ode, VOL. IV. K asserts,

(n) History of Poetry, vol. ii. p. 361. note.

(o) Knox's Essays, moral and literary, vol. ii. p. 379. Edition of 1782.

asserts, that Collins was the first of our Poets who reached its excellence. "His mind
 "was impressed with a tender melancholy, but without any mixture of that sullen gloom
 "which deadens its powers: it led him to the softest sympathy, that most refined feeling
 "of the human heart. His faculties were vigorous, and his genius truly sublime: his
 "style is close and strong, and his numbers in general harmonious. He was well ac-
 "quainted with Æschylus and Euripides, and drew deep from their fountains. His
 "thoughts had a romantic cast, and his imagination a certain wild grandeur, which some-
 "times perhaps approaches to the borders of extravagance; but this led him to descrip-
 "tions and allegories wonderfully poetical: such, for instance, is the antistrophe in his
 "Ode to Liberty, and the first part of his Ode to Fear: Æschylus himself has not a
 "bolder conception, and the grandeur of thought is as greatly expressed. Dr. Johnson
 "speaks of this sublime Poet with a tenderness which reflects honour on himself: he al-
 "lows him sometimes to have sublimity and splendour; but in the coldness of criticism
 "expresses some disapprobation of his allegorical imagery, and is unjust to his harmony (p)." (p) Potter's In-

quiry into some
 Passages in Dr.
 Johnson's Lives
 of the Poets, p.
 15.

Though we agree with these ingenious Critics, in giving a much higher rank to Collins as a Poet than Dr. Johnson seems willing to allow him, and though we condemn the excesses to which the Doctor's strictures are carried, it must be acknowledged, that they are not in every respect destitute of foundation. Mr. Collins is occasionally, though not frequently, harsh in his numbers: his personifications appear, in a few instances, to be multiplied beyond just cause; and he is sometimes blameably obscure. Of the last fault, his Ode on the Poetical Character is a striking example. But when every possible deduction is made from his merit, he will still stand entitled to a very large proportion of praise; and his Ode on the Passions must ever be joined with Dryden's St. Cecilia, and Gray's Bard, as among the boldest and brightest efforts of the Lyric Muse.

We shall conclude this article with a Sonnet from Dr. Langhorne's "Visions of Fancy;" and we insert it with the greater pleasure, as it hints at the moral which is deducible from the life of our unfortunate Poet.

Reclining in that old and honoured shade,
 Where MAGDALEN's graceful tower informs the sky,
 Urging strong thought thro' contemplation high,
 Wisdom in form of ADDISON was laid;
 Who thus fair truth's ingenuous lore convey'd
 To the poor shade of COLLINS wandering by.
 The tear stood trembling in his gentle eye,
 With modest grief reluctant, while he said—
 "Sweet Bard! beloved by every Muse in vain!
 "With powers whose fineness wrought their own decay!
 "Ah! wherefore, thoughtless didst thou yield the rein
 "To fancy's will, and chase her meteor ray?
 "Ah! why forgot thy own Hyblæan strain?
 "(q) Peace rules the breast, where reason rules the day (r)." K.

* The account from which the materials of the present article are chiefly derived, and which has appeared in several publications, was the joint production of Dr. Fothergill and Michael Collinson, Esq. We are indebted to the latter gentleman for some additional information.

(a) From the information of Michael Collinson, Esq.

* * [COLLINSON (PETER), * an excellent Citizen, a distinguished Naturalist and Antiquary, and a zealous promoter of useful knowledge, was born on the 14th of January, 1693-4 (a). The family from which he descended had long been seated in the North of England; and his great-grandfather, who was of the same christian name with himself, lived on his paternal estate, called Hugal-Hall, or Height of Hugal, near Windermere-Lake, in the parish of Stavely, about ten miles from Kendal in Westmoreland. What was his father's profession, or where he inhabited, cannot be fully ascertained; and we are equally incapable of determining at what place young Collinson received the first rudiments of his education. Being intended for trade, he does not appear to have had any great degree of instruction in the learned languages. The business in which he was brought up, was that of a wholesale dealer, in what is called man's mercery; and he had a brother, James, who seems to have been bred to the same business. It is supposed, that man's mercery was the employment of their father. At a proper age, the two brothers engaged in trade as partners, and this was a happy circumstance for both of them; because, as they lived in entire harmony, and their occupation did not require their presence together, each of them had leisure to attend to his particular studies and pursuits, whether of pleasure or improvement (b). Mr. Peter Collinson had discovered, from his youth, a strong attachment to Natural History. The examination of insects, and their several metamorphoses, employed many of those hours which, at his time of life, are too frequently devoted to less innocent and less improving objects. Plants also engaged his attention, and he began very early to make dried specimens. So diligent was his curiosity with respect to matters of this kind, that, whilst he was yet a young man, he obtained the notice and esteem of the most eminent Naturalists of the age. Derham, Woodward, Dale, Lloyd, and Sir Hans Sloane, honoured him with their acquaintance and their friendship. He had a particular intimacy with Sir Charles Wager, which

(b) Annual Re-
 gister for 1770.
 Part the 2d, p.
 53, 54.

which he converted to the purposes of science. At the instigation of Mr. Collinson, Sir Charles made it his business, in the course of his numerous voyages, to pick up a variety of curiosities, which did not a little contribute to enrich Sir Hans Sloane's collection. With the same kind and liberal view, Sir Charles Wager encouraged the commanders under him, who were stationed in different parts of the globe, to procure whatever was rare and valuable in the several branches of Natural History. Among the vast number of articles in Sir Hans Sloane's immense treasury of nature, there were very few with which Mr. Collinson was not well acquainted; his familiarity with Sir Hans being such, that he visited him at all times, and continued to do so till his death (c). To the other friends which Mr. Collinson's scientific attainments procured him, though at a later period, must be added John, Earl of Bute; a nobleman who has now been long known in the world for his skill in botany, his distinguished encouragement of that part of philosophy, and his patronage of the liberal arts in general (d).

(d) From the information of Michael Collinson, Esq.

(e) Annual Register, ubi supra.

It was not to Natural History only that the knowledge of the gentleman who is the subject of the present article was confined. His acquaintance with the antiquities of his own country was very considerable. He was, therefore, well qualified to become a member of both the great literary institutions with which London is adorned. Accordingly, he was elected a Fellow of the Royal Society, in December 1728, being then nearly thirty-five years of age. To the Society of Antiquaries he had the honour of belonging from its first institution (e). How diligent and useful a member he was of the Royal Society, is apparent from many parts of the Philosophical Transactions, to which we refer such of our readers as are desirous of obtaining a more particular view of his zeal in extending the boundaries of science. Besides his personal communications, which were curious and valuable, he promoted and preserved a most extensive correspondence with the learned and ingenious of all countries. We shall only here take notice, that, in the fifty-first volume of the Philosophical Transactions, Mr. Collinson, in a letter to the Honourable J. Th. Klein, Secretary to the City of Dantzick, has maintained the opinion of the migration of swallows, in opposition to that gentleman, who insisted that they are not birds of passage, but that, at the time of their going away, they retire under the water, and live therein all the winter. This hypothesis Mr. Collinson regards as incongruous to nature and reason, and urges the authority of Sir Charles Wager, one Captain Wright, and Mr. Adanson, as eye-witnesses of the travels of swallows (f). We have the rather been led to the mention of the controversy, as our author's sentiments have been ingeniously and ably opposed by Mr. Daines Barrington, first, in the sixty-second volume of the Philosophical Transactions, and since, with considerable additions, in the late publication of his Miscellanies (g).

(g) Miscellanies by the Honourable Daines Barrington, p. 174—244.

Mr. Collinson was not a little zealous, as a Fellow of the Society of Antiquaries, to promote the ends of the institution. One distinguished testimony of his attention in this respect, is his paper relating to the round tower at Ardmore in Ireland. There are several of these towers in that kingdom, and different opinions have been formed concerning the design for which they were constructed. Mr. Charles Smith, upon the authority of some ancient Irish manuscripts, maintains that they were used for imprisoning penitents, and with him Mr. Collinson agrees. According to the manuscripts, these penitents were placed in the uppermost story of the tower, where having made probation, or done penance for a limited time, according to the heinousness of their crimes, they then were permitted to descend to the next floor; and thus they proceeded by degrees, until they came to the door, which always faced the entrance of the church, where they stood to receive absolution from the Clergy, and the blessings of the people (h). Plausible as this account may appear, it has been ably controverted by Owen Salusbury Brereton, Esq; who thinks that the towers in question were ancient Irish structures, and that, from their situation near churches, and having a floor and windows only at the top, the principal use of them was to receive a person to call the people to worship, with some wind-instrument (i). Mr. Collinson's extensive correspondence enabled him to procure, for the Society of Antiquaries, a relation of some very curious Tartarian antiquities (k). Wherever he was, or however seemingly engaged, nothing that deserved notice at any time escaped him; and he minuted down every striking hint that occurred to him either in reading or in company. With such hints he was perhaps still more furnished by conversation than from books; for there was scarcely a man of learning and ingenuity in England, of any profession, with whom he was not acquainted. As to the foreigners who came into this country either for improvement or pleasure, those of them who were eminent for their knowledge in Natural History, or for their proficiency in any art or science, were constantly recommended to his friendly attentions. Among these was the celebrated Linnæus, with whom, during his residence in England, Mr. Collinson contracted a peculiar intimacy, fostered by congeniality of pursuits, and cemented and increased by a variety of reciprocal good offices. Their friendship continued unbroken, till it was interrupted by death. The numerous recommendations of foreigners to Mr. Collinson were the natural result of his extensive correspondence, and did not a little contribute to enlarge it. In his obligations of this kind, he maintained the strictest punctuality. He acquainted the learned and ingenious

in distant quarters of the globe, with the discoveries and improvements that were here made in different branches of knowledge; and there is scarcely any part of the world from which he did not receive informations of a similar kind in return. From this various intelligence he had it in his power to promote, in several important respects, the honour and advantage of his native country (l).

From a letter of Dr. Franklin's, in the Annual Register, vol. xix. Part the 2d, p. 53.

(m) Annual Register, vol. xiii. *ubi supra*. See also Dr. Franklin's letter, referred to above.

In the year 1730, a subscription Library was begun at Philadelphia, in North-America, to which Mr. Collinson made a number of valuable presents, and procured others from his friends. As the Library Company had a considerable sum arising annually to be laid out in books, and needed a judicious friend in London to transact the business for them, he voluntarily and cheerfully undertook that service, and executed it for more than thirty years successively. He not only assisted in the choice of books, but took upon himself the whole care of collecting and shipping them, without ever charging or accepting any consideration for his trouble. The success of this library, which was not a little owing to his kind countenance and good advice, encouraged the erection of others, in different places, on the same plan; so that, after some time, there were upwards of thirty subsisting in the several Colonies, which contributed greatly to the spreading of useful knowledge in that part of the world. The books recommended by him were all of the most valuable kind, and the catalogue of the first library was much respected and followed by those libraries that succeeded*. To the Directors of the Library at Philadelphia, among whom was Mr. Benjamin, now the famous Dr. Franklin, Mr. Collinson transmitted the earliest information of every European improvement in agriculture and the arts, and of every philosophical discovery. He sent over, in 1745, an account of some new experiments in electricity, that had lately been made in Germany, together with a glass tube, and proper directions with regard to the manner in which the experiments should be repeated. This was the first notice which Dr. Franklin had received on that curious subject; a subject which, being encouraged by the friendly reception Mr. Collinson gave to his letters concerning it, he has since prosecuted with a success that has rendered him eminent in all the countries of Europe (m), and, indeed, in every civilized part of the globe. Whatever different opinions may be formed of his political conduct, the Franklinian system of electricity will hand down his name, with great philosophical reputation, to the latest posterity.

Among other instances of Mr. Collinson's active zeal to promote the advantage of his country, we must not omit to mention the account which he procured, and published, of the management of sheep in Spain, with respect to their migration from the mountains to the plains, and back from the plains to the mountains [A]. Perhaps this account, in some

[A] *The account which he procured, and published, of the management of sheep in Spain, &c.* Though this account hath already appeared in the Annual Register for 1764, and in the Gentleman's Magazine for the same year, it is so curious and entertaining, and may hereafter be of such great utility, that we rather expect the thanks, than the censure of our readers, for giving it a place in the present article.

Account of the Sheep and Sheep-walks of Spain, in a Letter from a Gentleman in Spain, to Mr. Peter Collinson, F. R. S.

"SIR,

"There are two kinds of sheep in Spain. The coarse-wooled sheep, who remain all their lives in their native country, and who are housed every night in winter; and the fine-wooled sheep, who are all their lives in the open air, who travel every summer from the cool mountains of the northern parts of Spain, to feed all the winter on the southern warm plains of Andalusia, Manca, and Extremadura. From computations made with the utmost accuracy it has appeared, that there are five millions of fine-wooled sheep in Spain, and that the wool and flesh of a flock of ten thousand sheep produced yearly about twenty-four reals a head, which we will suppose to be nearly the value of twelve English sixpences; of these but one goes clear a head to the owner yearly, three sixpences a head go yearly to the king, and the other eight go to the expences of pasture, tithes, shepherds, dogs, salt, shearing, &c.

"Thus the annual product of the five millions of sheep amounts to thirty-seven millions and a half of sixpences, a little more or less, of which there are about three millions and a half for the owners; above fifteen millions enter into the treasury, and seven millions and a half go to the benefit of the public.

Hence it is that the Kings of Spain call these flocks in their ordinances, *the precious jewel of the crown*.

"Formerly this jewel was really set in the crown. A succession of many kings were lords of all the flocks: hence that great number of ordinances, penal laws, privileges, and immunities which issued forth in different reigns for the preservation and special government of the sheep: hence a royal council was formed under the title of the council of the grand royal flock, which exists to this day, though the king has not a single sheep. Various exigencies of state, in different reigns, alienated by degrees the whole grand flock from the crown, together with all its privileges, which were collected and published in the year 1731, under the title of laws of the royal flock; a volume in large folio of above five hundred pages.

"The wars and wants of Philip the first's reign forced that king to sell forty thousand sheep to the marquis of Iturbieta, which was the last flock of the crown.

"Ten thousand sheep compose a flock, which is divided into ten tribes. One man has the conduct of all. He must be the owner of four or five hundred sheep, strong, active, vigilant, intelligent in pasture, in the weather, and in the diseases of sheep. He has absolute dominion over fifty shepherds and fifty dogs, five of each to a tribe. He chuses them, he chastises them, or discharges them at will; he is the prepositus or chief shepherd of the whole flock. You may judge of his importance by his salary: he has forty pounds a year and a horse, whereas the first shepherd of a tribe has but forty shillings a year, the second thirty-four, the third twenty-five, the fourth fifteen, and a boy ten shillings a year. All their allowance is two pounds of bread a day each. They may keep a few goats and sheep in the flock, but the wool is for the master; they have only the lambs and the flesh. The chief shepherd gives them three shillings in April, and three in October, by way of regale for the road; and these

some future period, may not be considered as one of the least of the benefits which have accrued from his extensive and inquisitive correspondence. When America is better peopled;

are all the sweets these miserable wretches enjoy; exposed every day in the year to all weathers, and every night to lie in a hut. Thus fare, and thus live, generally to old age, 25,000 men, who clothe Kings in scarlet, and Bishops in purple; for that is the number computed to keep the fine-wooled sheep of Spain, with the same number of dogs of the large mastiff kind, who are allowed two pounds of bread a piece a day. I often saw these flocks in the summer sheep-walks of the hills and vales of Leo, Old Castile, Cuenca, and Arragon. I saw them in their winter plains of Manca, Extremadura, and Andalusia. I often met them in their peregrination from the one to the other. I saw and I saw again. One eye is worth an hundred ears. I enquired, I observed, and even made experiments. All this was done when I happily got acquainted with a good plain old Friar, who had a consummate knowledge of all the mechanical, low, minute circumstances and economy of a flock. He told me that he was the son of a shepherd, that he had followed fifteen long years the tribe of sheep his father led; that at twenty-five years of age he begged an old primer, that at thirty he could read, that at thirty-six he had learned Latin enough to read mass and the breviary; that he was ordained by Don Juan Navarra, Lord Bishop of Albarazzin, who, as it is known, even to a proverb in Spain, has ordained thousands, declaring these forty years, in a loud voice, *That a Priest is the most precious boon which a Bishop can bestow, in the name of God, to mankind, even though he was as unlearned as an apostle*: that thus ordained he entered into the order of St. Francis; that he had never meddled in their affairs these twenty-four years past, but only said mass, confessed, instructed, and gave an eye to about five hundred wethers who grazed in the neighbouring downs for the use of the convent; that he had read the Bible, the Lives of the Saints, and the Lives of the Popes, with no other view in the world but to find out all that was said about shepherds; that good Abel was the first shepherd, that all the patriarchs were shepherds, that the meek shepherd Moses was chosen to deliver the people of God out of bondage; that Saul, in seeking his father's flocks, found a kingdom; that David went out from his flock to slay the Philistine giant; that 14,000 sheep was the chief reward Job received for his invincible patience; that Isidro, the protecting saint of Madrid, was not, as is vulgarly believed, an husbandman, like wicked Cain, but that he was really a keeper of sheep; that the great Pope Sixtus Quintus was verily and truly a shepherd, and not a swine-herd; that, for his part, he had forsaken his sheep to become a shepherd of men. He had all these things by heart, just as he had all the minute circumstances of the sheep he had followed; and this latter would have been imperfect, had I not met him.

"The five millions of sheep pass the summer in the cool mountains and hills above-named. Before we begin their itineraries to their winter walks, let us see how a few flocks live in a couple of cantons, which I will chuse to serve as examples for all the rest: one is the Montana, the other is Molina Arragon. I select these two for these reasons; because I passed two summers in one, and a summer in the other: one is the most northern part of Spain, and at the greatest distance from the winter walks; the other is towards the east, and the shortest journey the sheep have to make: one is the highest, and the other the lowest, summer walk in Spain; and because one is full of aromatic plants, and the other has none.

"At the extremity of Old Castile there is a territory called the Montana: it is divided into two parts. The low mountains is that chain of mountains which bounds the Cantabrian sea. The city of Santander is its chief port, from whence you ascend southerly, twelve long leagues, a succession of high craggy mountains, to the town of Reynosa in the Upper Montana, which ascent reaches three leagues more, and then you always descend about fourteen leagues to the city of Burgos, the capital of Old Castile. Reynosa

VOL. IV.

is in the center of an open plain, surrounded by a ridge of high mountains, at whose feet are low hills of pasture land. The source of the great river Ebro is an hour's walk to the west of Reynosa. All the spring rain, and snow waters of the mountains to the north of Reynosa, run into the bay of Biscay. The waters of the southern chain are collected in the river Pisuerga, which running into the river Duero, are carried to the Atlantic ocean at Oporto, and all the water that falls into the plains of Reynosa, runs with the Ebro into the Mediterranean, seven leagues below the city of Tortosa. Hence we see that the adjacent parts of Reynosa divide the waters of three seas, which lie north, east, and west. Eight leagues square of this Upper Montana is the highest land of Spain: the mountains rise in the atmosphere to the line of congelation. I see snow from my window this fourth of August that I am writing this. Some years ago, there used to fall so much snow, that the people were forced to dig lanes through the snow to go to church in winter; but there has fallen little snow since the Lisbon earthquake, and some years none at all. It certainly changed the climates of many parts of Spain. No man living saw, nor heard his father say he saw, snow fall in or about Seville, till the year 1756, which extraordinary appearance struck a dread into some convents: they rung the bells to prayers, and made processions to appease the wrath of heaven, as if the falling flakes foreboded the last day. I found many plants only beginning to flower here, which I saw in seed below at Santander. I remember to have seen in Switzerland all the plants but two, which grow in the mountains, hills, and plains of Reynosa, a small yellow-flowered genistella, with an herbaceous, triangular-jointed stem, and wild gooseberry bushes. The high mountains abound with oak, birch, holly, and hazel.

"The hills and plains are fine pasture: I never saw a meadow in any other part of Spain, nor cows and horses feed on hay. These mountains are formed of sand-stone, lime-stone, plaster-stone, [talc] and emery-stone. The sand-stone is at the summit of the mountains and hills in some, and the lime-stone forms the body. You see the contrary in others, but the sand-stone abounds, and the plaster is always the lowest. As for example, the high mountain of Arandilla, which is about a small league north of the town, is all sand-stone at the summit; its body is a mass of ash-coloured lime-stone, in which you find imprisoned petrified cornua ammonis and scollop-shells, and beds of plaster-stone at his foot towards the plain, which join to strata of black marble veined with white and yellow; which is no more than a purer lime-stone like all other marble, and you find great blocks of emery-stone in the plain and on the hill to the east of Reynosa, of which I will say a word, because I think its nature is not truly known, at least that of emery, which the looking-glass grinders of the king's fabric at St. Ildefonso say is the most biting emery they ever used, and I never saw any other in its native matrix. That iron has been, and is now, in a fluid state, percolating through the earth, and that it subsides, crystallises, or is precipitated to form different bodies, is demonstrated by the black and red bloodstone (hematites) by some beautiful stalactites, which are almost pure iron; by the eagle-stone; by figured pyrites; by native vitriol, and by native crocus. When this fluid iron penetrates a rock of sand-stone, and only stains the surface of each grain of a brownish, reddish, or yellow colour, it is only sand and crocus. But when this fluid iron, joined with the crystalline matter, is in a fluid state, in the very act of the crystallisation of each grain of sand, it incorporates with it, increases its weight and hardness, it is emery. The earths of the mountains and hills are of the nature of the rock below. If it be lime-stone, the soil cast into any acid liquor will boil up with a violent effervescence, and the acid will dissolve it. If the rock below be sand-stone, plaster-stone, or emery, the earths of the hill or mountain will remain quiet in the acid; there is

L

no

peopled, when the mountainous parts are become more habitable, when the low-lands are unloaded of their vast forests, and properly cultivated, the finest sheep in the world may

no effervescence nor dissolution. I often observed that when the rocks below are mixed, (calcareous and non-calcareous) the soil of the surface is of a mixed nature too; and I always found the action of the acid to be weak or strong upon these earths, in proportion to the stone that abounds. The farmers have found out by experience the genus of these two simple, and even the mixt soils; they know that corn grows best in the sod that covers the lime-stone, that the mixed requires much manure, and that the deep, fat, clayey soil, which covers the sand-stone, must have more ploughing and other labour than the farmer can afford; and corn-land and calcareous or lime-stone land, are synonymous terms in this country. These rocks and earths would be improperly mentioned in a letter upon wool, were it not that the sheep find out the nature of these three soils as surely as farmers and acids.

"The first thing the shepherd does when the flock returns from the south to their summer downs, is to give them as much salt as they will eat. Every owner allows his flock of a thousand sheep one hundred arroves or twenty-five quintals of salt, which the flock eats in about five months: they eat none in their journey, nor in their winter walk. This has ever been the custom, and it is the true reason why the kings of Spain cannot raise the price of salt to the height it is in France; for it would tempt the shepherds to stint the sheep, which, it is believed, would weaken their constitutions and degrade the wool. The shepherd places fifty or sixty flat stones at about five steps distance from each other, he strews salt upon each stone, he leads the flock slowly through the stones, and every sheep eats to his liking. But then they never eat a grain of salt when they are feeding in lime-stone land, whether it be on the grafs of the downs, or on the little plants of the corn-fields after harvest-home. The shepherd must not suffer them to stay too long without salt: he leads them into a spot of [argillaceous] clayey soil, and in a quarter of an hour's feeding, they march to the stones and devour the salt. If they meet a spot of the mixed soil, which often happens, they eat salt in proportion. Ask the shepherd why the sheep eat no salt in lime-stone soil, and but little in the mixt? Because, Sir, it is corn-land. I know, and indeed who does not know, that lime abounds in saline matter; but then the salt which chymists extract from it may not be the genuine salt of the lime-stone before calcination, for the fire may form new combinations. It may be sea-salt, or at least the muriatic acid which rises in the vegetation of grafs, and satisfies the sheeps taste for salt. The latter end of July the rams are turned into the tribe of ewes, regulated at six or seven rams for every hundred. When the shepherd judges they are served, he collects the rams into a separate tribe to feed apart; but then there is another tribe of rams that feed apart too, and never serve the ewes, but which are merely for wool, and for the butchery: for though the wool and flesh of wethers are finer and more delicate than those of rams, yet the fleece of a ram weighs more than the fleece of a wether, who is likewise shorter-lived than the ram, which compensation is the reason there are so few tribes of wethers in the royal flock of Spain. The fleeces of three rams generally weigh twenty-five pounds: there must be the wool of four wethers and that of five ewes to weigh twenty-five pounds. There is the same disproportion in their lives, which depend upon their teeth; for when they fail they cannot bite the grafs, and they are condemned to the knife. The ewes teeth, from their tender constitutions, and the fatigue of breeding, begin to fail after five years of age, the wethers after six, and the robust ram not till towards eight. It is forbidden to expose rams flesh to sale, but the law is eluded; they cut the old rams, and as soon as the incision is healed, they are sold to the butchers at a lower price than coarse-wooled wethers. That is the reason such bad mutton is generally eaten in Madrid, and that is the reason there are more rams and fewer lamb-stones

fold and eaten every day in the year in Madrid, than in the rest of Europe.

"At the latter end of September they put on the redding or ochre: it is a ponderous iron earth, common in Spain: the shepherd dissolves it in water, and dawbs the sheeps backs with it from the neck to the rump. It is an old custom. Some say it mixes with the grease of the wool, and so becomes a varnish impenetrable to the rain and cold; others, that its weight keeps the wool down, and so hinders it from growing long and coarse; and others, that it acts as an absorbent earth, receives part of the transpiration, which would foul the wool, and make it asperous.

"The latter end of September the sheep begin their march towards the low plains. Their itinerary is marked out by immemorial custom, and by ordinances, and is as well regulated as the march of troops. They feed freely in all the wilds and commons as they pass through; but as they must necessarily pass through many cultivated spots, the proprietors of them are obliged by law to leave a passage open for the sheep, through vineyards, olive-yards, corn-fields, and pasture land common to towns; and these passages must be at least ninety yards wide, that they may not be too crowded in a narrow lane. These passages are often so long that the poor creatures march six or seven leagues a-day to get into the open wilds, where the shepherd walks slow to let them feed at ease and rest, but they never stop: they have no day of repose: they march at least two leagues a day, *ever following the shepherd*, always feeding or seeking with their heads towards the ground till they get to their journey's end, which, from the Montana to Extremadura, is about one hundred and fifty leagues, which they march in less than forty days. The chief shepherd's first care is to see that each tribe is conducted to the same district it fed in the year before, and where the sheep were yeanned, which they think prevents a variation in the wool: though indeed this requires but little care; for it is a notorious truth, that the sheep would go to that very spot of their own accord. His next care was to fix the toils where the sheep pass the night, lest they should stray, and fall into the jaws of wolves. Lastly, the shepherds make up their poor huts with stakes, branches, and brambles; for which end, and for firing, they are allowed by the law to cut off one branch from every tree. I believe this to be the reason, that all the forest-trees near the sheep-walks in Spain are as hollow as willow-pollards. The roots of trees and the quantity of sap, increase yearly with the branches: if you lop off these, all the sap that should go to the annual production, and to the nourishment of buds, stems, leaves, flowers, fruit, and growth of the branches, remains in the trunk; from hence stagnation, fermentation, and rottenness. Next comes the time when the ewes begin to drop their lambs, which is the most toilsome and most solicitous part of the pastoral life. The shepherds first cull out the barren from the pregnant ewes, which are conducted to the best shelter, and the others to the bleakest part of the district. As the lambs fall, they are led apart with their dams to another comfortable spot. A third division is made of the last yeanned lambs, for whom was allotted from the beginning the most fertile part, the best soil, and sweetest grafs of the down, that they may grow as vigorous as the first yeanned, for they must all march the same day towards their summer-quarters: the shepherds perform four operations upon all the lambs about the same time in the month of March, but first they pay the twentieth lamb; the other half tithe is paid in the winter walk: they cut off their tails five inches below the rump for cleanliness: they mark them on the nose with a hot iron: they saw off part of their horns, that the rams may neither hurt one another nor the ewes: they render impotent the lambs doomed for docile bell-wethers, to walk at the head of the tribe; they make no incision; the shepherd turns the testicles with his finger twenty times

may possibly cover the plains of Carolina, Georgia, East and West-Florida, in the winter months, and retreat to the mountains as the summer heats increase and dry up the herbage. In

times about in the scrotum, till he twists the spermatic vessels as a rope, and they wither away without any danger. As soon as the month of April comes about, which is the time of their departure, the sheep express, by various uneasy motions, a remarkable restlessness, and strong desire to go off. The shepherds must exert all their vigilance lest they should escape; and it has often happened, that a tribe has stolen a forced march of three or four leagues upon a sleepy shepherd: but he is sure to find them, for they return exactly the same way they came; and there are many examples, of three or four strayed sheep walking an hundred leagues to the very place they fed in the year before. Thus they all go off towards their summer mountains in the same order they came, only with this difference, the flocks that go to Leon and Castile are shorn in the road, where we will stay a little to see the apparatus of this operation, whilst the other flocks march on to Molina Arragon. They begin to shear the first of May, provided the weather be fair; for if the wool were not quite dry, the fleeces which are close piled upon one another would ferment and rot: it is for this reason that the sheering houses are so spacious. I saw some which can contain in bad weather twenty thousand sheep, and cost above 5000*l.* sterling: besides, the ewes are creatures of such constitutions, that if they were exposed immediately after sheering to the air of a bleak night, they would all perish.

“ There are one hundred and twenty-five sheermen employed to shear a flock of ten thousand sheep: a man sheers twelve ewes a day and but eight rams: the reason of this difference is, not only because the rams have larger bodies, stronger and more wool, but the sheermen dare not tie their feet as they do those of the unresisting ewes. Experience taught, that the bold rebellious ram would struggle even to suffocation in captivity under the sheers: they gently lay him down, they stroke his belly, they beguile him out of his fleece: a certain number of sheep are led into the great shelter-house, which is a parallelogram of four or five hundred feet long, and one hundred wide, where they remain all day: as many as they judge can be dispatched by the sheermen next day, are driven from the shelter-hall into a long, narrow, low gut, which is called the sweating-place, where they remain all night, crowded as close together as the shepherd can keep them, that they may sweat plentifully, which, as they say, is to soften the wool for the sheers, and oil their edges. They are led by degrees in the morning into the spacious sheering-hall, which joins the sweating-room. The shepherd carries them off as fast as they are sheered, to be marked with tar; and as this operation is necessarily performed upon one at a time, it gives a fair opportunity to the shepherds to cull out for the butchery all the sheep of the flock who have out-lived their teeth. The sheered sheep go to the fields to feed a little if it be fine weather; and they return in the evening to pass the night in the yard before the house, within the shelter of the walls; but if it be cold and cloudy they go into the house. They are thus brought by degrees to bear the open air; and their first days journeys from the sheering-house to the mountains are short, where we will leave them to conclude their annual peregrination, and go see how fare the flocks of Molina Arragon, which have by this time got thither; but while the mule is saddling, a word of the shorn wool.

“ The sheep and shearers dispatched, the first thing done is to weigh the whole pile of wool; the next is to divide each fleece into three sorts of wool: the back and belly give the superfine; the neck and sides give the fine; the breast, shoulders, and thighs, the coarse wool. A different price is fixed upon these three classes, though the general custom is to sell the whole pile together at a mean price. It is sold after it is washed, when it is to go out of the kingdom, or to any considerable distance in it; for as it never loses less than half its weight in washing, and often more when the sweating is violent, half the carriage is saved.

“ Here I see that I have changed the order I proposed in setting out; for I have followed the sheep from the mountains to the plains, and back again; but it is not worth mending.

“ Thirty-one leagues S. E. of Madrid, and five leagues S. of the source of the river Tagus, is the town of Molina Arragon, capital of a lordship of the crown, which is twelve leagues wide, as many long, and almost in the center of Spain. The high lands of this little territory are covered with pine-trees; the low lands feed about 150,000 sheep. Here I learnt some truths, which prove that the three following opinions should be ranked amongst vulgar errors.

“ 1. That sheep eat and love aromatic plants, and that the flesh of those that feed on hills where the sweet herbs abound has a fine taste.

“ 2. That salt springs are not found in the high primitive mountains, but in the low hills and plains only.

“ 3. That metallic vapours destroy vegetation; that no rocks nor mountains pregnant with rich veins of ore are covered with rich vegetable soil.

“ The town of Molina is almost in the middle of the sheep-walks. The solid part of the country is formed of red and grey sand-stone, lime-stone, white and grey granite, and plaster-stone, white, grey, yellow, blueish, greenish, and blood-red; in some places these are all beautifully mixed in one stratum. Time and moisture uncompound these stones: for they have mouldered, and are daily mouldering into the soil of the country, which is always of the same nature as that of the rock. The red fuller's earth, with which the manufacturers of Molina clean their cloth, is evidently the very grains of sand of the red rock degraded into earth. The rocks about the town contain either salt or saltpetre: you see the hewn stones of the houses covered with saline efflorescences which are drawn out by the sun after rain. The whole territory of Molina is full of salt springs; but there is a copious salt spring rising out of a land yet higher than the source of the Tagus, and not far from it, which is one of the highest lands in all the inward parts of Spain, for it divides the waters of the ocean and Mediterranean. The Tagus runs one hundred and fifty leagues to Lisbon, and the two rivers Gaudalquivir and Sucar, which rise near it, run to Valencia. This spring furnishes salt to the jurisdiction and bishopric of Albarrazin. There is another salt spring, in a high land too, which supplies the eighty-two towns and villages of Molina Arragon with salt. Now I will mention the salt spring that issues out of a spot in the Montana, which is higher than the source of the Ebro, and about a quarter of a mile from it.

“ There are many iron, copper, lead, and pure pyritous ores in these sheep-walks, where grow the same plants and the same sweet grass as in the other parts. I will give one example: about two hours walk N. W. of Molina there is a little hill called the Platilla: it is about half a league over from valley to valley; its body is solid, rocky, of white granite, through which run in different directions, and without any order, an infinite number of blue, green, and yellow veins of rich copper ores, which hold a little silver, mineralized by a great quantity of arsenic and sulphur. The very surface of the rock is in many places stained blueish and green, and the veins of ore are not above a foot deep in the fissures and in the solid rock, which contain lead ore sometimes up to the surface.

“ The following plants grow out of the soil which covers these arsenical sulphureous veins, and which is not above a foot deep. True oak, ilex, whose leaves fall, white-thorn, juniper; these are poor shrubs, because they are browsed by the goats. Cystus, wild rose, uva-ursi, phlomis salvia, fol. fl. luteo, verbascom of the highways, stœchas, sage, thymum legitimum, clus, serpyllum, greater and lesser; rosemary, helianthemum, pimpinella, chamædris, filipendula, stachys lychnoides, incana angustifolia flo. aureo.

In consequence of the late American revolution, such an improvement would not now be productive of that benefit to this kingdom, which Mr. Collinson expected from it: but it is worthy of consideration, whether the œconomy of Spain might not be introduced with advantage even in England; with this difference, that the hills should be chosen for the residence of the sheep in winter, and the wetter low-lands reserved for their pasture in summer (n).

(n) Annual Register, vol. xiii. *ubi supra*.

reo. var. The great asphodel, coronilla of the meadows, gallium luteum, yarrow, campanula radice esculenta à jacobea, which I saw grow in the sand of the sea-side, and is all quite white. A gladiolus, and a little glaucium, which grow in corn-fields in Spain; leucanthemum of the meadows, orchis, ornithogalum, muscaria, polygala, and about twenty kinds more, which are found likewise in meadows, corn-fields, highways, hedges, and sea-shores; yet the non-calcareous earth of this mineral hill is covered with the same sweet small grasses as the rest of the country, even the lime-stone land. I made the same observations at the three greatest mines in Europe; St. Mary of the mines in Alfatia; Claustahl in the Hartz-mountains of Hanover; and Freyberg in Saxony. The mines of St. Mary are at the head of a valley in the Voge-mountains; its hills are some of them covered with oak and pines, others with apple, pear, plum, and cherry-trees: others are fine green downs for sheep and cows, with a great variety of plants; others are fields of wheat, which in the year 1759 (as I find it in my notes) gave a product of eight for one. All these things grow in a foot or two deep of soil, which covers a rock full of the most arsenical, sulphureous silver, or copper, lead, and cobalt ore in Europe, and most of their veins near the surface.

"The mines of Claustahl are in a plain which is, in truth, the summit of a mountain. The Dorothy and Caroline veins of silver, lead, and copper ore stretched away eight miles to the Wildman mountain. The finest meadows and sweetest grasses, are upon these veins, and all their branches near the city; they feed nine hundred cows, and two hundred horses. They are mowed in June; a second grass springs up, which is mowed in August. A multitude of plants grow in these meadows over the mines, as valerian, gallium fl. albo, coronilla, chrysanthemum segetum, leucanthemum, viola tricolor. bistort. bonus henricus, St. John's wort, agrimony, ladies mantle, tussilago, &c.

"The mines of Freyberg are in the lower hills near the city: I saw them all covered with barley in the month of July. A stranger would not imagine that men were reaping corn over hundreds of miners heads, who were blowing up veins of ore, arsenic, and brimstone.

"It is true, I also saw mines in the barren naked mountains and hills; but it is certain that their barrenness is not the effect of mineral vapours. The air, moisture, heat, and cold, have more power over the surfaces of some rocks than others, to moulder the stone into earth: such is the high mountain Ramelsberg, at whose foot is the imperial city of Goslar, whose inhabitants live, and have lived these nine hundred years, by the mine of this steep barren mountain. I crept up to its summit, and found it was split and cracked into millions of fissures, from a foot wide to a hair's breadth; that in other places the rock was shivered into small rotten stones, which, in some spots, were perfectly uncompounded and fallen into earth, from whence sprang a little grass, moss, and a few plants. In short, I saw that the time of its decay into vegetable mould was not yet come, and that the mountain Ramelsberg will be one day as green as Claustahl; which shews, I think, that the world is not so old as some men fancy. I will make no apology to Mr. Peter Collinson for this digression: I heard Fame declare him twenty years ago an enemy to error; he must love truth, though he finds it placed out of order.

"As my duty obliged me to pass hundreds of days at the Platilla mine of Molina, I saw thousands of sheep feed around it. I observed, that when the shepherd made a pause, and let them feed at their will, they sought only for the fine grass, and never touched any aromatic plant; that when the creeping *terpillum* was interwoven with the grass, the sheep

industriously nosed it aside to bite a blade, which trouble made them soon seek out a pure gramineous spot. I observed too, when the shepherd perceived a threatening cloud, and gave a signal to the dogs to collect the tribe, and then go behind it, walking apace himself to lead the sheep to shelter; that as they had no time to stoop they would take a snap of *stœchas*, *rosemary*, or any other shrub in their way; for sheep will eat any thing when they are hungry, or when they walk fast. I saw them greedily devour henbane, hemlock, glaucium, and other nauseous weeds, upon their issue out of the sheering-house. If sheep loved aromatic plants, it would be one of the greatest misfortunes that could befall the farmers of Spain. The number of bee-hives is incredible: I am almost ashamed to give under my hand, that I knew a parish priest who had five thousand hives. The bees suck all their honey, and gather all their wax from the aromatic flowers, which enamel and perfume two-thirds of the sheep-walks. This priest cautiously seizes the queens in a small crape fly-catch; he clips off their wings; their majesties stay at home. He assured me that he never lost a swarm from the day of this discovery to the day he saw me, which I think was five years.

"The shepherd's chief care is not to suffer the sheep to go out of their toils till the morning sun has exhales the dew of a white frost: and never let them approach a rivulet or pond after a shower of hail, for if they should eat the dewy grass, or drink hail-water, the whole tribe would become melancholy, fast, pine away, and die, as often happened. Hail-water is so pernicious to men in this climate, that the people of Molina will not drink the river water after a violent shower of hail: experience taught the danger: but let it be never so muddy, and rise never so high after rain, they drink it without fear. Perhaps this may be the unheeded cause of many endemical epidemics of other cities. The sheep of Andaloufia, who never travel, have coarse, long, hairy wool. I saw a flock in Extremadura whose wool trailed on the ground. The itinerant sheep have short, filky, white wool. I do believe, from a few experiments and long observation, that if the fine-wooled sheep stayed at home in the winter, their wool would become coarse in a few generations. If the coarse-wooled sheep travelled from climate to climate, and lived in the free air, their wool would become fine, short, and filky in a few generations.

"The fineness of the wool is due to the animal's passing its life in an open air of equal temperature. It is not colder in Andaloufia and Extramadura in the winter, than it is in the Montana or Molina in summer. There is little frost in Andaloufia; sometimes it snows in June in Molina. I felt a cold day upon the least cloud in summer. Constant heat or constant cold, with housing, are the causes of coarse, black, and speckled wool. All the animals I know, who live in the open air, constantly keep up to the colour of their fires. There are the most beautiful brindled sheep in the world among the coarse-wooled sheep of Spain. I never saw one amongst the fine-wooled flocks; the free but less abundant perspiration in the open air is swept away as fast as it flows; whereas it is greatly increased by the excessive heat of numbers of sheep housed all night in a narrow place. It fouls the wool, makes it hairy, and changes its colour. The swine in Spain, who pass their lives in the woods, are all of one colour, as the wild boars. They have fine, filky, curled bristles. Never did a Spanish hog's bristle piece a shoe. What a quantity of dander is daily secreted from the glans of a stabled horse! the curry-comb and hair-cloth ever in hand. How clean is the skin of an horse that lives in the open air.

I am, Sir, &c.

W. B. (1)."

So

(1) Annual Register for 1764. Part 2d, p. 77—89.

So early as the year 1740, Mr. Collinson had risen to considerable reputation among those who were best acquainted with Botany and Natural History in Great-Britain. His collection was very large, and his specimens well chosen. He had a botanical garden at Mill-Hill, near Endfield, which contained many curious plants, not at that time to be found in any other, the number of which was continually increasing till his death. The collection and garden which he had formed, procured him the acquaintance of a variety of persons of rank and distinction in the kingdom, who were distinguished by their taste in planting and horticulture, or desirous to make rural improvements. With some of these he frequently spent a few days at their seats, commending and censuring what he approved and disapproved in the designs they were carrying on, with an integrity and taste which did equal honour to the simplicity of his manners, and the rectitude of his judgment. The experience of a long life had furnished him with an extensive knowledge of the various methods of cultivation, and of the particular soil and aspect which were best adapted to different plants and trees. By his superior skill in the fittest method of improving beauties, and hiding incurable defects, he often prevented young planters from committing capital mistakes, and rectified others, into which they had been misled by the ignorant or the designing. He prevailed upon many of his friends to adopt, and to persevere in the rational amusements of planting and horticulture; and this they did to the mutual advantage of themselves and their country (o). "Planting, he used to say, and (o) *Ibid.*
 "gardening, supply a fund of entertainment, the most lasting and reasonable of any occupation in this life; pleasures not to be purchased. The trees which we ourselves
 "have planted, the fruits we have raised, the plants we have cultivated, seem to be like
 "our children, a kind of new creation. Their shade, their taste, their fragrance, and
 "their beauties, affect us with a richer repast than any others. What a pleasing scene,
 "would he observe, lies open to a young man of fortune, devoted to such amusements!
 "Each succeeding year produces new shades, other fruits, fresh beauties, and brings besides most certain profit. To behold the rising groves, barrenness made fertile, our
 "country improved, ourselves made useful and happy, and posterity enriched! When on
 "this favourite subject, a very natural reflection often escaped him, that he seldom knew
 "a man possessed of a taste for such pleasures, who was not at the same time temperate
 "and virtuous. And indeed he had a right to make the observation; for he had the satisfaction of reckoning among his most intimate friends, men of the most amiable and
 "unblemished characters, in all stations, parties, and distinctions (p)." Nor was Mr. (p) *Annual Register*, vol. xix. for 1776. Part 2d, p. 50.
 Collinson only employed in promoting this taste among his friends, in enlarging their views, and in correcting and refining their judgments, but also in furnishing them with the means of increasing their plantations. It is but doing justice to his memory, to mention that he was the first who introduced the great variety of seeds and shrubs, which are now the principal ornaments of every garden; and that it was owing to his indefatigable industry, that such a number of persons of the first distinction are enabled to behold groves transplanted from the western continent, flourishing as luxuriantly in their several domains, as if they were already become indigenous to Britain (q). (q) *Ibid.*

Mr. Collinson's business in the mercantile way was chiefly to North-America and the West-Indies, and particularly to the former. He had perused every performance that had been written respecting the Natural History and produce of our own settlements, and indeed of all the European Colonies in the New World. This enabled him to make enquiries into whatever was curious and useful, and brought him acquainted with the most intelligent people who came from America. One result of his various enquiries was, that a taste for Natural History, and botanical researches, was excited in that part of the globe. It perhaps may safely be asserted, that every thing of this kind which has appeared in the American Colonies, was principally owing to his encouragement. That eminent Naturalist, John Bartram, may almost be said to have been created such by Mr. Collinson's assistance. He it was who first recommended to him the collecting of seeds, and afterwards aided him in disposing of them in this country. Animated by his friend, Mr. Bartram persevered in investigating the plants of America with indefatigable labour, and with a success which has rendered his name not a little illustrious. The quantities of new seeds which Mr. Collinson received from the western world, not only supplied his own garden with every thing that was curious, but furnished him with the means of procuring others in exchange, from the most distant parts of the globe. This mutual exchange was carried on from America through Europe and Asia, even so far as to Pekin. In managing such an extensive correspondence, Mr. Collinson's punctuality, care, and (r) *Ibid.* p. 51.
 generosity, were eminently distinguished (r).

In consequence of Mr. Collinson's connection with the Americans, he frequently urged to them the benefit, nay the necessity of cultivating flax, hemp, wine, silk, and other products. In most of the northern and southern Colonies, there are a variety of native grapes growing wild in the woods, and thriving among the trees and bushes by which they are supported. As these yield fruit in plenty of different kinds, and many of them are capable of producing a rich and good wine, it would be easy in autumn to collect a sufficient quantity for the purpose of making a trial. A few persons have done it with

(1) *Ibid.*

success, and nothing is wanting but a general application to the proper modes of conducting the business (1).

Mr. Collinson was fond of fruit to an extreme, and of flowers he was a perpetual admirer. He was seldom without them in his house, from the early snowdrop to the autumn cyclamen. He would often relate, with pleasure, the astonishing advancement that had been made during his time in horticulture. He used to mention instances of various plants which, at their first introduction, would not bear our winters without shelter, but which now endured almost our hardest frosts; so that foreigners stood amazed at the power of vegetation in this country, and the happy temperature we enjoy, notwithstanding the unmerited murmurs of the unthinking and the injudicious, against a climate eminently favourable to the real happiness of mankind (2). Why Mr. Collinson was not elected a Curator of the British Museum, may continue a matter of surprize, so long as the Museum itself exists. He was one of the founder's most intimate and ancient friends, was well acquainted with every subject it contained, and had done perhaps more to promote the knowledge of Natural History, than any individual in that trust. But never did the least hint upon the subject escape from him, or any symptom of disgust, from such an apparent neglect, shew itself in his behaviour. He had no higher an ambition than to render his knowledge subservient to the common good, whether in or out of the direction of that vast and inestimable treasure (3).

(2) *Ibid.* p. 52.

(4) Observations communicated by Michael Collinson, Esq.

Excepting some attacks of the gout, Mr. Collinson generally enjoyed perfect health, and great equality of spirits. Those trials which are incident to man he bore with resignation and fortitude. In such a course of life he arrived to his seventy-fifth year; when, being on a visit to Lord Petre, in Essex, for whom he had a singular regard, he was seized with a total suppression of urine, which baffled every attempt to relieve it, and, on the 11th of August, 1768, deprived his family, his friends, and his country, of a man devoted to their interest and advantage (4). In 1724, he had married Mary, the daughter of Michael Russell, Esq; of Mill-Hill, in the parish of Hendon, Middlesex, a lady of exemplary character, with whom he lived in the greatest conjugal felicity, and whom he had the great misfortune to lose, in the year 1753. By this lady he left issue, a son and a daughter (5), Michael Collinson, Esq; and Mary, married to John Cator, Esq; of Beckenham, in Kent, and some time Member of Parliament for Wallingford, Berks. Mr. Peter Collinson had the satisfaction of seeing both his children take the same bias with himself, and of being aided by them in his pursuits. He left behind him a vast treasure of dried specimens of plants. His garden was repeatedly exposed to cruel depredations, by which he lost a multitude of the valuable productions of his botanical skill and labour. Many others were destroyed by the villains in the very act of plunder. Nevertheless, there still remains a small treasure of rare plants, in greater perfection than can be seen perhaps in any other spot (5).

(7) From the information of Michael Collinson, Esq.

(8) Annual Register, vol. xix. *ubi supra.*

Mr. Collinson's stature was below the middle size, and the habit of his body somewhat corpulent. In his dress he was plain, and probably the more so from having been bred a Quaker. His aspect was pleasing and social, and his temper open and communicative; for to lock up knowledge from others he considered as treason to mankind. Though he was an œconomist, his œconomy was not of that severe kind, which prevented him from having a heart that sympathized with distress, and a hand that was open to relieve it (6). He rose very early, and, whilst in the country, his time was almost constantly employed in his garden, observing and assisting the operations of nature, or in the study of other parts of physical knowledge, which contributed to his health and pleasure. Inclosed in Mr. Collinson's will, was found a paper, importing, that he hoped he should leave behind him a good name, which he valued more than riches; that he had endeavoured not to live uselessly; and that all his days he constantly aimed to be a friend to mankind (7). As it was thus the wish of this excellent Citizen to quit the world with an honourable reputation, so it affords the truest satisfaction to those who were the most nearly connected with him in friendship and in blood, even in the tenderest moments of reflection, that his desire has been fully gratified. No man has gone down to the grave with a fairer character, or more generally been lamented, at his decease, by his friends and acquaintance. Indeed, it could not be otherwise: for his life was a continued exertion of laudable industry, and all his studies and pursuits had the honour and happiness of mankind for their object. It was for this end that he promoted great and useful undertakings, communicated to the public curious and interesting accounts of improvements in Husbandry and Natural History, and endeavoured to rescue from oblivion the memories of those persons who had deserved well of their fellow-creatures (8). Such were the views, and such the conduct of Mr. Peter Collinson. Without pretensions to what usually goes under the appellation of literature, he was distinguished by his extensive and various knowledge; and without public station, he was the means of producing national advantages. He obtained, during life, an influence which wealth cannot give; and his name will be had in honourable remembrance, when external dignities and splendid titles are forgotten.] K.

(11) From hints communicated by Michael Collinson, Esq.

COLSTON

COLSTON (EDWARD), a person ever memorable for his great and extensive charities, in the end of the XVIIth, and beginning of the XVIIIth century, was the eldest son of William Colston, Esq; [A], by Sarah his wife, and born in Temple parish, in the city of Bristol, November 2, 1636 (a). He was brought up to trade, probably under his father, (who was a most eminent Spanish Merchant) and resided some time in Spain; as did also his brothers, two of whom were inhumanly murdered there by assassins [B]. Through a very laudable industry, and in the course of a long and happy life, he acquired very great riches [C]; of which he expended a considerable part in works of beneficence and charity. In the year 1691, he built upon his own ground, at his own charge, St. Michael's-Hill Alms-house, in Bristol [D]. The same year, he gave houses and lands, without Temple-gate, in that city, to the Society of Merchants for ever, towards the maintenance of six poor old decayed sailors, to the yearly value of twenty-four pounds. In 1696, he purchased a piece of ground in Temple-street, in the same city; and built, at his own charge, a school and dwelling-house for a master, to instruct forty boys in writing, arithmetic, and the Church-catechism [E]. In 1702, he gave five hundred pounds towards rebuilding Queen Elizabeth's Hospital, on the College Green, in Bristol; and for the maintenance, cloathing, and education of six boys there, and putting them out apprentices, he appropriated an estate, out of which is paid to the master the yearly sum of sixty pounds, exclusively of all taxes and charges, besides ten pounds for placing out the boys apprentices. In the year 1708, he settled his great benefaction of the Hospital in St. Augustine's Back, in the city aforesaid, consisting of a master, two ushers, and one hundred boys [F]. He also gave six pounds *per annum* to the Minister of All-Saints in Bristol, for reading prayers every Monday and Tuesday morning throughout the year; and one pound a year to the Clerk and Sexton. Likewise six pounds yearly, for ever, for a monthly sermon and prayers to the prisoners in Newgate there; and twenty pounds to be paid yearly, for ever, to the Clergy beneficed in that city, for preaching fourteen ser-

(a) From Mr. Colston's monument, in All-Saints church in Bristol; and from an account sent by the Rev. Mr. Tucker.

[A] Was the eldest son of William Colston, Esq;] Who was a very eminent Spanish Merchant, as is said above. He was usually stiled *Deputy Colston*, because generally deputed by the corporation of the city to officiate for the Mayor-Elect, when he went to London to take the oaths; which the Mayors of Bristol always did before the new charter granted to that city by Queen Anne. This circumstance is a strong proof, both of his station in life, and of his character for integrity and virtue. Sarah, his wife, was a Counsellor's daughter (1). Their son, Mr. Edward Colston, erected a monument to their memory, in the church of All-Saints in Bristol; the inscription on which is as follows: 'To the dear memory of his father William Colston, Esq; and of his Mother Sarah Colston, interred near this place in the sepulchre of his ancestors; as also their four sons, William, Thomas, Robert, and William, and their two daughters, Martha and Martha, who were all natives and inhabitants of this city. William his father died 21st Nov. 1681, aged 73 years; and Sarah his mother the 23d Dec. 1701, aged 93 years.'

Edward Colston, their eldest son, born likewise in this city, but inhabitant of London, hath dedicated this monument.'

[B] Two of whom were inhumanly murdered by assassins.] There is a tradition, that when Mr. Colston and his two brothers were in Spain, in their disputes with the Papists it was often objected to them, 'That the Reformed religion produced no examples of great and charitable benefactions;' to which they were wont to reply, That if it pleased God to bring them safe home, they would wipe off that aspersion. Upon which, two of them were poisoned, to prevent their return: but their elder brother, Mr. Edward Colston, escaped. Such is the tradition: but it is more certain, that one or both of them, were assassinated by banditti's or braves; very common in Spain and Portugal.

[C] He acquired very great riches.] The visible means whereby he acquired his riches, were as follows: 1. Being the eldest son, he received a handsome fortune from his parents. 2. Surviving all, if not most of, his brothers and sisters, he received theirs likewise: and the brothers had made very great additions to theirs by trade. 3. The Colston family had at that time the two most valuable branches of trade, in that part of the kingdom, almost entirely to themselves, viz. the fruit, and the oil, trade; Mr. Colston having two ships always employed in that business: and oil was

much more in use formerly than at present. Mr. Colston not only supplied all, but purchased it abroad at a very great advantage, by advancing money to those necessitous people, the Spaniards and Portuguese, before their vintage, and being allowed a discount. 4. He never insured a ship, saving that expence, and yet he never lost one (2).

[D] In the year 1691, he built upon his own ground, at his own charge, St. Michael's-hill alms-house in Bristol.] The front and two sides are faced with free-stone. It contains a chapel neatly adorned; twenty-four apartments: and other conveniencies, for twelve men and twelve women. The elder brother receives six shillings; and each of the others three shillings, weekly; besides an allowance for coal, &c. To a Clergyman is paid the sum of ten pounds yearly. He is to read the Common-Prayer, according to the Liturgy of the Church of England, twice every day, except when prayers are read in St. Michael's church; at which every member of this alms-house is to attend. The endowment, or estate given for this charity, arises chiefly from fee farm rents, and amounts yearly to two hundred and eighty-two pounds, three shillings, and four-pence. The overplus of this estate is paid towards the maintenance of the six Sailors in the merchants alms-house in King's-street. The charge of building and finishing this house amounted to about two thousand five hundred pounds.

[E] To instruct forty boys, in writing, arithmetic, and the Church-catechism.] The boys are likewise to be cloathed. The estate given for this charity is an annuity of fourscore pounds yearly, clear of all charges.

[F] In—1708, he settled his great benefaction, of the hospital in St. Augustine's Back, in the city aforesaid, &c.] For the maintenance, cloathing, and education of these boys, and for placing them apprentices, he gave an estate, mostly arising by fee-farm rents, to the yearly value of thirteen hundred and eighteen pounds, fifteen shillings, and six-pence farthing. And the charge of first fitting up the hospital, and making it convenient for the purpose, amounted to about eleven thousand pounds. Out of that estate is to be paid yearly, ten pounds to a clergyman of the Church of England, for explaining and instructing the children in the Church-Catechism: and in case the estate given for this charity, be not sufficient to answer the charges upon it, the executors are empowered to supply any deficiencies which have been, and to prevent them for the future.

(2) From the account as above.

(1) From the same account as above.

mons in the time of Lent [G]; besides many occasional charities and benefactions to several Churches and Charity-schools in the same city of Bristol [H].—Moreover, he built an Alms-house for six poor people at Shene, in Surrey. He gave six thousand pounds for the augmentation of sixty small livings [I]. To St. Bartholomew's Hospital, London, he gave two thousand pounds, wherewith was purchased an estate of one hundred pounds a year, which is settled on that Hospital; and he left to the same, by will, five hundred pounds more. To Christ's Hospital, at several times, he gave a thousand pounds; and bequeathed thereto the like sum afterwards. As also to St. Thomas's Hospital, and to Bethlehem, five hundred pounds a piece. To the Work-house without Bishopsgate, two hundred pounds. To the Society for propagating the Gospel in foreign Parts, three hundred pounds. He left, moreover, very handsome legacies to Mortlake, in Surrey, where he died [K]. And gave the sum of one hundred pounds *per annum* to be continued for twelve years after his death, and to be distributed, by the direction of his executors, either to place out every year ten boys apprentices, or to be given towards the setting up ten young tradesmen, to each ten pounds: in the whole, twelve hundred pounds. He gave likewise to eighteen Charity-schools, in several parts of England, and to be continued to them for twelve years after his decease, to each school yearly five pounds; or in all, each year, ninety pounds [L]. Finally, he gave towards building a Church at Manchester, in Lancashire, twenty pounds; and towards the building of a Church at Tiverton, in Devonshire, fifty pounds. Besides these known and public benefactions, he gave away every year large sums in private charities, which was his practice for the course of many years; and there is reason to believe, that these were not much short of his public charities (b). His usual method was, never to give any thing to common beggars; but he always ordered, that poor housekeepers, sick, and decayed persons, should be sought out as the fittest objects for his charity. In building his Hospitals and Alms-houses, he showed that his judgment could not be imposed upon by the workmen, as to the goodness of the materials, or the value of their work: for, as he understood those things very well, he drove what they would call a hard bargain; and paid all the workmen himself, if present, or else ordered them to be paid, every Saturday night. If they worked longer than their customary hours, he paid them proportionably; if otherwise, he deducted; but never allowed any thing for drink. It is observable, that all the Colston family were animated with a spirit of charity and piety. Several of Mr. Edward Colston's public benefactions were designed, and some actually begun, by his brothers; which he afterwards

(b) From Mr. Colston's Funeral Sermon, by Dr. Harcourt, preached in the church of All-Saints in Bristol, Oct. 29, 1721, and printed at London the same year.

[G] *And twenty pounds to be paid yearly for ever to the Clergy beneficed in that city, for preaching fourteen sermons in the time of Lent.* The subjects on which he himself appointed they should be preached, are these: The Lent-Fast; against Atheism and Infidelity; the Catholic Church; the Excellence of the Church of England; the Powers of the Church; Baptism; Confirmation; Confession and Absolution; the Errors of the Church of Rome; Enthusiasm or Superstition; Restitution; Frequenting the Divine Service; Frequent Communion; the Passion of our Blessed Saviour.

[H] *Besides many occasional charities and benefactions to several churches and charity-schools in Bristol.* Particularly—to the cathedral, towards beautifying the choir, the marble about the communion-table, and organ, &c. at several times, two hundred and sixty pounds.—Towards rebuilding the Tower, and the repair and beautifying the chancel of All-Saints church, at three several times, two hundred and fifty pounds.—Towards the building a new isle in Clifton-church near Bristol, fifty pounds.—Towards the building of a gallery, and erecting an organ in St. James's church, fifty pounds.—Towards an organ to be erected in St. Mary Redcliff, a hundred pounds.—Towards the repair of St. Michael's church, fifty pounds.—Towards the repair of St. Stephen's church, fifty pounds.—Towards the altar-piece, ceiling, and portal, in the Temple-church, one hundred and sixty pounds.—Towards the repair of St. Thomas's church, fifty pounds.—For an altar-piece in the church of St. Werburgh, one hundred and sixty pounds. In 1702, he gave to the Mint work-house, for employing the poor, two hundred pounds. And for placing out poor boys and girls apprentices, two hundred pounds more. He gave yearly sixty pounds, to the charity-schools in the parishes of St. Philip and St. Jacob, St. Thomas and Redcliff, St. James's, and to several erected in other places. And left by will, to the charity-schools erected in the parishes of St. Philip and Jacob, ten pounds; of St. Thomas and Redcliffe, ten pounds; of St. Augustine and St. Michael, ten pounds; of St.

James, ten pounds. And to each of these ten pounds yearly, to be continued for twelve years after his death. All this in Bristol.

[I] *He gave six thousand pounds, for the augmentation of sixty small livings.* This gift at first was four thousand pounds, to which he afterwards added the other two thousand pounds. No more than a hundred pounds was to be given to one living. The distribution was to be after this manner: any living that was entitled to Queen Anne's bounty might have this too, on condition, that every parish, which did receive this, should be obliged to raise one hundred pounds, to be added to the hundred pounds allowed by Mr. Colston. Many livings have had the grant of this bounty from Mr. Colston (3).

[K] *He left moreover very handsome legacies to Mortlake in Surrey, where he died.* He bequeathed for the education and cloathing of twelve boys and twelve girls, in that place; to be continued for twelve years after his death, yearly forty-five pounds; amounting in the whole to five hundred and forty pounds. Moreover, he gave eighty-five pounds (as many as he was years old) to be distributed to eighty-five poor men and women there, to each twenty shillings, at the time of his decease.

[L] *He gave likewise to eighteen charity-schools in several parts of England, and to be continued to them for twelve years after his decease, to each school yearly, five pounds, &c.* Those eighteen charity-schools were:—In Berkshire; at Longcotton, in the parish of Shrevenham: at Shrevenham: at Farrington: and at Stanford.—In Devonshire; at Plymouth: and at Barnstable.—In Dorsetshire; to one at Dorchester set up by Madam Strangeways.—In Hampshire; to one at Alton.—In Kent, at Stroud near Rochester: and at Chislehurst near Bromley.—In Middlesex; at Highgate: and at Brentford.—In Northamptonshire; to one at Kettering.—In Oxfordshire; to one at Bradwell, if the inhabitants thereof can maintain twenty-five boys.—In Somersetshire; at Chewstoke: at From: at Farmborough.—In Wiltshire; to one at Box near Bath (4).

(3) See Ecton's *Liber Valerum*, &c. edit. 1728, in the beginning.

(4) See Dr. Harcourt's Sermon, as above.

confirmed

(c) From the information as above.

confirmed and enlarged (c). Some years before his decease he retired from business, and came and lived at London, and at Mortlake, where he had a country-seat. At this last place he died, October 11, 1721, aged eighty-four years, eleven months, and nine days; and was buried the 29th of the same month, in the church of All-Saints, in Bristol, where there is a monument erected to his memory [M]. His charity was his most shining virtue [N], as is abundantly manifest from those many instances of it mentioned above. As for the rest of his character, he was a constant communicant with the Church of England, a most zealous advocate for her doctrines, worship, and discipline, in opposition to Popery as well as Fanaticism, and a most lively and exemplary son of it (d). He was, likewise, a person of great temperance, meekness, evenness of temper, patience, and mortification. He always looked cheerful and pleasant, scarcely ever in the least discomposed; and was naturally of a very peaceable and quiet disposition. He was remarkably circumspect in all his actions; always observed the same regularity in keeping his accounts, as when he began the world, and was a very good master of book-keeping (e). His strength continued vigorous, his understanding clear, his apprehension quick, and his judgment sound, long beyond the age of man, even to reach almost to the end of his eighty-fifth year, without decay in his understanding, without labour or sorrow (f).

(d) Dr. Harcourt, *ubi supra*.

(e) From the information as above.

(f) Dr. Harcourt, *ubi supra*.

[M] Where there is a monument erected to his memory. The inscription thereon, contains an enumeration of his public charities, already mentioned in this article. Then on the pedestal, or base, is added as follows:

'Edward, the son of William Colston, Esq; and Sarah his wife, was born in this city, Nov. 2, 1636, died at Mortlake in Surrey, October 11, 1721, and lies buried near this monument.'

(5) Sermon, as above.

[N] His charity was his most shining virtue. And so extensive was it, that, as Dr. Harcourt observes (5), 'To do justice to his character, would oblige one to enumerate almost every kind of charity, whereby we can promote the glory of God, or relieve the necessities of our fellow-creatures. Scarcely any sort of temporal calamity escaped his charitable assistance; nor is there scarcely one spiritual want, towards the removing of which he did not piously and freely afford his contribution. In short, the charities which have taken either their foundation or improvement from his open hand, are so numerous, that the variety will appear so great as to surprize; and the immensity of the sums expended in them will be judged extremely large, when it shall be considered, that they are the charity of one private person. From his bountiful benefactions, the ignorance of the young, the miseries of the infirm, and the helpless necessities of the old, are removed, eased, and relieved.' M.

* [The two beautiful quotations, which are under the picture of this most excellent and charitable gentleman, deserve to be inserted. They are as follows:

Hic non divitias nigrantibus abdidit antris,
Nec tenebris damnavit opes: sed largior imbre
Sueverat innumeras hominum ditare catervas.
Quippe velut densos currentia mœnura nimbos
Cernere semper erat; populis undare Penates,
Assiduos intrare inopes, remeare beatos.

CLAUDIAN.

Ἐθέλειτο τὰς εἰκόνας τῆς ἀρετῆς ὑπόμνημα μᾶλλον, ἢ τὴν σὺν ματος, καταλιπεῖν.

ISOCRATES (6).

It is a great pleasure to find that beneficent institutions maintain their original purity and spirit, and continue to answer the valuable purposes they were intended to promote. This pleasure the editor of the present work lately experienced, with regard to Mr. Colston's grand benefaction at Bristol, the hospital in St. Augustine's Back, for the maintenance, cloathing, education, and apprenticing of a hundred boys. In going to see the hospital, in company with some friends, on account of Chatterton's having been brought up there, I was much struck with the neatness, cleanliness, and good order which were apparent in every part of the building. It is to be observed, that the visit, being entirely accidental, could not possibly be known by any of the people concerned in the care of the House. I believe that the trustees of the school, who are some of the first citizens of Bristol, are very exact in enforcing the regulations, and promoting the intentions of the worthy founder; and I was informed, that many persons have been educated in the hospital, who have become very respectable and useful members of society.] K.

(6) Communicated by the Rev. Paul Wright, D. D.

COMBER, or CUMBER (THOMAS), a considerable Divine in the XVIIth century [A], was born in Westram in Kent, in the year 1645 (a), being the son of James Cumber, of that parish, [by Mary his wife, daughter of Bryan Burton, of Westerham; which James was fourth son of John Comber, of Allington, in Suffex, Esq; descended from an ancient family long resident in that county.] He was educated in grammar-learning in his native place, by Thomas Walter, and William Holland, Vicars of Westram. At fourteen years of age, on the 18th of April, 1659, he was admitted into Sidney-Suffex-College, in Cambridge, under the tuition of Edmund Matthews, B. D. The 16th of

(a) This appears from his age at the time of his death. See his epitaph below.

[A] A considerable Divine in the XVIIth century. His surname, as printed in his works, is *Comber*; but it is written *Cumber*, in the admission-book of Sidney-college. He must not be confounded with another Dr. Thomas Comber, who lived in the same century, and was of Trinity-college in Cambridge. This last was born in Suffex, Jan. 1, 1575; admitted Scholar of Trinity-college, May 11, 1593; Fellow of the same, October 2, 1597; Junior Dean, October 2, 1608; Preacher, October 16, 1609; Greek Examiner, October 2, 1611; Chief Reader, October 2, 1612; Senior Dean, October 2, 1618, 1619, and 1625; Senior Treasurer, Dec. 13, 1620, and Dec. 20, 1621; appointed Dean of Carlisle, Aug. 28, 1630; and sworn in Master of Trinity-college, Oct. 12, 1631 (1). He wrote 'An Historical Vindication of the Divine Right of Tithes, &c.' against Mr. Selden's History

of Tithes, &c. In 1642, he was imprisoned, plundered, and deprived of all his preferments. He died Feb. 28, 1653, at Cambridge, and was buried March 3, in St. Botolph's church in that town (2).

[This Thomas Comber, Dean of Carlisle, was of the same family as the foregoing. He married Susan, daughter of — Freston of Norwich, relict of — Cotton of London, Esq; who, after his death, married, thirdly Sir Thomas Sclater of Cambridge, Bart. and M. D. He had an only daughter, Mary Comber, who married William Johnson of Rushton-Grange, Com. Ebor. Esq; by whom she was great-grandmother of J. Allen of Rushton-Grange, and of Temple-Belwood Com. Linc. Esq; who has an original half-length picture of this Dean Comber, and other memorials concerning him.] *

(1) From the College Registry.

VOL. IV.

N

January,

* The two additions, included in brackets, are by John Charles Brooke, Esq.

(c) From the University Register, communicated by Dr. W. Richardson.

(d) Dr. W. Richardson could not find that he subscribed; and therefore questions whether he completed this degree in the University.

January, 1662-3, he was elected Scholar of that house; and the next day had his grace in college for the degree of Bachelor of Arts (b): which he accordingly took, and completed in the University (c). On the 26th of May, 1666, he had likewise his grace for the degree of Master of Arts (d). It moreover appears, that he was created Doctor in Divinity between the years 1676 and 1679; but as his name doth not occur in any of our university registers, it is therefore probable, that he had that degree conferred upon him at Lambeth. On the 5th of July, 1677, he was collated by Archbishop Sterne to the Prebend of Holme, in the cathedral church of York (e); which he quitted the 19th of July, 1681, for the Prebend of Fenton, in the same church (f). The 19th of January, 1683-4, he was also collated to the Præcentorship (g). Upon the deprivation of Dr. Dennis Granville, he was nominated, April 23, 1691, to succeed him in the Deanery of Durham; whereupon he resigned his Præcentorship of York (h). He was Chaplain to Anne, Princess of Denmark, and to King William and Queen Mary. He died November 25, 1699, in the fifty-fifth year of his age (i); and was buried at Stonegrave, in Yorkshire, of which it seems he was Rector. There is a tomb-stone on his grave, with an inscription [B]. He was author of several works, chiefly on the Common Prayer; in which he shows great piety, and very extensive learning, having been well read in sacred and profane authors, both ancient and modern. Those works of his, are, I. A Scholastical History of the Primitive and general Use of Liturgies in the Christian Church: Together with an Answer to Mr. David Clarkson's late Discourse concerning Liturgies. Lond. 1690. Dedicated to King William and Queen Mary. II. 'A Companion to the Temple; or, A Help to Devotion in the Use of the Common Prayer.' Part I. On Morning and Evening Prayer. Part II. On the Litany, with the occasional Prayers and Thanksgivings [C]. III. 'A Companion to the Altar; or, An Help to the worthy Receiving of the Lord's Supper, by Discourses and Meditations upon the whole Communion-Office [D]. IV. 'A brief Discourse upon the Offices of Baptism, Catechism, and Confirmation [E]. Printed at the end of the Companion to the Altar. V. 'A Discourse on the occasional Offices in the Common Prayer, viz. Matrimony, Visitation of the Sick, Burial of the Dead, Churching of Women, and the Communion [F]. VI. 'A Discourse upon the Manner and Form of making Bishops, Priests, and Deacons.' Lond. 1699, 8vo. Dedicated to Archbishop Tenison. VII. 'Short Discourses upon the whole Common Prayer, designed to inform the Judgment, and excite the Devotion of such as daily use the same.' Chiefly by way of paraphrase [G]. Lond. 1684, 8vo. Dedicated to Anne, Princess of Denmark, to whom the author was Chaplain. VIII. 'Roman Forgeries in the Councils during the first four Centuries: Together with an Appendix, concerning

Salutis, Ætatis 55. Proveciore Senio, modo visum Deo, dignus (3).*

(3) Br. Willis, among the Deans of Durham, p. 256, 257.

[C] With the occasional Prayers and Thanksgivings. Printed in two volumes 8vo, 1679. His general method in this work, is to give, first, an analysis of each part: secondly, an explanation of it: thirdly, a paraphrase; and, lastly, a meditation upon it.

[D] A Companion to the Altar, &c.] It is dedicated by the author to his patron Richard Archbishop of York. — To whom, as he observes, he was obliged to make this tender by his condition and his duty, by gratitude and affection; — having first received the Holy Order of Priesthood, and the power of dispensing the Sacrament of the Lord's Supper from his Grace's hands. — He observes, in the same place, that 'There is nothing more useful to the friends of this Church, nor more convincing to the dissenters from it, than to present her pure and primitive order of worship in its natural and lovely splendor.' — The Imprimatur bears dates January 21, 1673-4. It was so well received, that a fourth edition came out in

1685, within the space of eleven years. The whole is divided into four parts, containing learned observations, and then paraphrases, and meditations upon each branch of the Communion-Office.

[E] A Discourse upon the Offices of Baptism, Catechism, and Confirmation.] The author dedicates it to Dr. Tillotson, then Dean of Canterbury: and says, 'it will contribute to the reputation of these tracts, to be ushered in with so worthy a name, and add to their author's character, to be reckoned among the number of your friends.'

[F] A Discourse on the occasional Offices, &c.] First printed in 1676, 8vo. These four last pieces, were re-printed together in one volume, fol. 1701, divided into four parts. They are dedicated to King William.

[G] Short Discourses upon the whole Common-Prayer, &c.] He tells us in his Dedication, that the importunity of his friends had engaged him to write these shorter Discourses, for the use of those who wanted time to consider the larger work, i. e. his Companion to the Temple and Altar. As for the method and design of it, First, the Original and Antiquity of every part of Common-Prayer is therein declared. Secondly, the method of each several piece is cleared. Thirdly, the sense of all is opened by divers plain and natural observations on the matter of these offices, to help all to perform them with a devotion suitable to their great worth. And it is designed, 1. To instruct those who did not understand, or rather not observe, these excellencies to be in the Common Prayer. 2. To furnish the devout sons of the Church with profitable meditations, to enlarge upon in their minds in the use of these prayers, and to put them into a right frame for saying them affectionately, and with a holy importunity. 3. It is designed to convince the mistaken Dissenters if they will hear reason; if not, to discover to others the injustice and malice of their clamours against it (4).

(4) This is the account given of it by the author, in the Preface.

the

'the Forgeries and Errors in the Annals of Baronius [H].' Lond. 1689, 4to. He is said, in his epitaph, to have been a person eminent for piety, learning, ingenuity, judgment,

[H] *Roman forgeries in the Councils, &c.*] In the introduction he observes, that in the allowed Romish editions of the Councils (those of Binius, *Colon.* 1618, and of Labbé and Cossart, *Paris*, 1671) 'there is such adding and expunging, such altering and disguising things in the body of the Councils, and such excusing, falsifying, and shuffling in the notes, that a judicious reader will soon perceive, those venerable records truly set down and explained, do not favour them. But these corruptions are carried on with such confidence and cunning, that an *unexperienced and unwary student*, may be imposed on by this specious shew of venerable antiquity: for their sakes therefore he thought it necessary to take a short view of that fraud and policy which is so commonly made use of in those editions of the Councils which pass through the Roman mint.' — Then he says he hopes 'this undertaking will be many ways useful: First, It will tend to the ease of those who intend to read over the tomes of the *Councils*, or the *Annals* of Baronius, and save them much time and pains by presenting the principal errors of those great volumes at one view, which they would spend a long time in searching after, if they were to gather them up as they lie dispersed. Secondly, It may be very useful to those who desire to be rightly informed in the controversies between us and the Roman Church, because it will give them a clear prospect of what Councils and other antiquities are authentic, and may be allowed for evidence in this dispute; wherein our adversaries have so little regard to their own honour, that generally one half of their evidence is such as they have either forged or corrupted. Thirdly, It will be necessary (by way of antidote) to prepare those, who by reading books so full of infection, may by these plausible falsifications be in danger to be seduced into a great esteem of the opinions and practices of the Roman Church; when they find so many seemingly ancient tracts and Councils brought in to justify her in all things, and see (by this false light) all Ecclesiastical History and Records so modelled, as to persuade their readers, that in the purest Christian times, all things were believed and done in the Catholic Church just as they are now at Rome. But when it shall appear, that all this is a continued series and train of impostures, it will render their notions and practices, not only suspected, but odious, as needing such vile and base artifices, to make them seem agreeable to true Antiquity.'

* [Besides the works of Dr. Comber, mentioned above, he published "Christus Triumphans, Co-mœdia Apocalyptica, Autore Johanne Foxo, Anglo. Edita est olim Basileæ, anno 1556, nunc denuo edita, & Scholarchis Ludique literarii Moderato-ribus dedicata, ob insignem Styli Elegantiam in Scholas utilissime admittenda. Editore. T. C. Sidn. Collegii, A. M. Apocal. xxii. 17. Spiritus & Sponsa dicunt, Veni Domine." Londini. Impensis Rob. Clavel, apud quem prostant in vic. vulg. voc. Little Britain, 1672. He published likewise in 12mo. "Friendly and seasonable Advice to the Roman Catholics of England." By a charitable Hand. Mr. Archdeacon Blackburne's Copy is, "The fourth Edition enlarged, with an Addition of the most convincing Instances and Authorities, and the Testimony of their own Writers for the same." London: printed for Charles Brome, 1686.

Dr. Comber corresponded with Tillotson, Sharp, Burnet, Hicks, Cave, Lake, and other eminent Divines of the last century. In consequence of this correspondence, a noble collection of letters came into the possession of the family, and belonged to the late Dr. Thomas Comber, of Buckworth, in the county of Huntingdon. Mr. Blackburne has formerly seen and perused most of these letters, and hath often regretted that so many curious particulars, relative to the times in which they were written, should be lost to the public. They are yet preserved, but perhaps greatly injured by damp and other accidents, in the uninhabited and ruinous Mansion-House, appertaining to the family, at East-Newton in Yorkshire.

Dean Comber wrote, also, his life, with his own hand; which, likewise, is locked up in the library of the same mansion. It unfortunately happens, on account of the heir of the Combers being a minor, that no access can be had at present to these valuable materials; the trustees of the young gentleman not thinking themselves sufficiently authorized to communicate them during his minority (5). We must wait, therefore, for a future opportunity of making more important additions to the present article.

We shall here subjoin an account of the Comber family, with which we have been favoured by John-Charles Brooke, Esq; Somerset Herald, and Fellow of the Society of Antiquaries, London.

Dr. Thomas Comber, Dean of Durham, married Alice, eldest daughter and coheir of William Thornton of East-Newton, in the parish of Stonegrave, in the North-Riding of the county of York, Esq; by Alice his wife, daughter of Sir Christopher Wandesford of Kirklington, in the said county, Knight, sometime Lord Deputy of Ireland; by which Lady, he ultimately came in for the manor of East-Newton, and a considerable estate in Yorkshire; and by her had issue, besides three sons who died young, Thomas his heir, and two daughters, Alice and Mary.

Thomas Comber of East-Newton, Esq; his son, was a Justice of Peace and of the Quorum for Yorkshire. He married Anne, daughter of Andrew Wilson of Easingwold, relict of the Rev. Elias Micklethwaite, Vicar of Gilling; and died 12th May, 1765, and was buried at Stonegrave, having had issue Thomas his heir; William, Vicar of Kirkby-Moor-side, and Rector of Kirkby-Overcarr in Yorkshire, and Justice of Peace, who married Dorothy, daughter and heir of James Arbuthnot, of Ampleford in the said county, Esq; by whom he has no issue (1783); and Andrew, who died a minor.

Thomas Comber, of East-Newton, his eldest son, was of Jesus-college, Cambridge, L.L.D. and Rector of Morborne and Buckworth, in the county of Huntingdon. He was a man of considerable parts and learning, and author of some works. He married his cousin Mary, eldest daughter of William Brooke, of Dodworth, Esq; hereafter mentioned; by whom he had five children, Anne, Thomas, Duncombe, William-Turner, and Andrew, all (1783) under age. He died at Buckworth, on the 9th of April, 1778, and was buried at Stonegrave.

Alice, Dean Comber's eldest daughter, married, first Francis Blackburne, of St. Nicholas, near Richmond, in the county of York, by whom she had issue Francis Blackburne, Thomas, who died young at Cambridge; and Jane, who was the first wife of Sir Onesiphorus Paul, of Woodchester, in the county of Gloucester, Bart. The said Alice married, secondly William Kirkby, of Kirkby and Ashlack, in Lancashire, Esq; by whom she had issue William-Comber Kirkby, of Ashlack, Esq; James and Sarah, all living in 1783. She died in Nov. 1740, and is buried at Kirkby.

Francis Blackburne, M. A. [Archdeacon of Cleveland, Yorkshire, Vicar of Richmond in the same county, well known in the republic of letters, by his able and learned publications, married Mrs. Elsworth, a widow lady, by whom he had five children, who arrived to years of maturity, three sons and two daughters. Francis, the eldest son, is Vicar of Brignall, Yorkshire. Thomas, the second son, was bred at Peterhouse-College, Cambridge, and was likewise intended for the Church; but declining to make the usual subscriptions, he relinquished his prospects, which were very considerable, and retired to Edinburgh, where he applied himself to the study of Physic, and became M. D. He settled as a Physician at Durham, in which city he died young, having obtained a great reputation. Some time before his decease he was chosen a Fellow of the Royal Society. William, the youngest son, M. D. has succeeded his brother at Durham. Jane, Archdeacon Blackburne's eldest daughter, is married to the Rev. Dr. Disney; and Sarah, the youngest, to the Rev. Mr. Hall.*]

Mary, Dean Comber's younger daughter, married Thomas Brooke, of Dodworth, in the West-Riding of

(5) From the information of the Rev. Mr. Archdeacon Blackburne, of Richmond, Yorkshire.

* Addition, by the Editor.

ment, and other excellent qualities, and a strenuous defender of the doctrine, worship, and discipline of the Church of England.

of Yorkshire, A. M. Rector of Richmond, who was eldest son and heir of William Brooke, of the same place, Esq; by whom she had issue William, and Anne, married to Richard Fenton, of Banktop, Esq; Clerk of the Peace for the West-Riding of Yorkshire (by whom an only daughter, Mary, now the wife of Sir William Wake, of Courtenhall, in Northamptonshire, Bart.) She died July 20, 1768, and was buried at Silkeston.

William Brooke, of Dodworth, Esq; A. M. of St. John's-college, Cambridge; married Alice, eldest

daughter and coheir of William Mawhood, of Doncaster, and died August 24, 1755, and was buried at Silkeston, leaving issue William; John-Charles Brooke, of Pond, in Yorkshire, Somerset-Herald, and F.S.A. Mary, married to her cousin Dr. Thomas Comber before-mentioned; Margaret, and Jane married to Richard-Horton Brisco, of Brisco, in Cumberland, Esq;

William Brooke, of Dodworth, Esq; married Elizabeth Morris, by whom he hath Thomas, William, Jane, and Margaret, all infants (1783.)] K.

COMPTON (WILLIAM), ancestor of the present noble Earls of Northampton and Wilmington, was the son of Edmund de Compton [A], and born in the year 1481 (a). The first foundation of his succeeding honours and riches, was, his being made, in the eleventh year of his age (b), one of the Pages to Henry Duke of York, afterwards King by the title of Henry VIII. who, as soon as he came to the crown, made him Groom of his Bedchamber (c); and, before the expiration of that year, chief Gentleman of his Bedchamber (d). He grew so much in favour with that King, that he was appointed by him, in the second year of his reign, 1510, Groom of the Stole (e); and, soon after, Constable of Sudley-Castle, in Gloucestershire (f); as he was also of Gloucester-Castle, in 1511 (g). In consideration of his good and faithful services, he obtained, in 1512, November the 7th, a special grant, to himself and his heirs, of an honourable augmentation to his arms (h), out of the King's own royal ensigns and devices [B]; and, on the 4th of February next ensuing, the King conferred on him the office of Usher of the Black Rod, with an allowance of twelve-pence a day for that service (i). He had likewise, the same year, by his Majesty's favour, a large grant, to himself, and the heirs of his body lawfully begotten (k), of several lands and manors [C]. In 1513, being a Knight, he had a commission to retain men in any of those lordships belonging to the monasteries whereof he was then steward, for the service of the King in his wars (l); and, in the expedition to Terouenne and Tournay, the same year, led the rere guard of the King's army (m). Shortly after, he was made one of the Knights for the King's body (n); as also Chancellor of Ireland, with liberty to execute that office by a sufficient deputy (o). But he did not hold it long; for, two years after, namely, in 1515, it was given to the Archbishop of Dublin (p). In 1514, and 1517, he had a grant to himself and his wife, and to the heirs of their two bodies lawfully begotten (q), of several manors and estates [D]. The same year, namely, 1517, he was appointed Constable of Hanley-Castle, in Worcestershire (r); and in 1518, was ordered to provide fifty archers for the King's service in his wars (s). In 1519, he obtained licence to make a park at his manor of Compton Vineyats, or Vineyard, in Warwickshire; and, for an addition to the same, to inclose two thousand acres more thereto adjoining (t). Upon the attainder of Edward Stafford, Duke of Buckingham, in 1521, he obtained a grant of the manor, castle, and park of Max-

[A] Was the son of Edmund de Compton.] This noble family derive their descent from *Turchill* the son of Alwin; who, in the time of Edward the Confessor, resided at Warwick, of which county he was Earl. At the time of the Norman conquest, not joining with Harold, he continued in the possession of his own lands, among which was the Lordship of Compton, and forty-seven manors in divers counties. By Leverunia his second wife he had Osbert, who wrote himself of *Compton*, and was ancestor of the present noble family. His second son was *Philip*; to whom succeeded his son and heir *Thomas*, that lived in the reign of Henry the third; and whose eldest son was *Philip*, father of *Robert de Compton*, who was knighted before the 13th of Edward the second; and was succeeded by *Robert*, father of *Thomas de Compton*. He was one of the Coroners for Warwickshire, in the 23d of Edward the third, an office of great account in those days. It was enjoyed after him by his son and heir *Edmund*, who died in the reign of Henry IV. He had issue six sons, whereof *William* the eldest, dying about the year 1431, left issue *Robert* his son and heir, who died in 1480. His son, and successor was *Edmund*, who dying in 1492, left issue by Joan his wife, daughter and heir of Walter Aylworth, Esq; *William*, who is the subject of this article (1).

[B] Out of the King's own royal ensigns and devices.] Namely, 'a Lion passant gardant, or.' And for the crest, 'a demi-dragon erased, gules, within a coronet of gold, upon a torse argent and vert:' as by a special instrument under the King's own sign manual, bearing date November 7, 1512, appeareth (2).

[C] Of several lands and manors.] Of which these

are the names. The manor of Wyke in Middlesex, formerly belonging to George Duke of Clarence: Lovel's-Inn in Pater-Noster-Row, London; with divers tenements pertaining thereto: The manor of Aldwike, or Holand's with Baro-Shanke wood, in Northamptonshire; twenty-four acres of meadow in Brantfy; twenty-four in Swillingholm; all in Aldwicle, (or Aldwike) in the same county: also the manor of Deyncourt in Buckinghamshire, part of the possessions of Francis Lord Lovel; with the manors of Rocholds, Cobham, and Rishams, part of the lands of Sir Richard Charlton, Knt (3).

[D] In 1514, and 1517, he had a grant—of several manors and estates.] Namely, in 1514, the manors of Elcombe, and Ufcote, in Wiltshire; and the manor of Pole-place in Berkshire, part of the possessions of Francis Viscount Lovel. In 1517, the manors of Salthrope, Chilton, and Blagrove, in Wiltshire; two hundred acres of pasture, called Blagrove, with their appurtenances in Blagrove and Wroughton, in the same county. Likewise the manor of Wythynden, or Myhunden in the parishes of Wroughton, and Lidiard-Tregoze, in the same county; the manor of Elcomb, with the park: the manors of Watlescote, and Westcote; one hundred acres of land, and sixty acres of pasture, in Wigleste, and Wroughton: the manor of Uffecote, two messuages, a thousand acres of land, a thousand acres of pasture, three hundred acres of meadow, and three hundred acres of wood in Broad-Hinton, all in the same county. And eight pounds yearly rent, issuing out of the manor of Denford, in Berkshire, late Francis Viscount Lovel's attainted (4).

stoke, in Warwickshire; as also of the manors of Scotton and Brereton, in Yorkshire, in reversion, after the death or surrender of Simon Coniers (u). In 1523, he was employed, with the Earl of Surrey, and the Marquis of Dorset, &c. to make incursions into Scotland. This ungrateful office was put upon him by the contrivance of Cardinal Wolsey; who, observing how much Sir William was in the King's favour, and fearing he should diminish his authority, procured him to be thus sent into the wars against the Scots. For Sir William could not bear the Cardinal's presumption, in taking so much upon him to the derogation of the King's prerogative; therefore the Cardinal thought, in his absence, to have worked him out of favour. But he could not; for the King recalled him soon after to court (w); and, in 1525, constituted him Keeper of his money and jewels (x), which is the same we now call the Privy Purse (y). Sir William built a very noble house at his manor of Compton [E]; and, in the chapel, erected a beautiful window towards the east, in the painted glass of which, most curiously done, was represented the Passion of Jesus Christ; and in the lower part, Sir William himself and his Lady, kneeling, in their furcoats of arms (z). He died of the sweating sickness, in the year 1528, May 31, aged forty-seven (a), being at that time of the Privy Chamber to the King, who was then also in great danger (b). His body was buried at Compton, as he had desired in his will, bearing date March 8, 1522; in which he also desired, that his Lady should be interred in the same place; and, that a tomb of alabaster should be made, by the direction of his executors, for his father, and set over his grave, with his arms cut thereon. Likewise, that his mother's body should be taken up from the place where she lay buried, and deposited by his father. Moreover, he appointed that his executors should found in his name two chantries at Compton, and that every Priest therein should have a yearly salary of ten marks (c) [F]. He married Werburge, daughter and heir of Sir John Brereton, Knt. and widow of Sir Francis Cheney, Knt. by whom he had issue,

PETER, who being under age at the time of his father's decease, was put under the wardship of Cardinal Wolsey (d). He married Anne, daughter of George, Earl of Shrewsbury; but dying before he came of age, on the 30th of January, 1543, he left only one son, forty-nine weeks and five days old (e), named

HENRY, who was knighted February 10, 1566, by the Earl of Leicester; and, on the 8th of May, 1572, summoned by writ to the House of Lords, by the title of Baron Compton, of Compton. In 1586, he was one of the Peers for the trial of Mary Queen of Scots (f). He is supposed to have died in the year 1589 (g). By his first Lady, Frances, daughter to Francis Hastings, Earl of Huntingdon, he had, among other children [G],

WILLIAM, his eldest son and heir, who was summoned to Parliament in the thirty-fifth of Queen Elizabeth, and was one of the Privy-Council to that Queen. On the 5th of January, 1604, he was made Knight of the Bath at the creation of Charles, Duke of York, afterwards King by the title of Charles I. (h); and was constituted, some years after, President of the Council for the Marches of Wales (i), and Lord Lieutenant of the counties of Worcester, Hereford, Salop, and Warwick (k). On the 2d of August, 1618, he was advanced to the title of Earl of Northampton (l); and on the 21st of April, 1629, installed a Knight of the Garter. He died June 24, 1630, leaving issue, by Elizabeth his Lady, sole daughter and heir of Sir John Spencer, Alderman of London; Spencer, of whom we shall speak in the next article.

[E] Sir William built a very noble house at his manor of Compton. The greatest part of the brick used in the building of it, was brought from Fulbrook, in the same county (of Warwick), where there stood a ruinous castle, of which the King had granted him the custody. This castle he pulled down, making use of the materials for that building (5).

[F] And that every priest therein should have a yearly salary of ten marks. For the proving of this Will, Cardinal Wolsey (who, under colour of his Legantine authority, had wrested the probate of wills from the Prerogative court of Canterbury,) exacted no less than a thousand marks; as was publicly declared by Sir Henry Guilford, one of the executors. And this extortion was the cause of making the statute 21 Henry VIII. ch. v. wherein the fees to be taken for the Probate of testaments, were settled and limited (6).

[G] Among other children. His children by the Lady Frances Hastings, besides William here mentioned, were, Margaret, married to Henry Lord Mordaunt; and Thomas, who, on the 4th of March, 1606-7, was knighted; he married Mary, daughter of Anthony Beaumont, second son of William Beaumont of Cole-Overton in Leicestershire; which Mary was by King James I. created Countess of Buckingham, July 1, 1618, being the mother of George Villiers, Duke of Buckingham, the great favourite of King James, and King Charles I. — The second wife of Henry Lord Compton, was Anne daughter of Sir John Spencer of Althorpe, in Northamptonshire, Knt. by whom he had, Sir Henry Compton of Bramble-Tegh, in Sussex, Knight of the Bath; Cecily; Mary; and Margaret (7).

COMPTON (SPENCER), only son of the former [A], and second Earl of Northampton, deserves to be particularly remembered. He was made Knight of the Bath, on the 3d of November, 1616, at the time when Charles, Duke of York, (afterwards King Charles I.) was created Prince of Wales, with whom he became a great favourite. In 1622, he accompanied him into Spain, waiting on him in quality of Master of his Robes and Wardrobe, and had the honour to deliver all his presents, amounting, as was com-

[A] SPENCER only son of the former. Besides him, William Lord Compton had two daughters: Elizabeth, married to Robert Maxwell Earl of Nithif-

dale in Scotland; and Anne to Ulick Bourk, Lord Dunkellin, son and heir to Richard Earl of Clanrickard in Ireland, and Earl of St. Albans in England (1).

puted, to sixty-four thousand pounds. At the Coronation of that Prince, he attended as Master of the Robes; and, in 1639, waited on his Majesty in his expedition against the Scots. He was likewise among those Noblemen, who, on the 4th of May 1641, took the Protestation to defend the true Protestant Religion expressed in the doctrine of the Church of England, and his Majesty's Royal person, honour, and estate; as also the power and privilege of Parliaments, and the lawful rights and liberties of the subject^(a). In 1642, he waited upon his Majesty at York; and was one of the Lords who subscribed, the 15th of June the same year, a Declaration at that place, wherein they professed before God, and testified to all the world, that they were fully persuaded, that his Majesty had no intention to make war upon his Parliament: but that all his endeavours tended to the firm and constant settlement of the true Protestant Religion; the just privileges of Parliament, the liberty of the subject, and the law, peace, and prosperity of the kingdom^(b). Having, after that, often endeavoured to compose the unhappy jealousies in the nation; but finding his endeavours ineffectual, and that the Parliament were raising forces to distress such as came not into its measures, he thought it more for his Majesty's service to retire to his native country: where he soon got together such a number of Gentlemen and Soldiers, as awed the country into the King's allegiance, drove the Lord Brook out of Warwickshire, who endeavoured to secure that county for the Parliament; and in twelve skirmishes put a stop to the Earl of Essex's rendezvous at Northampton^(c). After King Charles I. had set up his standard at Nottingham, he raised, one of the first, at his own charge, a troop of horse, and a regiment of foot^(d): and, at the battle between Keinton and Edge-hill, brought two thousand of the best disciplined men in the whole army. When that battle (which happened on the 23d of October 1642) was over, the King's army having taken Banbury, a garrison was placed therein under the command of the Earl of Northampton^(e): who, by his vigilance and conduct, performed many successful services, and was the life of his Majesty's cause in those parts. He secured most of the arms, ammunition, and garrisons in Warwickshire, Staffordshire, and Northamptonshire, and settling an association, made the country, from garrison to garrison, one line of communication^(f). Afterwards, with a strong party of horse and dragoons, from his garrison at Banbury, he relieved the town of Stafford, that was besieged by Sir John Gell; and putting himself into that town, beat up a quarter of the enemies, in which he took and killed above an hundred of their horse. But Sir John Gell having joined Sir William Brereton, and they being nearly three thousand foot and horse, with a good train of artillery, moved back towards Stafford, imagining the Earl of Northampton would meet them without the walls. And it happened according to their expectation: for, on Sunday the 19th of March, 1642-3, as soon as he heard they were advancing towards the town, he marched out with his party, consisting in all of nearly one thousand horse, dragoons, and foot, to encounter them. He found the enemy in very good order, expecting him on a plain called Cranock-green, Salt-heath, or Hopton-heath^(g), about two or three miles from Stafford. Though their number was more than double that of his Lordship's [B], yet the heath seeming very fair, the breadth of it being more than musquet-shot from the enclosure on each side, and the number of his horse at least equal to theirs, he resolved to charge them; and accordingly did, with so good success, that he totally routed one part of their horse. Rallying again his men, he charged the other part of their horse, which stood more in shelter of their foot, and so totally dispersed them, that the enemy had scarcely a horse left upon the field. He took likewise from them eight pieces of cannon [C]. In this second charge, his Lordship being engaged in the execution, very near, or among, their foot, had his horse killed under him [D]: so that his own body of horse, pursuing the

(*) Memorable Occurrences in 1642, at the end of *Mercurius Rusticus*. edit. 1646, 8^{vo}.

[B] *Though their number was more than double that of his Lordship's.* We are assured, that the number of their men, was 'near three thousand foot and horse, with a good train of artillery (2).' Some of the Parliament-Historians (3) affirm indeed, that Sir John Gell's army consisted but of about fifteen hundred, horse and foot: and the Earl's of about twelve hundred: though they mention afterwards the coming of Sir William Brereton to Gell's assistance, before the fight was ended. But they do not express the number of the forces he brought; in which point, their silence seems to be culpable, as being designed to mislead the reader. Such instances are very frequent in Vicars's Chronicle; which indeed is only a heap of falsehood and misrepresentations, as well as of most shocking hypocrisy, and canting nonsense. Honest Mr. Whitelock tells us plainly, and without disguise (4), that Sir John Gell and Sir William Brereton came with three thousand horse and foot.

[C] *And so totally dispersed them, that the enemy had scarcely a horse left upon the field, &c.* This is the Lord Clarendon's account. And Dr. Ryves more particularly informs us (*) that in this fight above three hundred of the rebels were taken and killed; at

the least, two hundred more wounded; above three hundred of their horse taken, with four pieces of cannon, and a case of Drakes. And on the King's side, some few slain. On the other hand Vicars affirms (5), that the Parliament-forces repulsed the Earl's horse,—and at least an hundred and forty Cavaliers were slain with him; with the loss of eight or ten only of the Parliamentarians. And 'by the timely coming in of Sir William Brereton, before the fight was ended, Sir John Gell obtained a glorious victory, and drove his enemies quite out of the field.' Such are the frequent contradictions between Historians of different parties. But, on which side the victory inclined, we may judge by the consequence. And that it was in the King, is evident by the Earl of Northampton's forces recovering Litchfield soon after; which the others would never have permitted them to do, had they been victorious.

[D] *Had his horse killed under him.* One Historian tells us that, 'being unhappily fallen from his horse among coney-burrows, he was barbarously murdered (6).'

(6) A short View of the Troubles in England, &c. by Sir Will. Dugdale. Oxf. 1681, fol. p. 118.

chafe

chase with too much fury, he was left encompassed by the enemy. After he was on his feet, he killed, with his own hand, the Colonel of foot, who first came near him; and, after his head-piece was struck off with the but-end of a musquet, they offered him quarter; which he refused, answering, 'That he scorned to take quarter from such base rogues and rebels, as they were.' Upon this, he was slain by a blow with a halbert on the hinder part of his head, receiving, at the same time, another deep wound in his face (b). He was then in the forty-second year of his age (i). The enemy refused to deliver the body to the young Earl of Northampton, and would not even permit his Chirurgeons to come and embalm it, unless he would deliver, in exchange for it, all the ammunition, prisoners, and cannon he had taken in the late battle (k). However, it was delivered up at last, and buried in Allhallows Church in Derby, in the same vault with his relation the old Countess of Shrewsbury (l). As to this noble Lord's character, we are informed, that he was a person of great courage, honour, and fidelity, and not well known till his evening; having, in the ease, plenty, and luxury, antecedent to our unhappy dissensions, indulged himself in that licence which was then thought necessary to great fortunes. But, from the beginning of the civil wars, as if he had been awakened out of a lethargy, he never proceeded with a lukewarm temper. From the time he submitted himself to the profession of a soldier, no man was more punctual upon command, no man more active and vigilant in duty. All distresses he bore like a common man, and all wants and hardships, as if he had never known plenty or ease; most prodigal of his person to danger; and would often say, That if he outlived these wars, he was certain never to have so noble a death (m). His Lordship married Mary, daughter of Sir Francis Beaumont, Knt. by whom he had two daughters, and six sons. The daughters were, *Anne*, married to Sir Hugh Cholmondeley, of Whitby, in Yorkshire, Bart. and *Penelope*, to Sir John Nicholas, Knight of the Bath, eldest son of Sir Edward Nicholas, one of the Secretaries of State to King Charles I. and King Charles II. (n). Of the sons, who were all highly esteemed for their eminent abilities, and all inherited their father's courage, loyalty, and virtue, five of them received the honour of Knighthood; namely, *James*, the eldest son, and heir; *Sir Charles*; *Sir William* [E]; *Sir Spencer*; and *Sir Francis*; and *Henry*, the sixth, and youngest, Bishop of London, was no less conspicuous. At the battle of Hopton-heath, the three eldest, who were officers under their father, charged that day in the field, when Sir James, the eldest, received a shot in one of his legs (o). At the battle of Edge-hill he was absent; but Sir Charles and Sir William, though neither of them were twenty, charged in the troop with their father; and Sir Spencer, though not able to grasp a pistol, yet in indignation wept, That he was not exposed to the same hazard as his brothers (p).

[E] *Sir William*.] This brave gentleman had the command of a regiment, wherewith he performed considerable service at the taking of Banbury, leading his men on to three attacks, and had two horses shot under him. Upon the surrender of the town and castle, he was made Lieutenant-Governor under his father; and on the 19th of July, 1644, when the Parliament's forces came before the town he returned answer to their summons; 'That he kept the castle for his Majesty, and as long as one man was left alive in it, willed them not to expect to have it delivered;' also on the 16th of September, they sending him another summons, he made answer, 'That he had formerly answered them, and wondered they should send again.' He was so vigilant in his station, that he countermined the enemy eleven times, and during the siege, which held thirteen weeks, never went into bed, but by his example so animated the garrison, that though they had but two horses left uneaten, they would never suffer a summons to be sent to them, after the answer before-mentioned was de-

livered. At length, his brother the Earl of Northampton raised the siege on the 26th of October, the very day of the month, on which both town and castle had been surrendered to the King two years before. Sir William continued Governor of Banbury, and performed many signal services for the King, till his Majesty left Oxford, and the whole kingdom was submitting to the Parliament; and then on the 8th of May, 1646, surrendered upon honourable terms. In 1648, he was Major-General of the King's forces at Colchester, where he was so much taken notice of for his admirable behaviour, that Oliver Cromwell called him the sober young man, and the godly Cavalier. At the restoration of King Charles II. he was made one of the Privy-Council, and Master-General of the Ordnance; and died October 19, 1663, in the 39th year of his age, having married Elizabeth, widow of Lord Allington of Hortheath in Cambridgeshire, with whom he lived twelve years, but left no issue (7). There is an epitaph erected to his memory in the church of Compton-Winyate (8).

COMPTON (JAMES), the eldest of the six sons last mentioned, and third Earl of Northampton, taking arms with his father for King Charles I. was distinguished for his bravery and conduct, and performed many gallant acts in those times of confusion. He was at the battle of Edge-hill, the taking of Banbury, &c. (a); and waiting upon the King at Oxford, had the degree of Doctor of Laws conferred on him by that University, November 1, 1642 (b). The 19th of March following, he was in the engagement at Hopton-heath, where receiving a shot in one of his legs, he was obliged to quit the field (c). However, he was in a short time so well recovered of that wound, that on the 8th of April, 1643, he was with Prince Rupert at the taking of Litchfield, and the surrender of the Close there, the 21st of the same month. Also May 6, the same year, he routed a party of the enemies of horse and foot (d), at Middleton-chenev, in Northamptonshire, which thought themselves strong enough to attempt the taking of Banbury; and he defeated their horse, killed above two hundred of their foot, and took as many more prisoners.

ers (c). He afterwards commanded the horse at the first battle of Newbury, September 20, 1643, and charged and put to flight the enemy's horse under Sir William Waller. On the 29th of June, 1644, he was one of the commanders at Cropredy-bridge fight, wherein Sir William Waller was routed again (f). Soon after he marched with the King into Cornwall; and at his return raised the siege of Banbury, October 26, 1644, routing the Parliament forces, though their horse were much superior in number (g). Then joining the King, he relieved Donnington-Castle; whereupon battle was offered to the enemy, who declined it, though they had just before obtained advantages in the second fight at Newbury, the Earl being absent in raising the siege of Banbury (h). On the 18th of March, 1644-5, he and his three brothers routed a great body of the Parliamentarians horse, of Northampton, near Althorp, killed about thirty, and hurt many more, taking twenty-six prisoners (i). But in April, 1645, he was defeated by Lieutenant-General Cromwell, near Oxford, and several of his men were taken prisoners (k). After this, finding that his Majesty was overpowered by the Parliament, he resolved to go beyond sea, and obtained a pass from the House of Commons for that purpose (l). But, however, he seems to have compounded for his estates, and to have staid in the kingdom (m). Afterwards, the powers in being growing jealous of him, he was imprisoned; but discharged again, the 2d of November 1659, upon security given to live peaceably (n). On the 29th of May 1660, at the Restoration of King Charles II. he led a troop of two hundred Gentlemen, clothed in grey and blue: and, in the reign of that King, was of the Privy-Council, Constable of the Tower of London, Lord Lieutenant of the county of Warwick, and city of Coventry, Recorder of the same, and also of the towns of Northampton and Tamworth. He died at his seat of Castle-Ashby in Northamptonshire, December 15, 1681, and was interred among his ancestors at Compton in the county of Warwick; which church being demolished in the civil wars, was rebuilt at his Lordship's sole expence, in 1665. He was married twice [A]. By his second Lady he had three sons, GEORGE, who succeeded him in his honours [B]; James, that died young; and Spencer,

[A] *He was married twice.* His first Lady was, *Isabella*, one of the two daughters and coheirs to Richard Earl of Dorset; by whom he had issue two sons, William, and James, who both died in their childhood; and three daughters, Anne, and Isabella, which also died young, and Alatheia married to Edward Hungerford, Esq; This first Lady died October 14, 1661. His second Lady, was, *Mary*, eldest daughter of Baptist Noel Viscount Campden, by whom he had three sons as mentioned above; and two daughters, Juliana who died young; and Mary married to Charles Sackville Earl of Dorset, mother of Lionel Duke of Dorset (1).

[B] *GEORGE, who succeeded him in his honours.* His Lordship was of Christ-Church in Oxford, where he was created Master of Arts, February 18, 1681-2 (2). Though he was under age at the time of his father's death, he was notwithstanding, made Lord Lieutenant and Custos Rotulorum of Warwickshire. On Queen Anne's accession, he was sworn of her Privy-Council; and in 1712, appointed Constable of the Tower of London. His Lordship died April 15, 1727, and was buried at Compton with his ancestors. By his first Lady, *Jane*, youngest daughter of Sir Stephen Fox, Knt. whom he married in 1686 (3), he had issue four sons; JAMES, Earl of Northampton; George, Member in Parliament for Northampton, and one of the Lords of the Treasury: Stephen, who died young; and Charles, who on the 10th of May, 1727, was appointed Consul at Lisbon, and Consul-General in the dominions of Portugal. He had also by her six daughters; Elizabeth, Mary, Jane, Anne, Penelope, and Margaret; of whom the second was married in April, 1709, to William Gore of Tring in Hertfordshire, Esq; and the fourth, on the 16th of October, 1729, to Sir John Rushout of Northwick, in Worcestershire, Bart. His second Lady, was, Elizabeth, daughter of Sir James Rushout of Northwick, Bart. relict of Sir George Thorold, Bart. who in 1719, was Lord Mayor of London; but by her he had no issue (4).

* * [For a farther account of this noble family in general, we refer to the peerages; but as Spencer Compton, the youngest son of James the third Earl of Northampton, raised himself, by his abilities, to eminent stations, and to high rank, we shall add a few particulars concerning him. This gentleman was introduced into Parliament in 1689, and continued in the House of Commons, without interruption, till the year 1727. In 1714, he was chosen Speaker of that House, and sustained this important and honourable situation during three successive Parliaments. King

George the first, towards the latter end of his reign, conferred upon him the dignity of Knight of the Bath. Besides being created Baron, and afterwards Earl of Wilmington, he was a Privy-Counsellor, Knight of the Garter, and some time president of the council. When Sir Robert Walpole was displaced in 1742, the Earl of Wilmington succeeded him as First Commissioner of the Treasury. This office he held till his death, which happened on the second of July, in 1743 (5). Dying unmarried, he bequeathed his estate to the Earl of Northampton (6). The Earl of Wilmington appears to have been a friend to the Church, and an encourager of genius and learning. For a proof of the former, we may mention, that he gave, in 1716, two hundred pounds, for the augmentation of the Vicarage of Wilmington, in Sussex (7). It is no small testimony of the latter, that he was one of the earliest patrons of Thomson the Poet, who inscribed to him his "Winter," which was the first of his publications. From this circumstance his Lordship has obtained an eulogium that reflects a greater lustre upon him than all his titles, and which will transmit his name with honour to posterity, when his external distinctions are no longer regarded. The following lines, from the beginning of the later editions of the "Winter," will be an ample demonstration of the truth of our assertion.

"To thee, the patron of *her* first essay,
The muse, O WILMINGTON! renews her song.
Since has she rounded the revolving year:
Skim'd the gay spring; on eagle-pinions borne,
Attempted thro' the summer-blaze to rise;
Then swept o'er autumn with the shadowy gale;
And now among the wintry clouds again,
Roll'd in the doubling storm she tries to soar;
To swell her note with all the rushing winds;
To suit her sounding cadence to the floods;
As is her theme, her numbers wildly great:
Thrice happy! could she fill thy judging ear
With bold description, and with manly thought,
Nor art thou skilled in awful schemes alone,
And how to make a mighty people thrive:
But equal goodness, sound integrity,
A firm unshaken uncorrupted soul
Amid a sliding age, and burning strong,
Not vainly blazing for the country's weal,
A steady spirit regularly free;
These, each exalting each, the Statesman light
Into the Patriot; these, the public hope
And eye to thee converting, bid the muse
Record what envy dares not flattery call (8)."

COMPTON (HENRY), Bishop of London in the end of the XVIIth, and beginning of the XVIIIth Century, and one of the most eminent Prelates that ever sat in that See, was the sixth [A] and youngest son of Spencer, the second Earl of Northampton, mentioned in the foregoing article. He was born at Compton (a) in the year 1632 (b). His father being unhappily slain in 1642-3, when this his youngest son was but ten years old, he was thereby deprived of that paternal care which is so necessary in that tender age. However, (notwithstanding that misfortune) he received an education suitable to his quality. When he had gone through the Grammar-schools, he was entered a Nobleman of Queen's-College, in Oxford, in the year 1649; and having continued there till about 1652, went and lived with his mother at Gryndon, in Northamptonshire. Afterwards he travelled beyond sea (c), where he remained a considerable time, and examined the civil and ecclesiastical polities abroad; but the more he observed them, the more he liked the English constitution. He saw their manners, and was too wise to imitate them. However, what he thought valuable amongst them he brought home, and in particular retained their languages perfectly (d) [B]. After the Restoration of King Charles II. he returned to England; and a regiment of horse being raised about that time for the King's guard, of which the command was given to Aubrey Earl of Oxford, Mr. Compton accepted of a Cornet's commission therein, either by his own choice, or the persuasion of friends. But, soon after, discovering a greater inclination to his studies than to a military life, he quitted that post, and dedicated himself to the service of the Church (e). Accordingly he went to Cambridge, where he was created Master of Arts (f). Afterwards entering into Orders [C], and obtaining a grant of the next vacant Canonry of Christ-Church in Oxford, he was admitted Canon-Commoner of that college, in the beginning of the year 1666, by the advice of Dr. John Fell, then Dean of the same (g). The 7th of April next ensuing, he was incorporated Master of Arts at Oxford, as he stood at Cambridge (h): about which time, he was possessed of the Rectory of Cottenham in Cambridgeshire, worth above five hundred pounds a year. Before that, he had a smaller benefice. In both he showed his great concern for the souls of men. He was constituted in 1667, Master of St. Croffe's Hospital near Winchester, upon the death of Dr. William Lewis [D]. On the 24th of May 1669, he was installed Canon of Christ-Church [E], in the room of Dr. Richard Heylin deceased (i). Two days after (k), he took the degree of Bachelor in Divinity (l); and that of Doctor, the 28th of June following (m). Advancing daily in the King's favour and esteem, and in the opinion of all good men, he was, upon the translation of Dr. Nathaniel Crew from the Bishopric of Oxford to that of Durham, nominated to succeed him in the See of Oxford; to which he was elected November 10, confirmed December 2, and consecrated at Lambeth December 6, 1674 (n). About July, 1675, he was made Dean of the Royal Chapel, on the death of Dr. Blandford, Bishop of Worcester; and being the same year translated to the See of London [F], in the

(n) Survey of the Cathedral of Oxford, &c. by Br. Willis, Esq; edit. 1730, p. 434.

[A] *Was the sixth.* See above, in the article SPENCER COMPTON. Mr. Boyer says by mistake, that he was the fourth son (1). We are told that he was 'in the field at Edgehill in his cradle; by which 'is understood, that he was carried to the camp for 'security when very young (2). But certainly he could not be there in his cradle: for he was then ten years old.

[B] *And in particular retained their languages perfectly.* Dr. Gooch informs us (3), that, 'The better 'to prepare him for that figure he was afterwards to 'make, he spent some years in travelling; not to 'suck in the maxims of foreign states, or to try the 'rices of foreign Courts; not before he knew our 'constitution in Church and State, and was able to 'defend it, and sure to stick to it. He observed and 'examined the Civil and Ecclesiastical Polities abroad; 'he made them his study, but not his rule. The 'more he staid in France and Italy, &c. the more 'Englishman he was; he came home the better 'Statesman and the better Churchman; he was proof 'against all their arts, to debauch either his principles or his practices.' Whilst he was abroad, he is said to have trailed a pike in Flanders, under the Duke of York (4).

[C] *Afterwards entering into Orders.* When he did so, he was not a novice in age, or knowledge; being above a Bishop's necessary years (i. e. thirty years of age), when he was ordained a Deacon: but he did not aspire to, or desire the Episcopal Office, before he was qualified for the good work.—And though he might have made high demands upon the

Court, and raised himself at once to the greatest dignities, yet he chose to make gradual and regular advances (5).

[D] *He was constituted in 1667, Master of St. Croffe's Hospital, &c.* A fit preferment, as Dr. Gooch rightly observes (6), for him, whose house was always a constant hospital! By this his income was considerably increased, (it being above 500 a year) and he had greater opportunities of doing good; the only motive to him to wish for its increase; this was his greatest pleasure; and here he lived, and enjoyed it: here he would gladly have rested; but Providence had designed him for greater things.

[E] *On the 24th of May 1669, he was installed Canon of Christ-Church.* And when he was Sub-Dean in that church, he moderated in the Divinity-Disputations, with such gravity and wisdom, as made those exercises both reputable and instructive (7).

[F] *Being the same year, translated to the See of London.* Anth. Woods tells us (8), that, 'This 'translation was much promoted by some of the political Clergy, because they knew him to be a bold 'man, an enemy to the Papists, and one that would 'act, and speak what they would put him upon, 'which they themselves would not be seen in, as many 'prime Papists used to say.' We are also informed (9), that this translation was effected through the Earl of Danby's interest; to whom the Bishop was a property, and was turned by him as he pleased. The Duke of York hated him; but Lord Danby persuaded both the King and him, that, as his heat did no great hurt to any person, so the giving way to it helped

the room of Dr. Henehman, deceased, was confirmed therein the 18th of December (o). On the 22d of January, 1675-6, King Charles, who entertained a just opinion of his capacity and fidelity, caused him to be sworn one of his Privy-Council; which station his Majesty thought fit to continue him in, upon his constituting a new Privy-Council in April 1679 (p). The educating and well-grounding of the King's two nieces, the Princesses Mary and Anne (q), in the doctrine and communion of the Church of England, were committed to his care; and that important trust he discharged, to the nation's universal satisfaction [G]. On the 4th of November, 1677, he had the honour of performing the ceremony of the marriage of the eldest, Mary, with William Prince of Orange; and on the 28th of July, 1683, that of Anne, the youngest, with George Prince of Denmark (r). The firmness of these two Princesses in the Protestant religion, was owing, in a great measure, to their learned tutor Bishop Compton; which afterwards, when Popery came to prevail at the Court of England, was imputed to him as an unpardonable crime. During the mutual heats and animosities in the latter part of King Charles the Second's reign, some of the most learned and exemplary Clergy endeavoured, both in private and public, to bring the Dissenters to a sense of the necessity of union among Protestants. To promote that good design, our worthy Bishop held, in 1679, three conferences with his Clergy upon the two Sacraments, and upon catechising youth in the true principles of religion. In 1680, he pursued the same design in three other conferences; namely, on the half communion; prayers in an unknown tongue; and prayers to Saints: the substance of which he published in a letter to the Clergy of his diocese, dated July 6, 1680. He farther hoped, that it might tend to pacify and reconcile the Dissenters, by bringing in the judgment of foreign Divines against their needless separation. For that purpose, he wrote to Monsieur Le Moyne, Professor in Divinity at Leyden, to Mr. de l'Angle, one of the Preachers at the Protestant Church at Charenton, near Paris; and to Mr. Claude, another eminent French Divine; who, in their several answers [H], agreed in vindicating the Church of England from any errors in its doctrine, or any unlawful impositions in its service and discipline; and, therefore, did condemn a separation from it, as needless and uncharitable (s). But Popery was what the Bishop most strenuously opposed: for, when it was gaining ground in these kingdoms, under the favour and influence of the heir-apparent to the Crown, James Duke of York, our worthy Prelate, at the head of his Clergy, made a noble stand; and, by his encouragement, their pulpits and their pens more strenuously defended the reformed religion, than it had ever been, to the shame and silence of their Romish adversaries [I]. The great disservice thereby done to these, and their cause, was remembered, and repented, when King James II. ascended the throne.

helped to lay the jealousies of the Church-Party. About a year after that, Sheldon dying, Bishop Compton was persuaded that Lord Danby had tried with all his strength to promote him to Canterbury; though that was never once intended. He was a great patron of the converts from Popery, and of those Protestants whom the bad usage they were beginning to meet with in France drove over to us: And by these means he came to have a great reputation. He used to make many complaints to the King, and often in Council, of the insolence of the Papists, and of Coleman's in particular. So that the King ordered the Duke to dismiss Coleman out of his service: yet he continued still in his confidence.

[G] *And that important trust he discharged to the nation's universal satisfaction.* How well he executed it, as Dr. Gooch observes (10), let those confess, who value the memory of the late most renowned Queen (Mary), or have not laid aside all duty to our present most gracious Sovereign (11). They never forgot their obligations to him; but he was always in the esteem of the former, and received marks of favour from the latter. He had the particular honour which no one Bishop ever had, of marrying two Regent Queens to Protestant Princes. They were both confirmed by him January 23, 1675-6 (12).

[H] *Who in their several Answers.* Their Answers are published at the end of Bishop Stillingfleet's *Unreasonableness of Separation*, 1681, 4to. That of Mr. Le Moyne, bears date, September 3, 1680. That of Mr. De L'Angle is dated from Paris, October 31; and that of Mr. Claude from the same place, Nov. 29, 1680.

[I] *By his encouragement, their pulpits and their pens more strenuously defended the Reformed Religion, than it had ever been.* This we learn from a Gentleman, who had been his Lordship's Chaplain (13). 'From whatever quarter, says he, or at what time soever any assault was made upon our Doctrine or Discipline, his vigilance and Christian courage were

upon the guard to defend them; of which I shall give only some few instances within the narrow compass of my own knowledge. 1. From hence proceeded that volume of useful *Treats against the Dissenters*, to convince them by Reason, Scripture, and Antiquity, of the unreasonableness of their separation, and ill-grounded scruples: never yet replied to, or to be answered. 2. From hence likewise (before, and even under his suspension) came forth the distinct *Reply to all the pretences of the Church of Rome*, in their day of exaltation and trial; most of them written by the best-learned Divines of this City. Join both these together, and you will find enough said to confirm you in the faith and worship of this Church, against the adversaries on either hand; not to separate from our holy Apostolical Communion, out of needless scruple, and the so often-baffled pretences of seeking after greater purity, and better edification; nor yet to be perverted to Idolatry, in order to find out the true Church. 3. The danger of *Socinianism*, and other Heresies, did not escape his care or remedy, as far as his power and persuasion could reach: to this end, many learned and rational treatises have been published by his Clergy on this subject. And when the dispute about the holy undivided Trinity was managed by some, in new and unusual terms, a Royal Letter was procured to forbid the bringing in such terms into that controversy, as were unknown to Antiquity or to Scripture.—By these-like means, our pious Bishop, as the good shepherd of souls, used his strenuous endeavour to hold up the weak, heal the sick, bind up the broken, seek the lost, and bring back the out-casts, not by severity even against the irreclaimable, or prosecutions against the deceived, but first and chiefly by argument and conviction: yet not so merciful, as to be remiss against impious Heretics, and notorious immorality.'

Lond. 1713, 8vo.
p. 14, &c.

To our Bishop's immortal honour, this was his unpardonable crime; and, accordingly, he was marked out, as the first sacrifice to Popish fury (t). The first instance of it was, his being dismissed from the Council-table soon after King James's accession; and, on the 16th of December, 1685, he was put out from being Dean of the Royal Chapel (u). Farther occasions were sought, and soon found, of molesting, or entirely ruining him, if possible: for Dr. John Sharp, Rector of St. Giles's in the Fields, London, having, in some of his sermons, vindicated the doctrine of the Church of England in opposition to Popery [K], the King sent a letter, dated June 14, 1686, to Bishop Compton, wherein his Majesty 'required and commanded him, immediately upon receipt thereof, forthwith 'to suspend Dr. Sharp from farther preaching in any parish church or chapel in his diocese, until he had given the King satisfaction.' Upon the receipt of it, the Bishop sent an answer, June the 18th, to the Earl of Sunderland, Principal Secretary of State, wherein he said, That 'he should always count it his duty to obey the King in whatever commands 'he laid upon him, that he could perform with a safe conscience; but in this, he conceived, he was obliged to proceed according to law; and therefore it was impossible for 'him to comply, because, though his Majesty commanded him only to execute his pleasure, yet in the capacity he was to do it, he must act as a Judge, and no Judge condemns any man before he has knowledge of the cause, and has cited the party.' But the Court being resolved to be revenged on the Bishop, for his exemplary zeal for the Protestant interest; and intending thereby to terrify all persons (the Clergy in particular) from opposing their arbitrary designs, they caused his Lordship to be cited, on the 3d of August, to appear the 9th of the same month before the new Ecclesiastical Commission. At his appearance, he was charged with 'not having observed his Majesty's commands 'in the case of Dr. Sharp, whom he was ordered to suspend.' The Bishop seemed to be surprized at this; and humbly begged a copy of the commission, and a copy of his charge: but was answered by Chancellor Jefferys, 'That he should neither have a copy of, nor see, the commission; neither would they give him a copy of the charge.' Thereupon his Lordship desired time to advise with counsel; and there was given him till the 16th, and afterwards till the 31st of August above-mentioned. In the mean time, he sent his Proctor for a copy of what orders and minutes they had set down concerning his business; but it was refused, though never denied in any Court. On the 31st of August, when his Lordship appeared for the second time, he declared, That the whole world could bear him witness, he had been that whole summer endeavouring with all the power and skill he had, to enforce the King's letter to the strict observation of his Clergy. Then he offered his plea to their jurisdiction [L]: which being over-ruled, he protested to his right, in that or any other plea, that might be for his advantage. And observed, that, as a Bishop, he had a right by the most authentic and universal Ecclesiastical Laws, to be tried first before his Metropolitan, precedent to any other Court whatsoever. But the Ecclesiastical Commissioners would not, upon any account, suffer their jurisdiction to be called in question; and therefore did not pay the least regard to whatever his Lordship could alledge, even though he farther insisted, that in the capacity he was, they were warranted by their commission to try him only for offences *after the date* of the commission. But this plea likewise was over-ruled by the Chancellor, who affirmed, 'There were general words which 'gave authority sufficient to look back.' Whereupon the Bishop gave in his answer in writing [M]; and, after it was read, he observed, that the word *suspend* was liable to two constructions.

(t) Dr. Gooch, as above. He also argued against giving up the Test, which incensed the Court against him. Burnet's Hist. of his own Time, p. 665.

(u) Wood, Ath. ubi supra.

[K] Dr. John Sharp—*having, in some of his sermons vindicated the Doctrine of the Church of England in opposition to Popery.*] He received one day, as he was coming out of the pulpit, a paper sent him, as he believed, by a Priest, containing a sort of challenge upon some points of controversy, touched by him in some of his Sermons. Upon this, he, not knowing to whom he should send an answer, preached a Sermon in answer to it: and, after he had confuted it, he concluded, shewing how unreasonable it was for Protestants to change their religion on such grounds. This was carried to Court, and represented there, as a reflection on the King for changing on those grounds (14). But in order to understand how this could be imputed as a crime to Dr. Sharp, it is to be observed, that King James had caused the *Directions concerning Preachers*, published in 1662, to be now reprinted, and reinforced them by a letter directed to the Archbishops of Canterbury and York, given at Whitehall, 5 March, 1685-6, *to prohibit the preaching upon controversial points* (15); which was, upon the matter, forbidding them to defend their religion in the pulpit; when it was at the same time attacked by the Popish Priests with all the vigour they were capable of, both in their Sermons and books. This order was taken from a precedent in Queen Mary the 1st's time; who soon after her accession to the throne,

issued out a proclamation, forbidding the preaching upon controverted points of religion; for fear, it was said, of raising animosities among the people (16).

[L] *Then he offered his plea to their jurisdiction.*] This plea was chiefly a recital of the statute made in the 16th of King Charles I. entitled. 'A Repeal of 'the branch of a statute *primo Elizabethæ*, concerning 'Commissioners for causes Ecclesiastical: in which statute of Charles I. it was, among other things, enacted,—'That no new Court should be erected, 'ordained, or appointed, within this realm of England, or dominion of Wales, which should, or might 'have the like power, jurisdiction, or authority as 'the said High-Commission Court then had, or pretended to have; but that all and every such Letters- 'Patents, Commissions and Grants, made or to be 'made by his Majesty, his heirs or successors, and all 'powers and authorities granted thereby; and all 'Acts, Sentences, and Decrees, to be made by virtue 'or colour thereof, should be utterly void and of 'none effect (17).'

[M] *Whereupon the Bishop gave in his answer in writing.*] The Commissioners question to him was, Why 'did you not obey the King's command, in his 'letter concerning the suspending Doctor Sharp?' In answer to which, his Lordship, after reciting the King's letter of June 14, above-mentioned, says, 'I 'took

constructions. In the first, which is the legal and strict sense of the word, he understood the King's letter; and was advised by his counsel, that it was a judicial act, and by consequence could not be complied with, unless he had first cited the party, and heard the cause. In the other sense of the word *suspend*, that is, at large for *silencing*, he apprehended, he had in effect obeyed the King's letter. For he sent for Dr. Sharp, shewed him that letter, advised him not to preach till he had endeavoured to know his Majesty's farther pleasure; and he had not preached to that day, so that his Majesty's command was fulfilled. But, notwithstanding all that his Lordship or his counsel could alledge, he was suspended, on the 6th of September following [N], for his disobedience, from the function and execution of his episcopal office, and from all episcopal and other ecclesiastical jurisdiction, during his Majesty's pleasure (w). Immediately after, the Bishops of Durham, Rochester, and Peterborough, were appointed commissioners to exercise all manner of ecclesiastical jurisdiction within the diocese of London, during the suspension of the Bishop (x). He acquiesced in this hard sentence [O]; but being suspended only as a Bishop, and remaining still whole in his other capacities, he made a noble stand as one of the Governors of the Charter-House [P]. However, as according to the form of the Ecclesiastical Courts, a person under suspension must make a submission within six months, otherwise he may be proceeded against as obstinate: so, six months after sentence, the Bishop sent a petition to the King, desiring to be restored to the exercise of his episcopal function; but he made no acknowledgment of any fault. So this had no other effect, but that it stopt all farther proceedings; only the suspension lay still on him (y). Whilst he was thus sequestered from his episcopal function, he applied himself to the improvement of his garden at Fulham; and, having a great genius for Botany, enriched it with a new variety of domestic and exotic plants (z). His suspension was so flagrant a piece of injustice, that the Prince of Orange, in his Declaration, could not omit taking notice of it [Q]; and, upon the dread of his Highness's coming over, the Court was willing to make the Bishop reparation, by restoring him, on the 23d of September, 1688 (a), to his episcopal function. But he made no haste to resume his charge, and to thank the King for his restoration; which made some people believe, he had no mind to be restored after such a manner, or that he knew well enough what passed in Holland (b). And, indeed, he was one of the noble persons who often met at the Earl of Shrewsbury's, and concerted measures for the Prince of Orange's coming over, whose interest he heartily endeavoured to promote (c). On the 3d of October, 1688, he waited upon King James, with the Archbishop of Canterbury, and seven other Bishops, when they suggested to his Majesty such advices as they thought proper at that season, and conducing to his service (d). Upon the Prince of Orange's landing, the first share our Bishop had in the ensuing Revolution, was, together with the Earl of Dorset, the conveying safe from London to Nottingham the Princess Anne of Denmark [R], lest she, in the present confusion of affairs,

‘took the best advice I could get, concerning Doctor Sharp, and was informed, that the letter being directed to me, as Bishop of London, to suspend a person under my jurisdiction, I was therein to act as a Judge, it being a judicial act; and that no person could by Law be punished by suspension, before he was called, or without being admitted to make his defence.’ And then goes on to say, That he represented so much to the Earl of Sunderland, in the letter mentioned above. Nevertheless, that he might obey his Majesty's commands as far as by Law he could, he had shewed the King's letter to Doctor Sharp, who had not preached since that time within the Diocese of London (18).

(18) Ibid. p. 21; and 482.

[N] He was suspended, on the 6th of September following.] The Court did not think fit to meddle with his revenues. For the Lawyers had settled that point, that Benefices were of the nature of Freeholds. So, if the sentence had gone to the Temporalities, the Bishop would have had the matter tried over again in the King's Bench, where he was likely to find good justice, Herbert not being satisfied with the legality and justice of the sentence. While this matter was in dependance, the Princess of Orange thought it became her to interpose a little in the Bishop's favour. So she wrote to the King, earnestly begging him to be gentle to the Bishop, who she could not think would offend willingly. She also wrote to the Bishop, expressing the great share she took in the trouble he was fallen into. The Prince wrote to him to the same purpose. The King wrote an answer to the Princess, reflecting severely on the Bishop, not without some sharpness on her for meddling in such matters (19).

(19) Burnet, ubi supra, p. 677.

[O] He acquiesced in this hard sentence.] The Court seemed uneasy, when they saw they had gained so

poor a victory: for now the Bishop was more considered than ever. His Clergy, for all the suspension, were really more governed by the secret intimations of his pleasure, than they had been by his authority before. So they resolved to come off as well as they could (20).

(20) Burnet, as above, p. 677.

[P] He made a noble stand as one of the Governors of the Charter-House.] For, King James having, on the 17th of December 1686, sent a letter to the Governors of the Charter-House, requiring them to admit one Andrew Popham into the first Pensioner's place in that Hospital, which should become void, and be in his Majesty's disposal; without tendering any oaths to him, or requiring of him any subscriptions, or other acts in conformity to the Doctrine and Discipline of the Church of England: the Bishop of London, jointly with the Archbishop of Canterbury, the Duke of Ormond, the Marquis of Halifax, the Earls of Craven, Danby, and Nottingham, all Governors of that Hospital, and Dr. Thomas Burnet, Master of the same, agreed, not to comply with the King's illegal and unreasonable command (21).

[Q] That the Prince of Orange, in his Declaration, could not omit taking notice of it.] In the following words: ‘The said Commissioners have suspended the Bishop of London, only because he refused to obey an order that was sent him to suspend a worthy Divine, without so much as citing him before him to make his own defence, or observing the common forms of process.’

(21) See Hist. of the Ecclesiastical Commission, edit. 1711, 8^{vo}, p. 22, &c.

[R] The conveying safe from London to Nottingham, the Princess Anne of Denmark.] We have a particular account of this transaction in the following words. ‘When the news came to London, of Prince George of Denmark's having joined the Prince of Orange,

fairs, might have been sent away into France, or put under restraint, because the Prince, her consort, had left King James, and was gone over to the Prince of Orange. Bishop Compton, at his return to London, set his hand to the Association begun at Exeter (a). Nor was he only one of the most instrumental in the Revolution, but also the most zealous in promoting the settlement of it: for, upon the 21st of December, he waited on the Prince of Orange, at the head of his Clergy, and even attended with some of the Dissenting Ministers; and in his own and their name, thanked his Highness 'for his very great and most hazardous undertaking for their deliverance, and the preservation of the Protestant Religion, with the ancient laws and liberties of this nation (f).' On the 30th of December, he administered the holy Communion to his Highness, in the Royal Chapel at St. James's, according to the rites of the Church of England (g). The 29th of January, 1688-9, when the House of Lords, in a grand Committee, debated the important question, Whether, the throne being vacant, ought to be filled up by a Regent, or a King? Dr. Compton was one of the two Bishops (Sir Jonathan Trelawny, Bishop of Bristol, being the other) who made the majority for filling up the throne by a King: for there were, upon that occasion, only fifty-one votes to forty-nine (b). On the 14th of February he was appointed one of the Privy-Council (i), and made Dean of the Royal Chapel (k); and afterwards pitched upon by King William to perform the ceremony of his and Queen Mary's coronation, April 11, 1689 (l). The same year, he was constituted one of the Commissioners for reviewing the Liturgy, in the execution of which commission he laboured with great zeal and earnestness to reconcile the Dissenters to the Church; and also in the Convocation that met November 21, 1689, of which he was President. But the intended Comprehension met with insuperable difficulties [S], the majority of the Lower House being resolved not to enter into any terms of accommodation with the Dissenters (m). King William having, soon after, named Commissioners of Trade and Plantations, his Lordship was made one of them; and the Bishop of London, for the time being, is always to be one, by reason of his superintendency of all the Churches in the Plantations [T]. In the beginning of the year 1690-1, at his own charge, he attended King

'Orange, the Princess Anne was so struck with the apprehensions of the King's displeasure, and of the ill effects it might have, that she said to the Lady Churchill, that she could not bear the thoughts of it; and would leap out at window rather than venture on it. The Bishop of London was then lodged very secretly in Suffolk-street. So the Lady Churchill, who knew where he was, went to him, and concerted with him the method of the Princess's withdrawing from the Court. The Princess went sooner to bed than ordinary. And about midnight, she went down a back stairs from her closet, attended only by the Lady Churchill, in such haste, that they carried nothing with them. They were waited for by the Bishop of London, who carried them to the Earl of Dorset's, whose Lady furnished them with every thing. And so they went northward, as far as Northampton; where that Earl attended on them with all respect, and quickly brought a body of Horse to serve for a guard to the Princess. And in a little while a small army was formed about her, who chose to be commanded by the Bishop of London; of which he too easily accepted (22). So that, as Dr. Gooch observes (23), the Bishop thought it then a proper time to resume his care and charge, and to guard the Princess against any attempts on her Religion or her Liberty. This is that so much talked of part he acted at the Revolution. He rescued the Princess Anne; he hid her (as it were) till Popish Tyranny was overpast. During that nice and difficult juncture, he was called peculiarly the Protestant Bishop; and, indeed, he was the ornament and security of the Protestant cause.

[S] But the intended Comprehension met with insuperable difficulties.] For, though many arguments were used to bring the more stiff of the inferior Clergy to a charitable condescension, and the much desired union; yet there prevailed amongst them a jealousy and a distrust not to be conquered. This appeared in the choice of a Prolocutor for the Lower-House. Dr. Tillotson was the person proposed, and desired by our Bishop, and most of his Brethren; and yet Dr. Jane had the majority of votes. And when he was presented to the Bishop of London, as President, for his approbation, he made a customary speech in Latin, wherein he extolled the excellency of the Church of England as established by Law, above all communities; implied that it wanted no amendments; and

then ended with the application of this sentence, by way of triumph, *Nolumus leges Angliæ mutari*. But the Bishop of London, to whom Dr. Jane had been chaplain, made a speech in the same language, wherein he told the Clergy; 'That they ought to endeavour a temper in those things, that are not essential in religion, thereby to open the door of Salvation to a multitude of straying Christians: that it must needs be their duty, to shew the same indulgence and charity to the Dissenters under King William, which some of the Bishops and Clergy had promised to them in their addresses to King James;' and concluded with a pathetical exhortation to unanimity and concord (24). But though he made such great advances towards a Comprehension, yet when he observed the perverse and obstinate disposition of the Dissenters; when he found, that not a sense of true and undissembled religion, but interest and humour were at the bottom; and that there was no Comprehension to be proposed, or satisfaction given, but by the expensive sacrifice of truth and order, then he thought it necessary to stop. He wished as well as any body to the Protestant interest, and would gladly have seen it more united: but he was not well-bred enough to betray the rights of the Church in favour of a schism. He had seen so much the effects of popular forwardness and contention, men's awkward dislike to what is settled, and desire to change, that he dreaded the thoughts of innovations (25). His not complying so far as the Dissenters liked, is undoubtedly what made an author who is very favourable to them (26) say, 'that Bishop Compton was a weak man, wilful, and strangely wedded to a party:' that is, he was not of the same party in that respect as Bishop Burnet.

[T] By reason of his superintendency of all the churches in the Plantations.] Bishop Compton often declared his resolution of going over himself, to settle the Christian Church in those American Plantations; but by his persecution in King James's reign, and the mischiefs of a long war ever since, he could never bring it to effect. Greater then was his care in sending over good pastors; more constant his attention to their lives, manners, and doctrine; by every conveyance, letters sent of instruction, commendation, or reproof; a perpetual correspondence, in answer to volumes of complaints, wants, and requests. And all this carried on by himself, against the perverseness of the inhabitants, the wiles of the Church of Rome, and

King William to the famous Congress at the Hague, where the grand alliance against France was concluded. But, notwithstanding the great part he acted in the Revolution, and his subsequent services, no sooner was the storm over, but jealousies were infused, and calumnies dispersed, to supplant and undermine him; insomuch, that though the Metropolitan See of Canterbury was twice vacant in that reign, yet he still continued Bishop of London [U]. However, he went on consistently, and like himself, despising all other rewards but the quiet and the applause of his own conscience, and the high esteem and intimacy of Queen Mary, which he preserved to her dying day (n). At the accession of Queen Anne to the throne, he seemed to stand fairest for the royal favour; and though many things were said to disparage him at Court [W], yet nothing could discourage him from paying his duty and attendance there. About the beginning of May, 1702, he was sworn of her Majesty's Privy-Council. The same year, he was put in the commission for the Union of England and Scotland, but was left out in the new commission issued out in April 1706. Two years before, he very much promoted the 'Act for making effectual her Majesty's intention for the augmentation of the maintenance of the poor Clergy, by enabling her Majesty to grant the revenues of the First-Fruits and Tithes.' He maintained all along a brotherly correspondence with the foreign Protestant Churches, and endeavoured to promote in them a good opinion concerning the doctrine and discipline of the Church of England, and her moderate sentiments of them, as appears both by his application to Messieurs Le Moyne, Claude, and de l'Angle before-mentioned (o), and the letters that passed between his Lordship and the University of Geneva in 1706 [X]. Towards the end of Queen Anne's reign, his access became easier at Court, and he had greater power and interest there. But, whether the times were good or bad, he looked upon all that power and interest only as accidental circumstances that attended the office of a Bishop, and not as an essential part of it (p). In 1709-10, he was one of the Lords who opposed the prosecution then carried on against Dr. Sacheverel, and declared him Not Guilty; and likewise protested against several steps taken in that affair (q). His Lordship having, for some time, been afflicted with the Gout and Stone [Y], it turned at last to a complication of distempers, which put an end to his most valuable life, at Ful-

(n) Gooch, and Boyer, as above.

the subtleties of their societies *de Propaganda Fide*, till the Society for propagating Christian Knowledge was erected. It was no small trouble or expence, to find out fit Pastors for that refractory and unbelieving part of mankind: men of integrity; for they could not be under his inspection as to their manners and doctrine, in those remote territories; and men of prudence and constancy, to reclaim the inhabitants from their old imbibed leaven of Independency, Antinomianism, and Quakerism; and to reduce the natives from being worshippers of evil dæmons (25).

(25) Whitfeld, as above, p. 17. See also Dr. Gooch, ubi supra.

[U] Though the metropolitan See of Canterbury was twice vacant in that reign, yet he still continued Bishop of London.] The first time indeed, it is no great wonder he should miss of it, since he had for competitor Dr. Tillotson, the glory of the English nation. But why he should not be promoted to it at the second vacancy is entirely unaccountable, all circumstances considered. And no truer reason of it can be assigned than this, that it was thought, Dr. Tenison would be more subservient to all the Court Designs, than Bishop Compton could be expected to be.

(26) Ubi supra.

[W] And though many things were said to disparage him at Court.] For then, as Dr. Gooch observes (26), was the time for the most artful management. Honesty and integrity will always stand in some men's way. The Bishop of London could neither be corrupted nor removed. But whatever attempts were made against him, they moved him not; neither counted he his life dear, while he was doing God and his Church good service.

[X] The letters that passed between his Lordship, and the university of Geneva in 1706.] What the substance of them was, we learn from the following passage in a letter from that University, to the University of Oxford, dated Feb. 5, 1706-7. *Summo gaudio nos perfudit quod de vestra in nos charitate scribere dignatus est illustrissimus Præsul Henricus Londinensis Episcopus. Cum enim accepissemus, nos male audire, & Genævæ famam apud vos deteri; nomine vestro nos docuit, præjudicatas esse & veteres opiniones nondum penitus depositas; & quæ in medium à quibusdam allata erant nos non spectare, verum nonnullos qui ecclesiæ Anglicanæ disciplinam & liturgiam detrectantes, nomen nostrum præ se ferebant: illud vero à sententia nostra omnino diffitum esse noverat vir illustrissimus, &c. i. e. 'The assurances we have received from the most illustrious*

Bishop of London of your affection towards us, hath filled us with the utmost joy. For hearing that we were ill spoken of, and that Geneva was odious amongst you, he hath assured us in your name, that those were old prejudices, and wrong notions not yet laid aside; and that what had been said by some, did not concern us, but certain persons, who dissenting from, and railing at, the discipline and liturgy of the Church of England, made use of our name: but he knew us to be quite of another mind.'—The compliment paid to his Lordship by the University of Oxford, in their answer to this letter, is both very just and handsome. — *Quo nemo aut Ecclesiæ Anglicanæ paterno magis affectu fovet ac tuetur, aut exterius omnes, utcumque locorum intervallis diffitas, arctissimo tamen purioris Fidei vinculo conjunctas charitate magis fraterna prosequitur. i. e. 'Than whom, none hath a more paternal affection for the Church of England, nor a greater brotherly love for the foreign Churches, united by one close bond of the true Faith, though never so far distant from each other (27).'*

(27) These Letters were printed at Oxford, 1707, fol.

[Y] His Lordship having for some time, been afflicted with the Gout and Stone.] 'The Gout and Stone will make the stoutest heart to shrink; yet (says Dr. Gooch) in the midst of these tormenting pains, we never heard the voice of murmur; those shocks that would make a beholder tremble, did not make him repine. He never complained against God, nor grew touchy and peevish to his domestics; (almost every body's case in pain and sickness.) He was firm and constant, quiet and good-natured to the end. When his last illness came upon him, he foresaw and foretold what would be the event on it, with the same composedness as if he had been sure of his recovery. He knew his summons could never be sudden, because he was never unprepared to receive it. He had long ago settled his worldly affairs: indeed he had little worldly affairs to settle; for he had remitted his treasure to the other world, and secured an eternal reversion there. He talked of dying with the same unconcernedness, (or with the same pleasure) as if he was only taking a journey; and wished for nothing but an easy passage:—which he obtained; being taken out of this world in the same easy and quiet manner as he had endeavoured to live, and wished to die (28).'

(28) Gooch, ubi supra.

(r) Boyer's Annual List, as above.

ham, on the 7th of July, 1713, in the eighty-first year of his age. His body was interred the 15th of the same month, in the church-yard of Fulham [Z], according to his particular direction (r). What few things he published, are mentioned in the note [AA]. As to his *personal* qualifications, he was, in all respects, one of the best-bred men in his time; courteous and affable; not full of words, but very conversable; and, as in his ministerial offices, so in conversation too, willing and apt to teach. He was always easy of access, and ready to do good offices. In his friendships he was constant, or rather inflexible. He was a man of the largest and most public spirit, and liked nothing that looked narrow or stingy. He had no little, artful, selfish designs. He was never seen to be afraid or concerned at danger. In the midst of storms he himself was calm. With regard to his *moral* character, he was a person of singular modesty and humility; of great temperance and abstinence; of exemplary piety [BB], and every virtue. Never did such tender and such manly passions meet before in the same breast! Never such firmness and fortitude, mixed with so much meekness and condescension! But he was most particularly eminent for his unbounded charity and beneficence, being generous and charitable beyond example. He disposed of money to every one who could make out (and it was very easy to make that out to him) that he was a proper object of charity. He answered literally the Apostle's character, poor enough himself, yet making many rich (s). He had divers ancient people, men and women, whom he supported by constant annual pensions; and several children at school, at his own cost and charge, besides those educated from children, and brought up to the Universities, to the sea, or to trades, &c. (t). The poor of his parish were always attending his gate for their dole, and for the remains of his constant hospitable table, which was always furnished, and free to those whom respect or business drew to him. His hall was frequented in the morning with petitioners of all sorts (u). More particularly, he spared no cost nor pains to serve the Church and Clergy. He bought many Advowsons out of Lay-hands [CC]. He gave great sums for the rebuilding of Churches (w), and greater still for the buying in Improvements, and settling them on the poor Vicars [DD]. There was no poor honest Clergyman, or his widow, in want, but had his benevolence when applied for. Not any in the Reformed Churches abroad, to whom he was not a liberal patron, steward, and perpetual solicitor for. The French Refugees drank deep of his bounty for many years; so did the Irish in their day of affliction; and likewise the Scotch Episcopal party [EE] in their grievous persecution (x). He was indeed upon some occasions imposed upon, and bestowed his charity sometimes upon forward and impudent persons, who did not want or deserve it; but that is frequently the case of generous well-meaning persons, and must be owned to be a weakness

(u) Whitfield, *ubi supra*, p. 19.

(w) As, St. Mary's, Colchester, Pleshey, and others in his diocese.

(x) Whitfield, *ubi supra*.

[Z] *His body was interred—in the church-yard of Fulham.* According to his particular direction: for he used to say, 'that the church is for the living, and the church-yard for the dead.' So that his humility of life, and greatness of mind, above worldly pomp, followed him to his grave (29). Over it there is erected a handsome tomb, (surrounded with iron rails,) having only this short inscription. H. LONDON. EI MH EN TΩ ΣΤΑΥΡΩ. M.DCC.XIII. The Greek words (Engl. *Save in the cross*) are part of Galatians vi. 14. God forbid that I should glory, *save in the cross* of our Lord Jesus Christ.

[AA] *What few things he published, are mentioned in the note.* They are as follows. I. A Translation from Italian, of 'The Life of Donna Olympia Malda-chini, who governed the Church during the time of Innocent X. which was from the year 1644 to 1655.' Lond. 1667, written originally by Abbot Gualdi, and printed privately at Paris. II. A Translation from French into English, of, 'The Jesuits intrigues; with the private instructions of that Society to their Emissaries.' Lond. 1669. Nine sheets in 4to. This was found in manuscript in a Jesuit's closet after his death: and both were sent in a letter from a gentleman at Paris, to his friend in London. III. 'A Treatise of the Holy Communion.' Lond. 1677, 8vo. His name is not set to it. IV. 'A Letter to the Clergy of the Diocese of London, concerning Baptism, the Lord's Supper, Catechising. Dated April 25, 1679,' and printed on one side of a sheet. V. Second Letter, concerning 1. The half Communion. 2. Prayers in an unknown tongue. 3. Prayers to Saints. Dated from Fulham, July 6, 1680, and printed also on one side of a sheet of paper. VI. A third Letter, on Confirmation, and Visitation of the Sick. From Fulham 1682. VII. A fourth Letter; upon Canon 54. Dated from Fulham, April 6, 1683. VIII. A fifth Letter, upon Canon 118. From Fulham, March 19, 1684. IX. A sixth Letter, upon

Canon 13. Fulham, April 18, 1685. They were all reprinted together in 1686, 12mo. under this title, *Episcopalia*: or, Letters of the Right Reverend Father in God, Henry Lord Bishop of London, to the Clergy of his Diocese (30). We are informed, that they were part of them printed without his knowledge; but not without a design of bringing more trouble upon his head from King James II. for his opposing Popery, as he doth in some of them (31). X. There is also, 'A Letter of his to a Clergyman in his Diocese, concerning Non-Resistance:' written soon after the Revolution, and inserted in the Memoirs of the Life of Mr. John Kettlewell (32).

[BB] *Of exemplary piety.* No one was so strict and regular in his private devotions; no one so constant and frequent in the service of the Church. For, beside the public offices morning and evening, his whole family began the day with the Litany, and ended it with select prayers from the Liturgy: and at all these times he himself, when he was able, was a constant attendant (33).

[CC] *He bought many Advowsons out of Lay-hands.* As the Rectories of St. James, and All-Saints; and the Vicarage of St. Peter's, all in Colchester: the Rectories of Abberton Tendring in Essex, &c.

[DD] *For the buying in Improvements, and settling them upon the poor Vicars.* Particularly the Impropration of Marks-Tay in Essex, for which he is said to have given no less than seven hundred pounds; whereby he raised a very mean Curacy to a competent subsistence.

[EE] *And likewise the Scotch Episcopal party.* He provided in particular, for numbers of the Scotch Episcopal Clergy, who fled into England at the Revolution. To Mr. Robert Falconer, for instance, he gave the Living of Dunmow; to Mr. Thomas Dunbar, that of Keldon, both in Essex; and the like in many other instances.

rather.

(y) Burnet, *ubi supra*, p. 392.

rather than a fault [FF]. If we consider him *as a Bishop*, he was not only blameless, but a pattern of good behaviour in every respect. He applied himself more to his function than Bishops had commonly done. He went much about his diocese, and preached [GG] and confirmed in many places (y). In order not to burden his Clergy with frequent visitations, he was wont to hire houses, and spend every summer in some new part of his diocese, where he rode out, and visited in person the several churches, and parsonage, and vicarage-houses. His method also was, in stated meetings with his Clergy, to propose some topic in divinity, on which they discoursed together in a serious, familiar, and judicious manner; which afterwards was summed up, and formed into a regular treatise. Many of these discourses are published, under the title of *The Bishop of London's Conferences*. At those times, and indeed upon all other occasions, he was extremely civil, affable, and courteous, full of candour and patience [HH]. In a word, by his death the Church

(34) Sermon, as above, p. 23.

[FF] *And must be owned to be a weakness rather than a fault.* We shall conclude this article of his charities, with these words of Dr. Whitfeld (34): 'To his Honour be it spoken! he died poor; having made the needy and miserable his heirs all his life long. His contempt of gathering or leaving riches out of the patrimony of the Church, was worthy of his great mind and station. And he died with that honour, with which he had always lived.'—We must not forget to observe, that he left the third part of his large and well-chosen library to the Corporation of Colchester. But, that noble gift was slighted, so that his Lordship's heir was forced to dispose of it otherwise. The two other parts of his library he left to St. Paul's Cathedral, and to Sion-college.

(35) Burnet, as above, p. 392.

[GG] *And preached.* One author tells us (35), that 'his preaching was without much life or learning: for he had not gone through his studies with the exactness that was fitting.' But another who knew him better, gives the following account. 'He spake with the affection and authority of a spiritual father; always above the affectation of popular eloquence, but in the power of the Spirit, and primitive simplicity, with the majesty of plainness, in the utmost sedateness and good judgment. His weighty reason needed not to be set off with trappings. The love with which his people met his doctrine, made it superfluous to speak to their passions so easily raised and so soon sinking: he spake to convince their understanding. His deliberate way of utterance, gave them leisure to receive and fix his notions, and brought forth nothing but with maturity of thought, and exactness of judgment.—His knowledge and learning had been well cultivated in his private stations in the Church, and particularly assisted by his friendship with Dr. Rich. Allestry, Regius Professor of Divinity at Oxford. His books had always attended him in his most youthful years; nor were they neglected to the last in his fulness of business. His library was an evidence of his knowledge in divine things especially, and also in human learning, and in the modern languages (36).'

(36) Whitfeld, as above, p. 11, 12.

[HH] *Full of candour and patience.* 'None of his Clergy ever felt his displeasure, but for faults which carried their own mark and evidence. Not any difference of opinion in State-matters, did ever estrange him from a deserving man: that which was good and virtuous in the son, he laid hold on, and cherished with a fatherly tenderness, and passed by his mistaken judgment in that which was amiss. But in those that were bad, no interest, no being attached to the same cause with himself, could ever make him overlook their faults. This was true moderation! candour and charity to good men of all opinions, and firmness to his own just principles (37).'

(37) *Ibid.* p. 20.

M. [Though Dr. Henry Compton was undoubtedly a most excellent prelate, who deserved to be spoken of in great terms of applause, it may, nevertheless, be questioned, whether his praises are always delivered in terms sufficiently restricted and qualified. With the best intentions, the mind of the Bishop does not appear to have been in all respects duly enlarged. As a testimony of this, we may mention his procuring a Royal Letter, to forbid the introduction of new and unusual terms into the controversy concerning the Trinity (38). When the good prelate was obliged so conscientiously and nobly to oppose James the second, he then found, by experience, how dangerously

(38) See note [I].

the King's authority might be exerted, when applied to matters of religion.

In Mr. Macpherson's collection of original papers, are two letters of Dr. Compton's, written in 1688. The first was to the Archbishop of Canterbury, desiring to know why the Bishops were summoned to attend his Majesty. It doth not appear to whom the second letter was addressed; but it deserves to be inserted, as it contains a disavowal, on the part of our prelate and his brethren, of their having invited over the Prince of Orange.

"My Lord, November, 1688.

"Having some necessary business in Essex which calls me away to-morrow for two or three days, I thought it my duty to give you this account.

"When I waited upon the King, by his command, on Wednesday morning, the first of November, he told me that he had sent for me, when he had nothing but the declaration of the States of Holland. But that the declaration of the Prince of Orange was now come to his hands, out of which he read to me that short paragraph, of the Lords Temporal and Spiritual, inviting his Highness over; upon which I told him, I was confident the rest of the Bishops would as readily answer in the negative as myself; and his Majesty was pleased then to say, he did believe us all innocent. Next he told me, he thought it requisite we should make some public declaration of our innocence in this matter, and likewise an abhorrence. I then desired to see the declaration. But he refused. I told him this matter ought to be considered. "Every one," says he, "is to answer for himself. But I will send for my Lord of Canterbury, who shall call you together."

"On Friday, the second of November, I waited upon the King with my Lord of Canterbury and others; when his Majesty told him of the Prince's declaration, and made the Lord Preston read it. Then he put the question round, which was answered in the negative. The King desired some such denial should be published, saying it would be for his service. But he would not allow time to send for the Bishops at a distance. So his Grace told him, he would send for those in and about town to consult about it. Upon which, the King repeated twice, that we should add our dislike; which would be very much for his service (39)."

(39) Macpherson's original Papers, vol. i. p. 277.

Notwithstanding James the Second's importunity, the Bishops could not be prevailed upon to vindicate themselves in a public manner; and the following reasons, which they alledged for their refusal, reflect great credit on their wisdom and discretion:

"First, We humbly beseech your Majesty to receive what we offer in a favourable sense, since we have done nothing that can justly deserve misconstruction.

"Secondly, We humbly conceive, that a general clause in a declaration not avowed nor published, is not a sufficient ground for a man or number of men to vindicate themselves, as if they were concerned in it. And further, if this declaration should be owned and published by the Prince of Orange, we beg leave to offer it, as our opinion to your Majesty, that it would be a new thing and no good precedent, to put it in the power of a foreign and general accusation to bring your Majesty's subjects in particular, to a vindication of themselves, as if they were regularly accused and legally tried, for a criminal correspondence.

"Thirdly,

Church lost a most excellent Bishop; the kingdom a brave and able Statesman; the Protestant religion, at home and abroad, its ornament and refuge; and the whole Christian world, an eminent example of virtue and piety (z). His Lordship was never married.

(z) Dr. Gooch.

"Thirdly, if your Majesty should think fit to make it punishable to read or communicate the declaration; then, by making such an address as is required, we should do an act grounded upon a thing which must not be produced; and consequently we shall not be at liberty to alledge the reason of our doing it, which must unavoidably expose us, not only to censure, but suspicion.

"Fourthly, As we have in all times adhered to our duty and allegiance, we are the less willing to do any thing now, which may distinguish us as men marked with a particular character of suspicion, since we think our loyalty less blemished by not being called in question, than it would be by the clearest vindication that can be made of it upon this occasion.

"Fifthly, We beg leave to observe to your Majesty, that by an address from a few of us, who are now in town, without the concurrence of the greater number who are absent, it would look to the world, as if the Bishops (who we hope are very well united) were of different opinions; or that we, who are now here, had more particular reasons of a vindication than the rest; which makes it reasonable for us to be unwilling to come within the danger of such an interpretation.

"Sixthly, We consider that the clause in the declaration joineth the Lords Spiritual and Temporal, so that, if it has any meaning, it must intend, that there is a concurrence of many of both orders to invite them to this attempt, which would make it more imperfect for us, even though all the Bishops were here to make a separate vindication, where the accusation is joined and comprehends the Temporal Lords in it. So that, if any notice is to be taken of it, it can be done no where so naturally or with so great effect as in Parliament; which, whenever your Majesty shall think fit to call, we resolve to do our duty, and to employ our utmost endeavours for the good of the Church and State, and for preventing the miseries which now seem to threaten these distracted kingdoms, and to acquit ourselves in all things which shall be there transacted, as becomes, &c (40)."

(40) *Ibid.*

The preceding Letter, so far as it relates to the Bishop of London, doth not at all coincide with the accounts which are usually given of his conduct, previously to the Revolution. He is generally represented by our historians as one of those noble persons who concerted measures for the Prince of Orange's coming over to England. Burnet, who was likely to be well acquainted with the matter, positively asserts the fact, and farther informs us, that it was the Earl of Danby who prevailed upon the Bishop to engage in the scheme (41). Sir John Dalrymple's papers confirm the same account. We there find a copy of the association, by which the Prince of Orange was invited to undertake an expedition into this kingdom, for the purpose of delivering it from the evils with which it was threatened. The association was signed by seven persons, one of whom is expressly said to have been the Bishop of London. Indeed, the cyphers only of the associators are annexed to the paper; but Mr. Sidney, who was one of them, and who wrote the original with his own hand, could not possibly be mistaken in his explanation of the names to whom the signatures belonged (42). There is a letter of our Prelate's, written to the Prince of Orange about a month after the date of the association (43), in which there is a passage that may be construed as referring to that transaction. The letter is as follows:

(41) History of his own Times, vol. ii. p. 495. Third edition.

(42) Dalrymple's Memoirs of Great-Britain and Ireland, vol. ii. Appendix. Part 1st, p. 228—231.

(43) It is dated June 30, 1688.

"SIR, July 28, 1688. The honour your Highness did me in laying the charge upon me, to communicate to my Lords the Bishops how much you were concerned in their behalf, had its just effect upon them: for they are highly sensible of the great advantage both they and the Church have, by the firmness of so powerful a friend; and as I dare undertake they shall never make an ill use of it, so as I am very sure they will entirely rely upon it on all just occasions. I dare likewise take upon me to assure you, that both they that suffered, and the rest who concurred with them, are so

VOL. IV.

well satisfied of the justness of their cause, that they will lay down their lives, before they will in the least depart from it.

I should say something of myself, but I had so lately an opportunity of making my mind known to you, that it can be to no purpose to say more now to you, than that I am under all the obligations in the world of approving myself, Sir,

Your Highness's most devoted and faithful,

H. LONDON (44)."

(44) Dalrymple's Memoirs, *ubi supra*, p. 238.

What can we say to evidence so apparently contradictory? Shall we call in question the authenticity of any of the papers from which it is derived; or shall we suppose that Bishop Compton, being in the presence of the King, and surrounded by his brethren, was oppressed by his timidity? If the latter supposition should be made, every wise and good man will allow for the peculiarity and difficulty of his situation. The letter we have given from Mr. Macpherson's publication, is taken from Tanner's collection, preserved at Oxford. In Sir John Dalrymple's Memoirs, there are four letters from our Prelate to the Prince of Orange (45), besides that which we have inserted; but as they contain only general testimonies of his attachment to the Prince, they do not require to be particularly noticed. The Duchess Dowager of Marlborough, in the account of her conduct, has related the circumstances of the Princess Anne of Denmark's quitting the Court, under the guidance of Bishop Compton, in a manner which entirely corresponds with Burnet's narration of the same event, in note [R] (46).

(45) Dalrymple, *ubi supra*, p. 199. 209, 210, 211. 334.

(46) Duchess of Marlborough's Account of her Conduct, p. 16—18.

Our predecessor, Mr. Morant, seems angry that, after the death of Tillotson, Dr. Tenison was raised to the Metropolitan See of Canterbury, in preference to Compton. But it should be considered that Tenison, who was a very learned man, and of a most respectable character, was in himself highly worthy of the promotion; besides which, his being a more determined whig rendered him at that period fitter for the station. It is certain that the Bishop of London, notwithstanding the zeal he had shewn for the Prince of Orange, was greatly attached to Tory and High-Church principles. "His opposition to the Court," says Dr. Birch, after the Revolution, in concurrence with the Tory party, began after he had been set aside in the disposal of the Archbishopric to Dr. Tillotson, and it was still heightened upon the promotion of Dr. Tenison to that See; and in the reign of Queen Anne, he always supported those measures which were most agreeable to her Majesty's own inclination and principles (47)."

(47) Birch's Life of Tillotson, p. 186.

Though Bishop Compton was not destitute of learning, his literature was not of the first rate; and the few works he published cannot rank him, in this respect, with the great Divines of the age in which he lived. The argument alledged, at the end of note [GG], in support of the extent of his knowledge, from the books contained in his library, is but of little force. A man's erudition is not always proportioned to the excellence of his library. We do not mean, however, by this remark, to controvert the Bishop's having had a considerable acquaintance both with divine and human learning; and we sincerely join, at the same time, with our Biographical Predecessor, in giving our suffrage to his eminent worth. Mr. Granger concludes his account of our Prelate with observing, that he was a true son and brave champion of the Church, and a most munificent benefactor to it; and that whatever imperfections there might be in his character, he was allowed to be much a Gentleman, and no less a Christian. The same agreeable Biographer has related an anecdote concerning him, which we have not met with in any other author. King James, discoursing with Dr. Compton on some tender point, was so little pleased with his answers, that he told him, "he talked more like a Colonel than a Bishop." To this he replied, "that his Majesty did him honour in taking notice of his having formerly drawn his sword in defence of the Constitution; and that he should do the same again, if he lived to see it necessary (48).]" K.

(48) Granger's Biographical Hist. of England, vol. iv. p. 284. Second edition.

R

CONANT

- CONANT (JOHN), a very learned, pious, and eminent English Divine, in the XVIIth century. He was descended from a very good family, that had flourished for many years in the county of Devon, but which was originally French (a). His father was Robert Conant, and his mother's name was Elizabeth, persons of great integrity, having a competent, though not a large fortune, so that he had no reason to be ashamed of his family, nor had a certain writer any need to have troubled himself with an apology about it (b); and one, who was much better informed, and more nearly concerned, hath, with great modesty, set this point in the true light in which it ought to be known to posterity (c) [A]. He was born October 18, 1608, at Yeatenton, a small village in Bickton parish, in the south-east part of the county before-mentioned (d); and giving very early and lively tokens of his inclination to learning, his uncle, the Rev. Mr. John Conant, Rector of Lymington, near Ilchester, in Somersetshire, charged himself in a particular manner with the care of his education; and having kept him for some time at the free-school at Ilchester, put him afterwards under the tuition of Mr. Thomas Branker, a very laborious and learned school-master in the neighbourhood; and, while he was at both places, gave him occasionally whatever helps he wanted in his studies, with great readiness and pleasure (e). His youth promised all that his riper years produced: his disposition was always mild, moderate, and modest, so that he contented himself rather with the satisfaction arising from the possession of knowledge, than affected to display it. In Lent Term, 1626, his uncle carried him to Oxford, and entered him of Exeter-College, of which he had been himself nine years a Fellow, placing him under a very strict, pious, and learned tutor, Mr. Lawrence Bodley, B. D. (f). He studied there with great vigour and application, and, in a short time, distinguished himself as one of the shrewdest disputants in this College, then one of the most flourishing in that University. He was also very remarkable for the purity and perspicuity of his Latin style; and of the Greek he was so perfect a master, as often to dispute publicly in that language in the schools; which extraordinary accomplishments recommended him highly to Dr. John Prideaux, then Rector of Exeter-College, and the King's Professor of Divinity (g) [B]. It is very certain, that he took his degrees regularly, though the times, for what reason it is not easy to say, are omitted by the Oxford Historian (h); and so pious and prudent was the whole course of his life, that, without any other interest than his merit, he was chosen Probationer June 30, 1632, and became actual Fellow of Exeter-College, July 3, 1633 (i). He was also a very eminent tutor, and, in that capacity, had for his pupils several young gentlemen of the best families in his county, whom he educated with equal care, in sound learning, and true piety (k). Upon the breaking out of the civil war, most of the students under his care leaving the University, he judged it most convenient for him to retire also; which he accordingly did in 1642, but certainly without any design of forsaking his College, as appeared by his leaving in his chamber a large and well-chosen collection of books, of which, in his absence, he was plundered (l). Some short time before he quitted the University, he had taken Deacon's orders, and had applied himself with very great diligence to the study of the Oriental languages, and whatever else might properly qualify him for the discharge of the ministerial function, for which he had always a high reverence, and which he afterwards discharged, for many years, with great piety and zeal, and no less wisdom and learning (m) [C]. He retired first to Lymington, his uncle's living

- [A] In which it ought to be known to posterity. We are told by the Reverend Mr. Prince what follows, with respect to the descent of this worthy Person (1). 'He was not, says he, descended indeed from great, but from good parentage, more eminent for their piety than gentility, which in the estimation of God and good men, is the truest nobility. However, we are not to esteem him as sprung *ex facie virum*, from the dregs of the Plebeians: no; his name hath long flourished, and his relations lived in good estate and reputation in those parts.' Dr. John Conant, the son of our Divine, gives us the plain English of all this in the following words (2): 'He was the eldest son of Robert Conant, and Elizabeth his wife, who were persons of great integrity. Robert was one of the sons of Richard Conant, and Agnes his wife, who lived at Budley, near Yeatenton, and were much esteemed for their exemplary piety. Richard was the son of John Conant, descended from ingenious parents of Gittisham, near Honiton, in this county; whose ancestors, for many generations, had been fixed there, but were originally of French extraction.'
- [B] Recommended him highly to Dr. John Prideaux, then Rector of Exeter-college, and the King's Professor of Divinity. We have an account of this fact from both the writers before-mentioned; but the latter gives it in the clearest and most intelligent manner (3). 'These his excellent endowments, says he, set off by a life every way regular and unblameable, could not escape so vigilant a governor, and so known an encourager of learning and virtue, as the reverend and learned Dr. John Prideaux, then Rector of Exeter-college; who, by an allusion to his name *Conanti, nihil est difficile*; (this, according to the humour of those times, is a playing upon words; for, in one sense, it implies, to him who endeavours, every thing is easy; and in another, there is nothing difficult to Conant;) signified his opinion of him: and he once said of him, Jack Conant *will have my place*. Dr. Prideaux was then Regius Professor of Divinity in the University, as well as Rector of the College; both which eminent places were, in process of time, conferred on Dr. Conant.'
- [C] And no less wisdom and learning. We have mentioned in the text the excellence he acquired in the Latin and Greek languages, to which he soon after added as perfect an acquaintance with the Hebrew and Syriac Tongues; and he was also a good proficient in Chaldee and Arabic (4); all which he thought necessary to the thorough understanding of the holy scriptures; in reading which in their originals, and in comparing them with each other, and with the best commentators, he spent several years, by which

ing in Somersetshire, not in Hampshire, as Mr. Prince would have it; but finding his worthy relation forced from thence, he officiated for him as long as he could continue there with safety; but, after being rifled of all he had, and kept for some time a prisoner, he found it high time for him also to repair to London, where, having found his uncle settled in the church of St. Botolph, Aldersgate, he for some time assisted him in his pastoral duties (*n*). While he was at Lymington, he was constituted by the Parliament one of the Assembly of Divines (*o*); but I believe he sat amongst them, if ever, very seldom, since it is certain that he never took the Covenant. In order to avoid this, and other things not agreeable to his conscience, he willingly accepted the offer made to him, of being domestic Chaplain to the Lord Chandos; in whose family he lived at Harefield, or, as it is commonly called, Harvill, near Uxbridge, in Middlesex, where his piety, learning, and exemplary life, gained him many friends, who would have procured him a much better settlement, his income there being but fourscore pounds a year, the best part of which he bestowed in charitable uses (*p*); but the privacy in which he passed his days, and his great apprehension of charging his conscience with the transactions of those times, induced him to refuse the favours offered him, and in particular a good living in his own country, from Mr. Duke, of Otterton (*q*). He carried this just and religious principle still farther; for perceiving the effects of the Parliament visitation of the University of Oxford, where the Solemn League and Covenant was pressed upon all the members of the University, rather than break in upon his own innocence, by submitting to a power, and taking an oath, both which wanted a legal authority, and rather than abjure the good order that was established in this Church since the perfecting of the Reformation under Queen Elizabeth, or combine to promote a civil war, all which were thought to be virtually contained in that oath, he determined to quit his relation to Exeter-College (*r*), which he did, by resigning his fellowship, September 27, 1647 (*s*). This proceeding of his, as it was equally candid and conscientious, so the bare relation of it must sufficiently refute a very groundless calumny inserted in the work (*t*) of the Oxford Historian, concerning which the reader will be better informed in the notes [*D*]. While he lived as Chaplain to Lord Chandos, he preached a voluntary lecture, upon a week-day, at Uxbridge, where he had always a very numerous audience; and though this was purely from a principle of doing good, and not with any view of being talked of and known in the world, which no man of his abilities ever sought less, yet it served to keep alive that great reputation which he had acquired at the University; and of which the members of Exeter-College were so mindful, that upon the death of the learned Dr. George Hakewill, their Rector, in the month of April, 1649, there was a remarkable contest about choosing either his uncle or him for his successor (*u*): but Mr. John Conant, senior, who was then settled in the parish of St. Thomas, in Colchester, absolutely declining that preferment, the Fellows thereupon unanimously chose Mr. John Conant, on the 7th of June following; and on the 29th of the same month, he was admitted to that honourable office (*w*), which he executed with great prudence and fidelity, and with equal reputation to himself, and advantage to that

which he became so thoroughly master of that sort of learning, as to appear with equal lustre in the pulpit and in the chair (*5*): nor was there any man of his time who was then deemed to be more remarkable for being a solid and sound expositor, or for clearing the true sense of such texts as were misinterpreted by the Socinians and other reputed heretics (*6*).

[*D*] Will be better informed in the notes.] The famous Mr. Anthony Wood informs us (*7*), that the Rev. Mr. Henry Tozer, Fellow and Sub-rector of Exeter-college, was summoned before the Parliament visitors on the 21st of March, 1647, and by them questioned on eleven heads of offences by him committed in the management of the College; for which he was by these visitors afterwards expelled, and flying into Holland, was there taken into the service of the English merchants as their Chaplain, and in that post died at Rotterdam, Sept. 11, 1650. He farther adds, that these heads of accusation were transmitted to the visitors by Mr. John Conant, Mr. Anthony Clifford, Mr. John Martin, and Mr. Robert Hancock. This is a very heavy and a very extraordinary charge, which, at first sight, seems to agree but very indifferently with Mr. Conant's known character, who, of all things, hated to concern himself in quarrels or disputes. But the following refutation of this charge is so clear, so full, and so unanswerable, that it must certainly satisfy every man that reads it (*8*). 'His resignation in the College register bears date the 27th of Sept. 1647. That he had never seen Oxford from the end of the year 1642, till June, 1649, I find expressly under his own hand-writing,

' in a book of accounts relating to his pupils and to his Oxford affairs, which I here particularly mention, in order to rectify a mistake in a late author, who, in his book, intitled Historia & Antiquitates Universitatis Oxoniensis, reckons Mr. Conant among the Fellows of Exeter-college who accused Mr. H. Tozer, their Sub-rector, to the parliamentary visitors; whereas Mr. Tozer was not called before the visitors till the 21st of March, 1647, as may be seen in the register of the proceedings at that visitation, now in the public library at Oxford, which was near half a year after Mr. Conant had sent his resignation to the College. Besides the matters laid to Mr. Tozer's charge, as this very author has represented them, were such as could not possibly fall under the notice of any one who had not lived in the College very lately, which Mr. Conant had not done for more than five years past. But, had he been still Fellow there, and resident, yet it is very unlikely that he should join in an accusation against Mr. Tozer, whose name he would never mention without respect: neither can it be thought, that he would accuse any one, though never so faulty and unstatutable to those visitors, whose power he would not acknowledge, and to whom he himself was obnoxious, for not having taken the Covenant.' It hence appears, with how great caution the facts advanced in that book of Mr. Wood's particularly, ought to be received, and in how great need they stand of some authority to support them before they meet with allowance and credit.

society

society which had given him so signal a proof of their affection and esteem (x) [E]. In a very short time, however, after his being thus settled, he was in danger of being driven out of all public employment again, and this by the Parliament's enjoining what was called the *Engagement*, which he did not take within the time prescribed, but had a fortnight given him to consider farther of it. After having maturely deliberated upon the subject a month longer (y), he submitted, but under a declaration, subscribed at the same time with the *Engagement*, which, as it in fact enervated that instrument entirely (z), is at once a demonstrative proof of his great integrity, and of the general reputation he must have had to procure his subscription to be received upon those terms [F]. This difficulty being got over, he continued to discharge his office of Rector of Exeter-college with universal approbation; and though his labours therein were both constant and great, yet, being in virtue of that office Vicar of Kidlington, a large parish four miles from Oxford, he, for some time, officiated there in person, going thither on a Saturday, and preaching twice on Sunday, and catechizing the youth, leaving the care of the parish, during the week, to Mr. Rumbald, a very worthy and learned man (a), who kept a school there. But finding his absence from College detrimental to its discipline, he afterwards took care to have a sufficient Curate at his living, to whom he allowed three-fourths of its revenue (b). After he was thus fixed at Oxford, he preached a voluntary lecture at Allhallow's-church every Friday morning at seven o'clock; almost every Sunday he preached at St. Michael's, and every other Sunday, during the summer half-year, in the afternoon, at St. Mary Magdalen's, in the suburbs; and this not only without desiring, but even without accepting

(9) Life of Dr. Conant, p. 15.

[E] *So signal a proof of their affection and esteem.* At the time Mr. Conant was admitted to the Rectory of Exeter-college, the state of its revenue was very indifferent. The Collegians had contracted considerable debts by assisting the King, while he remained at Oxford; and other misfortunes had contributed to heighten both the confusion and distress of their affairs (9). Mr. Conant set about the removing of these inconveniencies with equal sagacity and diligence: he put the method of receiving the College revenues upon the best footing possible, and, having adjusted, in an equitable manner, the order in which their incumbrances were to be paid off, the very first notice of his scheme revived the credit of the College. In point of discipline, during the administration of Dr. Holland and Dr. Prideaux, it fell short of none in the University; but that being afterwards broken in upon, the society gradually declined, and was in a very low state when he became Rector. He set about the correction of those disorders with the greatest vigour and vigilance; and he persisted in that course with the utmost steadiness and courage; did much by exhortation and encouragement; more by reproof and an unrelaxed strictness in punishments; most of all by the brightness of his own example. He was constant in his attendance at public prayers; he expounded the holy scriptures learnedly, critically, and practically; he took care that the meanest servants in the College should be instructed, and, for that purpose, catechized them often in his own apartment. He had a watchful eye over the scholars, more especially such as were intended for the Ministry; he enquired carefully into the progress of their studies, and was still stricter with regard to their morals; his way of punishing was by exercises, and not pecuniary mulcts; for he understood not making parent's pockets pay for their children's offences (10). He took no less pains with the tutors, to whom he frequently remonstrated the great trust that was reposed in them, the obligations they were under to discharge it, and the folly of expecting any proficiency in their pupils, if they were at all wanting in their duty. But above all, he was remarkably just and candid in the affair of elections, where his interest, as Rector, could be procured no otherwise than by merit; and, where that appeared, his influence was sure to be exerted as far as legally it might. What the effects were of this so painful and diligent discharge of his duty, may be learned from the following paragraph in his son's memoirs, out of which the foregoing particulars were extracted (11).

(10) Prince's Worthies of Devon, p. 224.

(11) Life of Dr. Conant, p. 23.

Exeter-college flourished so much under the government of Mr. Conant, that the students were many more than could be lodged within the walls. They crowded in here from all parts of the nation, and some from beyond sea, where the fame of its discipline had reached. It would be tedious to

enumerate those eminent persons, both in Church and State, those learned and good men who were bred up under his care. In his time it afforded a Vice-chancellor, a Proctor, a Doctor of the chair in Divinity, a Moral Philosophy and Rhetoric Reader to the University, a President to St. John's, a Principal to Jesus, and a Divinity Professor to Magdalen-college; not to mention such as were transplanted thence to scholarships and fellowships in other Colleges, many of whom were men of eminency afterwards.

[F] *To procure his subscription to be received upon those terms.* If, as the most judicious critics agree, the capital use of Biography, not composed by barely tacking together the circumstances of a life, so as to render it a mere skeleton of facts and dates, is to inform and instruct by example; then, without doubt, there is nothing so much worthy of observation, in what is preserved to us, of the conduct of this worthy person, as the steadiness and integrity he shewed in those times of confusion, when, notwithstanding the hypocritical shew of religion, there was as great a defection from virtue as in any of which we have authentic records (12). His son gives us those particulars relative to this matter, which we have inserted in the text; but, as to the restrictions, with which, after delaying so long, he at last signed the Engagement, we owe it entirely to Mr. Prince, that they have not been buried in oblivion. The terms of the Engagement were (13).

any recompence when offered (c). October 28, 1652, he received Priest's orders, at Salisbury; and (d) May the 29th, 1654, he was admitted to the degree of Doctor in Divinity (e). In the month of December, the same year, upon the decease of Dr. Joshua Hoyle, he became Divinity Professor in the University of Oxford, where his lectures were received with universal applause, by a very numerous and learned audience, by whom, though often and warmly importuned, his modesty was so great, that he could never be prevailed with to publish them (f). In 1657 he accepted the impropriate Rectory of Abergely, near St. Asaph, in Denbighshire, as some satisfaction for the benefices formerly annexed to the Divinity Chair, which he never enjoyed. This acceptance of his was very beneficial to the Curate, whose salary he augmented twenty pounds a year, gave him other encouragements besides, and contributed largely to the relief of the poor, though the whole income of the living was but one hundred and twenty pounds a year (g). Upon the restoration of Episcopacy, knowing that this rectory had been anciently annexed to the Bishopric of St. Asaph, he not only immediately quitted it to Dr. Griffith, upon his coming to that See, but allowed him also to receive the last year's profits (h). On the 9th of October, 1657, he was admitted Vice-Chancellor of the University of Oxford, to the great joy, and no less benefit, of that learned body (i). This high dignity he kept till the 1st of August, 1660, during which space he corrected many abuses, regulated the public exercises in a manner highly serviceable to the promoting solid learning, was very instrumental in procuring Mr. Selden's large and valuable collection of books for the public library, and had a great hand in defeating a design, to which the Protector, Oliver, gave his consent, for erecting a kind of University at Durham (k). The most extraordinary thing of all that occurred during his administration, was preventing some eager persons in the University from sacrificing their own rights and privileges, by a petition to the Protector Richard's Parliament; which was the more honourable to Dr. Conant, as it was his own act entirely; and as his firmness in the opposition procured its success, so far as to defeat this pernicious project, which would have been highly prejudicial to their academical immunities (l) [G]. Upon the restoration of King Charles II. Dr. Conant, as Vice-Chancellor of the University of Oxford, came up to London, attended by the Proctors, and a great number of the principal members of that illustrious and learned body; and, June 15, 1660 (m), had the honour to be introduced to his Majesty, to whom he would have made his speech kneeling; but the King rose himself from his seat, and commanded him to rise; after which he made a succinct and elegant oration in Latin, which is unfortunately lost, and presented his Majesty with a book of verses, written by the members of the University, and amongst them some of his own, which have been deservedly commended, as having in them a true spirit of poetry, a just strain of panegyric, and a noble concern for religion (n) [H]. On the 25th of March, 1661, the King issued a commission for

(g) Life of Dr. Conant, p. 29.

(h) Ibid. p. 30.

(i) Wood's A-then. Oxon, vol. ii. col. 912. Prince's Wor-thies of Devon, p. 226. Ayloffe's Ancient and Present State of Oxford, vol. ii. p. 287.

(k) Life of Dr. Conant, p. 32, 33.

[G] Which would have been highly prejudicial to their academical immunities.] The point aimed at was to obtain from the Parliament, local visitors of such Colleges, as, by their statutes, were to be visited by Archbishops and Bishops. But Dr. Conant had so true an idea of parliamentary visitations, that he had not the least desire of seeing any more of them in his time, and therefore would not, by any means, countenance a petition for that purpose. He was told, that a Convocation were the proper judges of the matter: but this he denied: he said that local visitors was not the affair of the University, but of particular Colleges, many of which consisted mostly of Scholars and Undergraduates, and consequently had no votes in Convocations; and it would be very hard to represent any thing as their sense of the matter, who had no opportunity of expressing their sentiments upon it. It was then suggested to him, that it was a thing to which the University in general inclined, and that he might make himself extremely popular by promoting it. His answer was, that he had found, by long experience, it was impossible to please the generality, without prostituting a man's conscience; that if he could stretch his to the measures of other men's judgments, he knew he should not fail of the loud acclamations of the University; but he hoped never to purchase their applause at so dear a rate. It was then insinuated, that by his stiffness he would raise himself many enemies, and that possibly he might bring the Parliament upon his head, who would take it amiss that he checked any thing that tended to put greater power into their hands. This induced him to speak his mind more plainly. I am sensible, said he, how ill a negative vote may be resented at this juncture, and how much it concerns every man that loves his own quiet and

security, to keep himself out of their hands, who can do what they please: but, since I have no honest way of preventing what is feared, I submit to God's providence. As to my being worsted in this business I value it not, for I aim not at victory, but to keep my conscience clear; and as to this, it is not in any man's power to deprive me of my end. At last, they proposed, as an accommodation, that he should go out of town, and substitute a Pro-Vice-chancellor, who might do what he could not prevail upon himself to do; but he would hear of no such expedient: he said, it would be a betraying of his trust, by a weak and mean compliance in a thing which, in his own judgment, he utterly disallowed. The issue of this was, that after all the stir made about them, these petitions were quashed, and came to nothing.

[H] And a noble concern for religion.] The reader will best judge of the truth of the commendations by his perusing of the verses, which were these (16).

(16) Britannia Rediviva, p. 54.

Ad serenissimum Regem.

Accipe pacato, princeps celsissime, vultu,
Quæ tibi dat tremulâ musa togata manu.
Prima offensantis capias tentamina linguæ,
Quæ non ausa diu, marti strepente, loqui.
Jam solitos rescisse modos patiæ camænas;
Agnoscent artes, te redeunte, suas.
Quæ tua sunt cælum tibi reddidit; ipse vicissim
Jam cælo reddas, Carole magne, sua:
Sceptra Deo tradas; illum regnare jubeto,
Inclyte Rex, quo, tu sceptrâ jubente, tenes.
O ter felices, te sic regnante Britannos!
Christus ut emineat, teque regente, regat.
Ipsa sibi tristes gratabitur Anglia clades,
Penfari tanto quæ potuere bono.

S

In

VOL. IV.

for the review of the Book of Common Prayer, in which Dr. Conant was one of the commissioners, and assisted at the Savoy conferences, which were the fruits of the commission, in which he behaved with his usual modesty and moderation, expressing a desire that some regard might be had to those who had been otherwise educated, and such condescension shewed, as might preserve the peace of the Church (o). After this, upon the passing of the Act of Uniformity, which gave but a short day for the consideration of matters of very great importance, in the sentiments of such as were of truly tender consciences, he did not see sufficient cause to conform; and, as he had already given up his living in Denbighshire to the Bishop of St. Asaph, lost his Professorship of Divinity by the return of Dr. Robert Saunderson, to whom, of right, it belonged; so, rather than offer any violence to his principles, he suffered himself to be deprived of the Rectory of Exeter-College, which was pronounced vacant September 1, 1662 (p), and in which he was succeeded by Mr. Joseph Maynard. And thus, as a judicious Prelate observes, Dr. Conant was disabled from the public exercise of his ministry, to the great loss of the Church of England in general, and more especially of the University of Oxford, and of Exeter-College in particular (q). In this situation, however, he shewed that he had as great tenderness for the public peace, as for the quiet of his own conscience; and, therefore, he was so far from setting himself at the head, as he might easily have done, of a separation, that, on the contrary, he refused to join with, or countenance it, but went publicly to Church, and behaved there with exemplary piety and devotion (r). An ecclesiastical dignity was offered him about that time, which he refused (s), because he was resolved to consider coolly and carefully the terms prescribed by authority; that, after weighing every thing seriously, he might, if he saw evidence, conform, or, if not, remain firm in his present conduct [I]. At length, after eight years serious deliberation, his mind was satisfied, and he resolved to comply in all points, and in particular with that which had probably stuck most with him, which was the being re-ordained, and accordingly was so, September 28, 1670 (t), by the Right Rev. Dr. Reynolds, Lord Bishop of Norwich, whose daughter he had married. This behaviour of his surprized those who best knew him least; and Dr. Owen, his contemporary at Oxford, could not help saying, when he heard it, that he did not in the least wonder at it, since he knew Dr. Conant's sentiments were for Episcopacy all along (u). He had no sooner qualified himself for the acceptance of ecclesiastical preferments, than many were offered him; and, on the 18th of December, the same year, he was actually elected Minister of the Church of St. Mary, Aldermanbury, in the city of London (w); but having spent some years in the town of Northampton, where he was much beloved, and highly esteemed, he chose rather to accept of the invitation of his neighbours to remain amongst them; and Dr. Simon Ford, who was then Minister of All-Saints, being elected in the room of Dr. Conant, by the vestry of St. Mary, Aldermanbury, December 29, 1670 (x), he was nominated by the corporation to the Vicarage of All-Saints, and had institution given him February 15, 1670; which, though of the value only of a single hundred pounds *per annum*, he would never part with, though very considerable offers were made him, and in particular one by his gracious master King Charles II. which was signified to him by a letter from the then Secretary of State (y).

In English thus.

To his SACRED MAJESTY.

*Kindly accept, that tribute, best of Kings,
The college muse, with trembling reverence brings,
The first essays of her unpractis'd song,
Whom war's harsh clamour doom'd to silence long.
But, now reviv'd, the lamps of learning burn,
And, arts returning, wait on thy return.
Heav'n has thy rights restor'd; do thou restore
The rights of heav'n! religion's sacred power!
Return the sceptre GOD bestows again,
And a CHARLES reigning, let his Maker reign.
Thrice happy BRITONS, whom you thus shall sway,
And only rule that they may CHRIST obey.
Our slaughter's past, no longer we deplore,
Nor ill regret that such a PRINCE restore.*

[I] Or, if not, remain firm in his present conduct.] We have a very curious, as well as circumstantial account of his behaviour upon this occasion, and of the methods he took to resolve his own case of conscience, whether he ought to conform or not, in his son's memoirs (17).

(17) Life of Dr. Conant, p. 44, 45.

‘He applied himself very closely, for some time, to the study of the controversies relating to Conformity. He had deliberately weighed and considered the whole compass of these disputes, and made himself master of every turn in them. He had not only examined what had been objected to the several offices of the liturgy, its doxologies and responses,

its rubrics and kalendar, and thoroughly considered all the phrases and modes of expression in each service, but likewise compared it with ancient liturgies, as well as with the holy scriptures, doctrines of the apostles, and later rituals and offices. This appears from his papers in my hands, running over many of the passages in the book of Common Prayer that have been objected to, and giving such orthodox senses of them, as he concludes were agreeable to the judgment of the first Right Reverend and pious compilers of them. And, I persuade myself, were they perfect, they might reconcile the most scrupulous to join in those excellent forms of prayer.’ He adds afterwards, ‘Dr. Conant's conformity could not be surprizing to any one who considers, that his prejudices were never many, and those not strong or violent, though his determinations were slow and advised. One would rather wonder, that he did not conform much sooner than he did, since it is certain, that his temper was never soured by the loss of his college; that he had an awful regard for the commands of authority in things indifferent; that he constantly blamed those who held their assemblies at hours that interfered with the public worship of God, in affront to the civil sanctions of the laws, to good order and parochial communion; that he was so far from being ambitious of a separate congregation, or covetous of their contributions, that he had industriously kept out of the way of both.’

On

On the 20th of September, 1675, he had the mortification to see the greatest part of his parish, together with his church, burnt to the ground, though providentially his own house escaped (z). His presence was of great use to the town in that critical juncture, when he employed both his person and his purse for the service of the distressed, and would not, though new and great offers were made him, consent to leave them under this calamity (a). So true a sense had the inhabitants of Northampton of his wise conduct upon this occasion, that they gave him the use of St. Peter's Church till his own could be repaired; and the gentlemen in the neighbourhood made up his year's salary, which, the next year, was paid him by his generous benefactor Mr. Montagu, of Horton, brother to his old patroness the Lady Chandos (b). He discharged his pastoral duty there with the same zeal and application which he had shewn in other places, and was particularly instrumental in bringing over Dissenters of all denominations to the Church [K]. In the beginning of the year 1676, the Archdeaconry of Norwich becoming vacant by the death of Mr. John Reynolds, his brother-in-law, the Bishop offered him that preferment, with this singular compliment (c): *I do not expect thanks from you, but I will be very thankful to you if you will accept of it*; of which he desired time to consider, and reflecting on the misconstructions that might be made of his declining it, he embraced the proposal, was instituted on the 7th, and installed on the 8th of June following, in that Archdeaconry (d); and, so long as his health would permit, constantly discharged his duty by personal visitations. Upon the death of Mr. Tomkins, one of the Prebendaries of the Cathedral Church of Worcester, Dr. Conant's old friend and contemporary at Exeter-College, the worthy Earl of Radnor (e), asked it for him from King Charles II. in these terms: *Sir, I come to beg a preferment of you for a very deserving person, who never sought any thing for himself*; and, upon naming him, the King very kindly consented; so that December 3, 1681, he was installed (f). He governed himself strictly, with respect to this preferment, by the local statutes, as to residence, preaching, and other circumstances, so long as he was able to travel; and when his age and infirmities intitled him, in the judgment of the chapter, to statuteable exemption, he directed a great part of the revenue of his prebend to be distributed among poor housekeepers (g), and others, at Worcester. In 1686, after his eyes had been for some time weak, he lost his sight entirely; which great misfortune, together with the common infirmities of old age, for sharp and painful diseases he had none, he bore not only with patience and resignation, but with cheerfulness and ease (h). As his public course of life was useful and honourable, so he was also very happy in his family. He married in August, 1651, Elizabeth, daughter of Dr. Edward Reynolds, afterwards the right reverend and learned Bishop of Norwich, by whom he had six sons, and as many daughters (i). In his private life, there was a happy mixture of mildness of temper, with severity of morals. He had always as great a contempt of pomp and magnificence, as he had an unfeigned affection for a private and retired life (k). Temperate he was to a degree of abstemiousness, frugal in his expences, and more of his time, and yet no man freer of both where charity required. So little desirous of the wealth of this world, that, when he had nothing but his Fellowship to support him, he generously made over the estate that descended to him from his father, to his younger brother, Robert, who had married young, and had many children (l). He was not only a man of very solid, but of very extensive learning, and yet so very modest, that though he understood most of the

[K] *In bringing over Dissenters of all denominations to the Church.* He was not only constantly resident in his parish, excepting when his other offices absolutely required his attendance, but also constantly officiated in person, preaching twice every Sunday, and taking care to inculcate practical religion in the plainest and most pathetic language (18). In the evenings he catechized the children, and, amongst them, his own were always present. He seldom, if ever, visited his parishioners, more especially those of the better sort, in a ceremonious way; but his clerk had strict orders to inform him when any were sick, and then, without staying to be sent for, he readily waited upon the meanest of his flock. He was not afraid to speak freely where it was necessary, out of any respect to persons; and, where he saw the appearance of distress, he relieved with a bounty suitable rather to his inclinations than his circumstances. He was one of the most remarkable Casuists in his time, and was not only resorted to by some who lived at a great distance, but his advice was likewise asked, by letters, even from foreigners. As his duties took up a great part of his time, so the short spaces that he allowed to those relaxations which are absolutely necessary for the relief of human nature, were dedicated to things that would have hardly passed with many for recreation. Reading a few pages in the classics, hearing some remarkable piece of history, and discoursing

upon it to his children, or explaining to them some point in Natural Philosophy, that they might have just notions of the wisdom of Providence, and an early impression of the reverence due to its divine Author, were his only diversions. Yet, with all this strictness of manners, he had nothing either of moroseness or pride, great evenness of temper, which never rose higher than being cheerful; and, on the other hand, was never depressed by temporal losses, or corporal pain; his humility so true, that it discovered itself upon all occasions; he knew little of form and ceremonies, and, from the little he did know, despised them; yet, from natural sweetness of temper, he was obliging to all, and courteous even to the meanest in his parish. His charity, as has been before hinted, had less relation to his circumstances than any other point of his conduct. At Northampton, for twenty years together, he paid for the schooling of poor children, never fewer than twenty-four, and sometimes nearer forty; and these he placed out with several needy widows, that what he gave might contribute to their assistance. He was, upon all occasions, ready to promote the relief sought by strangers, of which various instances are given in his son's memoirs; but we have already exceeded the usual limits of such an article, for which, the worth of it must be our apology; for it would be hard, as well as unjust, to say but little of so great and good a man (19).

Oriental languages, and was particularly as well versed in Syriac as any man of his time, yet his proficiency in these studies was known to very few. It was with much difficulty that he was prevailed upon (for that is really the fact, though directly contrary to what several authors have asserted) (m) to suffer a volume of his sermons to be published in his life-time; and as for the rest, which escaped that severe censure he passed upon what would have been thought of the highest value by the rest of the world, they were sent abroad, by the pious care of several wise and worthy persons, from a charitable desire, that the Church might not be deprived of the labours of so painful and so practical a Preacher; which writings of his have met with that respect and esteem they so highly deserved (n) [L]. This learned person, after an exemplary life, deceased, in the eighty-sixth year of his age, March 12, 1693, and was buried in his own parish church of All-Saints, in Northampton, with a suitable inscription to his memory, upon a plain and decent monument, erected by his widow (o). His son, John Conant, Doctor of Laws, a man very eminent in his profession, wrote his life with great care and judgment, from which many particulars have been taken, and the whole of which deserves well to be published.

[L] *With that respect and esteem which they so highly deserved.* In this note it is proposed to give an account of such of Dr. Conant's works as have been preserved and made public, in order to rectify the mistakes that have been made about them. There have been, in all, six volumes of his sermons sent abroad, at several times, by several hands.

Vol. I. Published in 1693, 8vo. by the care of Dr. John Williams, minister of St. Mildred's, in the Poultry, in the author's life-time, as appears by the preface, and Dr. Conant's dedication to the inhabitants of Northampton. There are in this volume eleven sermons.

II. Published in 1697, 8vo. by Dr. John Williams, then become Bishop of Chichester, with a preface before it, in which notice is taken of the former volume, published in the Doctor's life-time. This volume contains fifteen sermons.

III. Published in 1698, 8vo. by the same editor, who says in the preface, that Dr. Conant committed to the flames many learned discourses, and particularly those which he had preached in a Lecture in the University on nice and difficult subjects, preserving such only as related to practice. He likewise mentions a life of the author, which was expected, but not come to hand. This volume contains fourteen sermons.

IV. Published in 1703, 8vo. by the same editor. In the preface his Lordship takes notice, that there had been an intention of writing the author's life, as a thing that could not fail of being acceptable to those who knew him, and very useful to those who did not; but, for the present, this design being laid aside, it was hoped the loss of it would be compensated by the publication of this fourth volume of sermons from his own manuscripts. This volume contains thirteen sermons.

V. Published in 1708, 8vo. by the same editor, who, in his preface, says very confidently, that, with the next volume, an account of the author's life would appear, written by an able hand. This volume contains fourteen sermons.

VI. Published in 1722, 8vo. by Digby Coates, M. A. Principal of Magdalen-hall, in Oxford, at the request of the author's son, John Conant, LL.D. but without any life or preface before it. There are in

this volume thirteen sermons, making up the whole number fourscore. C.

[Dr. Conant had a near relation, whose name was Samuel Conant, M. A. who was instituted to the Rectory of Lytchet Matravers, in the county of Dorset, in the year 1662, and died in 1719, Rector of that parish. He was buried on the North-side of the parish-church; and this inscription, written by the grandfather of our ingenious friend, the Rev. Mr. Hall, of Child-Okeford, is upon his tomb.

H. S. E.

SAMUEL CONANT, A.M.
Collegii Exoniensis olim Socius,
Academiae Oxon. dignissimus Procurator:
Omnibus Disciplinae academicæ Inimicis,
Novarum Rerum vehementer studiosis,
se totum opposuit.
Reverendo admodum Doctori Reynolds

Ob Indolem suavissimam,
Vir omnibus merito percarus.
Animam Deo reddidit,
quinto Die Decembris
Anno Salutis Christianæ 1719, Ætatis 92.

The learned Dr. William Grigg, formerly Master of Clare-Hall, Cambridge, in a letter to Mr. Hall's grandfather, dated at Cambridge, July 4, 1719, says, "you have acted the part of a friend, and done justice to the character of Mr. Conant, in your Epitaph of him (20)."]

K. (20) Communicated by Mr. Hall.

CONGREVE (WILLIAM), a celebrated English Poet in the last and present century. There is no sort of question about the descent of this gentleman, which was from the antient house of Congreve, in Staffordshire, flourishing there with honour and reputation (a); neither is there any doubt as to his immediate family, for he was the only surviving son of William Congreve, Esq; who was the second son of Richard Congreve, Esq; of Congreve and Stratton, in the county of Stafford (b). As to the place, and indeed as to the kingdom, in which he was born, authors differ; and not only so, but are positive on both sides. Some are clear that he was a native of Ireland (c); but it seems more probable, or, to speak more plainly, it is morally certain, that he was a native of England, and drew his first breath at the village of Bardsa, near Leeds, in Yorkshire (d), which was the estate of a near relation of his by the mother's side. The reason of our giving the preference to this sentiment, rather than that which entitles another island to the honour

honour of his birth, will be found at the bottom of the page [A]. The time when it happened can only be collected by circumstances, which place it in 1671 or 1672 (e). His father carried him, when a very child, into Ireland, where, at that time, he had a command in the army, but afterwards was entrusted with the management of a considerable part of the large estate of the noble family of Burlington, which fixed the residence of himself and family in that kingdom (f). Our author received the first tincture of letters in the great school of Kilkenny, and gave very early proofs of his pregnant genius; and it is said, that one of the first essays of his poetical talent was a copy of verses upon the death of his master's magpye (g). He went from the school of Kilkenny to the University of Dublin, then flourishing under the direction of Dr. St. George Ash, where, in a very short time, Mr. Congreve became perfectly acquainted with all the branches of polite literature, and acquired not only a general acquaintance with, but a correct and critical taste in, the Classics (h). His father, however, was desirous that his parts should be applied to more profitable studies, and therefore sent him over to England a little after the Revolution, and placed him as a student in the Middle-Temple (i). But the severe study of the law had so little relation to the active disposition and sprightly humour of the young gentleman, that though he continued for three or four years to live in chambers, and pass for a Templar, yet it does not appear that he ever applied himself with diligence to conquer his dislike to a course of life which had been chosen for him, with so little respect either to the turn of his natural parts, or the preceding course of his education (k). But how little soever he answered the expectation of his friends in the prosecution of that profession to which they had destined him, certain it is, that he was not either indolent or inactive in the cultivation of those studies, that were both his early and his latest care. His first performance, when almost a boy, was extraordinary in its kind; and though no more than a novel, which, under the assumed name of *CLEOPHIL*, he dedicated to Mrs. Catherine Leveson, yet it was a proof, not only of the vivacity of his wit, and the fluency of his style, but also of the strength of his judgment [B]. As he did not then think proper to

(j) See his Dedication of his *Incognita*: or, Love and Duty reconciled.

[A] Will be found at the bottom of the page.] In the new English translation, with great additions, of the learned Antiquary of Ireland's works, we find Mr. Congreve's life inserted, as a native of that country; but it is not said when or where he was born (1). In a very large collection of the same kind with this, we find the same fact asserted, from the information of the late ingenious Thomas Southerne, Esq; who was Mr. Congreve's intimate friend, and out-lived him many years (2). He was himself of that country, and might very probably be firmly persuaded, from his knowing him a youth there, that he was his countryman. The author, upon whose credit we rely, in giving a different account of this matter, is the late Mr. Giles Jacob; and (3) though at first sight it must appear very singular, to prefer the authority of Mr. Jacob to that of Mr. Southerne; yet there is a reason for it, so strong, that when it is once mentioned, it may perhaps clear this dispute, in the reader's opinion as well as mine. In the preface, Mr. Jacob, speaking of the communications which he had received from living authors, has this passage, 'I am in particular obliged to Mr. Congreve for his free and early communication of what relates to himself, as well as his kind directions for the composing of this work.' This correspondence was in the year 1719, though the book was not published till three years afterwards: but, however, as it was both written and published in Mr. Congreve's life-time, we must conclude from thence, that we have his own authority for the matter of fact, which is superior even to the recollection of his old friend and acquaintance Mr. Southerne, who, as a man might mistake, though he was certainly a man of too much honour, willingly, to misinform any body.

[B] But also of the strength of his judgment.] The title of this first work of our ingenious author's was, *INCOGNITA*: or, *Love and Duty Reconciled*. It has been always considered as a piece very well written, more especially as it was the first production of a youth of seventeen. It has also been asserted, that at the bottom it is a true history, and though the scene is by Mr. Congreve laid in Italy, yet the adventures happened here in England. It is not our business to enter into the secret history of this entertaining piece, or to attempt giving the reader a key to what the writer took so much pains to conceal; but what we intend in this note, is to justify the observation in the text, and to prove, that though this was the first essay,

VOL. IV.

and the first essay of a very young man, yet there is in it something very extraordinary; more especially when we add to what has been said before, that it was a very hasty essay likewise. There is nothing more common, and indeed there is nothing more natural, than for young men to pique themselves upon the brightness of their parts, the quickness of their wit, and, in pieces of this nature, on the elegance and floweriness of their language. But this was not Mr. Congreve's point: he aimed at perfection from the very beginning, and his design in writing this novel, was to shew how novels ought to be written. Let us hear what he says himself, and thence we shall entertain a higher opinion of his abilities, than could possibly be raised by the warmest commendations. After observing, very judiciously, that there is the same relation between Romances and Novels, as between Tragedy and Comedy, he proceeds thus: 'Since all traditions must indisputably give place to the Drama; and since there is no possibility of giving that life to the writing or repetition of a story, which it has in the action, I resolved in another beauty to imitate dramatic writing, namely, in the design, contexture, and result of the plot. I have not observed it before in a novel. Some I have seen begin with an unexpected accident, which has been the only surprising part of the story, cause enough to make the sequel look flat, tedious, and insipid; for it is but reasonable the reader should expect, if not to rise, at least to keep upon a level in the entertainment; for so he may be kept on in hopes, that, at some time or other, it may mend; but the other is such a balk to a man, it is carrying him up stairs to shew him the dining-room, and after forcing him to make a meal in the kitchen. This I have not only endeavoured to avoid, but also have used a method for the contrary purpose. The design of this novel is obvious, after the first meeting of Aurelian and Hippolito with Incognita and Leonora; the difficulty is in bringing it to pass, maugre all apparent obstacles, within the compass of two days. How many probable casualties intervene in opposition to the main design, viz. of marrying two couple so oddly engaged in an intricate amour, I leave the reader at his leisure to consider: as also, whether every obstacle does not, in the progress of the story, act as subservient to that purpose, which, at first, it seems to oppose. In a comedy this would be called the unity of action; here it may pretend to no more

T

than

own this piece to the world, so the reputation resulting from it was confined within the narrow compass of his acquaintance. But as true genius cannot remain long hid, and as untoward accidents rather provoke than tame high spirits; so, upon a fit of sickness (m), which seized him about three years after his return to England, he amused himself, during a slow recovery, in writing a Comedy, which he very soon finished; and though he was very modest and diffident of his own abilities, yet he suffered himself to be overcome by the persuasion of his relations and friends, and consented to bring it upon the stage. In order to this, he was recommended to Captain Southerne, who, in conjunction with the great Mr. Dryden, and that excellent Critic Arthur Manwaring, Esq; revised the *Old Batchelor*, of which Mr. Dryden said, he never saw such a first play in his life (n); and that the author not being acquainted with the stage or the town, it would be pity to have it miscarry for want of a little assistance. The stuff was rich indeed, only the fashionable cut was wanting, which was soon given it. Mr. Thomas Davenant, who had then the direction of the Theatre-Royal in Drury-lane, was so much struck with the merit of the piece, and the author's conversation, that he granted him what is called the privilege of the house, half a year before his play came upon the stage; which, according to the maxims of theatrical government, was not barely an unusual, but an unprecedented favour (o). In 1693, the *Old Batchelor* was acted before a numerous and noble audience. The prologue, intended to be spoken, was written by Lord Falkland. The play was admirably performed, and received with such general applause, that Mr. Congreve was thenceforward considered as the prop of the declining stage, and as the rising genius in Dramatic Poesy (p) [C]. It was this play, and the very singular success that attended it upon the stage, and after it came from the press, that brought our author to the notice of that great patron of the English Muses, Charles Montague, Lord Halifax, who being desirous to place so eminent a wit in a state of ease and tranquillity, made him immediately one of the Commissioners for licensing Hackney-coaches; bestowed upon him, soon after, a place in the Pipe-office; and gave him, likewise, a post in the Custom-house, of the value of six hundred pounds a year (q). As these were favours of a very extraordinary nature, so they raised in the breast of Mr. Congreve a noble spirit of gratitude and affection, which shewed itself in an unalterable attachment to that nobleman during his life, and the most profound re-

(p) Memoirs of Mr. Congreve, p. 3.

(q) General Dict. vol. iv. p. 428.

‘than an unity of contrivance. The scene is continued in Florence from the commencement of the amour, and the time, from first to last, is but three days. If there be any thing more in particular resembling the copy, which I imitate, as the curious reader will soon perceive, I leave it to shew itself, being very well satisfied how much more proper it had been for him to have found out this himself, than for me to prepossess him with an opinion of something extraordinary in an essay, begun and finished in the idler hours of a fortnight's time; for I can only esteem that a laborious idleness, which is parent to so inconsiderable a birth.’

[C] And as the rising genius in Dramatic Poesy.] This play is dedicated to the Lord Clifford, of Laneshorough, the eldest son and heir apparent of the Earl of Burlington; but himself a Peer also, being, as we have told the reader elsewhere, called up to the House of Lords, in the life-time of his father, by writ. In the text we have joined the two accounts of Mr. Congreve's father going over to Ireland and remaining there, because, as it appears from what Mr. Congreve himself communicated to Mr. Jacob (4), that he went thither originally in a military capacity; so from this dedication we may be convinced of the truth of the other circumstances as to his being intrusted with the concerns of the Burlington family. Mr. Congreve begins his dedication thus (5). ‘My Lord, it is with a great deal of pleasure that I lay hold on this first occasion, which the accidents of my life have given me, of writing to your Lordship: for since, at the same time I write to all the world, it will be a means of publishing what I would have every body know, the respect and duty which I owe and pay to you. I have so much inclination to be your's, that I need no other engagement; but the particular ties by which I am bound to your Lordship and family, have put it out of my power to make you any compliment, since all offers of myself will amount to no more than an honest acknowledgment, and only shew a willingness in me to be grateful. I am very near wishing, that it were not so much my interest to be your Lordship's servant, that it might be more my merit: not that I would avoid being obliged to you, but I would have my own

choice to run me into the debt, that I might have it to boast, I had distinguished one to whom I would be glad to be obliged, even without the hopes of having it in my power ever to make him a return.’ There stand before this comedy three copies of verses, by Mr. Southerne, Mr. Marth, and Mr. Higgins, in which it is very highly commended. But that we may be convinced this did not at all proceed either from the excusable fondness of friendship, or that more excusable tenderness for a rising genius which glows in the bosom of every true judge of writing, let us look a little into the merits of the cause, as they are stated by an excellent and impartial judge. The author of the Tatler says (6), ‘In the character which gives name to the play, there is excellently represented the reluctance of a battered debauchee, to come into the trammels of order and decency: he neither languishes nor burns, but frets for love. The gentlemen of more regular behaviour are drawn with so much spirit and wit, and the drama introduced by the dialogue of the first scene, with uncommon, yet natural conversation. The part of Fondlewife is a lively image of the unseasonable fondness of age and impotence.’ We are told in another paper, by the same agreeable writer (7), ‘That in this comedy there is a necessary circumstance observed by the author, which most other poets either overlook, or do not understand; that is to say, the distinction of characters. It is very ordinary with writers to indulge a certain modesty of believing all men as witty as themselves, and making all the persons of the play speak the sentiments of the author, without any manner of respect to the age, fortune, or quality of him that is on the stage. Ladies talk like rakes, and footmen make families; but this writer knows men, which makes his plays reasonable entertainments, while the scenes of most others are like the tunes between the acts; they are perhaps agreeable sounds, but they have no ideas affixed to them.’ But, notwithstanding this, the remarks of Mr. Collier (8), upon some passages in this comedy, are not altogether wide of truth, or of sound criticism; but they regard not the structure of the play, and only censure a few libertinisms, into which the author had fallen a little unwarily.

verence for his memory after his decease. We need not be surprized, that after such encouragement as the town, and even the Critics, had given him, our author quickly made his appearance again upon the stage, as he did the year following, when he brought on the *Double Dealer* (r). This play was honoured with the presence of Queen Mary; and though it was not so universally applauded as his former performance, yet it had the honour to be very highly commended, as well as generally approved, by the best judges (s). We need not at all wonder at the fate of this fine performance, for regular Comedy was at that time a new thing. Our author was the very first who attempted it; I will not say he was the last who succeeded in it; but I may safely assert, that he carried it to the highest degree of perfection; and that if we were to wish any of our Comedies translated into French, for the honour of our nation, it should be his; and amongst them there is none that does him greater credit than the *Double Dealer*, notwithstanding some objections that have been made to it (t) [D]. It was towards the close of that year that Queen Mary died, which melancholy accident, as it afforded a pregnant subject to Orators and Poets, so, amongst all that attempted it, none succeeded better than Mr. Congreve, in the Pastoral which he wrote upon that occasion; and which, in point of simplicity, elegance, and correctness, is at least equal to any thing of the kind that has appeared in our language (u). We have taken notice in another place, of the great revolution that happened in the theatrical world in the succeeding year, and of the justice and generosity with which Mr. Congreve espoused the cause of our English Roscius (w), when he opened his new Theatre in Portugal-Row, Lincoln's-inn-fields, by giving him his excellent Comedy of *Love for Love*, so judiciously contrived, and so happily executed, as to unite at once the approbation of the few, and the tumultuous applause of the many, in its

[D] Notwithstanding some objections that have been made to it.] This play is dedicated to the Right Hon. Charles Montague, one of the Lords of the Treasury: and though we are apt to overlook dedications, as seldom containing any thing except acknowledgments and praises, yet there are in this some passages of such true and solid criticism, and which give so clear and so good an account of the play itself, that they very well deserve the reader's notice (g). I have, since the acting of this play, hearkened after the objections which have been made to it, for I was conscious where a true critic might have put me upon my defence. I was prepared for the attack, and am pretty confident, I could have vindicated some parts, and excused others; and, where there were many plain miscarriages, I would most ingenuously have confessed them. But I have not heard any thing said sufficient to provoke an answer. That which looks most like an objection, does not relate in particular to this play, but to all, or most, that ever have been written, and that is soliloquy: therefore I will answer it, not only for my own sake, but to save others the trouble to whom it may be hereafter objected. I grant, that for a man to talk to himself appears absurd and unnatural, and indeed it is so in most cases; but the circumstances which may attend the occasion, make great alteration. It oftentimes happens to a man to have designs, which confine him to himself, and, in their nature, cannot admit of a confidant. Such, for certain, is all villainy; and other less mischievous intentions, may be very improper to be communicated to a second person. In such a case therefore, the audience must observe, whether the person upon the stage takes any notice of them at all or no: for if he supposes any one to be by when he talks to himself, it is monstrous and ridiculous to the last degree: nay, not only in this case, but in any part of a play, if there is expressed any knowledge of an audience, it is insufferable. But otherwise, when a man in soliloquy reasons with himself, and *pro's* and *con's*, and weighs all his designs, we ought not to imagine that this man either talks to us, or to himself; he is only thinking, and thinking such matter as were inexcusable folly in him to speak. But, because we are concealed spectators of the plot in agitation, and the poet finds it necessary to let us know the whole mystery of his contrivance, he is willing to inform us of this person's thoughts, and to that end is forced to make use of the expedient of speech, no other or better way being yet invented for the communication of thought. Another very wrong objection has been made by some, who

have not taken leisure to distinguish the characters. The hero of the play, as they are pleased to call him, (meaning Mellefont) is a gull, and made a fool, and cheated. Is every man a gull and a fool that is deceived? At that rate I am afraid the two classes of men will be reduced to one, and the knaves themselves be at a loss to justify their title; but if an open-hearted, honest man, who has an entire confidence in one whom he takes to be his friend, and one whom he has obliged to be so, and who, to confirm him in his opinion in all appearance, and upon several trials has been so: if this man be deceived by the treachery of the other, must he of necessity commence fool immediately, only because the other has proved a villain? Ay, but there was caution given to Mellefont, in the first act, by his friend Careless. Of what nature was that caution? only to give the audience some light into the character of Maskwell, before his appearance, and not to convince Mellefont of his treachery, for that was more than Careless was then able to do: he never knew Maskwell guilty of any villainy; he was only a sort of man which he did not like. As for his suspecting his familiarity with my Lady Touchwood, let them examine the answer that Mellefont makes him, and compare it with the conduct of Maskwell's character through the play. I would beg them again to look into the character of Maskwell before they accuse Mellefont of weakness, for being deceived by him; for, upon summing up the inquiry into this objection, it may be found, they have mistaken cunning in one character, for folly in another. To this play there is now prefixed a copy of verses, by Mr. Dryden, that were addressed to the author upon its first appearing. They contain the highest compliments to him, and the strongest commendations of the play possible, but are too well known to the world, and too commonly met with, to be inserted here, and the force and meaning of them would be very much weakened and broken by citing parts of them. Mr. Charles Hopkins also wrote a copy of verses upon the same occasion; and the best judges in general have admitted, not only that the foregoing defence of Mr. Congreve was very well founded, but that he has fairly unravelled the true source of false criticism, and shewn himself thereby a deep enquirer, as well as an excellent judge of human nature; which, as we shall have frequent occasions to shew hereafter, appears to have been the constant study of his life, as well as the chief fund whence he drew the many fine and beautiful strokes that distinguish all, but more especially his comic writings.

favour (x) [E]. The same year he distinguished himself in a new kind of Poetry, by addressing to King William an irregular Ode on the taking of Namur, in which the sublimity of the sentiments, the harmony of the numbers, the happy imitation of the antients, the graceful turn of his panegyric, are truly admirable; but perhaps there is nothing in it that deserves higher commendation than the delicate compliment with which it ends, and where, in a single line, he says the finest things possible of his two great patrons Halifax and Dorset (y). As he had now attained the highest reputation as a Comic Poet, he was inclined to shew that a regular and finished Tragedy might succeed upon the English Theatre. It was an adventurous task that he set himself, and a very high stake he made, when he hazarded all the reputation he had already acquired upon this new performance, which, though written according to the rules, was altogether destitute of those artificial and irregular helps, frequently relied on by former writers. It seems to have cost him more pains than any of his former pieces; for it was not till 1697, that the *Mourning Bride* (z) was acted at the new Theatre in Lincoln's-inn-fields. Very few plays ever excited so great expectations as this did, and fewer still have met, after such expectation raised, with so universal an approbation. In short, it was the best received of all his pieces; and, without doubt, whatever credit he drew from this exquisite Tragedy, was in some measure shared by the audience, who fairly entitled themselves to the character of equal and able judges, by the applause they bestowed upon that excellent performance [F]. He was called off from his attention to the Theatre to another kind of writing, that to him, of all men living, was the most tedious and tiresome, and that was controversy. His four plays were attacked with equal fury and celerity by the famous Mr. Jeremy Collier, who, without the least pity to his fine parts, or the slightest tenderness for a reputation raised with so much pains, fell upon him, not as a dull or tasteless, but as a dangerous and destructive writer (a). An answer was necessary, and therefore an answer was given, under a very plain title (b), and written with much modesty as well as wit. There are abundance of judicious things in this defence, which was drawn up in the form of letters to that candid Critic, and the author's constant friend, Walter Moyle, Esq; which, though the subject seems to render them now out of date, will make them always well worth a judicious reader's perusal [G]. In all probability, this quarrel created in our author

[E] *In its favour.*] There is prefixed to this play a short dedication to the then Lord Chamberlain, Charles, Earl of Dorset and Middlesex, written, as all his dedications are, with great decency and good sense, and without any of that fulsome flattery, which reflects at once on the patron and the writer, and is, at the same time, such a plague and punishment to a reader, as he has seldom the patience to go through. Some faults have been found with several characters in this play; but if the reflections, proceeding from the severe morals of Mr. Collier, can be averted by any tolerable excuses, drawn from the very nature of comedy, which requires the representing the manners of the age as they really are, nothing else can affect it. The sense of succeeding times has fully justified the judgment of those in which it was first acted, and *Love for Love* continues, and is likely to continue, an admired comedy, as long as true taste for theatrical entertainments shall prevail.

[F] *They bestowed upon that excellent performance.*] This play was dedicated to Queen Anne, then princess; and it is not easy to imagine any thing, either more great or graceful, than the manner in which the author shews the consistency of his address; and as there is something in this very peculiar, the following paragraphs will be perused with pleasure (10). 'It is from the example of Princes that virtue becomes a fashion in the people; for even they who are averse to instruction, will yet be fond of imitation. But there are multitudes who never can have means nor opportunities of so near an access, as to partake of the benefit of such examples: and to these Tragedy, which distinguishes itself from the vulgar poetry, by the dignity of its characters, may be of use and information; for they who are at that distance from original greatness, as to be deprived of the happiness of contemplating the perfections and real excellencies of your Royal Highness's person, in your Court, may yet behold some small sketches and images of the virtues of your mind, abstracted and represented on the theatre. Thus poets are instructed and instructed, not alone by precepts, which persuade, but also by examples, which illustrate. Thus is delight interwoven with instruction: when not only virtue is prescribed, but also represented. But, if

' we are delighted with the liveliness of a feigned representation of great and good persons, and their actions, how must we be charmed with beholding the persons themselves? If one or two excellencies, barely touched in the single action and small compass of a play, can warm an audience with a concern and regard, even for the seeming success and prosperity of the actor; with what zeal must the hearts of all be filled, for the continued and increasing happiness of those who are the true and living instances of elevated and persisting virtue? Even the vicious themselves, must have a sacred veneration for those peculiar graces and endowments which are daily so eminently conspicuous in your Royal Highness; and, though repining, feel a pleasure, which, in spite of envy, they perforce approve.' This Tragedy has been highly commended by Sir Richard Blackmore (11), and he has shewn himself a very judicious critic in all that he says about it; nor is there any reason to dispute the character which he has given it, of being the most perfect tragedy written in that age.

[G] *Will make them always well worth a judicious reader's perusal.*] The title which our author gave this work was, *Amendments of Mr. Collier's false and imperfect Citations, &c. from the Old Batchelor, Double Dealer, Love for Love, Mourning Bride. By the author of those plays* (12). In this apology for his own conduct, he lays down many things which are extremely well worth the knowing, and without knowing which, it is impossible to form a right notion of the innocence, excellency, or use of plays. He observes, that Aristotle defines comedy to be an imitation of the worse sort of people. He does not mean the worse sort of people in respect to their quality, but in respect to their manners. This is plain from his telling you immediately after, that he does not mean relating to all kinds of vice: there are crimes too daring and too horrid for comedy. But the vices most frequent, and which are the common practice of the looser sort of livers, are the subject matter of comedy. He tells us farther, that they must be exposed after a ridiculous manner: For men are to be laughed out of their vices in comedy; the business of comedy is to delight, as well as to instruct: And as vicious people

(c) Lives of the English Poets, vol. i. p. 45. Memoirs of William Congreve, Esq; p. 13.

author some distaste to the stage: however, he afterwards brought on another Comedy, the last, not the least valuable, of his performances. It was intituled *The Way of the World* (c), of which it was so just a picture, that the world could not bear it, which completed the disgust of our author to the Theatre: upon which Mr. Dennis (though not very famous for either) said a very fine, and a very kind thing, *That Mr. Congreve quitted the stage early, and that Comedy left it with him* (d). He seems to have foreseen the fate of his play, which is well revenged in his epilogue, as it is justly exposed in the dedication prefixed to it when it was published; wherein our author shewed, that he knew how to resent the injuries done him by little Critics: but it would have been better if he had stopped there, and not punished the rest of the world for their fakes, by dropping his pen in the prime of life, and when he was most capable of doing honour to himself, and to his country. This play has long ago triumphed over its feeble adversaries, and is now justly esteemed as much as it deserves [H]. He amused himself, however, after this, and

(d) Lives of the English Poets, vol. i. p. 46.

people are made ashamed of their follies or faults, by seeing them exposed in a ridiculous manner, so are good people at once both warned and diverted at their expence. Our author next observes, that since comic poets are obliged by the laws of comedy, and to the intent that it may answer the end and purpose above-mentioned, to represent vicious and foolish characters; it ought not therefore to be imputed to the persuasion or private sentiments of the author, if at any time one of these vicious characters shall behave himself foolishly or immorally, in word or deed. This, says he, would be as hard and as unreasonable, as to believe that a Painter should resemble all the ugly faces that he draws. He next remarks, that Mr. Collier's method of citing detached sentences is unfair, because when thus cited, they may, and indeed must, carry quite another sense, than they do in the author's own work, so that a man becomes criminal by representation only. 'I cannot think it reasonable, says he, because Mr. Collier is pleased to write one chapter of immodesty, and another of profaneness, that therefore every expression traduced by him under those heads, shall be condemned as obscene and profane immediately, and without any farther enquiry. Perhaps Mr. Collier is acquainted with the *deceptio visus*, and presents objects to the view through a stained glass: things may appear seemingly profane, when in reality they are only seen through a profane medium, and the true colour is dissembled by the help of a sophistical varnish: Therefore I demand the privilege of the Habeas Corpus Act, that the prisoners may have liberty to remove, and to appear before a just judge in an open and uncoun-terfeited light.' To these he adds another remark. 'Because, says he, Mr. Collier, in his chapter of the profaneness of the stage, has founded great part of his accusation upon the liberty which poets take of using some words in their plays, which have been sometimes employed by the translators of the holy scriptures: I desire that the following distinction may be admitted, viz. That when words are applied to sacred things, and with a purpose to treat of sacred things, they ought to be understood accordingly: But when they are otherwise applied, the diversity of the subject gives a diversity of signification. And in truth, he might as well except against the common use of the alphabet in poetry, because the same letters are necessary to the spelling of words which are mentioned in sacred Writ.' He adds farther, 'It may not be impertinent to take notice of a very common expedient, which is made use of to recommend the instruction of our plays, which is this: after the action of the play is over, and the delight of the representation at an end, there is generally care taken that the moral of the whole shall be summed up and delivered to the audience, in the very last and concluding lines of the poem. The intention of this is, that the delight of the representation may not so strongly possess the minds of the audience, as to make them forget, or over-see the instruction: it is the last thing said, that it may make the last impression; and it is always comprehended in a few lines, and put into rhyme, that it may be easy and engaging to the memory.' Upon these foundations, he builds the justification of the greatest part of the passages objected to: some others he excuses, and very frankly gives up some, with a promise of correction. As we have already treated of this matter elsewhere, we shall

not insist any longer on it here, but content ourselves with observing, that this dispute had a very good effect upon the stage; and that of all the authors criticized by Mr. Collier, Mr. Congreve was thought to escape the best, and to have defended himself with the greatest appearance of learning, justice, and candour.

[H] *And is now justly esteemed, as much as it deserves.* The reasons are mentioned in the text, why this comedy did not meet with so universal an approbation as his former pieces. It is very certain, the fault was not in the play but in the audience, who were not as yet arrived at that correct taste, which requires that all kind of follies, how general or fashionable soever, should be submitted to the chastisement of the stage. In his dedication to Ralph Earl of Montague, a nobleman justly celebrated both as a competent and candid judge, the author treats this matter with great penetration and perspicuity (13). 'But little of it, says he, was prepared for that general taste, which seems now to be predominant in the palates of our audience. Those characters which are meant to be ridiculed in most of our comedies, are of fools so gross, that, in my humble opinion, they should rather disturb than divert the well-natured and reflecting part of an audience: they are rather objects of charity than contempt; and instead of moving our mirth, they ought very often to excite our compassion. This reflection moved me to design some characters, which should appear ridiculous, not so much through a natural folly (which is incorrigible, and therefore not proper for the stage) as through an affected wit; a wit, which at the same time that it is affected, is also false. As there is some difficulty in the formation of a character of this nature, so there is some hazard which attends the progress of its success upon the stage: for many come to a play so over-charged with criticism, that they very often let fly their censure, when, through their rashness, they have mistaken their aim. This I had occasion lately to observe: for this play had been acted two or three days, before some of these hasty judges could find the leisure to distinguish betwixt the character of a witwound and a true wit.' In the following apology to his patron, for the liberty taken in the foregoing paragraphs, he sufficiently shews, that he felt the treatment that he had met with from the many, to whose decision he was resolved to trust no more. 'I must, says he, beg your Lordship's pardon for this digression, from the true course of this epistle; but that it may not seem altogether impertinent, I beg that I may plead the occasion of it, in part of that excuse, of which I stand in need, for recommending this comedy to your protection. It is only by the countenance of your lordship, and the few so qualified, that such who write with care and pains, can hope to be distinguished: for the prostituted name of poet, promiscuously levels all that bear it.' There stand prefixed to this comedy, a copy of verses by Sir Richard Steele, in which he touches on the same subject, and condemns that coarse taste which induces the multitude to slight true Comedy for Farce. He insinuates, that our author had conquered this folly, and that the crowd were disposed to admire implicitly whatever had the stamp of his name. Mr. Congreve, it seems, would not trust to these implicit admirers: he was resolved not to write down to their understandings, or to put it in their power any more to question his.

(13) See this Dedication, in the third volume of Mr. Congreve's Works.

obliged the world by a great variety of poems and translations (e). He had a fine taste for Music as well as Poetry, which sufficiently appears in his Hymn to Harmony, in honour of St. Cecilia's Day, 1701, set by Mr. John Eccles, his great friend, and one of the most elegant Composers our nation has produced. To him also our author was obliged for setting several of his songs, which are very beautiful in their kind, and have all that vivacity of wit which can give life and lustre to such performances. His early acquaintance with the great, had promised him not an easy only, but a happy station in life, to which it is very rare that either true genius, or any kind of literary merit, recommends any man. This freed him from all obligations of courting any longer public favour, though it still left him under the tie of gratitude to his illustrious friends (f). He acted in a manner suitable to his situation: he very seldom risked the character he had obtained for the sake of exalting it; but he never missed any opportunity of paying his compliments to his high patrons, in a manner worthy of himself and of them. The death of the Marquis of Blandford, only son to the Duke of Marlborough, which happened February 20, 1705, afforded him a melancholy occasion of endeavouring to soften, by celebrating the distress of that illustrious family; which he did in a most beautiful Pastoral (g), inscribed to the Lord Godolphin, Lord High-Treasurer of England. The glorious successes of the British arms, under the invincible Duke before-mentioned, supplied a glorious theme for an Ode to the late Queen Anne, in which he celebrates victories most honourable to this nation, in numbers that justly entitle their author to unfading reputation, as they cannot fail of preserving the memory of those victories, as long as our language shall last, or a true taste in poetry remains (h). In another Pindaric Ode, he celebrated that great Statesman, and true Patriot, the Lord High-Treasurer Godolphin; taking occasion, from that nobleman's great delight in horse-racing, to imitate, or rather to emulate, the Greek Poet, in his favourite manner of writing, by a truly elegant and exquisite digression (i). We owe to him not only these two pieces in a kind of poetry almost before unknown to our language, but also a very learned and judicious dissertation upon this species of poetry, which contains a solid and just criticism on those sort of irregular pieces, that hitherto have passed, though very undeservedly, for Pindarics [I]. The clearness and candour of his criticism, ought to give him as high a character in the Republic of Letters, as even his fine performances in so many different kinds of poetry. His *Birth of the Muse*, and his *Dedication* in verse of his poems when collected, both addressed to his old patron Charles Lord Halifax, are equally grateful and pleasing, though as different in their composition as any two pieces can be: the former is solemn and sublime, the latter easy and familiar. We see, in one, how able the Poet was to rise to the greatest heights, without the least mixture of bombast or fustian; and, in the other, how finely he could unite the becoming liberty of a friend, with that respect which was nevertheless due to his patron's superior rank and dignity. But as, in the earlier part of his life, Mr. Congreve had received obligations from persons of less exalted station, so of these he was highly sensible, and never let slip any favourable opportunity of returning them. He wrote an Epilogue for his old friend Mr. Southerne's fine Tragedy of *Oroonoko* (k); and we learn from Mr. Dryden

(i) The Address of this Poem was, To the Right Honourable the Earl of Godolphin, Lord High-Treasurer of England. A Pindaric Ode.

(k) Congreve's Works, vol. iii. p. 279.

(h) The title of this piece was, *A Pindaric Ode, humbly offered to the Queen, on the Victorious Progress of her Majesty's Arms under the Conduct of the Duke of Marlborough.*

[I] *That hitherto have passed, though very undeservedly, for Pindarics.* It has been hinted in the text, that whenever Mr. Congreve applied himself to any kind of writing in prose or verse, his constant aim was perfection; to which he had not the vanity of thinking he might arrive by the strength of his genius, but applied himself first as a critic, to acquire a thorough knowledge of the nature of his task, before he undertook to execute it as a poet. It was this led him to examine the works of Pindar, with the greatest care, before he attempted to imitate him; and at first sight he discovered how little resemblance the odes, pretending to the character of Pindaric, in our language, had to the odes of that author in respect to numbers, structure, or sentiment. He resolved therefore to restore this ancient and sublime manner of writing, by giving the world a true Pindaric in substance as well as show, that it might appear the force and spirit of this kind of poetry, consisted in the strength of the thought, and not in the looseness or irregularity of the numbers. He enquired also into the cause of so general a mistake, and has assigned it with an equal mixture of critical justice, and the candour of a gentleman. His words are these (14), 'Mr. Cowley, in his preface to his Pindaric odes, speaking of the music of numbers, says, that these sometimes, especially in songs and odes, almost without any thing else, make an excellent poet. Having mentioned Mr. Cowley, it may be very well expected, that something should be said of him, at a time when the imitation of Pindar is the theme of our discourse.'

(14) Congreve's Works, vol. iii. p. 345.

'But there is that great deference due to the memory, great parts, and learning of that gentleman, that I think nothing should be objected to the latitude he has taken in his Pindaric odes. The beauty of his verses are an atonement for the irregularity of his stanzas; and though he did not imitate Pindar in the strictness of his numbers, he has very often happily copied him in the force of his figures, and sublimity of his style and sentiments. Yet I must beg leave to add, that I believe those irregular odes of Mr. Cowley, may have been the principal, though innocent, occasion of so many deformed poems since; which instead of being true pictures of Pindar, have (to use the Italian Painters term) been only caricatures of him, resemblances that for the most part have been either horrid or ridiculous. For my own part I frankly own my error, in having heretofore mis-called a few irregular stanzas a Pindaric ode; and possibly if others, who have been under the same mistake, would ingenuously confess the truth, they might own, that never having consulted Pindar himself, they took all his irregularity upon trust; and finding their account in the great ease with which they could produce odes, without being obliged either to measure or design, remained satisfied, and it may be were not altogether unwilling to neglect being undeceived.' This shews not only how desirous Mr. Congreve was of writing correctly himself, but also how willing to establish so true a taste, as might render correctness necessary to applause.

himself,

himself, how much he owed to his assistance in the translation of Virgil (1) [K]. He contributed, by translating the eleventh Satire, to the translation of Juvenal published by that great Poet, and wrote an admirable copy of verses on the version of Persius performed by Mr. Dryden alone (m). He wrote likewise a Prologue for a play of Mr. Charles Dryden's, full of kindness for that young gentleman, and of respect for his father (n). But the noblest testimony he gave of his filial reverence for that exalted genius, was in that inimitable panegyric upon his writings, contained in the dedication of his plays to his Grace the Duke of Newcastle; a monument that will ever express, in the most lively colours, the worth of him to whose honour it is consecrated, and the capacity, candour, and critical justice, of the hand that raised it. His translations have done him the greatest honour, in the sentiments of those who were the best judges, and who have taken pains to compare them with their originals. The *Hymn to Venus*, and some of the most moving passages in the *Iliad*, appear with all the spirit and dignity of Homer in the English version; and as it is impossible for a learned writer to peruse them without confessing his accuracy, so whoever has a true taste for poetry must feel the effects of that art and force, with which all the emotions naturally rising from the passions of the human mind, are expressed in these nervous pieces (o). His imitations of Horace have as much the air of that Poet, as our times or language will permit; that is, the same strength, vivacity, and delicacy, for which, through a long series of years, they have been admired in the original (p). The third book of *Ovid's Art of Love*, appears in our tongue with all the sweetness and softness peculiar to that author, who was perfectly acquainted with the passion, and knew how to describe it with all the masterly graces of a great Poet; and what was admired in the Augustan age, becomes excellent in ours, from the skill of Mr. Congreve, and the happy union of the most distant excellencies in a translator, ease and exactness (q). He was the better qualified for an undertaking of this kind, from the natural turn of his own temper; for his Poem to, and his excellent Epigram on, Mrs. Arabella Hunt, are entirely in the Ovidian strain, and are as pleasingly pathetic as any Poems in their kind, in our own, or perhaps in any other language (r). There is a strength and solemnity in his verses to the memory of Lady Gethins, and in his Epitaph upon the two Huntingtons (s), that make one scarcely conceive it possible that he should succeed as well in lighter compositions; and yet the tales that he has told after a celebrated French author, are so unaffected and natural, that if we were not apprised of it, we should never have suspected they were translations (t). But there is one piece of his which ought to be particularly distinguished, as being so truly an original, that though it seems to be written with the utmost facility, yet we may despair of ever seeing it copied: this is his *DORIS*, so highly and so justly commended by Sir Richard Steele, as the sharpest and most delicate satire he had ever met with (u). We must not omit, in this free catalogue of his works, two pieces of the dramatic kind, which do him equal honour as a Poet, and as a lover of Music, viz. the *Judgment of Paris*, a *Masque*, and the *Opera of Semele*. Of these, the former was acted with great applause, and the latter finely set to music by Mr. Eccles. In respect to both, it is but bare justice to say, that they have the stamp of excellency borne by the rest of Mr. Congreve's works, were considered as master-pieces when published, and may serve as models to posterity [L]. We have now almost finished the list of his poetical labours,

(1) In his Dedication to John Lord Marquis of Normanby, afterwards Duke of Buckinghamshire.

[K] In the translation of Virgil.] As there have been few authors, whose abilities have been more universally confessed than Mr. Dryden's, so never any author was more remarkable for modesty. He shewed it in that civility, kindness, and candour, with which he corrected the works of others; but much more so in the readiness and gratitude, with which he received any information of mistakes made by himself. He knew that every man was fallible, and therefore, with all the great gifts he received from nature, did not at all repine at his being in that respect not exempt from the lot of mortals. It was from a true sense of this, and not a vain affectation of hearing his own praises echoed, that he communicated his works, before they were printed, to the ablest of his friends, that he might receive their help as well as censure. Neither was he afraid or ashamed to confess this to the world; for he knew that men of parts and probity, would approve and applaud it. In his dedication therefore to the Marquis of Normanby, afterwards Duke of Buckinghamshire, he makes the following mention of our author (15). Mr. Congreve has done me the favour to review the *Aeneis*, and compare my version with the original. I shall never be ashamed to own, that this excellent young man has shewed me many faults, which I have endeavoured to correct. The English translation of Virgil was not published until 1697, but Mr. Dryden was engaged in it in 1695, and consequently at the time he consulted our

author, he was only between twenty-three and twenty-four years of age. What an honour to have his opinion asked by the greatest poet of his time, upon a subject of such importance to his reputation; what an honour to justify both his friendship and his judgment on so critical an occasion; and what an honour to receive the laurel from his learned brow, only to fix it again upon his tomb; to be the defender of that great man's fame when he was dead, who had loved him so much living; and piously to vindicate the character of him, whose generous, though just, praises had laid the foundation of his own?

[L] And may serve as models to posterity.] The great art of adapting poetry to music, though studied by many, has been acquired by few. This very plainly appears from the want of a true poetic spirit, in many of the pieces set to fine music, in which we evidently perceive, that the notes were not accommodated to the words, but the words to the notes. We do not indeed perceive this so plainly, during the performance, when the faculties of the mind are so transported by the sweetness of the sound, that we have not power to discern the defects in the sense. But what escapes us on the Theatre, stares us in the face in the closet; and we cannot help wondering, when we read what it was that transported us so much in the hearing. But the few great masters that have reached the sublime heights of Harmony, instead of receiving from, communicate helps to the most able composer.

bours, in which we have been the more particular, because it was peculiar to Mr. Congreve to have written and excelled, not barely in every kind of dramatic poetry, but almost in every kind of poetry. The last to which he turned his genius was that of familiar epistles. Of these, that on the *Art of Pleasing* (w), addressed to Sir Richard Temple, afterwards Viscount Cobham, is the only one inserted in his works; and is so truly admirable, that the public has just reason to regret some others that are still said to be preserved in the cabinets of his friends to whom they were addressed, and which it is hoped will one day see the light. Another epistle of his to the same noble person, as it is not to be found in his works, we have, as one of its brightest ornaments, inserted in ours, from a copy that appeared to be very correct [M]. This naturally leads us to mention his prose letters,

(w) Congreve's Works, vol. iii p. 332.

composer. Of this we have the strongest instance in Mr. Dryden's celebrated ode on St. Cecilia's day, which not only ravishes us when performed, but when read, and thereby convinces the judicious peruser of the real force of numbers. The same thing may with equal justice be said of our author's masque, the songs in which are most admirably adapted to the characters, as well as the music; and the performance is not only perfect upon the stage, but perfect also when considered only as a poetic entertainment; and though we may see it with more rapture, yet we read it too with the highest delight, and find nothing in it flat or insipid for want of the support of music. There is an excellency in every kind of writing; and as an author is justly entitled to reputation who reaches this in any, so admiration is the just tribute to that exalted genius that reaches it in all: I need not tell the reader, that this is Mr. Congreve's claim to admiration. His opera of *Semele* was never performed; but, for all that, it has been universally admired. The fable is happily chosen and skilfully managed; the scenes are finely disposed, the sentiments perfectly agreeable to the subject, and the language exactly suitable to the sentiments. There is, however, one thing that deserves peculiar notice, and that is, the manner in which our author has disposed that part of his work which seemed least susceptible of sense and grace at the same time. Himself shall give you an account of it, for none but himself could express it so well. 'It was (16) not thought requisite to have any regard either to rhyme or equality of measure, in the lines of that part of the dialogue, which was designed for the recitative style in music; for as that style in music is not confined to the strict observation of time and measure, which is required in the composition of airs and sonata's; so neither is it necessary that the same exactness in numbers, rhymes, or measure, should be observed in words designed to be set in that manner, which must ever be observed in the formation of odes and sonnets: for what they call recitative in music, is only a more tunable speaking; it is a kind of prose in music; its beauty consists in coming near nature, and in improving the natural accents of words by more pathetic or emphatical tones.' This explains what had never been explained before, that is to say, the nature and meaning of the recitative; how far it approaches, and wherein it is removed from prose; what the use of it, and consequently what rules are to be observed in its composition, so as to keep it from sinking servilely low, and to restrain it from swelling into rant and bombast.

[M] Inserted in ours, from a copy that appeared to be very correct.] This beautiful poem is written with that simple elegance, that force of genius, and that dignity of sentiment, which leaves no room to doubt of its being justly attributed to Mr. Congreve. At what time it was written cannot be said with any pretence to certainty; but as there is a visible allusion in the poem to measures, which the writer thought were too complaisant to the *French*, it is very evident that it must have been penned but a very small time before his death. The title it bears is this,

Of improving the present time.

Sincerest critic of my prose or rhyme,
Tell how thy pleasing Stowe employs thy time.
Say, Cobham, what amuses thy retreat?
Or stratagems of war, or schemes of state?

Dost thou re-call to mind, with joy or grief,
Great Marlbro's actions? that immortal chief,
Whose slightest trophy, rais'd in each campaign,
More than suffic'd to signalize a reign.
Does thy remembrance rising, warm thy heart
With glory past, where thou thyself had'st part;
Or dost thou grieve indignant, now to see
The fruitless end of all thy victory?
To see the audacious foe, so late subdu'd,
Dispute those terms for which so long they su'd,
As if Britannia now were sunk so low,
To beg that peace she wonted to bestow.
Be far, that guilt! be never known that shame!
That England should retract her rightful claim!
Or ceasing to be dreaded and ador'd,
Stain with her pen the lustre of her sword.
Or dost thou give the winds afar to blow,
Each vexing thought and heart-devouring woe,
And fix thy mind alone on rural scenes,
To turn the levell'd lawns to liquid plains;
To raise the creeping rills from humble beds,
And force the latent springs to lift their heads;
On watry columns capitals to rear,
That mix their flowing curls with upper air?
Or dost thou, weary grown, these works neglect,
No temples, statues, obelisks erect;
But catch the morning breeze from fragrant meads,
Or shun the noon-tide ray in wholesome shades;
Or lowly walk along the mazy wood,
To meditate on all that's wise and good?
For nature, bountiful in thee, has join'd,
A person pleasing, with a worthy mind;
Not given the form alone, but means and art,
To draw the eye, or to allure the heart.
Poor were the praise in fortune to excel,
Yet want the way to use that fortune well.
While thus adorn'd, while thus with virtue crown'd,
At home in peace; abroad, in arms renown'd;
Graceful in form, and winning in address,
While well you think what aptly you express,
With health, with honour, with a fair estate,
A table free, and elegantly neat;
What can be added more to mortal bliss?
What can he want that stands possess'd of this?
What can the fondest wishing mother more,
Of Heaven attentive, for her son implore?
And yet, a happiness remains unknown,
Or to Philosophy reveal'd alone;
A precept which, unpractis'd, renders vain
Thy flowing hopes, and pleasure turns to pain.
Shou'd hope and fear thy heart alternate tear,
Or love, or hate, or rage, or anxious care,
Whatever passions may thy mind infest,
(Where is that mind which passions ne'er molest?)
Amidst the pangs of such intestine strife,
Still think the present day the last of life;
Defer not 'till to-morrow to be wise,
To-morrow's fun to thee may never rise;
Or shou'd to-morrow chance to cheer thy sight
With her enliv'ning and unlook'd-for light,
How grateful will appear her dawning rays!
As favours unexpected doubly please.
Who thus can think, and who such thoughts pursues,
Content may keep his life, or calmly lose.
All proofs of this, thou may'st thyself receive,
When leisure from affairs will give thee leave.
Come, see thy friend retir'd, without regret,
Forgetting care, or striving to forget,
In easy contemplation, soothing time
With morals much, and now and then with rhyme;
Not

(16) See the argument prefixed to Mr. Congreve's Opera of *Semele*, in the third vol. of his Works.

letters, which are dispersed through the works of other men; but, whenever they have a new edition, would make a very natural and a very valuable addition to his own. His letter upon *Humour* in English Comedy, is, without doubt, as instructive, as entertaining, and as correct a piece of criticism as is any where to be met with (x). All his other letters are written with infinite wit and spirit, and at the same time with a wonderful facility, and a fine flow of language, so happily intermixed with lively and inoffensive raillery, that it is impossible not to be pleased with them at the first reading, or to find any fault with them on the most mature reflection. We may be satisfied from the perusal of them, that his conversation must have been very engaging; and, therefore, we need not wonder that he lived in such familiarity with the greatest men of his time, or that they courted his friendship, by rendering him every good office in their power. It has been observed, that no change of Ministries affected him in the least, nor was he ever removed from any post that was given him, excepting to a better (y). His place in the Custom-House, and his office of Secretary in Jamaica, are said to have brought him in upwards of twelve hundred pounds a year; and though he lived in a manner suitable to such a fortune, yet he was so far an œconomist, as to raise from thence a competent estate. No man of his parts and learning ever passed through life with more ease, or less envy; and as in the dawn of his reputation he was very dear to the greatest wits of his time, so during his whole life he preserved the utmost respect, and received continual marks of esteem from men of genius and letters, without ever being involved in any of their quarrels, or drawing upon himself the least mark of distaste, or even dissatisfaction. On the contrary, they sought his approbation with concern, and received it as the highest sanction of merit. Mr. Addison testified his personal regard for him, and his high esteem of his writings, upon many occasions. Sir Richard Steele considered him as his patron upon one occasion, and was desirous of submitting to his judgment as an umpire on another (z). Even the judicious Mr. Pope, though sufficiently jealous of his poetical character, thought fit to honour him with the highest testimony of deference and esteem (a) [N]. We may add to all this, that Mr. John Dennis, who valued himself so much upon criticising the works of the ablest writers of his time, was so sensible of the superior excellence of Mr. Congreve's writings, or at least was so grateful for the repeated marks of affability and beneficence which he received from him, that he always spoke of him, not with decency only, but with veneration; which, if not a peculiar felicity, must at least have been a singular satisfaction to a man of Mr. Congreve's peaceable disposition, who, as he never gave any offence, was very desirous, if it was possible, to avoid abuse (b). There is no doubt that Mr. Congreve had an appetite to fame, and was not insensible of praise: yet never any man was freer from vanity, or shewed less concern about the fate of his writings; insomuch, that a foreigner of distinction, and, without comparison, the best Poet his country has to boast, was a little offended at this, and thought him rather too careless as to his literary reputation (c) [O].

Not so robust in body as in mind,
And always undejected, tho' declin'd;
Not wond'ring at the world's new wicked ways,
Compar'd with those of our fore-fathers days;
For virtue now is neither more or less,
And vice is only vary'd in the dress:
Believe it, men have ever been the same,
And *Ovid's* GOLDEN AGE is but a dream.

WILLIAM CONGREVE.

[N] With the highest testimony of deference and esteem.] Those who were well acquainted with the late Mr. Pope know, that there was nothing he despised so much in others, or the imputation of which he could have borne with so little patience himself, as the paying a servile court, and shewing a mean dependance upon any man, how great soever. He knew that virtue was true nobility, and parts the riches of nature: hence his deep reverence for Mr. Bethel, and his high regard for Mr. Congreve. To them, however, he would have been ashamed to dedicate his works, and yet to them he was proud to inscribe them. He looked upon his performances, as monuments secure from time and accident, and every name they bore as consecrated to immortality. This was his sentiment, nor was it vanity: the most generous possessor of gold knows the properties and value of the metal as well as the meanest miser. Let us hear then what praises one who was so sparing of them has bestowed on Mr. Congreve. We shall find them at the close of his postscript to the translation of Homer, and there they run thus (17). 'Instead of endeavouring to raise a vain monument to myself, let me leave behind me a memorial of my friendship, with one of the most valuable men, as well as finest

writers of my age and country. One who has tried, and knows by his own experience, how hard an undertaking it is to do justice to Homer, and one who I am sure, sincerely rejoices with me at the period of my labours. To him therefore, having brought this long work to a conclusion, I desire to dedicate it, and to have the honour and satisfaction of placing together in this manner the names of Mr. Congreve, and of

A. POPE.

[O] As to his literary reputation.] The gentleman mentioned in the text, was the late eminent wit, and justly esteemed poet of France, Mr. Voltaire, who, in the short time that he stayed here, acquired indeed a wonderful knowledge of our language, and of our manners; notwithstanding which, however, he was sometimes mistaken; and it is the more necessary to take notice of his mistakes, because no man's authority in the world is more likely to pass them upon the present age, or upon posterity, for undoubted truths. The character he is pleased to give Mr. Congreve runs thus: 'He raised the glory of comedy to a greater height than any English writer before or since his time (18). He wrote only a few plays, but they are excellent in their kind. The laws of the drama are strictly observed in them. They abound with characters, all which are shadowed with the utmost delicacy, and we do not meet with so much as one low or coarse jest. The language is every where that of men of fashion, but their actions are those of knaves; a proof that he was perfectly well acquainted with human nature, and frequented what we call polite company. He was infirm, and come to the verge of life when I knew of him.

(18) Letters concerning the English Nation, p. 188, 189.

(17) Postscript to his Translation of the Iliad of Homer, dated March 25, 1720: Vol. IV.

X

The best part of the last twenty years of his life was spent in ease and retirement; but towards the end of his days he was very much afflicted with the gout, which at length broke his constitution so much, as to bring on a gradual decay. It was for this, that in the summer of the year 1728, he made a tour to the Bath for the benefit of the waters, where he had the misfortune to be overturned in his chariot, from which time he complained of a pain in his side, which was supposed to arise from some inward bruise. However it was, upon his return to London, his health declined more and more, but without making any impression on his spirits or understanding. He had accustomed himself to consider life, and every thing belonging to it, as blessings in which we have a very uncertain tenure, and therefore was not either surprized or disturbed at the prospect of losing it: the only concern he expressed, was for the grief it occasioned to his friends, more especially those for whom he had a tender affection, and a most profound esteem. He yielded his last breath about the hour of five on Sunday morning, January 19, 1728-9, at his house in Surrey-street in the Strand, in the fifty-seventh year of his age (e); and on the Sunday following, January 26, his corpse lay in state in the Jerusalem-Chamber, from whence, the same evening, between the hours of nine and ten, it was carried, with great decency and solemnity, into King Henry the VIIIth's Chapel; and, after the funeral service was performed, was interred in the Abbey. The pall was supported by the Duke of Bridgewater, Earl of Godolphin, Lord Cobham, Lord Wilmington, the Honourable George Berkeley, Esq; and Brigadier-General Churchill; and Colonel Congreve followed his corpse as chief mourner. Some time after, a neat and elegant monument, with a suitable inscription thereupon [P], was erected to his memory by Henrietta Duchess of Marlborough.

(e) Mr. Congreve's last Will and Testament. Lond. 1730, 8vo. p. 10.

Mr. Congreve had one defect, which was his entertaining too mean an idea of his first profession, that of a writer, though it was to this he owed his fame and fortune. He spoke of his works as of trifles that were beneath him, and hinted to me in our first conversation, that I should visit him upon no other foot than that of a gentleman, who led a life of plainness and simplicity. I answered that had he been so unfortunate as to be a mere gentleman, I should never have come to see him, and I was very much disgusted at so unseasonable a piece of vanity.

It is somewhat strange to hear an author accused of vanity, for undervaluing his own works. We often meet with censures even upon great men, for talking continually of themselves and their writings; but it is a very singular censure that is passed upon Mr. Congreve, that he was troubled with an unseasonable vanity, which hindered him from talking of them at all. The truth of the matter seems to have been, that instead of feeling an unseasonable vanity, he had outlived the season of vanity, if ever he had any; and having no longer any thing of the pride of an author about him, it is not at all wonderful that his conversation was not relished by Mr. Voltaire, whose merit, as an author, was superior to every thing—but the sense he had of that merit.

[P] *With a suitable inscription thereupon.* As the erecting of this monument is later, in point of time, than any of the collections of such kind of ornaments in Westminster-Abbey*, it is proper to insert the inscription here, which runs thus. 'Mr. William Congreve died Jan. the 19th, 1728, aged fifty-six, and was buried near this place; to whose most valuable memory this monument is set up, by Henrietta, Dutches of Marlborough, as a mark how dearly she remembers the happiness and honour she enjoyed in the sincere friendship of so worthy and honest a man, whose virtue, candour and wit, gained him the love and esteem of the present age, and whose writings will be the admiration of the future.' C.

* [There are scarcely any new circumstances, relative to the personal history of Mr. Congreve, which can at present be collected by the most diligent investigation. Notwithstanding his own assertion that he was born in England, it is believed by many, and hath positively been affirmed by some of his Biographers, that Ireland was the country of his nativity. Dr. Johnson appears to have been of this opinion. "It was said by himself," observes the Doctor, "that he owed his Nativity to England, and by every body else that he was born in Ireland. Southerne mentioned him with sharp censure, as a man that meanly disowned his native country.—To doubt whether a man of eminence has told the truth

about his own birth, is, in appearance, to be very deficient in candour; yet nobody can live long without knowing that falsehoods of convenience or vanity, falsehoods from which no evil immediately visibly ensues, except the general degradation of human testimony, are very lightly uttered, and when once uttered, are fully supported. Boileau, who desired to be thought a rigorous and steady moralist, having told a petty lye to Lewis the fourteenth, continued it afterwards by false dates; thinking himself obliged in honour, says his admirer, to maintain what, when he said it, was so well received (19)." Whilst we are sensible of the acuteness of the preceding remark, and that it shews Dr. Johnson's great knowledge of the human mind, we are not satisfied with the application of it, in regard to Mr. Congreve. There doth not appear to be any sufficient reason for charging him with maintaining a falsehood; and his assigning so particularly the place in Yorkshire in which he declared that he was born, has all the appearance of truth. Accordingly, his two last Biographers, in the New and General Biographical Dictionary, and in the Biographia Dramatica, decidedly prefer our Poet's own testimony to that of Mr. Southerne (20).

(19) Johnson's Lives of the Poets, vol. iii. p. 41, 42. Octavo edition.

(20) New and General Biographical Dictionary, vol. iv. p. 86. Biographia Dramatica, vol. i. p. 95.

In contradiction to every account we have of Mr. Congreve, Dr. Swift, in the following lines, has represented him as but indifferently provided for, in the more early part of his life.

"Thus Congreve spent in writing plays,
And one poor office, half his days,
While Montagu, who claim'd the station
To be Mecenas of the nation,
For Poets open table kept,
But ne'er consider'd where they slept.
Himself, as rich as fifty Jews,
Was easy, tho' they wanted shoes;
And crazy Congreve scarce could spare
A shilling to discharge his chair,
Till prudence taught him to appeal
From pæan's fire to party zeal;
Not owing to his happy vein
The fortunes of his latter scene;
Took proper principles to thrive,
And so might every dunce alive."

These lines afford a striking instance how much men are biased by a party spirit, and what little dependence can be placed on satirical writers, in their representations of characters and facts. Swift's design was to throw abuse on Lord Halifax, in the doing of which he has not scrupled to violate truth (21). It would have been strange indeed, if Congreve could scarcely afford a shilling for the discharge of his chair, been obliged.

(21) From the communications of a correspondent, to whom we have often been obliged.

*When this note was written.

chair, when, from his first setting out in the world, he was put into valuable places by his noble patron.

Theophilus Cibber (or rather Mr. Shiells) informs us, that it is said, that when Congreve found his play of the "Way of the World" not likely to be successful, he came in a passion on the stage, and desired the audience to save themselves the trouble of shewing their dislike; for he never intended to write again for the theatre, nor submit his works to the censure of impotent critics (22). As this fact is grounded only upon report, we cannot pay much credit to it; especially, as it doth not seem to comport with Mr. Congreve's acknowledged manners as a Gentleman.

Of our author's controversy with Jeremy Collier, proper notice is taken under that Gentleman's article; and, therefore, we shall only add in this place, that however successful Congreve might be in his attempts to vindicate some particular passages in his comedies, it was totally out of his power to defend their general tendency. In the latter part of his life, he became convinced that his conduct as a writer could not admit of a justification. On a visit to Mr. Bevern the Quaker, in company with Mr. Pope, he said, in the course of the conversation, that he most sincerely wished that it were possible to obliterate all the offensive and impure passages in his works; and that he was fully sensible of the errors into which he had been betrayed, by the liveliness of youth (23).

Our worthy Predecessor, Dr. Campbell, has taken some pains in vindicating Mr. Congreve's behaviour to Voltaire; but the generality of Biographers will be found to disapprove of that behaviour. Cibber observes, that, when he owed to his wit and writings the reputation, as well as the fortune he acquired, his pretending to divest himself of human nature to such a degree, as to have no consciousness of his own merit, was the most absurd piece of vanity which ever entered into the heart of man; and that of all vanity, that is the greatest which masks itself under the appearance of the opposite quality (24). "He treated," says Dr. Johnson, "the muses with ingratitude: for, having long conversed familiarly with the great, he wished to be considered rather as a man of fashion than of wit; and, when he received a visit from Voltaire, disgusted him by the despicable foppery of desiring to be considered not as an author but a gentleman (25)." Congreve, however, has had the good fortune to meet with an ingenious defender in an eminent modern Poet. "I have often thought," says Mr. Mason, "that Mr. Congreve might very well be vindicated on this head. It seldom happens that the vanity of authorship continues to the end of a man's days. It usually soon leaves him where it found him; and if he has not something better to build his self-approbation upon than that of being a popular writer, he generally finds himself ill at ease, if respected only on that account. Mr. Congreve was much advanced in years when the young French Poet paid him this visit; and, though a man of the world, he might now feel that indifference to literary fame which Mr. Gray, who always led a more retired and philosophic life, certainly felt much earlier. Both of them, therefore, might reasonably, at times, express some disgust, if their quiet was obtruded upon by persons who thought they flattered them by such intrusion (26)." Whatever force there may be in this reasoning, we believe that the common sense of mankind will find it difficult to acquit Mr. Congreve of some degree of vanity and affectation, in his reception of Voltaire's visit.

The bequest of Congreve to Henrietta, Duchess of Marlborough, has been exposed to strictures. It is Cibber's remark, that he would have made a better figure in his last will, had he remembered the friendship he professed for Mrs. Bracegirdle, whose admirable performance added spirit to his dramatic pieces; but that he forgot her, and gratified his vanity by choosing a rich Duchess his sole legatee, and executrix (27). This short paragraph is full of mistakes. It is not true that Mr. Congreve forgot Mrs. Bracegirdle; for he left two hundred pounds to that Lady. He bequeathed, likewise, several other legacies, among which were some to his relations; and particularly, three hundred pounds to William Congreve,

son of Colonel William Congreve of Highgate; and two hundred pounds to Mrs. Anne Congreve, daughter of Colonel Ralph Congreve, of Clarges-street. Neither was the Duchess of Marlborough the executrix of our Poet's last will. He constituted the Earl of Godolphin his sole executor, in trust for the Duchess his Lordship's wife, and in confidence of his honour and justice (28). Mr. Congreve's leaving to that Lady the bulk of his fortune, which amounted to ten thousand pounds, is not to be justified. Dr. Johnson justly observes, that this accumulation of attentive parsimony, though to her superfluous and useless, might have given great assistance to the ancient family from which he descended, at that time, by the imprudence of his relation, reduced to difficulties and distress (29). The Duchess of Marlborough's attachment to Congreve appears to have been of a very extravagant nature. Cibber mentions it; but the following account of it hath been transmitted to us by a respectable correspondent. "This Lady, commonly known by the name of the young Duchess of Marlborough, had a veneration for the memory of Mr. Congreve which seemed nearly to approach to madness. Common fame reports, that she had his figure made in wax after his death, talked to it as if it had been alive, placed it at table with her, took great care to help it with different sorts of food, had an imaginary fore on its leg regularly dressed; and to compleat all, consulted Physicians with relation to its health. These things are usually ranked under the appellation of *whim*. But whenever a person acts thus absurdly, the best excuse is insanity." It ought to be remembered, that as the preceding account is grounded only on common report, there is the highest probability of its being greatly exaggerated.

Of Congreve's works much hath been said by various writers, whose remarks are not to be neglected; and particular regard will deserve to be given to those which have been made by Dr. Johnson. Concerning the "Incognita, or Love and Duty reconciled," the Doctor says, that "it is praised by the Biographers, who quote some part of the preface, that is indeed, for such a time of life, uncommonly judicious. I would rather praise it than read it (30)." Not being altogether so fastidious, we have perused this performance, and, as it is short, without much hindrance to better objects. It has merit, considering the age of the author. What it is chiefly distinguished by, is that intricacy of plot which he afterwards so much displayed in his dramatic writings; and something may be traced in the dialogue parts, of his succeeding coruscations of wit. The story, however, is very unnatural. We shall not read it again.

Dr. Johnson's general estimation of our Poet's genius as a Dramatist is finely expressed. "Congreve, says the Doctor, has merit of the highest kind; he is an original writer, who borrowed neither the models of his plot, nor the manner of his dialogue. Of his plays I cannot speak distinctly; for since I inspected them many years have passed; but what remains upon my memory is, that his characters are commonly fictitious and artificial, with very little of nature, and not much of life. He formed a peculiar idea of comic excellence, which he supposed to consist in gay remarks and unexpected answers; but that which he endeavoured, he seldom failed of performing. His scenes exhibit not much of humour, imagery, or passion: his personages are a kind of intellectual gladiators; every sentence is to ward or strike; the contest of smartness is never intermitted; his wit is a meteor playing to and fro with alternate coruscations. His comedies have therefore, in some degree, the operation of tragedies; they surprise rather than divert, and raise admiration oftener than merriment. But they are the works of a mind replete with images, and quick in combination (31)."

Of Mr. Congreve's first play, the "Old Batchelor," Dr. Johnson thus speaks:

"Such a comedy, written at such an age, requires some consideration. As the lighter species of dramatic poetry professes the imitation of common life, of real manners, and daily incidents, it apparently presupposes a familiar knowledge of many characters,

(27) Cibber, *ubi supra*, p. 93.

and exact observation of the passing world; the difficulty therefore is to conceive how this knowledge can be obtained by a boy.

"But if the *Old Batchelor* be more nearly examined, it will be found to be one of those comedies which may be made by a mind vigorous and acute, and furnished with comic characters by the perusal of other poets, without much actual commerce with mankind. The dialogue is one constant reciprocation of conceits, or clash of wit, in which nothing flows necessarily from the occasion, or is dictated by nature. The characters both of men and women are either fictitious and artificial, as those of *Heartwell* and the *Ladies*; or easy and common, as *Wittol* a tame idiot, *Bluff* a swaggering coward, and *Fondlewife* a jealous puritan; and the catastrophe arises from a mistake not very probably produced, by marrying a woman in a mask.

"Yet this gay comedy, when all these deductions are made, will still remain the work of a very powerful and fertile mind: the dialogue is quick and sparkling, the incidents such as seize the attention, and the wit so exuberant that it *o'er-informs its tenuity* (32)."

(32) *Ibid.* p. 45, 46.

Concerning our author's second performance, the "*Double Dealer*," the Editors of the *Biographia Dramatica* observe, that "the characters of it are strongly drawn, the wit genuine and original, the plot finely laid, and the conduct inimitable; yet such is, and ever has been the capricious disposition of audiences, that it met not equal encouragement with the "*Old Batchelor* (in some respects a much more exceptionable play,) nor had it the same success with his later performances (33)."

(33) *Biographia Dramatica*, vol. ii. p. 91.

Dr. Johnson remarks, that the comedy of "*Love for Love*" is of nearer alliance to life, and exhibits more real manners, than either of the former. "The character of *Forefight*, says that eminent Biographer, was then common. Dryden calculated nativities; both Cromwell and King William had their lucky days; and Shaftesbury himself, though he had no religion, was said to regard predictions. "The *sailor* is not accounted very natural, but he "is very pleasant (34)." We well remember that above forty years ago the character of *Ben* was not deemed unnatural. It was then a common tradition, that Congreve had resided six weeks at Portsmouth, in order to draw the character from living manners. It is true, that the generality of seamen are not so witty as *Ben*; but there have always been some wits among that body of people. A man must be a great stranger to Portsmouth and Plymouth, who does not know that a good deal of sea-wit subsists in those places. Besides, *Ben* is not a common sailor, but a Gentleman's son brought up to the navy.

(34) Johnson, *ubi supra*, p. 47, 48.

The annotators, in the last edition of Beaumont and Fletcher's works, have pointed out two passages in the "*Elder Brother*" of those Poets, which Congreve appears to have had in his eye when he wrote his "*Love for Love* (35)." We dispute not the instances; but surely no Dramatist was ever less of a borrower.

(35) Beaumont and Fletcher's *Dramatic Works*, vol. ii. p. 116. 157. notes.

Scarcely any tragedy has had more different accounts given of it than Congreve's "*Mourning Bride*." We have inserted a high character of it in the article of Blackmore (36), and Lord Kaims speaks of it in very favourable terms. Treating on the violation of the unity of place, he adds: "From the foregoing censure must be excepted the "*Mourning Bride*" of Congreve, where regularity concurs with the beauty of sentiment and of language, to make it one of the most complete pieces England has to boast of." Lord Kaims acknowledges, however, that in point of regularity, it is not altogether unexceptionable; the unity of place being broken in the fifth act (37). The Editors of the *Biographia Dramatica* treat the "*Mourning Bride*" with no small degree of contempt. "Thus, they say, is the "only tragedy our author ever wrote, and met with "more success than any of his other pieces; yet it "is certainly greatly inferior to the very worst of "them: for although the story is a pleasing and affecting one, and well told, yet the language has so "much of the bombast, and so little of real nature

(36) *Biog. Brit.* vol. ii. p. 329, 330.

(37) *Elements of Criticism*, vol. iii. p. 324, 325. Second edition.

"in it, that it is scarcely credible it could be the "work of an author so remarkable for the contrary, "in the easy flowing wit of his comedies (38)." We have observed, that other critics have spoken of the "*Mourning Bride*" in the like contemptuous language; not, we confess, with our entire approbation; for, though we are not insensible of its faults, we think, at the same time, that it has considerable excellencies: and it is some argument in its favour, that it has maintained its popularity on the theatre, so as to be continued a stock play, down to the present period. Mrs. Siddons has not deemed it derogatory to her reputation to appear frequently in the character of *Zara*. Dr. Johnson, though not partial to the "*Mourning Bride*," says, that it is so written as to shew that Mr. Congreve was sufficiently qualified for either kind of dramatic poetry. The Doctor remarks, however, that there is more bustle in this play than sentiment; that the plot is busy and intricate, and the events take hold on the attention; but that, excepting a very few passages, we are rather amused with noise, and perplexed with stratagem, than entertained with any true delineation of natural characters. To these strictures Dr. Johnson hath added a passage highly to Congreve's honour. "But "whatever objections may be made either to his "comic or tragic excellence, they are lost at once in "a blaze of admiration, when it is remembered, that "he had produced these four plays before he had "passed his twenty-fifth year; before other men, "even such as are some time to shine in eminence, "have passed their probation of literature, or presume to hope for any other notice than such as is bestowed on diligence and inquiry. Among all the efforts of early genius which literary history records, I doubt whether any one can be produced that more surpasses the common limits of "nature than the plays of Congreve (39)."

(38) *Biographia Dramatica*, vol. ii. p. 243.

Our Author's "*Way of the World*" is generally esteemed the most perfect of his comedies. It is observed, in the *Biographia Dramatica*, that, as it is the last, it is perhaps the best of his plays; that the language is pure, the wit genuine, the characters natural, and the paintings highly finished; and that, though it was not well received at the first, time has since opened the eyes of the town to its perfections (40). Lord Kaims commends the "*Way of the World*," on account of its preserving the unity of place during every act, and a stricter unity of time during the whole play than is necessary (41).

(40) Vol. ii. p. 399.

(41) *Elements of Criticism*, vol. iii. p. 325.

None of our readers can be ignorant of Mr. Pope's line,

"Tell me if Congreve's fools are fools indeed."

In reference to this line, and speaking of the character of *Lady Withfort*, Mr. Mason has the following curious observation. "For my own part, I think it one of the most entertaining characters that ever was written. I know, however, that it is commonly thought extravagant and unnatural; and I believe it is true, that no woman ever existed who had so much folly and affectation, and at the same time so much wit and fancy: yet every one sees that were this wit and fancy taken away, her character would become insipid, in proportion as it became more natural; so that in this and other instances, if Congreve's fools were fools indeed, they would, by being true characters, cease to be entertaining ones (42)."

Mr. Murphy, in his life of Henry Fielding, having mentioned that he had contracted a vicious turn of writing by making Congreve his model, and that he had derived an error in his style from the same source, thus characterizes the latter Gentleman's comedies. "It has been observed, that the plays of Congreve appear not to be legitimate comedies, but strings of repartees, and sallies of wit, the most poignant and polite indeed, but unnatural and ill-placed. If we except the *Old Batchelor*, *Forefight*, and *Sir Sampson Legend*, there will hardly, perhaps, be found a character in this lively writer, exempt from this general censure. The frequent surprizes of allusion, and the quickness and vivacity of these sudden turns, which abound in Mr. Congreve, "breaking

(42) *Memoirs of the Life and Writings of Mr. Gray*, p. 214. Quarto edition.

“ breaking out where you least expected them, as if
“ a train of wit had been laid all around, put one in
“ mind of those fire-works in a water-piece, which
“ used formerly to be played off in Cuper's Gardens.
“ No sooner one tube, charged with powder, raised
“ itself in various forms and evolutions of fire, but
“ instantly another and another was lighted up; and
“ the pleasure of the spectators arose from seeing
“ secret artificial mines blazing out of an element,
“ in which such a machinery could not be expected

(43) Life of
Fielding, prefixed
to his Works, p.
43. Edition of
1784.

“ (43).” A short character of our poet is drawn by
Dr. Blair. “ Congreve, says the Doctor, is, unques-
tionably, a writer of genius. He is lively, witty,
and sparkling; full of character, and full of action.
His chief fault as a comic writer, is, that he over-
flows with wit. It is often introduced unseason-
ably; and, almost every where, there is too great
a proportion of it for natural well-bred conversa-

(44) Lectures on
Rhetoric and
Belles Lettres, vol
ii. p. 545, 546.

tion (44).” What this ingenious author hath ad-
ded, concerning the immoral tendency of both
Congreve's and Farquhar's play's, cannot be omitted.
Throughout them all, the rake, the loose intrigue,
and the life of licentiousness, are the objects con-
tinually held up to view; as if the assemblies of a
great and polished nation could be amused with
none but vicious objects. The indelicacy of these
writers, in the female characters which they intro-
duce, is particularly remarkable. Nothing can be
more awkward than their representations of a
woman of virtue and honour. Indeed, there are
hardly any female characters in their plays except
two; women of loose principles, or women of af-
fected manners, when they attempt to draw a cha-
racter of virtue. The censure which I have now
passed upon these celebrated comedians, is far from
being overstrained or severe. Accustomed to the
indelicacy of our own comedy, and amused with
the wit and humour of it, its immorality too easily
escapes our observation. But all foreigners, the
French especially, who are accustomed to a better
regulated and more decent stage, speak of it with
surprize and astonishment. Voltaire, who is, as-
suredly, none of the most austere Moralists, plumes
himself not a little upon the superior *bienveillance* of
the French theatre; and says, that the language of
English comedy is the language of debauchery,
not of politeness. M. Moralt, in his Letters upon
the French and English nations, ascribes the cor-
ruption of manners in London to comedy, as its
chief cause. Their comedy, he says, is like that
of no other country: it is the school in which the
youth of both sexes familiarise themselves with
vice, which is never represented there as vice, but
as mere gaiety (45).” To finish the censure of
the immorality of the English comedies, we shall
transcribe the conclusion of a fine passage upon the
subject, by Lord Kaims, in his Elements of Criticism.

(45) Ibid. p.
546, 547.

“ How odious ought those writers to be, who thus
spread infection through their country, employing
the talents they have from their Maker most un-
gratefully against himself, by endeavouring to cor-
rupt and disfigure his creatures! If the comedies
of Congreve did not rack him with remorse in
his last moments, he must have been lost to all
sense of virtue. Nor will it afford any excuse to
such writers, that their comedies are entertaining,
unless it could be maintained, that wit, sprightli-
ness, and other such qualifications, are better suited
to a vicious than a virtuous character: the direct con-
trary of which holds true in theory; and is exem-
plified in practice from the *Merry Wives of Windsor*,
where we are highly entertained with the conduct
of two ladies, not more remarkable for mirth and
spirit than for the strictest purity of manners (46).”

(46) Elements of
Criticism, ubi
supra, p. 400.

In our Predecessor's article, the most extravagant
encomiums are bestowed on Mr. Congreve's Miscel-
laneous Poems. Such exuberant and indiscriminate
praise is seldom the result of judgment, and certainly
is not so in the present case. Our Author's Dramatic
Works excepted, few readers will now be able to go
through his poetical productions with any great de-
gree of pleasure. Dr. Johnson's criticism upon them
affords a fine contrast to the loud applauses of the
text; and, indeed, in every view, deserves to be in-
serted. Perhaps, in the fastidiousness of his taste, he

may sometimes be thought too severe: but if he have
erred in this respect, with regard to the instance be-
fore us, his error is very trifling. Nay, we can
scarcely help thinking that the following remarks on
Congreve are strictly and universally just.

“ Of his miscellaneous poetry, I cannot say any
thing very favourable. The powers of Congreve
seem to desert him when he leaves the stage, as Antæus
was no longer strong than he could touch the ground.
It cannot be observed without wonder, that a mind
so vigorous and fertile in dramatic compositions,
should on any other occasion discover nothing but
impotence and poverty. He has in these little pieces
neither elevation of fancy, selection of language, nor
skill in versification: yet if I were required to select
from the whole mass of English poetry the most poe-
tical paragraph, I know not what I could prefer to an
exclamation in *The Mourning Bride*:

ALMERIA.

It was a fancy'd noise; for all is hush'd.

LEONORA.

It bore the accent of a human voice.

ALMERIA.

It was thy fear, or else some transient wind
Whistling thro' hollows of this vaulted ile:
We'll listen—

LEONORA.

Hark!

ALMERIA.

No, all is hush'd, and still as death.—'Tis
dreadful!

How reverend is the face of this tall pile;
Whose ancient pillars rear their marble heads,
To bear aloft its arch'd and pond'rous roof,
By its own weight made steadfast and immoveable,
Looking tranquillity! It strikes an awe
And terror on my aching sight; the tombs
And monumental caves of death look cold,
And shoot a chillness to my trembling heart.
Give me thy hand, and let me hear thy voice;
Nay, quickly speak to me, and let me hear
Thy voice—my own affrights me with its echoes.

“ He who reads these lines, enjoys for a moment
the powers of a poet; he feels what he remembers to
have felt before, but he feels it with great increase of
sensibility; he recognizes a familiar image, but meets
it again amplified and expanded, embellished with
beauty, and enlarged with majesty.

“ Yet could the author, who appears here to have
enjoyed the confidence of Nature, lament the death
of queen Mary in lines like these:

The rocks are cleft, and new-descending rills
Furrow the brows of all th' impending hills.
The water-gods to floods their rivulets turn,
And each, with streaming eyes, supplies his wanting
urn.

The Fawns forsake the woods, the Nymphs the grove,
And round the plain in sad distractions rove;
In prickly brakes their tender limbs they tear,
And leave on thorns their locks of golden hair.
With their sharp nails, themselves the Satyrs wound,
And tug their shaggy beards, and bite with grief the
ground.

Lo Pan himself, beneath a blasted oak,
Dejected lies, his pipe in pieces broke.
See Pales weeping too, in wild despair,
And to the piercing winds her bosom bare.
And see yon fading myrtle, where appears
The Queen of Love, all bath'd in flowing tears;
See how she wrings her hands, and beats her breast,
And tears her useless girdle from her waist:
Hear the sad murmurs of her sighing doves!
For grief they sigh, forgetful of their loves.

And many years after he gave no proof that time had
improved his wisdom or his wit; for on the death of
the Marquis of Blandford this was his song:

And now the winds, which had so long been still,
Began the swelling air with sighs to fill:

Y

The

The water-nymphs, who motionless remain'd,
Like images of ice, while she complain'd,
Now loos'd their streams; as when descending rains
Roll the steep torrents headlong o'er the plains.
The prone creation, who so long had gaz'd,
Charm'd with her cries, and at her griefs amaz'd,
Began to roar and howl with horrid yell,
Dismal to hear, and terrible to tell;
Nothing but groans and sighs were heard around,
And Echo multiplied each mournful sound.

In both these funeral poems, when he has *yelled* out many *syllables* of senseless *dolour*, he dismisses his reader with senseless consolation: from the grave of Pastora rises a light that forms a star; and where Amaryllis wept for Amyntas, from every tear sprung up a violet.
"But William is his hero, and of William he will sing;

The hovering winds on downy wings shall wait
around,
And catch, and waft to foreign lands, the flying
sound.

It cannot but be proper to shew what they shall have to catch and carry:

'Twas now, when flowery lawns the prospect made,
And flowing brooks beneath a forest shade,
A lowing heifer, loveliest of the herd,
Stood feeding by; while two fierce bulls prepar'd
Their armed heads for fight; by fate of war to
prove

The victor worthy of the fair-one's love.
Unthought presage of what met next my view;
For soon the shady scene withdrew.
And now, for woods, and fields, and springing
flowers,

Behold a town arise, bulwark'd with walls and
lofty towers;

Two rival armies all the plain o'erspread,
Each in battalia rang'd, and shining arms array'd;
With eager eyes beholding both from far,
Namur, the prize and mistress of the war.

"The *Birth of the Muse* is a miserable fiction. One good line it has, which was borrowed from Dryden. The concluding verses are these:

This said, no more remain'd. Th' ethereal host
Again impatient crowd the crystal coast.
The father, now, within his spacious hands,
Encompass'd all the mingled mass of seas and
lands;

And, having heav'd aloft the ponderous sphere,
He launch'd the world to float in ambient air.

"Of his irregular poems, that to Mrs. Arabella Hunt seems to be the best: his ode for Cecilia's Day, however, has some lines which Pope had in his mind when he wrote his own.

"His Imitations of Horace are feebly paraphrastic, and the additions which he makes are of little value. He sometimes retains what were more properly omitted, as when he talks of *vervain* and *gums* to propitiate Venus.

"Of his Translations the satire of Juvenal was written very early, and may therefore be forgiven,

though it have not the massiness and vigour of the original. In all his versions strength and sprightliness are wanting: his hymn to Venus, from Homer, is perhaps the best. His lines are weakened with expletives, and his rhymes are frequently imperfect.

"His petty poems are seldom worth the cost of criticism: sometimes the thoughts are false, and sometimes common. In his verses on lady Gethin, the latter part is an imitation of Dryden's ode on Mrs. Killigrew; and Doris, that has been so lavishly flattered by Steele, has indeed some lively stanzas, but the expression might be mended; and the most striking part of the character had been already shewn in *Love for Love*. His *Art of Pleasing* is founded on a vulgar but perhaps impracticable principle, and the staleness of the sense is not concealed by any novelty of illustration or elegance of diction.

"This tissue of poetry, from which he seems to have hoped a lasting name, is totally neglected, and known only as it is appended to his plays.

"While comedy or while tragedy is regarded, his plays are likely to be read; but, except what relates to the stage, I know not that he has ever written a stanza that is sung, or a couplet that is quoted. The general character of his *Miscellanies* is, that they shew little wit, and little virtue.

"Yet to him it must be confessed, that we are indebted for the correction of a national error, and the cure of our Pindaric madness. He first taught the English writers that Pindar's odes were regular; and though certainly he had not the fire requisite for the higher species of lyric poetry, he has shewn us that enthusiasm has its rules, and that in mere confusion there is neither grace nor greatness (47)."

Mr. Melmoth, in his elegant *Sir Thomas Fitzborne's Letters*, hath clearly shewn, that some passages, which Congreve translated from Homer, are perfectly contemptible, when compared with Pope's version of the same passages (48).

Mr. Congreve's short *Essay on Humour* in Comedy, though not a regular and finished composition, contains some sensible observations on that difficult subject. Lord Kaims objects, and perhaps justly, to the exactness of his definition (49); but, notwithstanding this, several of his remarks are deserving of attention. Mr. Congreve refers humour to peculiarity of character, to which it does undoubtedly, in general, belong; though sometimes it appears to arise from an odd combination of incidents. His Remarks on Ben Jonson are very judicious (50).

In Mrs. Cockburn's life, are two letters, written to that ingenious lady, when young, by Mr. Congreve. The second of them contains some acute, but friendly, hints with regard to the plot of one of her tragedies (51).

It appears, from Mr. Ayscough's Catalogue, that there are preserved, in the British Museum, several original letters of Mr. Congreve's to Mr. Porter; and a manuscript poem, entitled, "Satyr against Love (52)."

We forgot to mention, in its proper course, that when, upon the extrusion of the Whigs, some intercession was used lest Congreve should be displaced, the Earl of Oxford made this answer:

"Non obtusa adeo gestamus pectora pœni,
"Nec tam averfus equos Tyriâ sol jungit ab urbe
"(53)."

CONNOR (BERNARD), an eminent Physician and learned Writer towards the close of the last century. He was descended from an ancient family in the kingdom of Ireland, and was born in the county of Kerry about the year 1666 (a). He had an early tincture of learning given him, though he was not regularly educated in the grammar-schools and university of that island, on account of his family's being of the Popish religion (b). When he grew up towards man's estate, either out of regard to the exhortations of his family, or from the natural turn of his own disposition, he determined to apply his thoughts to the study of Physic; and with that view, about the year 1686, he went over to France, resided for some time in the university of Montpellier, and went from thence to Paris, where he spent his time so well, and directed his studies in so prudent and regular a manner, that he was very much esteemed, not only for his proficiency in the art of Physic, but for his great skill in Anatomy and Chemistry (c). As he professed himself desirous of travelling,

travelling, and as there were two sons of the High-Chancellor of Poland then on the point of returning to their own country, it was thought expedient they should take that long journey under the care and inspection of Dr. Connor (*d*). He accordingly conducted them very safely to Venice, where he found the Honourable Mr. William Legg, afterwards Baron and Earl of Dartmouth, much indisposed of a fever; from which, by his great skill and diligent attendance, he happily recovered him; and having accompanied him to Padua (*e*), went from thence through Tyrol, Bavaria, and Austria, down the Danube to Vienna; and after having made some stay at the Court of the Emperor Leopold, passed through Moravia and Silesia to Cracow, and from thence, in eight days, to Warsaw (*f*). He was very well received at the Court of King John Sobieski, and by the interest of Signor Hieronimo Alberto de Conti, Minister from the Serene Republic of Venice, who married the Lady Margaret Paston, eldest daughter to Robert, and sister to William Earl of Yarmouth, to whom he had been strongly recommended, he became Physician to that Monarch (*g*). This was a very extraordinary preferment in so short a time, and for so young a man; for it happened in the beginning of the year 1694, when Dr. Connor could not be above twenty-eight years of age. In right of his employment he was constantly near the person of that Prince, which gave him an opportunity of entering thoroughly into his character, and of discerning that he was not only a deep Politician, and one of the greatest Captains of his age, but a person also of sound sense, great reading, quick parts, and much addicted to think freely upon all subjects. He gives us a very singular and curious instance of this (*h*), which, as it serves to let us into the Doctor's turn and disposition, as well as the King's, is inserted at the bottom of the page [*A*]. His reputation

[*A* At the bottom of the page.] The King, says he (*i*), was a well-spoken Prince, of very easy access, extremely civil, and had most of the good qualities requisite in a gentleman. He was not only well versed in all military affairs, but likewise in all polite and scholastic learning. Besides his own tongue, the Sclavonian, he understood the Latin, French, Italian, German, and Turkish languages: he delighted much in Natural History, and in all the parts of Physic: he used to reprimand the Clergy for not admitting into the university and schools the Modern Philosophy. He loved to hear persons discourse of those matters, and had a particular talent to set people about him very artfully by the ears, that, by their disputes, he might be diverted, as happened often in my time, especially once when I was undesignedly concerned myself. The King being at dinner, and having the Bishops of Posenania, Plosko, Vilna, and other Divines about him, particularly Father Vota, an ingenious Jesuit, the King asked me in Latin, 'What part of the body I thought the soul was in?' I was willing to decline talking on that subject, and told the King, 'That being a Physician, my chief enquiry was about the body, and that the Divines there present were able to satisfy his Majesty.' The King replied, 'That since the soul has an influence upon the body, and since the passions of the mind, as anger and fear, breed fevers, and other distempers, it was necessary that the Physicians should examine the soul in that respect, as well as the body.' I answered, 'That Physicians did enquire into the nature of the passions, and observed, that there was such an influence of the soul upon the body, and of the body upon the soul, that altered the thoughts of the one, as well as the operations of the other; but that the soul being a substance invisible, and without extension, it was impossible for Physicians to conceive the nature of it themselves, or explain it to others, as they do that of the body, which they take to pieces by Anatomy, and resolve into its minutest elements by Chemistry: that the Physicians only agree in the main, that the supreme Author of things has established such laws between the soul and the body, which make a mutual correspondence between them: that as for the seat of the soul, I might perhaps differ from the Divines then present, and consequently oppose the common doctrine of the schools; for they hold with Aristotle, that the soul is entire in all the body, and wholly in every part of the body, which was impossible to conceive; for if the soul was entire in every part of the body, there would be as many souls in the body as there are parts; since it is impossible that the self-same substance, though an indivisible spirit, can ever be in two places at the same time; besides, the soul cannot be but where it thinks; and every one finds,

by experience, that his thought is not in his hands nor feet, but is conscious to himself, that his thought is in his head, and that consequently the soul must be only in the brain, which is the seat of sensation, and the origin of all the nerves, which are the organs of perception and motion.' Father Vota being alarmed at this doctrine, which seemed altogether new in that part of Europe, said, 'That if the soul was only in the head, the rest of the body would be dead; since the received opinion was, that the soul was the life of the whole body, and that to enliven the whole body, the soul must be wholly present in every part of it.' This drew on a longer dispute than I expected; for I answered, 'That the rational soul was not the life of the body, but the blood only, and the animal spirits; and that this blood and spirits circulated equally all over the body, and gave it natural heat and motion, which is properly its life; and that this circulation of the blood and spirits could not possibly depend on the rational soul, because it was an involuntary motion, formed by the mechanic structure of the body, and by the natural impulse of the heart, which is the *primum mobile* of the whole machine; and that though they all held, not only in Poland, but in other countries, that the rational soul performed every minute action in the body, yet this opinion was very irreconcilable with the free-will of the mind, which they all admitted; for since they allow, that whatever the soul does, it is not only conscious of it, but likewise does it freely, without being necessitated thereto; when, as it is very evidently obvious to every one, that the vital motions in our bodies, I mean the motion of the heart, and that of respiration, with the peristaltic motion of the stomach and guts, are performed naturally with such mechanism, that the soul cannot stop them, no, nor so much as hasten nor retard them; and that the soul is not at all conscious of them; for if we think of any object, or not think at all, as when we are asleep, or in an apoplexy, those vital motions go on equally the same.' The Bishop of Posenania, who was bred up in his youth a Physician, seemed to speak in favour of this opinion, as did likewise some others of the company, which made the Jesuit very angry; insomuch, that he acquainted them in a kind of passion, 'That neither the King nor they ought to hearken to any discourse contrary to the received opinion of the Church: that it might have been a pernicious consequence had it been public; for (says he) if the soul be not in all the body, and if it does not animate the body, and perform all its vital functions, it would be of no use, and consequently we should live like other animals.' I answered him, 'That doubtless the operations of life were performed by the same mechanism

tion in the Court of Poland was highly raised by the judgment he made of the Duchess of Radzivil's distemper, which all the Physicians of the Court took to be no more than an ague, from which she might be easily recovered by the regular and constant taking of the Bark; but Dr. Connor insisted, that she had an abscess in her liver, and that her case was desperate (i). As this Lady was the King's only sister, his prediction made a great noise, more especially when it was justified by the event; for she not only died within a month, but, upon the opening of her body, the Doctor's sentiments of her malady were fully verified. He might have continued, with great reputation, at that Court, if he had been so inclined; but as he never proposed to remain longer in Poland than was requisite to finish his enquiries into the Natural History, and other remarkables of that kingdom; and as he foresaw that the King's life could not last long, and that there was little reason to hope for the establishment that was promised him, from the political views of the royal family, he resolved to lay hold of the first favourable opportunity for quitting that country, and returning into the British dominions; nor was it long before he met with as fair an occasion as he could wish (k). The King had an only daughter, the Princess Teresa Cuni-gunda, who espoused the Elector of Bavaria by proxy, in the month of August, 1694. As she was to make a journey from Warsaw to Brussels, of nearly a thousand miles, and in the midst of winter, it was thought necessary that she should be attended by a Physician; and, by the interest of his good friend the Venetian Minister, he procured himself to be named to that employment (l), and accordingly set out with her on the 11th of November for Berlin, and continued his journey through the territories of the Elector of Hanover, the Bishop of Hildesheim, and the Bishop of Munster, to Wezel, where she was met by the Elector of Bavaria; and from thence he proceeded in her train to Brussels, where she arrived on the 12th of January following (m). He soon after resigned his charge to Dr. Pistorini, the Elector's Physician; and, having taken leave of the Princess, set out for Holland, and from thence came over to England, in the month of February 1695 (n). He stayed some short time at London, and then went to Oxford, where, in the spring of the year last mentioned, he read his Lectures upon the Animal Economy, to a numerous and learned audience, with very great applause (o). In his travels through Italy he had conversed with Malpighi, Bellini, Redi, and other celebrated persons (p), of whose acquaintance he made a proper use; and distinguished himself by so clear, so methodical, and so judicious a manner of explaining the new discoveries in Anatomy, Chemistry, and Physic, that his reputation was very soon raised to a great height. This was not a little increased by his printing, during the time of his residence in that seat of the Muses, several learned and accurate Dissertations upon curious and important subjects; which treatise met with a very favourable reception (q), as it certainly deserved, from the many new and sensible thoughts that occur in every part of it, and which discover their author to have been a man of much meditation, as well as of great reading and general know-

nism in us as they were in brutes, since we have the same organs with them, as likewise the same fluids to enliven us: that the prerogatives of the soul are not less for its not being present to every action of the body; for the soul, though it is not the cause of spontaneous or vital motion in us, yet it performs all voluntary actions, as speaking, walking, and all other free motions of the body; it receives all impressions from the five senses, it forms to itself all ideas of ambient objects, it reasons upon them to know what is most useful and hurtful to itself and to the body. The soul, in short, is like the pilot, though it does not set the body in motion, as the wind does a ship, yet it is capable of governing its actions, and directing voluntarily its course. The King being thus satisfied, that the rational soul did not actuate, as they call it, or enliven, all the parts of the body, desired to know what was properly *Death*. The school Divinity maintains, that *Death* is a separation of the rational soul from the body. I owned, indeed, 'That in death the soul was actually separated from the body.' But I could not allow, 'That that separation was the cause of death, but that the death of the body was the cessation of the motion of the heart, of the blood, and of the spirits; which cessation could not proceed from the separation of the soul, since these do not at all depend upon it,' as I proved before, 'but it was occasioned by some defects in the organs and fluids of the body, which, losing their due disposition, and their mutual correspondence one with another, all their actions cease, which cessation is properly called *Death*; so that the soul, finding them incapable of receiving

its influence, and of obeying its commands, quits the body after it is dead; by which it appears, that the separation of the soul is not properly the cause of death, but that the death of the body is the cause of the separation.' The King himself illustrated this opinion from a familiar example of an organ and an organist: while the parts of the organ were in their due order and symmetry, the organist played upon them; but when, by length of time, they were either broke, used too much, or any other way put quite out of tune, he leaves playing on them. This discourse held from three of the clock till seven, and the Divines were extremely warm in it; and some of them had the boldness to tell the King, that his Majesty should not suffer such heretical opinions to be introduced before such a great assembly, contrary to the received doctrine of the Church. By this it may be plainly seen, how fond the Divines are of their old opinions; relying upon the doctrine of Aristotle, whom we cannot suppose to be so thoroughly acquainted with the structure, springs, and motions of the human body, nor indeed with all other natural causes as the modern Physicians are; yet it is the policy of the Divines, not only in Poland, but in Spain, Italy, and in most other countries, where their power is very great, not to let any opinions creep in among them that would seem to contradict those of Aristotle; for having built their systems of Divinity upon the principles of this Pagan Philosopher, they are justly afraid, that if experience and reason should shake the foundation, the superstructure would fall to the ground, as doubtless it would for the most part.

ledge.

ledge [B]. He returned in the summer of 1695 to London, lived in Bow-street, Covent-Garden, and in the winter read a course of Lectures of the same kind that he had done at Oxford (r), and which were received with general approbation. He became, about this time, a member of the Royal Society, and a member of the Royal College of Physicians also, which were a kind of rewards justly due to his great application and singular merit (s). In the summer of the year 1696, he went to Cambridge, in consequence of an invitation from some of the members of that University, read public Lectures there, and made various experiments in Chemistry (t). Upon his return from thence to London, he was honoured with a letter from the Bishop of Plozkow, wherein was contained the case of his old master the King of Poland, upon which his advice was desired; but before he had an opportunity of returning an answer, the news came of that Monarch's death (u). As he was naturally addicted to speak his sentiments very freely, even upon very nice and delicate subjects, he adventured, both at Oxford and at Cambridge, to let fall some discourses in relation to miracles, and of a new method of explaining the nature of them in a physical way, upon which he had digested his sentiments into writing some years before. He was very much pressed to make this work of his public; and though he could not but foresee that many inconveniencies would attend it, yet the solicitations upon this head were so strong, and came from persons to whom he was so much obliged, that he could not avoid yielding to their request (w). He took, however, the precaution of procuring the licence of the College of Physicians, which bears date April 9, 1697, and is subscribed by Sir Thomas Millington, then President, and by Dr. Barwick, Dr. Torlesse, Dr. Dawes, and Dr. Gill, who were Censors (x). He dedicated it to the Right Honourable Charles Montague, Chancellor of the Exchequer, and President of the Royal Society. This work of his made a very great noise in the world, and came to a second edition the same year: it is written in Latin, with as much perspicuity as the subject would permit, and with great prudence and circumspection [C]. Notwithstanding this, it made a bad

(x) It is prefixed to his book.

[B] As well as of great reading and general knowledge.] These essays were printed together, under the following general title, viz. *Dissertationes Medico-Physicæ, de Antris Lethiferis. De Montis Vesuvii Incendio. De Stupendo Ossium Coalitu. De Immani Hypogastrii Sarcomate, A. D. Bernardo Connor, M. D. Serenissimi Poloniae Regis Medico, & Regia Camera Patris Societate. Oxonii. E Theatro Sheldoniano Sumptibus Henrici Clementis Bibliopolæ, An. Dom. 1695, 8vo. That is, 'Medico-physical Dissertations concerning Pestiferous Caverns, an extraordinary eruption of Mount Vesuvius, the wonderful coalition of human Bones, and of an extraordinary swelling or dropsy of the womb.' These treatises are printed separately, and with different title pages. There is a table of contents to the first, and another to the other three. The Vice-Chancellor's Imprimatur is dated June 5, 1695. The first of these discourses is dedicated to Thomas, Earl of Pembroke and Montgomeryshire, at that time Lord Privy-Seal, and one of the Lord Justices. It is written very succinctly, and with great perspicuity: the author introduces and discusses a multitude of curious questions, and gives his reasons for believing, that there is nothing infectious or poisonous in the famous cave near Naples; but that animals are killed therein, or rather lose their lives, through the want of elasticity in the air, which renders it unfit for animal respiration. The second discourse is addressed to Dr. Edward Browne, whom he compliments highly upon his Book of Travels that he had published. He therein gives a particular description of a most remarkable eruption of Mount Vesuvius, which happened in the month of April, 1694, and which he attributes to the vast quantities of nitre and antimony lodged in the bowels of that mountain (2). He addresses his third discourse to Dr. John Ratcliff, Fellow of the Royal Society, and of the College of Physicians; and therein he gives an accurate account of an anatomical prodigy which he had seen at Paris. The fourth treatise is dedicated to Dr. Hans Sloane, then one of the King's Physicians, Fellow of the Royal Society, and of the Royal College, who was afterwards knighted, and became President of both those learned bodies; in which he gives him an account of the dissection of a widow at Paris, who died at the age of fifty-seven, and who laboured under a monstrous big belly, occasioned by a mole, or false conception, for twenty-five years. This fleshy substance was of an enormous size, being in length twenty-two inches, twelve*

broad, ten thick, and weighing forty-two pounds. What is most observable in these dissertations, is the great art and skill which the author has shewn in bringing in a great variety of useful subjects, more especially relating to the animal œconomy, of which he discourses with much freedom and judgment; from whence it is very evident, that they were not published so much with a view to gratify the curiosity of the learned men at that time, as to excite a good opinion of the author's capacity and knowledge in his profession; and, at the same time, to shew the improvements he had made in his travels, that by this means he might come into practice with the greater ease and credit. It is pretty certain that this method had its effects, and that if he had not been taken off so suddenly, he would have very soon grown into as high repute as any Physician of his time. It seems to be a pity that these dissertations have not been translated, as there is a great variety of curious observations in them, that would prove very entertaining to the English reader.

[C] And with great prudence and circumspection.] In the first place it will be necessary to see the title of it at large, which we may presume has given at least as much offence as the book, it runs thus: *Evangelium Medici: seu Medicina Mystica de Suspensis Naturæ Legibus, sive de Miraculis; Reliquisque in totis Scælarum Memoratis, quæ Medicæ indagari subijci possunt. Ubi perpenfis prius Corporum Naturæ, sano & morbofo Corporis Humani Statu, nec non Motus Legibus, Rerum Status super naturam, præcipue qui Corpus Humanum & Animam spectant, juxta Medicinæ Principia explicantur. A Bernardo Connor, M. D. & R. S. S. i. e. 'The Physician's Gospel: or, Mystical Physic, with respect to the suspension of the laws of nature, or of miracles; and whatever else worthy of note occurs in the sacred writings, that falls properly under the consideration of Physic, wherein the nature of bodies, the sound and diseased state of human bodies, as also the laws of motion, and the supernatural state of things, more especially of the human body and soul, are previously considered, and, according to the principles of Physic, explained.' Londini 1697, 8vo & 12mo. Amstelodami 1699, 8vo. This curious little treatise contains sixteen short sections, in which the author, with great clearness and conciseness, and with the most perfect connection, treats every part of his subject so as to make the reader fully sensible, that he had not hastily or superficially run it over in his mind, but with great care and caution*

(2) He gives a very clear and accurate description of this mountain, from his own observation.

a bad impression upon some minds, occasioned a suspicion of the author's religious principles here at home, and has given occasion to some warm and inconsiderate writers abroad,

tion had considered all things that he advances, and the consequences that might be drawn from them. The best, as well as most succinct account that can be given of it, the reader will meet with in the following extract of a letter, written by himself, to an eminent Divine (3).

(3) This letter is to be found at the end of the first vol. of his Hist. of Poland.

My design, Sir, says he, is to endeavour to make it no longer a difficulty to conceive and make evident, by reason and the principles of Physic, I mean the principles of nature, all the supernatural effects authentically delivered to us concerning bodies chiefly, but particularly the human: I mean, supposing those effects to be true matters of fact, and all matters of fact, as well natural as supernatural, to be immediate effects of a supreme Being, which must be granted; it is as easy to conceive the manner how this infinite power may be applied to bodies to work supernatural effects, as to produce the common phenomena of nature. By this I hope to convince our Sceptics, the Deists, who must give their assent, when they have the same evident reason to conceive the possibility, and consequently to believe the truth, of such miraculous effects, that are authentically related, as they have to conceive, that straw can burn in a flaming fire. The foundation I go upon is the structure of the human body, which I have often taken to pieces by Anatomy, and resolved into its essential elements, or minute particles, by Chemistry; for I find it as necessary to be acquainted with its fabric, to give an account of the miraculous states it is supposed to have been in supernaturally, as it is to explain the natural effects commonly produced in it. For want of a sufficient insight into this matter, several Divines in the latter ages have given very gross ideas of the supernatural effects they have pretended to explain; and in several places where I have been, I saw them, either through ignorance, or for interest, give out for miracles, phenomena, that were only surprising effects of natural causes, which has given so great an occasion to Scepticism, and increase of Deism. Having laid down for my basis the structure of the human body, as far as I could discover from my senses, anatomy, fire, microscopes, and experiments, I proceed to examine, and endeavour to explain, the different ways its natural state is supposed to have been supernaturally altered by an infinite power: for finding that the human body is all matter, and that all this matter is nothing but an union of particles with bulk, figure, and respective situation, I thought that all the alterations that could supernaturally happen to this bulk, figure, or situation, could be conceived. But before I enter upon those nice subjects, I find it first necessary to enquire into the cause, nature, and laws of motion, because motion is the only true cause of all natural phenomena; and the suspensions of the laws of this motion, are the only causes of all supernatural effects. I conceive the laws of motion can be suspended three different ways; and by one or more of these laws of suspension, it is as easy to solve clearly all supernatural effects, as it is to explain the most evident effects of natural causes by the common laws of motion. Though I mention, that all supernatural effects whatsoever can be easily reduced to some of the three laws of suspension of motion, notwithstanding I do not design to speak of them all in particular, but of such only as are most in dispute amongst the learned; yet any understanding man may easily make his application, and resolve all other miraculous effects into one or other of them. By the suspension of the laws of motion, I do not mean, that these laws are changed or abrogated, but only that their course is stopt while an effect is produced by the immediate action of the Deity, without any influence of theirs, for some particular end; and it cannot be denied, but that supreme Legislator, who made first the laws, may suspend them when he pleases, and, in that state of suspension, produce, of himself alone, without their

concurrence, the same effects, which are wont to be produced only by the same laws put in execution; so that though a body, for example, of a hundred pound weight, by the established laws of motion, must be moved by another that has several degrees of motion, yet an infinite power may, of himself, either move it without the concurrence of another body, or hinder its being moved by any other body of what weight soever, though put into the most rapid motion, as if combustible matter should be in a flaming fire without burning. — Sir, the learned and judicious gentlemen of your own, can have no reason to complain, that I invade their province, or encroach upon their prerogatives; for I do not undertake to prove, that there ever were any supernatural effects produced: that matter, I think, belongs entirely to Divines to make evident from authentic testimony. I only endeavour to demonstrate the possibility of them, and if there were ever any, to explain the mode and mechanism with which we may conceive how they might have been performed. This is not doing any prejudice to your profession; for I have that respect to the Church, and that deference to the Clergy, that I did nothing in this matter without the advice and approbation of those of them that are in the highest station; and they owned, that though this subject had never yet been handled by any Physician, nor indeed by any Divine that I know of, yet it was only a Physician's business to treat of, according to the principles of Natural Philosophy and Physic: for since it is on all sides acknowledged, that miraculous effects are above natural causes, no people can better judge whether any effect is really supernatural, than those that make it their business and profession to know how far the activity of natural causes can reach. For Physicians may find some times that what the wilful mistakes of some, and the ignorance of others, take for supernatural, is the visible effect of a natural cause, as I observed once at Rome some years since; passing by chance through the Strada del Popolo, I saw a multitude of people hurrying a man to St. Mark's Chapel, which belongs to the Venetian Ambassador; they told me, that he was possessed with the devil, and that they were carrying him to be exorcised. I crowded through the throng into the church, and felt the man's pulse; I found him in a fever, making hideous grimaces and motions with his face, eyes, tongue, and all his limbs, which were nothing else but a fit of convulsive motions all over his body, occasioned by disorder of his blood and his spirits, being a hypochondriacal person. The clergy and people began very devoutly to fright the pretended devil out of him, and, in a little time, his disorderly motion ceased; which, as they thought it to be the miraculous effect of their prayers, I attributed to the natural abatement and usual cessation of such fits. Every understanding Naturalist knows, that an able Chemist can work such surprising effects in his art, as may very easily pass for miracles with such as are unacquainted how far the force of natural causes can extend. It would seem to them very astonishing to see two liquors that are cold of their own nature ferment, boil, and become very hot, without any visible cause to put them in motion: to see Aqua Regalis dissolve massy gold, Aqua Fortis dissolve silver, iron, Mercury, and most other minerals: to see the Spirit of Nitre, and the Oil of Cloves, which separately are very quiet, turn into a burning flame when mixed together; to see transparent liquors, when mixed, turn red, green, white, and into all sorts of colours. I say nothing of the Phosphorus, of the surprising effects of the Air-Pump, of the elasticity of the Air, of the Magnet, nor of an infinite number of other wonderful Phenomena in nature, which though they may be common, yet they are not the less surprising, because their cause is as hid from those that do not, and even to those that do, study nature, as that of

super-

(y) Reimanni, *Historia Universalis Atheismi & Atheorum*, p. 449. Heisteri *Apologia pro Medicis*, p. 10.

(a) This he tells us himself in the same Preface.

abroad (y), to represent him as an absolute Atheist; though there is nothing more certain, than that the Doctor was entirely free from any thing of that kind, and actually wrote this piece with a very good intention: neither is there any thing in the treatise, that, fairly considered, will admit of any such construction, notwithstanding the prejudices that have been raised against it. The Polish election, upon the death of King John Sobieski, having a strong influence upon the general system of affairs in Europe, and being from thence a common topic of discourse at that time, induced many persons of the first distinction to desire the acquaintance of Dr. Connor, that they might inform themselves as to the state of that kingdom, than which there was none so little known, or so indifferently understood, amongst the generality even of intelligent persons: and the satisfaction given by the Doctor in his conversations upon these subjects was such, that he was desired to gratify the public, by committing what he knew of the Polish nation and country to the press (z). Upon his giving his consent to this, he found himself so much hurried in the execution, and this hurry so inconvenient with respect to his practice, that he was obliged to engage one Mr. Savage to assist in composing, correcting, and publishing that performance (a). The method he took, was that of an ingenious French Jesuit in his account of China; that is to say, he threw his materials into the form of letters, each of which he addressed to some person of high rank and distinction, who perhaps had formerly desired those lights from him, that are given in the Epistle thus addressed. The two volumes of which this work consists, were published separately; and the last more especially, carries in it many marks of precipitation: but, however, it must be allowed to be the best book that we have upon the subject, or rather, to contain the best things in it, and may be read with equal pleasure and improvement (b) [D]. There are some particulars which fell more immediately under the author's own inspection, that are very curious, and not to be met with elsewhere; such as his account of the salt-mines, of young children carried away and nourished by bears, and of the diseases peculiar to that country,

(b) *Methode pour etudier l'Histoire*, par M. l'Abbé du Fresnoy, Tom. iv. p. 294.

* supernatural effects is to those Naturalists who trace natural causes to their highest sphere of activity. I do not doubt, but that if the missionaries that are sent from the Western Churches to convert the Pagans of the Eastern Nations, were as well versed in Anatomy and Chemistry, as they are in the tenets of the Christian Religion, and in the Mathematics, and that if they did but dazzle the eyes of those ignorant people with a great many curious and useful experiments in these two fundamental branches of Physic, they would perhaps make as deep impressions upon their minds, and give them as convincing testimonies of the power and legality of their mission, as they can at present by the spiritual or indelible character they say is inherent in them, by virtue of their commission. Pope Clement X. knew well the effects which Chemistry, artfully applied, might produce in the minds of ignorant people, when he secured the person of the famous Italian, Signior Borri, who, about thirty-five years ago, by his skill in Chemistry, did work several extraordinary cures on diseases in Germany, and gained such universal reputation all over the Empire, and the northern kingdoms, that, (as it was reported of him) he thought he had credit and opportunity sufficient to invent and propagate a new religion, by making his surprizing experiments in Chemistry pass for miracles; which they might have easily done, since Chemistry being then in its minority was not much known in the world. But the Pope, foreseeing the ill consequence such a design might produce, gave timely orders to his Nuncio, then at Vienna, to desire the present Emperor to get him seized; which being accordingly done, he was sent prisoner to Rome, on condition nevertheless, that his life should be safe. Here he lived in Castello St. Angelo for several years, where I saw him, and his curious Laboratory for Chemistry, allowed him for his diversion. Nobody was admitted to discourse him without special leave, for fear, I suppose, he should inform the world either of his pretended new doctrine, or of the injustice he might intimate that was done to him. He died lately in this close confinement since I have been at Rome. To this is added another little piece, intitled, *Teutamen Epistolare de Secretione Animalis*, that is, 'An Epistolary Essay upon Animal Secretion,' addressed to Edward Southwell, Esq; son to Sir Edward Southwell, formerly President of the Royal Society.

[D] *With equal pleasure and improvement.*] The title of this work promises largely (4), and there is no doubt that the author was both willing and able to have performed what he promised, if he had been suffered to proceed in his own way; for as he was naturally a very close and concise writer, he intended to have insisted chiefly upon matters of the greatest moment, and upon facts and things that fell under his immediate observation, and to have brought the whole into an octavo volume; which if he had done, there is no doubt it would have appeared a very correct, and finished performance: but being prevailed upon to extend his plan, and to leave the open part of it, for which he had no materials, to be filled up from books by another person, it is, to say the truth, not a little confused and unequal; but wherever we can discern the Doctor's pen, the reader is sure to meet with something worthy his notice. The first volume is divided into six letters, viz. to the Earl of Dartmouth, the Earl of Rochester, the Duke of Devonshire, the Earl of Yarmouth, the Lord Townsend, and Mr. Stepney. According to the plan of the second volume, printed before the first, there is a scheme of twelve letters, notwithstanding which, there are only ten in that volume, addressed to the Archbishop of Canterbury, the Duke of Norfolk, Mr. Secretary Vernon, the Earl of Marlborough, the Marquis of Normanby, the Duke of Ormond, Mr. de Cleverskerk the Dutch Ambassador, the Earl of Burlington, Sir Thomas Millington, and Mr. Bridges, afterwards Duke of Chandos; but the last named letter is not upon the subject which was promised, for that and another, were never executed, though the contents of them shew that this was a loss to the public. Letter XI. giving an anatomical account of the natural cause, why people must necessarily die of old age alone, attended with no other disease. Letter XII. explaining the nature of curable and incurable wounds, demonstrating by practical observations, and anatomical experiments, the small number of wounds which are of themselves absolutely mortal; and shewing the true and common abuse of styptic waters and powders, in the practice of Surgery. All the letters in the second volume, excepting the first, are signed I. S. though it is evident, that part of the materials in each was furnished by Dr. Connor, who seeing them indifferently put together, did not care to own them.

(4) The History of Poland, in several Letters to Persons of Quality, giving an account of the ancient and present State of that Kingdom, Historical, Geographical, Physical, Political, and Ecclesiastical; its Origin and Extent; with a Description of its Towns and Provinces, the Succession and remarkable Actions of all its Kings, and of the Great Dukes of Lithuania, &c.

of which some notice will be taken in its proper place (c) [E]. Dr. Connor's practice, by that time he had finished the first volume of his work, was so much enlarged, that he was forced to charge his assistant with the care of the second entirely, furnishing him only with notes; and there is no doubt that if he had lived, he might have become a very eminent man in his profession. But in the flower of his age, and just as he began to reap the fruits of his learning, study, and travels, he was attacked by a violent fever, which, after a short illness, carried him off in the month of October 1698, when he was very little more than thirty-two years of age (d). He had, as we observed before, been bred in the Romish religion, but had embraced that of the Church of England, upon his first coming over from Holland; but in what communion he died is not perfectly clear, the reasons of which the reader will learn at large in the notes (e) [F], from a funeral sermon preached

(c) See a brief account of these matters in the note.

(e) Dr. Hayley's Sermon at his funeral.

(7) History of Poland, vol. ii. p. 95.

[E] Of which some notice will be taken in its proper place.] We are told by Dr. Connor, that the salt-mines near Cracow, were discovered in 1548, by a cobbler (5); and that they have been wrought ever since, without any danger of being exhausted. They descend into them by several pair of wooden stairs, and the depth of the mine is computed at three hundred geometrical paces. There are a vast number of turnings and windings at that depth, some narrow like alleys, and others broad and large like streets. The owner of the mine, Mr. Morstin Covalski, told the Doctor, it would require a week's time to go all over the mine, which must be consequently of a vast extent. In some places there is a great deal of fresh water, but in most places it is salt. There are frequently such fierce winds in the mine, as are not to be withstood; and the air, to those who are not used to it, is excessively penetrating and sharp. The miners positively affirm, that the salt weighs less in the mine than when brought up into the air; of which, however, the Doctor seems a little to doubt. The salt found here is of four sorts; the first clear, and hard like crystal; the second clear, but not so hard; the third brittle and white, like sugar; the fourth not so well coloured, and of a less pungent taste. In some places it is impossible to work, because the nitrous vapours are apt to take fire upon the approach of a candle. The revenue drawn from this mine by the public, amounts to eight hundred thousand Polish florins a year; besides which, the proprietor makes presents to each of the cities and towns of Poland, and to the Starosts, all which, and the expences of working defrayed, there remains a very great income.—The Doctor takes occasion to prove at large, a story he had before mentioned in one of his Latin treatises (6), of a boy kept in a convent in his time, that had been bred up by a she bear, and was taken in the woods when he was about ten years old, as they guessed from his stature and aspect: he was of a hideous countenance, and had not either the use of reason or of speech: he went upon all four, and had nothing in him like a man, excepting his human structure. But seeing he resembled a rational creature, he was admitted to the font, and christened; yet still he was restless and uneasy, and often inclined to flight; and at length being taught to stand upright, by clapping him against a wall, and holding him after the manner that dogs are taught to beg, and being by little and little accustomed to eat at table, he, after some time, became indifferently tame, and began to express his mind with a hoarse and inhuman tone; but being asked concerning his course of life in the woods, he could not give much better account of it, than we can do of our actions in the cradle.—The account the Doctor gives us of the Plica (7) is very singular, but free from the absurdities of former accounts. He tells us, that it consists in the hairs being matted and intangled like fulled cloth, sometimes on one side of the head, sometimes on both; but he assures us, that no blood follows upon cutting it, nor does the patient feel any pain in that operation, though he is afterwards subject to a kind of rheumatic disorder all over, and sometimes to greater inconveniences; yet he assures us, that Dr. Jonas, a Jew, and the King of Poland's Physician, found a very short and safe method of curing it, by first salivating by friction, and then cutting off the hair, which was done without any dangerous consequences ensuing. The most

extraordinary circumstances attending this disease are two (8); first, that it is peculiar to the kingdom of Poland, and Duchy of Lithuania; next, that it comes suddenly without any visible cause, and, that too, frequently in a night's time.

[F] Will learn at large in the notes.] This funeral sermon upon Dr. Bernard Connor, was preached by the Reverend William Hayley, D. D. Rector of St. Giles's in the Fields, on the 30th of October 1698, at which time the corps of Dr. Connor was interred there. What follows is in that Divine's own words (9). 'He had in his sickness, before his distemper arrived to a great height, and while he was in his perfect senses made a will, in which he left five pounds to the poor of this parish, where he now lived; and desired, that if it should please God to take him out of this world, I might preach his funeral sermon, and that it might be made public; his friends let me know this, and at his and their request I visited him: I found him very much decayed in strength, but perfectly sensible, as he had still been in the intervals of his fits, though the height of his fever put him into ravings. As soon as I saw him, he requested of me what his friends had told me before hand; and I presumed his design in it was, that he might be vindicated from the suspicion of some heterodox opinions, which his censurers imputed to him, as well as that his death might be the occasion of an useful discourse to the living. I therefore told him, that in case I complied with his desire, I thought it would be expected I should say something of a person whose writings and character had rendered him so much known to the world, and had given occasion to some people to speak doubtfully of his principles in religion; and that for this reason, among others, it would be very proper for me to have some satisfaction from him as to his faith; upon which I put several questions to him, *As whether he believed the gospel? whether he gave credit to the miracles that are there recorded, and looked upon them as attestations of the truth of the Christian religion? whether he believed that Jesus Christ was the saviour of the world, and that he came to be our propitiation, and to satisfy divine justice for the sins of mankind?* To which, and such like questions, he answered affirmatively with great earnestness; and when I discoursed him on the subject of that book of his, which occasioned suspicion of his principles, he declared that he had no intention to prejudice religion thereby, and remitted me to his Grace the Archbishop of Canterbury for farther satisfaction, to whom he said he had explained himself in this matter; and as an attestation of his sincerity, had received the sacrament upon it at the parish church of St. Martin in the Fields, which I have since found to be true.

'I then began to examine him as to the state of his soul, what sense he had of his sins, and what remorse for having at any time offended God? And whether he were persuaded of the necessity of repentance and amendment of life, in order to gain the salvation purchased by Jesus Christ? To all which he gave me satisfactory answers, and expressed great sorrow for the sins and errors of his life past; and then joined with us very devoutly in the prayers of the Church, in the office for the visitation of the sick. In the afternoon of the same day, I went with a desire to have had some farther discourse with him,

(8) Chwalkowski Singularia Polonica, p. 191.

(9) Sermon preached at the funeral of Bernard Connor, M. D. in the parish church of St. Giles's, Oct. 30, 1698, by William Hayley, D. D. Rector of the said Parish. Lond. 1699, 4to.

preached by an eminent Divine, at his own request, who seems to have spoken of him with all the candour and charity that became a Christian Priest. As his writings are very well known, and his character has been much canvassed in foreign countries, this article was thought the more necessary, in which we have endeavoured to collect all the scattered facts that can be met with about him.

‘ but the violence of his fit being upon him, he was not in a condition to be spoken with.

‘ The next morning I visited him again, and found him in one of his intervals still sensible, but very much weakened. I took this occasion to talk with him more particularly concerning his principles; and upon mentioning the merits of our Saviour, asked him whether he depended entirely on the merits of Jesus Christ, and his intercession, for pardon of his sins, and reconciliation to God? And he made answer, that he relied only on the merits of his Saviour. He was then put in mind of receiving the sacrament, and he said he desired it with all his soul. I asked, whether in receiving the sacrament, he had in his view the professing himself a disciple of Christ, and a member of his body the Church? And if in receiving it from my hands, he desired to profess himself a member of the Church of England, which question being a second time distinctly put to him by a friend of his then present, he answered, with very great seriousness, that he did. Then I put him in mind of his neglect of receiving the sacrament, which he had not done since about two years ago, when he communicated at St. Martin’s, and he expressed a sorrow for it. By all this I thought he sufficiently purged himself from the imputation of Deism, Socinianism, or Popery. I looked on him as a true penitent member of the Church of England, and I gave him the sacrament. He received it with signs of very great devotion, with expressions of hearty repentance for all the sins and follies of his life, and earnest petitions for pardon; and so I left him, as far as we could judge, in a Christian disposition for death, which I looked upon as very near.

‘ These are things which I think myself obliged to give a particular account of, partly to answer what I conceive was the design of the deceased, and partly upon occasion of an accident that happened some hours after I left him, which perhaps it will be thought not fair to conceal. A certain person, who it seems was a Romish Priest, came to the Doctor’s lodgings, and desired very earnestly to see him; declaring that he was his countryman, his friend, and his relation: those about him looking upon him as very near his departure, were unwilling he should be disturbed; but upon great importunity did at last grant the stranger admittance, who coming to the bed-side, called the Doctor by his name, and saluted him three times before he regarded, but at the third time he cried out for God’s sake assist me. Upon which the company was prevailed with to leave the room, but the Doctor’s most intimate friend returned to the door, and heard the Doctor repeating over his Confiteor in Latin, in a very buddled manner, upon which the priest gave him absolution; and then asked him, whether he would have extreme unction; and the Doctor said yes, after which it is suspected it was administered to him.

‘ Now here could I imagine the Doctor was in his senses, and that he was really in his heart of the Roman communion, while he only acted this part in the last scene of his life, I should look upon it as a very great stain on his memory; and I am persuaded it would give every body a shocking idea of that religion, which would allow a person so to prevaricate both with God and man.

‘ But I confess that I believe his judgment was now quite decayed, and that he did not know what he did; for he was thought dying by those about him, though he recovered out of that agony and lived till next day. His friend assures me, that in his sickness, he turned away another Romish priest who would have seen him; that the doctor thanked him for it, and desired that none of those persons (adding a reproachful word, which I do not think decent to publish) should be admitted to him; and that it was the Doctor’s own desire that I should attend him in his sickness; and I cannot see what occasion there should be for such a piece of dissimulation if he had been of the Roman communion.” C.

“ [If it was true, when Dr. Campbell wrote the preceding article, that Dr. Connor’s account of Poland was the best book we had upon the subject, or, at least, contained the best things in it, this is no longer the case at present. Several performances have appeared of late years, which throw great light upon that country; and we are, in particular, highly indebted in this respect to Mr. Coxe’s Travels, published in 1784. Our readers will there find the most exact and faithful description of the state of Poland, which, perhaps, has been yet given. Dr. Connor was undoubtedly a man of lively parts; but he doth not seem to have attained to a solid and regular mode of thinking. It is plain, from the letter inserted in note [C], that his ideas concerning the Miracles of Scripture were very ill digested. His writings are now of little consequence, and will probably never be enquired for: and with regard to his History of Poland, it is evident, from our predecessor’s account of it, that it is a confused production, and, in part, a hasty compilation. The circumstances of Dr. Connor’s death are extremely suspicious. The truth of the matter seems to have been, that having been a Sceptic in life, but possibly not a confirmed Infidel, he was desirous, in the darkness and distress of his last moments, to receive the consolations of religion, we should rather say of superstition; and these consolations he was willing to derive from the hands both of a Divine of the Church of England, and of a Popish Priest. The latter, however, appears to have taken an undue advantage of Dr. Connor’s weak state of body and mind, and of his early prejudices, as having been brought up in the Roman Catholic communion.] K.

* For the principal materials of this article, we are indebted to the obliging communications of the Rev. Dr. William Conybeare.

(a) Amory’s Memoirs of Dr. Benson, p. xii.

(b) New Biographical Dictionary, vol. v. p. 408.

[CONYBEARE (JOHN), * a learned Divine and Prelate of the Church of England, was born at Pinhoe, near Exeter, on the 31st of January, 1691-2. His father was the Rev. John Conybeare, Vicar of Pinhoe [A]; and his mother, whose maiden name was Grace Wilcocks, was the daughter of a substantial Gentleman Farmer of that place. At a proper age, he was sent to the free-school of Exeter for grammatical education. In this city, Mr. Joseph Hallet, afterwards a dissenting Minister there, whose notes on the scripture are held in great esteem by Clergymen of all denominations, was one of his school-fellows (a). Another of his school-fellows is said to have been the celebrated Dr. James Foster (b). But though they might be at the school together at the same time, they were not of

[A] Was the Rev. John Conybeare, Vicar of Pinhoe.] This gentleman died when his son was only in the fifteenth year of his age, having never recovered from a bad disorder, which he had contracted on the night of the great storm in 1703. At that time, his parsonage-house, which stood on an eminence, and was

much exposed to the south-west winds, was totally unroofed. However, by the assistance of some good relations, young Mr. Conybeare was enabled to go on in his education, notwithstanding the untimely death of his father.

of the same standing, Foster being more than five years and a half younger than Mr. Conybeare. We may judge, from the great literary improvements of the persons educated in the free-school of Exeter, that it was at that time under excellent tuition †. On the 23d of February, 1707-8, Mr. Conybeare was admitted a Battler of Exeter-College, Oxford, under the tuition of Mr. Thomas Rennel, afterwards Dr. Rennel, and who for many years was Rector of Drew's Teington, one of the best livings in the county of Devon. Mr. Conybeare, on his coming to the University, was, according to the language of that place, *Chum* with Mr. Richard Harding, who was elected Fellow of Exeter-College in 1709, and died Rector of Marwood in Devonshire, in 1782, in the ninety-fifth year of his age. How early our young student obtained the esteem of the learned society with which he was connected, appears from his having been chosen on the 30th of June, 1710, and admitted on the 8th of July following, a Probationary Fellow of his College, upon Sir William Petre's foundation, in the room of Mr. Daniel Osborne. When he was proposed as a candidate, it was only with the design of recommending him to future notice; but such was the sense entertained of his extraordinary merit, that he was made the object of immediate election. Mr. Harding used to say, that Mr. Conybeare had every way the advantage of him, excepting in seniority; and that he should have had no chance in a competition with him, if they had both been eligible at the same time. The patronage of Dr. Rennel, Mr. Conybeare's worthy tutor, concurred with his own desert, in bringing him forward thus early to academical advantages. On the 17th of July, 1713, he was admitted to the degree of Bachelor of Arts; and at the next election of college officers, upon the 30th of June, 1714, he was appointed Prælector, or Moderator, in Philosophy. On the 19th of December following, he received Deacon's orders from the hands of Dr. William Talbot, Bishop of Oxford; and on the 27th of May, 1716, he was ordained Priest by Sir Jonathan Trelawny, Bishop of Winchester. On the 16th of April, 1716, he proceeded to the degree of Master of Arts (c); soon after which he entered upon the Curacy of Fetcham, in Surry, where he continued about a year. He was advised to this change of scene for the benefit of his health, which was always delicate, and had been greatly impaired by the intenseness of his application. Upon his return from Fetcham to Oxford, he became a tutor in his own College, and was much noticed in the University as a Preacher ‡. In the beginning of the year 1722, he published a sermon, which he had delivered before the University, on the 24th of December preceding, from Hebrews ii. 4. entitled, "The Nature, Possibility, and Certainty of Miracles, &c." This discourse was so well received, that it went through four editions. Mr. Conybeare was hence encouraged to commit to the press a second sermon, from 1 Corinthians xiii. 12. (d), which he had preached before the University, on the 21st of October, 1724, and the title of which was, "The Mysteries of the Christian Religion credible." It is probable, that the reputation our author gained by these discourses, recommended him to the notice of the Lord Bishop of London (Dr. Gibson), who appointed him one of his Majesty's Preachers at Whitehall, upon the first establishment of that institution. The esteem in which his abilities and character were held, procured him, also, the favour of the Lord Chancellor Macclesfield, who, in May, 1724, presented him to the Rectory of St. Clement's in Oxford; a preferment of no great value, but which was convenient to him from his constant residence at that place, and from its being compatible with his fellowship. In 1725, he was chosen senior Proctor of the University, which office he served in conjunction with Mr. Barnaby Smyth, Fellow of Corpus-Christi College, and a scholar of eminence. In the same year, Mr. Conybeare was called upon to preach a visitation sermon before the Bishop of Oxford, at whose request it was published, under the title of "The Case of Subscription to Articles of Religion considered." This sermon, the text of which is taken from 1 Timothy vi. 3, 4. has obtained no small degree of celebrity. It hath often been referred to in the controversy relating to subscription, and is particularly noticed by the acute and learned writer of the Confessional (e). The position of Mr. Conybeare is, that "every one who subscribes the Articles of Religion, does thereby engage, not only not to dispute or contradict them; but his subscription amounts to an approbation of, and an assent to, the truth of the doctrines therein contained, in the very sense in which the compilers are supposed to have understood them (f)." Many persons, who may not agree with our author in other respects, will concur with him in this point; and, indeed, it seems to be clearly confirmed by the avowed design of the Articles of the Church of England, which was to prevent diversities of opinion. Mr. Conybeare's next publication was an assize sermon, preached at St. Mary's, Oxford, in 1727, from Ezra vii. 26. and entitled, "The penal Sanctions of Laws considered (g)." This discourse was dedicated by him to the Honourable Charles Talbot, at that time Solicitor General, afterwards Lord High Chancellor of Great-Britain, who had honoured our author with the care of his two eldest sons, Mr. Charles Talbot, celebrated by the Poet Thomson, and the late Earl Talbot, Steward of his Majesty's Household. On the 11th of July, 1728, Mr. Conybeare was admitted to the degree of Bachelor of Divinity; and on the 24th of January following, he took his Doctor's degree (h). In the year 1729, he again appeared from the press, in a sermon that had been preached before the Lord-Mayor and Aldermen

† St. Mary's Church was scarcely ever so much crowded as when Mr. Conybeare preached.

† Mr. Thorpe; we have reason to believe, was at that time master of the school; and it is understood that two other of Mr. Conybeare's school-fellows were Dr. Atwell and Dr. Rundle.

at St. Paul's Cathedral, and which was entitled, "The Expediency of a divine Revelation represented." It was accompanied with a dedication to Bishop Talbot, father of the Solicitor General. From Dr. Conybeare's introduction to this family, and the reputation he had acquired as a Divine, it was expected that he would soon have been promoted to some dignity in the Church. But the good Bishop was taken off, before he had a proper opportunity of carrying his benevolent intentions, in our author's favour, into execution. In 1730, the Headship of Exeter-College becoming vacant, by the death of Dr. Hole, Dr. Conybeare was chosen to succeed him. His competitor, on this occasion, was the Rev. Mr. Stephens, Vicar of St. Andrew's, Plymouth, a truly worthy Clergyman, and the author of several ingenious discourses. Nevertheless, as he had retired early from the society, he could not be supposed to carry such weight with him as Dr. Conybeare, who had resided constantly in the College. In this year Dr. Tindal's famous deistical book had appeared, entitled, "Christianity as old as the Creation, or the Gospel a Republication of the Law of Nature." This work excited the greatest attention, and drew forth the pens of some of the ablest Divines of the kingdom, both in the Church of England, and among the Protestant Dissenters. Bishop Gibson, who had himself engaged in the controversy, in his "Pastoral Letters," encouraged Dr. Conybeare to undertake the task of giving a full and particular answer to Tindal's production. Accordingly, he published, in 1732, his "Defence of revealed Religion [B];" by which he gained great credit

[B] *His defence of revealed Religion.* The whole title of the work is, "A Defence of revealed Religion against the Exceptions of a late Writer, in his Book, intitled, *Christianity as old as the Creation, &c.*" By John Conybeare, D. D. Rector of Exeter-college in Oxford, 8vo. London, 1732. We shall extract the account which Dr. Leland has given of it, in his "View of the Deistical Writers."

"Another answer which particularly engaged the attention of the public, was that published by Dr. John Conybeare, Rector of Exeter-College, Oxford, now Lord Bishop of Bristol, viz. *A Defence of revealed Religion, against the Exceptions of a late Writer in his Book, intitled, Christianity as old as the Creation*, London, 1732. This book is divided into nine chapters: The first is designed by the acute and learned author, to shew what we are to understand by the law or religion of nature, from what the obligation of it arises, and how far it extends. He shews, that the religion or law of nature, does not take in every thing that is founded in the nature or reason of things, which seems to be the sense the author of *Christianity as old as the Creation*, takes it in throughout his whole book, but only such a collection of doctrines and precepts, as is discernible to us in the use of our natural faculties. And this, though founded in nature, becomes then only properly a law to us, when it is regarded as the will of God the supreme legislator; and our obligation to it, strictly speaking, is founded on the divine sanctions of rewards and punishments. In the second chapter it is shewn, that the law or religion of nature, in the sense already explained, is not absolutely perfect: since as the law of nature is only what men are capable of discerning in the use of their natural faculties, it can be no more perfect than human reason. If the law of nature was absolutely perfect, it must have such a clearness as to the meaning and authority of it, as can admit of nothing more in any possible circumstance; it must have such a strength of enforcement, that it cannot be heightened in any way whatsoever; and such an extent of matter, as to comprehend every thing that may be fit and proper to be known or done, and not to admit of any possible article to be added to it. And he plainly proves, that the law or religion of nature is not absolutely perfect in any of these respects. Chap. 3d is intended to shew, that the law of nature is not immutable, in such a sense especially as to be incapable of admitting any additional precepts. And here the question concerning positive precepts is accurately stated, and it is proved that God may appoint them, and an answer is returned to the author's objections to the contrary. In chap. 4th he enquires, whether natural and revealed religion be necessarily the same, and if not, wherein the proper distinction between them doth consist. In the former chapter he had shewn, that positive precepts might be given; here he carries it farther, and proves that some positive institutions might reasonably be expected, if ever

God should reveal his will at all; both as tokens of his authority and our submission, and for the better order and decency of his worship, and the outward part of religion, and for the increase and advancement of inward piety. The same thing is urged from the concurrent sense of mankind in all ages, and under all religions. It is farther shewn, there are other things of higher importance in which natural and revealed religion differ, though they are not properly opposed to each other, *e. g.* with regard to principles and doctrines not discoverable by nature's light, or as to precepts, which though founded in the nature of things, yet are not knowable in the use of our own reason; they also differ in point of clearness, and in efficacy. He instances particularly in the assurance given us of the pardon of sin, divine assistances, and the eternal retributions of a future state. Chap. 5th is designed to shew, that a proper rule of life is not perfectly and easily discoverable by every man, even by those of the meanest capacity. And here it is evinced, that the author's own scheme of natural religion, which he pretends is so obvious to all mankind, is perplexed, obscure, and defective. In chap. 6th he inquires, whether a proper rule of life be more easily and perfectly discoverable by us in the use of our own reason, than the proof or meaning of a revelation can be. He shews the possibility of immediate revelation or inspiration, and that this gives the highest evidence. And that as to traditional revelation, though the evidence be not strictly demonstrative, it may be such as is sufficient to determine the assent of a sober thinking man. And he answers what the author had brought to prove, that the sense and meaning of such a revelation cannot be fixed and ascertained. Chap. 7th is designed to shew, that a revelation is expedient in order to a more easy, more perfect, and more general knowledge of the rule of life. This is distinctly evinced, both with regard to the wiser and better part of men, particularly the philosophers, and with respect to persons of a lower rank and meaner abilities. And a good answer is made to what the author had urged concerning the supposed inconsistency between our being governed by reason, and revelation. In chap. 8th it is shewn, that a revelation is expedient in order to enforce the general practice of the rule of life. That the mere pleasure of doing well, or a moral taste or sense, is not alone a sufficient balance for all the inconveniencies of doing otherwise, amidst all the embarrassments of passion and temptation; nor if to this be added the civil sanctions of human authority, are these alone sufficient. For these are designed not so much to reward virtues, several of which do not come under the cognizance of human courts, as to punish crimes, and those only such as tend to the hurt of the society. Virtue can only be sufficiently enforced by sanctions established by God himself; and a revelation is expedient for that purpose. He concludes this chapter with giving a clear answer to two objections urged by the

dit to himself, and performed an eminent service to the cause of christianity. In his dedication to the learned Prelate now mentioned, he observes, that if he has not succeeded in his book according to his wishes, he may plead that it was drawn up amidst a variety of interruptions, and under a bad state of health. "This, says he, will in some sort excuse the author, though it may detract from the performance." But Dr. Conybeare's work did not stand in need of an apology. It is distinguished by the perspicuity of its method, and the strength of its reasoning; and is, indeed, one of the ablest vindications of Revelation which England has produced. So well was the work received, that the third edition of it was published in 1733. Dr. Warburton justly styles it one of the best reasoned books in the world. It is, likewise, recommended by the temper and candour with which it is composed. Dr. Conybeare's Defence will always maintain its rank, and perhaps be thought to sustain the first place, among the four capital answers which Tindal received. The other three were, Foster's "Usefulness, Truth, and Excellency of the Christian Revelation;" Leland's "Answer to a late Book, intitled, Christianity as old as the Creation;" and Mr. Simon Browne's "Defence of the Religion of Nature and the Christian Revelation."

Though Dr. Conybeare, by his promotion to the Headship of Exeter-College, had obtained a considerable rank in the University, he did not, by the change of his situation, make any addition to his fortune. Indeed, the emoluments of his new place were so small, that he was much richer as a private Fellow and Tutor, than as the Governor of his College. It may be presumed that this circumstance in part, and still more the reputation he had acquired by his answer to Tindal, induced the Bishop of London, who at that time had great influence in the disposal of ecclesiastical preferments, to exert himself more vigorously in our author's behalf. This the good Prelate so effectually did, that on the death of Dr. Bradshaw, Bishop of Bristol, and Dean of Christ-Church, Oxford, in December, 1732, Dr. Conybeare was appointed to succeed him in the latter dignity. Accordingly, the Doctor was installed Dean of that Cathedral in the month of January following. On this occasion, he resigned the Headship of Exeter-College, in which he was succeeded by Mr. Atwell. Not long after, he gave up, likewise, the Rectory of St. Clement's, in favour of a friend, the Rev. Mr. Webber, one of the Fellows of Exeter. On the 6th of June, 1733, Dean Conybeare married Miss Jemima Jukes, daughter of Mr. William Jukes, of Hoxton Square, near London; and in the same year he published a sermon, which he had preached in the Cathedral of St. Peter, Exon, in August, 1732, from 2 Peter iii. 16. on the subject of Scripture-difficulties (i). In the beginning of the next year, he had the honour of entertaining the Prince of Orange, at the deanery of Christ-Church. The Prince, who had come into England to marry the Princess Royal, being desirous of visiting Oxford, and some of the places adjacent, took up his residence at Dr. Conybeare's apartments; and how solicitous the Dean was to treat his illustrious guest with a proper splendour and dignity, appears from his having received, by the hands of one of her servants, the especial thanks of Queen Caroline on the occasion.

(i) Cooke's
Preacher's Assis-
tant, *ubi supra*.

When, in 1737, Dr. Morgan had published his "Moral Philosopher," the Dean had it in contemplation to answer that work, so far as the general scheme of the writer might be thought to deserve it; and he had prepared many materials for this purpose (k). The design, for what reason we know not, was never carried into execution; and the omission of it will be reflected on with some regret by learned men; though it must, at the same time, be acknowledged, that Dr. Morgan was encountered by a number of very able and successful antagonists. It is to the honour of Dean Conybeare's temper, that he expressed his hope, that none of the animadvertisers on the "Moral Philosopher" would be provoked to imitate his scurrilities (l). In 1738, the Dean was requested to preach the sermon at the annual meeting of the several Charity-schools in London, which he did from Galatians vi. 9.; and the discourse was published (m). In 1747, he met with a great domestic affliction, in the loss of his lady, who departed this life on the 29th of October, after their union had subsisted not much longer than fourteen years. When, on the 25th of April, 1749, a day of solemn thanksgiving was held, on account of the treaty of Aix-la-Chapelle, which had been signed on the 18th of October in the preceding year, Dr. Conybeare was fixed upon to preach before the Honourable House of Commons on this occasion. The subject was "True Patriotism," and the following words of the Psalmist furnished the text. "Pray for the peace of Jerusalem: they shall prosper that love thee. Peace be within thy walls, and prosperity within thy palaces. For my bre-

tant, *ubi supra*.

(l) *Ibid.* p. xii.

the author: The one is, that if a revelation be expedient to be made to any, it must be equally expedient to be made to all, and at all times. The other is, that the revelation hath not in fact answered that purpose for which we affirm it to be expedient. The ninth and last chapter is intended to evince that there is sufficient evidence of the reality of a revelation, especially of the Christian. He observes, that what is usually called the internal evidence of a revelation is not strictly and properly an evidence, but only a

necessary condition or qualification of a true revelation: That external proof is the only direct evidence of a divine revelation; and this consisteth in miracles as including prophecies, which may be considered as one sort of miracles. He shews what reason we have to believe, that the miracles recorded to have been done in favour of the Christian religion were really wrought; and that supposing them to have been wrought, they were real and satisfactory proofs of a divine original (n).

Fourth edition.

" thren and companions fakes I will now say, peace be within thee. Because of the
" house of the LORD our God, I will seek thy good (n)." If our readers would not be
displeased with us for quoting any fine sentiments from a Greek or Roman Classic, it is
to be hoped that we shall be forgiven for reciting sentiments equally beautiful from a Sacred
Writer.

(n) Psalm cxxii.
6, 7, 8, 9.

As Dr. Conybeare was raised early in life to so conspicuous a station as that of the
Deanery of Christ-Church, it might have been expected, from his eminent merit and
learning, that he would sooner have been called to the higher honours of his profession.
But it is to be remembered, that, not long after his promotion to the Deanery, his good
friend, the Bishop of London, lost his influence at Court; and the Lord Chancellor Tal-
bot dying in the year 1737, our author had no particular patron to recommend him to
royal favour. It was not, therefore, till the latter end of 1750, that he attained the mitre;
and this was more owing to his acknowledged abilities and character, than to any personal
interposition. On the translation of Dr. Joseph Butler to the See of Durham, Dr. Cony-
beare was appointed to the Bishoprick of Bristol, and was consecrated at Lambeth Chapel,
on the 23d of December. The consecration sermon, which was soon afterwards pub-
lished, was preached by Francis Webber, D. D. Rector of Exeter-College. The pro-
motion of Dr. Conybeare to the Prelacy, whilst it raised him to the highest order of the
Church, and enlarged his sphere of usefulness, was injurious to his private fortune. The
slender revenues of his Bishoprick were not equal to the expences which accrued from his
necessary residence sometimes at Bristol, and sometimes at London. Four discourses were
published by our author, after he became a Bishop. The first was the Easter Monday
sermon, in 1751, from Proverbs xi. 17. before the Lord-Mayor and Aldermen of the
City of London, in which the virtue of being merciful was stated and enforced. The
second was preached before the House of Lords, on the 11th of June, in the same year,
from Psalm lxxviii. 72. upon occasion of his Majesty's accession to the throne: the subject
treated of, was civil government. The third was from Matthew xviii. 10, 11. in favour
of the Irish Protestant schools; and the fourth, from James i. 27. was before the Sons of
the Clergy, at Bristol. Both these discourses were printed in 1752 (o). It may be ob-
served, with regard to the twelve single sermons published by our Prelate, that they were
not vague, declamatory essays, calculated only to answer a present purpose, but judicious
and solid compositions, in which important topics were discussed with great perspicuity of
method and language, and with equal strength of reasoning; so that it is not a little to
be regretted, that they have not been collected together in a volume. Dr. Conybeare
did not long enjoy a good state of health, after his being raised to the Bishoprick of
Bristol. He was much afflicted with the gout; and, having languished about a year and
a half, was carried off by that disorder at Bath, on the 13th of July, 1755. He was
interred in the Cathedral Church of Bristol, where, some time after his death, the fol-
lowing inscription was erected to his memory:

(o) Cooke's
Preacher's Affis-
tant, ubi supra,
p. 88.

Juxta situs est
Reverendus admodum in Christo Pater,
JOANNES CONYBEARE,
Celeberrimæ Academiae Oxoniensis
Primarius, dum vixit, Ornamentum.
Quippe ex illorum erat hominum numero,
Quorum unus aut alter cuius se ostendit sæculo,
In honorem humani generis quasi de cælo delapsus.
Quid mirum est igitur, si eâ vi, illo ingenii acumine
Hostes fidei revelatæ adeo penitus profligaverit,
Ut de memorabili hac victoriâ
Hodiè glorientur Christiani.
Sane obtinuisse videatur
In Æde Christi eminentiorem Decani locum,
Episcopalem postea in hac Ecclesiâ Cathedram,
Non tam potentiorum auctoritate, aut propriis meritis,
Quam ipsâ Divini Numinis designatione evocatus.
Ut optimi Viri memoriæ quodammodò inserviat,
Marmor hoc positum est
Piâ tanti nominis reverentiâ.
Obiit 13^o die Julii. A. D. 1755. Ætatis suæ 64.

Bishop Conybeare had by his lady five children, three of whom died in their infancy.
A daughter and a son survived him. The daughter, Jemima, departed this life at Ox-
ford, on the 14th of March, 1785. The son, William, is the present Dr. Conybeare.
As our worthy Prelate died in but indifferent circumstances, and consequently left behind
him a very slender provision for his children, it was proposed, by some friends of the fa-
mily, to publish two volumes of sermons by subscription. The scheme succeeded so well,

that perhaps a larger list of subscribers never appeared on the like occasion [C]. Besides this, his Majesty King George the Second was pleased, in consideration of the Bishop's merits, to bestow upon the family, for the life of Miss Jemima Conybeare, a pension, the clear produce of which was about one hundred pounds a year.

Dr. Conybeare's connection with Bishop Gibson, and the Talbot family, has already been mentioned. Amongst his most intimate private friends may be reckoned Dr. Hayter, successively Bishop of Norwich and London, Dr. Atwell, and the famous Dr. Rundle, afterwards Bishop of Derry. The latter gentleman is understood to have been instrumental in recommending our author to the notice of the Talbots. There subsisted, likewise, a great intimacy between Dr. Conybeare and Dr. Secker. When Secker entered himself a Gentleman Commoner at Exeter-College, with a view of taking a degree at the University of Oxford, Mr. Conybeare was appointed his nominal tutor. The present Dr. William Conybeare enjoys the Rectory of St. Botolph's, Bishopsgate, as an option of Archbishop Secker's.

Bishop Conybeare's character appears to have been, in every view of it, respectable and excellent. Whilst he was a firm and faithful adherent to the doctrine and constitution of that Church of which he was so great an ornament, he was candid in his sentiments, and friendly in his conduct, with regard to the Protestant Dissenters. He occasionally corresponded with his former school-fellow, Mr. Joseph Hallet; and in the article of Dr. George Benson, we have inserted some extracts from a letter written by him to that gentleman, which shew him to have been a truly Christian Prelate, who had imbibed no small portion of the benevolent and liberal spirit of his Divine Master (p)].

(p) Biographia
Britannica, vol.
ii. p. 205, note
[O]. Second
edition.

[C] *That perhaps a larger list of subscribers never appeared on the like occasion.* The number of subscribers amounted to nearly four thousand six hundred persons, many of whom took more than one copy. Such an almost unparalleled subscription can only be accounted for from Dr. Conybeare's numerous connections, in consequence of his having presided over such a society as that of Christ-church, with the greatest reputation, for twenty-two years and a half; from the general estimation in which his abilities and character were held in the world, among men of all denominations; and from the disinterestedness of his temper, in making but a small provision for his family. The sermons were published in 1757, and dedicated, by the Bishop's daughter, to his Majesty King George the Second. The subjects of the discourses are as follows. Volume i. "Christian Salvation the Matter of Joy and Praise to Angels." From Luke ii. 14. "The true Ground of the Jews rejecting the Messiah, considered." From John i. 11. "The Excellency of Patience." From James i. 2, 3, 4. "The History of Joseph." In three parts. From Genesis xxxvii. 36. xxxix. 1, 2. xli. 46. "The Division of Mankind into Rich and Poor, considered." From Proverbs xxii. 2. "Reflections on the Conduct of Herod towards John the Baptist." In two parts. From Matthew xiv. 6, 7, 8, 9. "Prophecies and Miracles sufficient Proofs of a Divine Commission." From John xx. 31. "St. Paul's Difficulties and Distresses considered and applied." From 2 Corinthians xi. 23. "The Condition of Man-

kind in general unhappy, without the Belief of a future State." In two parts. From 1 Corinthians xv. 19. "Different degrees of Happiness in a future State." From 1 John iii. 2. "The Excellency of Charity above Faith and Hope." From 1 Corinthians xiii. 13. Volume ii. "The Aggravations of Sin under the Gospel." From Hebrews x. 29. "Reflections on the Dispute between St. Paul and Barnabas." In two parts. From Acts xv. 39. "The Doctrine of Christ's Satisfaction agreeable to Reason." From 1 Peter iii. 18. "The Needfulness of a Revelation, shewn from the Imperfection of the Law of Nature considered as a Rule of Duty." From Luke i. 78, 79. "History of Cain and Abel." In two parts. From Genesis iv. 3, 4, 5. "The Example of Abraham's Faith proposed to Christians." From Hebrews xi. 17, 18, 19. "On the Nature and Employment of good Angels." From Hebrews i. 14. "Providence concerned in the Revolutions of Government." From Isaiah xlv. 24, 25, 26. "Reasons why God delays the punishments of wicked Men." From 2 Peter iii. 8, 9. "The Rule of Equity." In two parts. From Matthew vii. 12. "The Moral Infirmary of Human Nature considered." From Matthew xxv. 5. "Human Life a State of Pilgrimage." From Hebrews xi. 13. "On the Vanity of the World." From Ecclesiastes i. 2, 3. The second volume is concluded with the Bishop's charge to his clergy, delivered at his primary visitation, in the month of July, 1752.

COOKE (Sir ANTHONY), Governor, Preceptor, or School-master to King Edward VI.

(a) Fuller's Worthies of England, in Essex, p. 327.

(c) He is not mentioned at all by A. Wood.

and great-grandson to Sir Thomas Cooke, Lord-Mayor of London, in 1462 [A], was born at Giddy, or Giddy-Hall, in Essex (a), about the year 1506 (b). Where the place of his education was, we cannot find any where mentioned, though it was most probably at Cambridge (c). But wherever it was, he became eminent in the whole circle of arts,

(b) Mr. Camden tells us, in his Annals of Queen Elizabeth under the year 1576, that Sir Anthony was septuagenarius, 70 years old, that very year when he died; and therefore must have been born about the year 1506.

(1) Stow's Survey of London, with Strype's Additions, edit. 1720, fol. vol. ii. B. v. p. 122.

[A] *Great Grandson to Sir Thomas Cooke, Lord-Mayor of London, in 1462.* This Sir Thomas Cooke was son of Robert Cooke, of Lavenham, in Suffolk. He was of the Drapers Company, and probably brought up to that business. In the 5th of King Edward IV. he was made Knight of the Bath, and knighted in the field by the King (1); but in the year 1467 he came into great troubles: For one Hawkins having, some years before, desired him to lend him a thousand marks upon good security, Sir Thomas answered, he would first know for whom it was, and for what intent. Understanding it was for the use of Queen Margaret, (wife of King Henry VI.) he answered, he had no goods that he could convert into money without too much loss; and, at length, refused to lend even a hundred pounds. Two or three years after, Hawkins being committed to the Tower, and put to the rack, impeached Sir Thomas

Cooke of high-treason; for what should then have been imputed to him as a virtue rather than a crime. However, he was for the same tried at Guildhall, by the procurement of Sir John Fogg; and though he was acquitted of treason, he was sent to the Counter, and from thence to the King's-Bench. During his confinement, his house in London, and his country-seat at Giddy-Hall, were plundered by the servants of Sir John Fogg, and Anthony Rivers, Earl of Widville: for which damages Sir Thomas could never get the least recompence: nor was he released until he had paid eight thousand pounds to the King, and eight hundred pounds to the Queen (2). His son was Philip Cooke, Esq; — his grandson John Cooke, Esq; who died Oct. 10, 1516, — and his great grandson, Sir Anthony, of whom we are now writing (3).

being a thorough master of the Latin and Greek languages, an excellent Critic and Philologist, and equally skilled in Poetry, History, and the Mathematics. He was, at the same time, adorned with singular piety and goodness. These illustrious qualities, together with his uncommon prudence in the management of his own family [B], being taken notice of by those noble persons that had the charge of King Edward VI. they appointed Sir Anthony to be that Prince's chief instructor, and the great guide of his learning and manners (d); and what glorious progress he made, under his, and the rest of his governors good care, is sufficiently known. During Queen Mary's persecuting reign, Sir Anthony was an exile for his religion. But after Queen Elizabeth's happy accession, he returned to his native country, and peaceably spent the remainder of his days at Giddy-Hall, of which he finished the building (e) [C]. He died June 11, 1576, aged seventy, leaving behind him the character of a man of severe gravity, and great learning (f). See the rest of his character in the note [D]. Several witty and ingenious sayings of his are recorded [E].

(f) Vir—anti-qua severitate, & doctrina multiplici—as Mr. Camden styles him; Annal. Reg. Eliz. sub anno, 1576.

[B] Together with his uncommon prudence in the management of his own family. His children's maintenance was always according to their quality, and their employment according to their disposition; he neither allowing them to live above their fortunes, nor forcing them against their natures. His first care was to give them a true sense of religion, and his next, to inure them to submission, modesty, and obedience; and to let their instructions grow with their years. Their book and pen were their recreation; the music and dancing-school, the court and city, their accomplishment; the needle in the closet, and housewifery in the hall and kitchen, their business. They were reprov'd, but with reason that convinced and checked, that wrought as well an ingenuous shame, as an unfeigned sorrow, and a dutiful fear. He never loved them with over-fondness, nor chastised them in a passion. He said, 'That the joys of parents are secrets, and so are their griefs and fears.' Children sweeten labours, but they embitter misfortunes; they increase the care of life, and mitigate the remembrance of death. The recreations he indulged his in, were moderate, lawful, sober, becoming, useful, and reasonable: the expences he allowed, not so illiberal as to acquaint them with shifts, make them resort with mean company, nor surfeit when they came to plenty; nor yet so prodigal, but that they were taught how to live in the world. The books he advised were not many, but choice; the business he pressed, was not reading, but digesting. The diet he prescribed was moderate: in apparel he allowed for necessity, for decency, and in some cases for magnificence, provided that it were neither too costly, nor too vain; neither above the purse, nor beyond the calling, nor besides the estate (4).

(4) State Worthies, &c. as above, p. 375, 376, 377.

[C] Giddy-hall, of which he finished the building. As the following inscription, on the front of it, testified.

*Ædibus his frontem præceps Thomas dedit olim,
Addidit Antoni cætera sera manus. 1568.
Ædes quisque suas, Domini sed mœnia pauci
Ædificant, levior cura minora decet (5).*

(5) Weaver's Funeral Monuments, edit. 1631, fol. p. 650.

The purport of which is, that the front of that house was built by his great grandfather Thomas, and the rest added by himself in 1568, &c. This seat was not long ago re-built, in an elegant manner, by the late owner, Sir John Eyles, Bart.

(6) Ubi supra, p. 377.

[D] See the rest of his character in the note. He was, if David Lloyd may be credited (6), naturally of a reserved temper; and took more pleasure to breed up statesmen, than to be one. Contemplation was his soul, privacy his life, and discourse his element: business was his purgatory, and publicness his torment. To which may be added what King Edward VI. used to say of his tutors, that Rodolph, the German, spake honestly, Sir John Cheke talked merrily, Dr. Cox solidly, and Sir Anthony Cooke weigh-ingly (7).

(7) Ibid. p. 386.

[E] Several witty and ingenious sayings of his are recorded. Particularly the following: 'That there were three things before whom he could not do amiss; his Prince, his conscience, and his children.' Writing to his daughter Mildred, he said to her, 'My example is your inheritance, and my life is your portion.' This story is likewise related of him: That a Suffex Knight having spent a great

estate at Court, and reduced himself to one park and a fine house in it, was yet ambitious to entertain King Edward VI. therein; and to that purpose had new-painted his gates, with a Coat of Arms, and this motto over them in large golden letters, OIA VANITAS. Sir Anthony offering to read it, desired to know of the gentleman what he meant by OIA? who told him it stood for omnia. Sir Anthony replied, 'Sir, I wonder, having made your Omnia (8) so little as you have, you notwithstanding make your Vanitas (9) so large (*).'

(8) i. e. Your All.
(9) i. e. Vanity.

* * [Sir Anthony Cooke's four daughters made so distinguished a figure among the literary Ladies of the period in which they lived, and were otherwise so respectable, in point both of situation and character, that it cannot be improper to give a more particular account of them than has been done by our predecessors. Indeed, to record them in the Biographia, is only paying a deserved tribute to their uncommon attainments and virtues.

(*) State Worthies, by David Lloyd, ubi supra, p. 375, 385.

Of Mildred, the eldest of these daughters, some notice was taken in the article of William Cecil, Lord Burleigh (10). It was there briefly mentioned, that she was long the faithful wife of that great Statesman; that she was learned in the Greek tongue, and wrote a letter to the University of Cambridge in that language; that she was a patroness of literature; and that she was distinguished by her numerous charities. It will, therefore, only be necessary to add a few circumstances concerning her, which have not already been specified. This Lady was born, probably at her father's house at Giddy-Hall, in Essex, in the year 1526. Her preceptor was Mr. Lawrence, an eminent Grecian; and she fully answered the care and pains that were taken in her education. In due time she became excellently acquainted with the Greek and Latin tongues, and especially with the former. Her reading was not confined to the classic writers of Greece only, but extended, likewise, to the ancient Christian fathers. Among the rest, she took great delight in perusing Basil, Cyril, Chrysostome, and Gregory Nazianzen. A piece of Saint Chrysostome's was translated by her, from the original, into the English language. It was on the twenty-first of December, 1546, and in the twentieth year of her age, that she was married to Sir William Cecil. Her death, as we have seen in her husband's article, was on the 4th of April, 1589. She had an admirable understanding, and is said to have been a good Politician. Nor is this at all surprizing, considering her intellectual powers, and that, for more than forty and two years, she was the wife of such an illustrious Statesman as Lord Burleigh. As an evidence of her political talents, Mr. Ballard has produced a letter written by her, on the 26th of October, 1573, to Sir William Fitzwilliams, at that time Lord Deputy of Ireland. The letter contains some excellent advice, and shews that she was not only a woman of great good sense, but well acquainted with the world. Five days after her decease, Lord Burleigh wrote what he calls a meditation on the death of his Lady. As it contains several farther particulars concerning her; as it is a striking testimony of his affection to her memory; and as it is the production of so eminent a person, the insertion of it will probably be a gratification to many of our readers.

Annals, vol. ii.
p. 467, &c.

He was buried in the chapel of Rumford in Essex, where a monument is erected to his memory (g). If he was great and happy in himself, he was much happier and greater in his

" There is no cogitation to be used with an intent
" to recover that which never can be had ageyn,
" that is, to have my deare wiff to lyve ageyn in her
" mortall body, which is seperated from the fowle,
" and resteth in the erth deade, and the fowle taken
" up to heaven, and ther to remayne in the fruition
" of blessednes unspeakable, untill the generall sur-
" rection of all flesh; whan by the almighty power
" of God (who made all thyngs of nothyng) hir body
" shall be rayfed upp and joyned wyth her fowle, in
" an everlastyng unspeakable joye, such as no tongue
" can exprefs, nor hart can conceive.

" Therefor my cogitations ought to be occupied
" in these thyngs following.

" I ought to thank Almighty God for his favor in
" permittynge hir to have lyved so manny yers togi-
" ther with me, and to have given hir grace to have
" had the trew knolledg of hir salvation by the death
" of his Son *Jesus*, oppened to hir by the knowlledg
" of the gospel: wherof she was a professor from
" hir youth.

" I ought to comfort my self with the remembrance
" of hir manny vertuous and godly actions wherin
" she contynued all hir liff, and especially in that she
" did of late yers sondry charitable dedes, wherof
" she determined to have no outward knolledg
" whylest she lyved, in so much as when I had some
" litell understanding therof, and asked her wherin
" she had disposed any charitable gifts, accordyng to
" hir often wishyng that she was hable to doo some
" speciall act, for mayntenance of learnyng, and
" releff of the poore; she wold allweifs only shew
" her self rather desiroose so to do, than ever confes
" any such act; as fence hir deth is manifestly known
" now to me, and confessed by sondry good men,
" whose names and ministeryes she secretly used, that
" she did charg them most stryctly that whylest she
" lyved, they should never declare the same to me
" nor to any other. And so now have I sene hir er-
" nest wrytyngs to that purpose of hir own hand.

" The particulars of many of these hereafter do
" follow, which I do with myne owne hand wrytyng
" recite, for my comfort in the memory therof, with
" assurance that God hath accepted the same in such
" fayourable sort, as she fyndeth now the fructs
" therof in heaven.

" About yers fence, she caused exhibitions
" to be secretly given by the hands of the master of
" St. Ihons in Cambridg for the mayntenance of two
" schollars for a perpetuite whereof to conynew.

" She did cause some lands to be purchased in the
" name of the Dean of Westmynster, who also in
" his own name to, did assure the same to that col-
" ledg for a perpetuall mayntenance of the sayd two
" schollars in that colledg. All which was done
" without any signification of hir act or charg to any
" manner of person but only of the Deane, and one
" William Walter of Wymbleton, whose advise was
" used; for the wrytyng of the purchase and assu-
" rance.

" She also did with the privite of Mr. Deanes of
" Powles and Westmystre, and of Mr. Alderly, beyng
" fre of the Haberdashers in London, give to the
" company of the sayd Haberdashers a good some of
" money; whereby is provyded that every two yers
" ther is lent to six poore men of certen speciall oc-
" cupations, as Smyths, Carpyntors, Weavors and
" such like in Romford in Essex, twenty pounds a
" pece, in the whole one hundred and twenty pounds.
" And in Chesthunt and Wooltham to other six lik
" persons twenty marks a pece, in the whole four-
" score pound. Which releff by way of loan is to
" continew. By the same means is provided for
" twenty poore people in Chesthunt the first sonday
" of every month a meass of meate, in flesh, bread,
" and money for drynk. And lykwise is provided
" four marks yerly for four sermons to be preached
" quarterly, by on of the preachers of St. Ihon's
" Colledg. And these distributions have bene made
" a long time, whylest she lyved by some of my ser-
" vants, without gyvyn me knolledg therof; though

" in dede, I had cause to thynk that she did some-
" tymes bestow such kynd of alms, but not that I
" knew of any order taken for contynuanse therof;
" for she wold rather cōenly use speches with me,
" how she was disposed to give all that she cold to
" some such uses if she cold devise to have the same
" faythfully performed after hir liff, wherof she all-
" wayes pretended many doubts. And for that she
" used the advise of Mr. Deanes of Powles and of
" Westmynster, and wold have hir actions kept se-
" crett, she forced upon them some small peces of
" plate to be used in their chambres, as remembrances
" of hir good will for their paynes.

" She did also four tymes in the yere secretly send
" to all the prisons in London, money to buy bread,
" chese and drink cōenly for four hundred persons,
" and many tymes more, without knolledg from
" whom the same come.

" She did lykwise sondry tymes in the yere send
" shyrts and smokks to the poore people, both in
" London, and at Chesthunt.

" She also gave a some of money to the master of
" St. Ihon's Colledg, to procure to have fyres in the
" hall of that colledg uppon all sondays and holly-
" dayes betwixt the fest of all Sayntes and Candel-
" mas, whan ther war no ordinary fyres of the charge
" of the colledg.

" She gave also a some of mony secretly towards
" a buyldyng for a new waye at Cambridg to the
" Cōen Scolles.

" She also provyded a great number of books,
" wherof she gave some to the University of Cam-
" bridge, namely the great Bible in Hebrew, and
" four other tongs. And to the college of Saint
" Ihon's very many books in Greke, of divinite and
" physick, and of other sciences. The lyk she did
" to Christ's Chyrch, and St. Ihon's Colledg in Ox-
" ford. The lyk she did to the colledg of West-
" minster.

" She did also yerly provyde wooll and flaxe, and
" did distribute it to women in Chesthunt parish,
" wylling them to work the same into yarn, and to
" bryng it to hir to se ther manner of workyng;
" and for the most part, she gave to them the stuff by
" way of alms. Some tyme she caused the same to
" be wrought into cloth and gave it to the poore,
" paying first for the spyning more than it was
" worth.

" Not long afor hir deth, she caused secretly to be
" bought a large quantite of wheat and rye, to be
" disposed amongst the poore in tyme of derth.
" Which remayned unspent at hir deth; but the
" same confessed by such as provyded it secretly.
" And therfor in conscience to be so distributed ac-
" cordyng to hir mynd.

" W. B. (11)." (11) Ballard's

Memoirs of Bri-
tish Ladies, p.
126—132. Se-
cond edition.

Anna, the second daughter of Sir Anthony Cooke,
was born in 1528. She had the same liberal educa-
tion which was bestowed upon her elder sister, and
perhaps under the same tutor. Having added much
acquired knowledge to great natural endowments,
she made an illustrious figure among the literati of
that period; and hence acquired so extraordinary a
reputation, that she is said to have been constituted
Governess to King Edward the sixth (12). If this be
a fact, it is a very surprizing one; since she could not
be much more than twenty-five years of age at the
death of that young monarch, and only nineteen
years old when he began to reign. However that
matter may stand, it is certain that she early became
eminent for piety, virtue, and learning, and that she
was skilled in the Greek, Latin, and Italian tongues.
At what time she was married to Sir Nicholas Bacon
has not exactly been ascertained. Her eldest son,
Anthony, was born in 1558 (13); and her youngest
son, p. 21.

(12) Ibid. p. 132.

Elizabeth, vol. i.
son, p. 21.

his four daughters, learned above their sex in Greek and Latin; namely, 1. Mildred, married to Sir William Cecil, Baron Burleigh, Lord-Treasurer of England. 2. Anne, to

(14) See his article.

fon, Francis, on the twenty-second of January, 1560-61 (14). It was a great honour to her to be the parent of two gentlemen of such distinguished abilities, and especially of the younger of them, whose intellectual powers and attainments are so well known to have been above all praise. There can be no doubt, but that they were much indebted to their mother for the early cultivation of their understandings; and we may be assured, from her acknowledged character, that she was equally assiduous, if not equally successful, in forming their minds to the principles of piety and virtue. Before she became Lady Bacon, she had given to the world a specimen of her literary industry, in translating, out of Italian into English, twenty-five sermons, written by Barnardine Ochine, a celebrated Divine of that age, concerning the predestination and election of God. This translation was published, in octavo, about the year 1550. Another edition, in 12mo, without a date, is mentioned in Ames's "Typographical Antiquities," under the following title: "Certayne sermons of the ryghte famous and excellent Clerk, master Barnardine Ochine, born within the famous Universitie of Siena in Italy, now also an example in thys lyfe, for the faithful testimony of Jesus Christe. Twenty-five sermons, translated into English from the Italian, by a gentleman, and the last twenty-five translated by a young Lady." Not long after her marriage, Lady Bacon again employed her pen, much to her own honour and to the advantage of her country. At that time, the Roman Catholics in general, and the English fugitives in particular, industriously applied all the learning, wit, and malice they were masters of, to the purposes of blackening the reformation of the Church of England, and of bringing our excellent reformers into contempt. Pope Pius the fourth had called the council of Trent, and had sent his nuncio, Martinigo, to invite Queen Elizabeth to accede to it. The chief Princes of Christendom interposed, likewise, by letters to her Majesty, soliciting her to entertain the nuncio, and submit to the council. At such a crisis, it was deemed necessary to give the world an account of what had been done in the English Parliament, and of the reasons on which it had proceeded; and to retort the many accusations that had been brought against our Church by the Papists. Upon this occasion, the learned, eloquent, and masterly pen of the incomparable Bishop Jewel was employed in drawing up, in the Latin tongue, "An Apology for the Church of England." This task he performed to the infinite satisfaction of the reformed churches, and to the shame and confusion of the Romanists. As the book made a great noise in the world, and excited no small degree of alarm among the advocates of the Popish Communion, the common people of England were earnestly desirous of becoming acquainted with its contents. But the literary men of that period being wholly engaged in refuting the calumnies raised by the Papists, and in answering the numerous seditious libels which swarmed hither from Louvain, Doway, and other places, Lady Bacon determined to gratify the curiosity of the public, and to promote the edification of her countrymen, by translating Bishop Jewel's work. The version is said not only to be faithful but elegant, due regard being had to the time in which it was made. When the translation was finished, Lady Bacon sent the copy to Archbishop Parker for his perusal, as a person to whom the care of the Church of England, and of its doctrine, chiefly belonged. Another copy was sent by her to Bishop Jewel, to be overlooked by him, lest she should in any point have mistaken his meaning. The translation was accompanied by an epistle to him in Greek, which he answered in the same language. Both the Bishop and the Archbishop, after reading over the version, found it to be so correct, as not to require the alteration of a single word. Lady Bacon must undoubtedly have been an excellent Latinist, and have thoroughly entered into the spirit of the work,

VOL. IV.

when the original author of it could find nothing to amend in her translation. The letter written to her by the Archbishop was so highly to her honour, that were we not to transcribe part of it, we should not render her that full justice to which her character is entitled. It was superscribed "To the Right Honourable, learned, and virtuous Lady, A. B. M. C. wisheth from God, Grace, Honour, and Felicity." The Archbishop tells her, "That according to her request, he had perused her studious labour of translation, profitably employed in a right commendable work. Whereof, for that it liked her to make him a judge, and for that the thing itself had singularly pleased his judgment, and delighted his mind in reading it, he had right heartily to thank her Ladyship, both for her well thinking of him, and for the comfort that it wrought in him. But far above these private respects, he was by greater causes enforced, not only to shew his rejoice of this her doing, but also to testify the same by this his writing prefixed before the work, to the commodity of others, and good encouragement of herself. That she had used her accustomed modesty, in submitting it to judgment; but therein her praise doubled, sith it had passed judgment without reproach. And whereas both the chief author of the Latin work, and he, severally perusing and conferring her whole translation, had without alteration allowed of it, he was both to desire her Ladyship, and advertise the readers, to think that they had not therein given any thing to any dissembling affection towards her, as being contented to wink at faults to please her, or to make her without cause to please herself. For that there were sundry respects to draw them from so doing, although they had been so ill minded, as there was no cause why they should be so thought of. That her own judgment in discerning flattery, her modesty in milking it, the laying open of their opinion to the world, the truth of their friendship towards her, the unwillingness of them both, in respect of their vocations, to have that public work not truly and well translated, were good causes to persuade, that their allowance was of sincere truth and understanding. That by her travail she expressed an acceptable duty to the glory of God, deserved well of this Church of Christ, honourably defended the good fame and estimation of her own native tongue, shewing it so able to contend with a work originally written in the most praised speech. That besides the honour done to her sex, and to the degree of Ladies, she had done pleasure to the author of the Latin book, in delivering him, by her clear translation, from the perils of ambiguous and doubtful constructions; and in making his good work more publicly beneficial: whereby she had raised up great comfort to her friends, and had furnished her own conscience joyfully with the fruit of her labour, in so occupying her time. Which must needs redound to the encouragement of noble youth in their good education, and to spend their time and knowledge in godly exercise, she having delivered them so singular a precedent. That as God, he was sure, did accept that her doing, and would blefs with increase; so her, and their most virtuous and learned sovereign Lady and mistress, it should be good cause to commend; and all noble gentlewomen should, he trusted, hereby be allured from vain delights, to doings of more perfect glory. That he, for his part, as occasion might serve, should exhort others to take profit by her work, and follow her example: whose success he beseeched our heavenly Father to blefs and prosper. That to the end, both to acknowledge his good approbation, and to spread the benefit more largely, where her Ladyship had sent him her book written, he had, with most hearty thanks, returned it her, as she saw, printed: knowing that he had thereby done for the best, and in this point used a reasonable

“able policy; that is, to prevent such excuses as her modesty would have made in stay of publishing it (15).” Lady Bacon’s version of Jewel’s Apology was accompanied, when printed, with some additions by the Archbishop (16). It first appeared, in quarto, in 1564. Another edition, in 12mo. was published in 1600 (17). That her Ladyship’s literary reputation extended beyond her own country, is evident from the famous Theodore Beza’s dedication to her of his *Meditations* (18). In Birch’s *Memoirs of the Reign of Queen Elizabeth*, Lady Bacon’s name frequently occurs; and we there meet with some of her letters at full length, and with extracts from others of them (19), which will fully justify the following character given of her by the historian now mentioned. “She frequently introduces Greek as well as Latin into her letters, sometimes with a view of secrecy, but more commonly from the custom of that age, wherein such an intermixture of languages had less the air of pedantry and affectation, than it would have in the present. She was very strict in the duties of piety, and inclined to the principles of the Puritans, to whom her husband had not been thought unfavourable: but her temper seems to have been severe and peevish, especially in the latter years of her life, when it was probably affected by her ill health. Her advices and remonstrances to her elder son, Anthony, were generally delivered in a style of authority, and in terms of reproach, which rendered them less acceptable and effectual, than otherwise they might have been (20).” Of her letters to Mr. Anthony Bacon, we have taken particular notice in that gentleman’s article (*). The advice she gave to the Earl of Essex, when she apprehended him to be in danger of a criminal connection, reflects great credit upon her integrity; and the Earl’s answer (both of which may be seen in the book referred to) was as honourable to himself as it was respectful to her Ladyship (21). What was the exact time of Lady Bacon’s death cannot now be ascertained; but it is certain, from the dates of the circumstances last related, that she was living in December, 1596. Mr. Ballard conjectures, that she died about the beginning of King James the First’s reign, at Gorhambury, near St. Alban’s, where her picture still remains. According to Dr. Rawley, she was buried at St. Michael’s Church, in that town; but Mr. Ballard could not find there any monument or inscription to her memory (22).

Elizabeth, third daughter of Sir Anthony Cooke, was born about the year 1529, and enjoyed the same liberal education which was bestowed upon her sisters. She was equally happy in improving the advantages conferred upon her; for such was her progress in the learned languages, that she gained the applause of the most eminent scholars of the age. It was observed by Sir John Harrington, that if Madam Vittoria, an Italian Lady, deserved to have her name celebrated and transmitted to posterity by Ariosto, for writing some verses, in the manner of an epitaph, upon her husband, after his decease; no less commendation was due to the Lady before us, who did as much and more, not only for two husbands, but for her son, daughter, brother, sister, and venerable old friend Mr. Noke of Shotelbrooke, in the Greek, Latin, and English tongues. She was married, first, to Sir Thomas Hobby, and accompanied him to France, when he went there, as Ambassador from Queen Elizabeth. At Paris Sir Thomas died, on the 13th of July, 1566, aged thirty-six years. His disconsolate Lady, who was big with child, brought him honourably home, and having erected a chapel in the chancel of the church at Bisham, in Berkshire, she carefully deposited the remains of her husband, and of his brother, Sir Philip Hobby, in one tomb together, which she adorned with large inscriptions, in Latin and English verse, of her own composition. She had by Sir Thomas Hobby four children, Edward, Elizabeth, Anne, and Thomas Posthumus. It doth not appear that she had great comfort in

either of her sons; and the youngest in particular, as is manifest from a letter written by her to Lord Treasurer Burleigh, was guilty of such extravagancies and undutifulness, as gave her much uneasiness. It is evident, from the letter, that she was a woman of uncommon spirit and sense, and an excellent oeconomist. Some years after the decease of Sir Thomas Hobby, she was married, a second time, to John, Lord Ruffel, son and heir to Francis Ruffel, Earl of Bedford. Her husband, dying before his father, in the year 1584, was buried in the Abbey Church of Westminster, where there is a noble monument erected to his memory, and embellished with inscriptions, in Greek, Latin, and English, by this his surviving Lady. Her children, by John Lord Ruffel, were one son, who died young in 1580, and two daughters, Anne and Elizabeth. The last of them survived her father but a little time, and is said to have bled to death by the prick of a needle in the forefinger of her left hand. This story has been supported by the figure placed on her monument, which is in the same grate with that of her father; where, on a pedestal of black and white marble made column-wise, in imitation of a Roman altar, may be seen the statue of a young Lady seated in a most curiously wrought oster chair, of the finest polished alabaster, in a very melancholy posture, inclining her head to the right hand, and with the fore-finger of her left only extended downwards, to direct us to behold the death’s-head underneath her feet, and, as the tradition goes, to signify the disaster that brought her to her end. Mr. Ballard thinks, that if the fact be true, it must be attributed to some gangrene, or other dangerous symptom, occasioned, perhaps, at first, by the pricking of an artery or nerve, which at last brought her to the grave. The matter, however doth not deserve to be reasoned upon; being, in truth, no other than an idle and groundless tale, which very well answers the purpose of amusing the croud who go to visit the tombs in the Abbey.

Lady Ruffel translated out of French into English a tract, entitled, “A Way of Reconciliation of a good and learned Man, touching the true Nature and Substance of the Body and Blood of Christ in the Sacrament.” This work was printed in 1605 (+), and is dedicated to her only daughter, Anne Herbert, wife to Henry Lord Herbert, son and heir to Edward Earl of Worcester. A short extract from the dedication will afford a specimen of Lady Ruffel’s disposition of mind, and of her manner of writing. “Most virtuous and worthily beloved daughter; even as from your first birth and cradle, I was ever most careful, above any worldly thing, to have you suck the perfect milk of sincere religion; so, willing to end as I began, I have left to you, as my last legacy, this book, a most precious jewel, to the comfort of your soul; being the work of a good learned man, made above fifty years since in Germany; after by travail a French creature, now naturalized by me into English.” Then proceeding to give the reason of her publishing this piece, she added, “That at first she meant not to set it abroad in print; but herself only to have some certainty to lean unto in a matter so full of controversy, and to yield a reason of her opinion. But since lending the copy of her own hand to a friend, she was bereft thereof by some: and fearing lest after her death it should be printed according to the humours of others, and wrong of the dead: who in his life approved her translation with his own allowance: therefore dreading, she said, wrong to him, above any other respect, she had by anticipation prevented the worst. And then piously and affectionately she concludes thus; that she meant it for a new-year’s gift: and then, farewell, my good Nancy. God bless thee with a continuance of the comfort of the holy Spirit; that it may ever work in you, and persevere with you to the end, and in the end.”

The dedication is concluded with the following Tetra-stich

(+) We have some doubts whether this was the first edition.

By his Lady, Anne, daughter of Sir William Fitz-Williams, of Milton, Knt. he had also
(b) *Strype, ibid.* two sons, Richard and William (b).

Tetrastich to her daughter, suitable to the new year:

" In A N N A M filiam,

" Ut veniens annus tibi plurima commodet, Anna,
" Voce piâ Mater, supplice mente, precor;
" Ut valeat pariterq; tuo cum conjuge Proles,
" Officiis junctis, vita serena fluat.

" ELIZABETHA RUSSELLA, Dowager.

" To her Daughter A N N E.

" That each new year new blessings Anne may bear,
" Thy tender mother breathes her pious pray'r,
" Blest be thy husband, blest thy offspring be,
" And all thy days from ev'ry ill be free."

The time of Lady Russel's death has not been ascertained. In a letter written by her to Sir Robert Cecil, without date, she complains of her bad health and infirmities, and mentions her having completed sixty-eight years. She seems to have been buried at Bisham, in Berks, near the remains of her first husband, and in the chapel which she herself had founded (23). From Birch's Memoirs of the Reign of Queen Elizabeth, it appears that Lady Russel interested herself in the concerns of her nephew Anthony Bacon, and endeavoured to do him service with the Lord Treasurer Burleigh. In that work there are some extracts from two of her letters upon this occasion, and a long account of a curious conversation which she had with her nephew, relative to the disputes between him and the Treasurer. The fact was, that Lord Burleigh was dissatisfied with the connections both of Mr. Anthony and Mr. Francis Bacon, and especially with their attachment to the Earl of Essex, and on these accounts was not favourable to their promotion (24).

(23) Ballard, *ubi supra*, p. 136—141.

(24) Birch's Memoirs, vol. ii. p. 129, 131, 132—137, 168.

Katherine, the fourth daughter of Sir Anthony Cooke, was born about the year 1530; and her natural genius being improved by the same excellent education which was bestowed upon her sisters, she became famous for her knowledge in the Hebrew, Greek, and Latin tongues, and for her skill in poetry. A short specimen of her talent in that art has been preserved by Sir John Harington and Dr. Thomas Fuller; but there is some difficulty in determining the occasion upon which the verses were written. Sir John Harington says, that her design in writing them was to get a kinsman of her's sent to Cornwall, where she inhabited, and to prevent his going beyond sea. Mr. Phillips, in his "Theatrum Poetarum," asserts that it was her lover. Dr. Fuller, however, with greater appearance of reason, informs us, that her husband being designed by Queen Elizabeth Ambassador to France, in troublesome times, when the employment, always difficult, was then apparently dangerous, his Lady wrote these lines to her sister Mildred Cecil, to engage her interest with Lord Burleigh for preventing the appointment. The verses are as follows:

" Si mihi quem cupio cures Mildreda remitti,
" Tu bona, tu melior, tu mihi sola soror:
" Sin male cessando retines, & trans mare mittis,
" Tu mala, tu peior, tu mihi nulla soror.
" Is si Cornubiam, tibi pax fit & omnia læta;
" Sin mare, Ciciliæ nuncio bella. Vale."

Thus translated by a friend of Mr. Ballard's.

" If, Mildred, to my wishes kind,
" Thy valued charge thou send,
" In thee my soul shall own combin'd
" The sister and the friend.
" If from my eyes by thee detain'd
" The wanderer crosses the seas,
" No more thy love shall sooth, as friend,
" No more as sister, please.
" His stay let Cornwall's shore engage;
" And peace with Mildred dwell:
" Else war with Cecil's name I wage,
" Perpetual war. Farewell."

The person to whom Katherine Cooke was married was Henry Killegrew, Esq; a Gentleman of good abilities, and who, for the services he performed to his country in the quality of an Ambassador, was afterwards knighted. It should seem, therefore, that, if Fuller be right in the account he has given of the purpose of the preceding verses, the fair author did not obtain her request. Sir Henry Killegrew had a daughter, probably by this Lady, married to Sir Jonathan Trelawny, a Gentleman of Cornwall, about the latter end of Queen Elizabeth's reign. Sir Henry was living in great esteem, in the year 1602. It appears, from her father's will, that Lady Killegrew was alive on the 22d of May, 1576. She was buried in the Chancel of the Church of St. Thomas the Apostle, in Vintry-yard, London, where is an elegant monument erected to her memory, on which is the following inscription, composed by herself.

" Dormio nunc Domino, Domini virtute resurgam;
" Et *σωτηρα* meum carne videbo mea.
" Mortua ne dicar, fruitur pars altera Christo:
" Et furgam Capiti, Tempore, tota meo."

" To God I sleep, but I in God shall rise,
" And, in the flesh, my Lord and Saviour see.
" Call me not dead, my soul to Christ is fled,
" And soon, both soul and body join'd shall be.

The death of Lady Killegrew was lamented in various Epitaphs. Her sister, Lady Russel, wrote one, partly in Greek and partly in Latin verse. Three others, in Latin verse, were written by Robert Mason Forman, Minister of the reformed French Church in London, by Andrew Melvin, and by William Chark. Such of our readers as are curious to see these productions, may find them in Ballard (25).

It is generally understood that Sir Anthony Cooke had only four daughters; but there is some reason to believe that he had, at least, one more. Camden, Fuller, Lloyd, Bohun, and Strype concur in mentioning a fifth daughter, whose name, they say, is lost. Nevertheless, they all observe that she was married to Sir Ralph Rowlet. Nay, Sir William Dugdale informs us (though without producing any authority for his assertion), that Sir Anthony Cooke had six daughters. On the other hand, Sir John Harington, who corresponded with Lady Russel, and who might be supposed not likely to be mistaken in this affair, speaks only of four. What is still more material, there is a monumental inscription for Sir Anthony Cooke, in the Church of Rumford in Essex, that contains a sort of pedigree of the family, and which mentions two sons, Richard and William, and the above-named four daughters. It is, likewise, observable, that the monument represents Sir Anthony with two sons behind him; and his Lady with only four daughters behind her. Strong as this evidence may be thought, it is weakened by the testimony of Mr. Fulman's manuscripts, in which that indefatigable Gentleman remarks, that the name of Sir Anthony Cooke's fifth daughter was Margaret, and that she was married to Ralph Rowlet. These facts are farther confirmed by the following tetrastich in Dr. Haddon's poems.

(25) Ballard, *ubi supra*, p. 142—146.

In nuptias Rodolphi Rouleti, & Thomæ Hobei, qui duas D. Antonii Coci filias, duxere uxores eodem die.

" Margaritam, Roulete, tuam fac mente recondas,
" Gemma fit ut tuto tam pretiosa loco.
" Sit frater fratri similis, sit filia patri,
" Sic vir erit dignus conjuge, sponsa viro."

On the nuptials of Ralph Rowlet, and Thomas Hobby, who, on the same day, married two daughters of Sir Anthony Cooke.

" Rowlet, in purest heart thy Marg'ret wear,
" A casket proper for a gem so rare!

" The

"The brother's merit let the brother claim,
 "The daughter emulate the father's fame:
 "So shall the bridegroom to his like be join'd,
 "The bride her virtues in her consort find."

Strype, in his *Memorials Ecclesiastical*, under the year 1557, says, that "December the eighth, the Lady Rowlet, one of the learned daughters of Sir Anthony Cooke, and the youngest of the five, wife of Sir Ralph Rowlet, Knight, was buried in the parish of St. Mary Staining, London." Mr. Ballard proposes a query, whether Lady Rowlet might not be a natural daughter of Sir Anthony Cooke; but this is a supposition to which we cannot give our assent. It doth not well accord with her being married to a Gentleman of such rank as her husband was, nor with the celebration of her marriage on the same day with that of her sister Elizabeth. Neither does Strype's account of her agree with Mr. Ballard's suggestion. Mr. Strype speaks of her without ignominy as one of the learned daughters of Sir Anthony Cooke, and as the youngest of the five (26). Her not being mentioned in the inscription of the monument at Rumford may be accounted for, by her having died nearly twenty years before her father. The surviving children only appear to have been represented in that monument. If, however, Lady Rowlet possessed as much literature as her sister, no memorials of it have come to our knowledge. Her early decease, for she could not, at most, be above twenty-six years of age when she died, might prevent the public fruits which would otherwise have been produced from her literary accomplishments. We are sensible, that this short disquisition concerning her is of little importance; but, when such subjects come properly before us, it is our duty to ascertain historical truth, as far as we are able. Bayle, whose genius was so much superior to our's, did not think these minute discussions beneath his attention; and whilst we are in some measure justified by his example, it fortunately happens that we shall not have occasion to enter into them so frequently as was done by that great Biographer.

We cannot dismiss Sir Anthony Cooke's four celebrated daughters, without making a few observations on the general state of female literature in that period. It has been remarked by Mr. Wotton, that no age was so productive of learned women as the sixteenth century. Speaking of the flourishing condition of learning in that century, he says, it was so very modish, that the fair sex seemed to believe that Greek and Latin added to their charms; and that Plato and Aristotle untranslated were frequent ornaments of their closets. "One would think by the effects, that it was a proper way of educating them, since there are no accounts in history of so many great women in any one age, as are to be found between the years fifteen and sixteen hundred." Erasmus, also, describing those times, says, "*Scena rerum humanarum invertitur: monarchi literas nesciunt, & fœminæ libris indulgent. — Bellum est eum sexum ad prisca exempla sese postliminio recipere.*" "The scene of human affairs is changed: the monks are ignorant of literature, and women are fond of books.—It is a pleasing circumstance, that the female sex should at length have recourse to the ancient examples." Learning was then held in such high estimation, that several great men were desirous that their daughters should be possessed of it, as well as their sons. The examples of King Henry the Eighth, in the education of the Princesses Mary and Elizabeth, and of Sir Thomas More with regard to Mrs. Roper, are thought to have chiefly contributed to the introduction of this custom (27). There can be no doubt but that the conduct of persons so illustrious would have much effect upon the sentiments of our countrymen, and be productive of imitation. But, besides this, there was a concurrence of other causes; such as the recent origin of printing; the curiosity hence excited in the human mind; the admiration with which the ancient writers, so lately brought to light, were contemplated; and the distinguished honour that arose from literary pursuits. In short, the general spirit of the age nourished the principle of training up wo-

men in learning. Nor was a slight degree of learning deemed sufficient for them. They were rendered complete mistresses of the Greek and Latin, as well as of the modern languages. Their reading was not confined to the classic authors, but comprehended the fathers of the Church. They could write Greek epistles, and compose Greek verses. It should be remembered, however, that the literature of the women of that period extended comparatively but to a few persons, and those only of considerable rank, the generality of the female sex being in a state of ignorance. There was by no means that diffusion of knowledge, that cultivation of mind, that taste for books, which we now meet with in almost every company of ladies. Neither do we find that the learned women of the sixteenth century produced such works as have continued to be read much by posterity. The most important production of any of Sir Anthony Cooke's daughters, was Lady Bacon's translation of Bishop Jewel's Apology; and yet, who but an Antiquary would now seek for it, or give himself the trouble of perusing it? Not a single Poetess, deserving to be mentioned, arose in this country till the seventeenth century. The Duchesses of Newcastle, Mrs. Katherine Philips, and Mrs. Behn, appear to have been the first who could, in any degree, merit that appellation. If we come down to later times, we shall be sensible that, independently of poetry, the learned women of the sixteenth century have been far exceeded by the ingenious ladies of the present age, both in the general and extensive utility of their writings, and in the elegancies of composition. We pretend not to enumerate all those whose works will be read and admired by succeeding generations; but it is impossible, whilst we are treating on such a subject, to forget the names of a Cockburn, a Rowe, a Montagu, a Carter, a Chapone, a More, and a Barbauld. We are speaking of prose works only, since otherwise we could not avoid adding to the catalogue a Seward and a Williams. Neither does novel-writing come under our immediate view, to which so many, perhaps too many female authors, apply themselves, though none with a success equal to that of a Burney.

There is a remark to be made concerning the difference between the literature of the ladies of the sixteenth century, and that of the women of more recent times. The former entered deeply into the study of the ancient languages, whilst the latter, besides acquiring a skill in the modern tongues, especially the French and the Italian, have paid their principal attention to the cultivation of general knowledge. Some of them, however, have been no small proficient in the learning of antiquity. Mrs. Carter stands, without competition, at the head of her sex in this respect; having displayed her accurate acquaintance with the Greek writings and philosophy, in a manner highly honourable to herself, and advantageous to the world. How admirably Mrs. Barbauld hath entered into the spirit of the Latin classics, is apparent from the uncommon propriety and beauty of her mottoes. Mrs. Montagu, in her admirable Essay on the Writings and Genius of Shakspeare, hath shewn that, amongst the other qualifications necessary to constitute a Critic of the first order, such as a penetrating mind, a fine taste, and a correct and elegant style, she is well acquainted with ancient literature, and rich in the stores of various knowledge.

Another circumstance observable in the learned ladies of the sixteenth century is, that they were most eminent for their piety. Religion was deeply impressed upon their minds, and, agreeably to the fashion of the times, religion was almost the sole topic of their writings. It is pleasing to reflect, that the best female authors of the present day are not inferior to them in pious and virtuous principles and conduct. Those who have the happiness of a personal intimacy with Mrs. Montagu, Mrs. Carter, Mrs. Barbauld, Mrs. Chapone, and Miss Hannah More, will know that we speak the truth; to which may be added, that these ladies are unaffected in their manners, and that they do not esteem themselves above the ordinary duties of domestic life.] K.

* * [COOK (JAMES), one of the greatest Navigators and Discoverers that ever existed, had no claim to distinction on account of the lustre of his birth, or the dignity of his ancestors. His father, James Cook, who from his dialect is supposed to have been a Northumbrian, was in the humble station of a servant in husbandry, and married a woman of the same rank with himself, whose christian name was Grace. Both of them were noted in their neighbourhood for their honesty, sobriety, and diligence. They first lived at a village called Morton, and then removed to Marton, another village in the North-riding of Yorkshire, situated in the high road from Gisbrough, in Cleveland, to Stockton upon Tees, in the county of Durham, at the distance of six miles from each of these towns. At Marton Captain Cook was born, on the 27th of October, 1728 (a); and, agreeably to the custom of the Vicar of the parish, whose practice it was to baptize infants soon after their birth, he was baptized on the 3d of November following. He was one of nine children, all of whom are now dead, excepting a daughter, who married a fisherman at Redcar. The first rudiments of young Cook's education were received by him at Marton, where he was taught to read by Dame Walker, the School-mistress of the village. When he was eight years of age, his father, in consequence of the character he had obtained for industry, frugality, and skill in husbandry, had a little promotion bestowed upon him, which was that of being appointed head servant, or hind (b), to a farm belonging to the late Thomas Skottow, Esq; called Airy Holme, near Great Ayton. To this place, therefore, he removed with his family (c); and his son James, at Mr. Skottow's expence, was put to a day School in Ayton, where he was instructed in writing, and in a few of the first rules of arithmetic. Before he was thirteen years of age, he was bound an apprentice to Mr. William Sanderson, a Haberdasher, or Shopkeeper, at Staiths, a considerable fishing town, about ten miles north of Whitby. This employment, however, was very unsuitable to young Cook's disposition. The sea was the object of his inclination; and his passion for it could not avoid being strengthened by the situation of the town in which he was placed, and the manner of life of the persons with whom he must frequently converse. Some disagreement having happened between him and his Master, he obtained his discharge, and soon after bound himself for seven years to Messrs. John and Henry Walker, of Whitby, Quakers by religious profession, and principal owners of the ship Free-love, and of another vessel, both of which were constantly employed in the coal trade. The greatest part of his apprenticeship was spent on board the Free-love. After he was out of his time he continued to serve in the coal and other branches of trade (though chiefly in the former) in the capacity of a common sailor; till, at length, he was raised to be mate of one of Mr. John Walker's ships. During this period it is not recollected that he exhibited any thing very peculiar, either in his abilities or his conduct; though there can be no doubt but that he had gained a considerable degree of knowledge in the practical part of navigation, and that his attentive and sagacious mind was laying up a store of observations which would be useful to him in future life (d). In the Spring of the year 1755, when hostilities broke out between England and France, and there was a hot press for seamen, Mr. Cook happened to be in the river Thames with the ship to which he belonged. At first he concealed himself, to avoid being pressed; but reflecting that it might be difficult, notwithstanding all his vigilance, to elude discovery or escape pursuit, he determined, upon farther consideration, to enter voluntarily into his Majesty's service, and to take his future fortune in the Royal Navy. Perhaps he had some presage in his own mind, that by his activity and exertions he might rise considerably above his present situation. Accordingly, he went to a rendezvous at Wapping, and entered with an officer of the Eagle man of war, a ship of sixty guns, at that time commanded by Captain Hamer. To this ship Captain (now Sir Hugh) Palliser was appointed, in the month of October, 1755; and when he took the command, found in her James Cook, whom he soon distinguished to be an able, active, and diligent seaman. All the officers spoke highly in his favour, and the Captain was so well pleased with his behaviour, that he gave him every encouragement which lay in his power. In the course of some time, Captain Palliser received a letter from Mr. Osbaldeston, then Member of Parliament for Scarborough, acquainting him that several neighbours of his had solicited him to write in favour of one Cook, on board the Captain's ship. They had heard that Captain Palliser had taken notice of him, and they requested, if he thought Cook deserving of it, that he would point out in what manner Mr. Osbaldeston might best contribute his assistance towards forwarding the young man's promotion. The Captain, in his reply, did justice to Cook's merit; but, as he had been only a short time in the Navy, informed Mr. Osbaldeston that he could not be promoted as a commission officer. A Master's warrant, Captain Palliser added, might perhaps be procured for Mr. Cook, by which he would be raised to a station that he was well qualified to discharge with ability and credit (e). Such a warrant he obtained on the 10th of May, 1759, for the Grampus sloop; but the proper Master having unexpectedly returned to her, the appointment did not take place. Four days after he was made Master of the Garland; when, upon enquiry, it was found that he could not join her, as the ship had already failed. On the next day, the 15th of May, he was appointed to the Mercury (f). These

(a) The mud house in which Captain Cook drew his first breath is pulled down, and no vestiges of it are now remaining.

(b) This is the name which, in that part of the country, is given to the head servant, or bailiff, of a farm.

(c) Mr. Cook, senior, spent the close of his life with his daughter, at Redcar, and is supposed to have been about eight or five years of age when he died.

(d) From the register of the parish of Marton; from the account given by some inhabitants of the parish; and from the information of — Jackson, Esq. of Normanby, Yorkshire, in a letter to Sir Joseph Banks, Bart. president of the Royal Society.

(f) From the books of the Admiralty.

quick and successive appointments shew that his interest was strong, and that the intention to serve him was real and effectual. The destination of the Mercury was to North America, where she joined the fleet under the command of Sir Charles Saunders, which, in conjunction with the land forces under General Wolfe, was engaged in the famous siege of Quebec. During that siege, a difficult and dangerous service was necessary to be performed. This was to take the soundings in the Channel of the river St. Lawrence, between the Island of Orleans and the north shore, directly in the front of the French fortified camp at Montmorency and Beauport, in order to enable the Admiral to place ships against the enemy's batteries, and to cover our army on a general attack, which the heroic Wolfe intended to make on the camp. Captain Palliser, in consequence of his acquaintance with Mr. Cook's sagacity and resolution, recommended him to the service; and he performed it in the most complete manner. In this business he was employed during the night-time, for several nights together. At length he was discovered by the enemy, who collected a great number of Indians and canoes, in a wood near the water-side, which were launched in the night, for the purpose of surrounding him, and cutting him off. On this occasion, he had a very narrow escape. He was obliged to run for it, and pushed on shore on the Island of Orleans, near the guard of the English Hospital. Some of the Indians entered at the stern of the boat, as Mr. Cook leaped out at the bow; and the boat, which was a barge belonging to one of the ships of war, was carried away in triumph. However, he furnished the Admiral with as correct and complete a draught of the Channel and soundings as could have been made after our countrymen were in possession of Quebec. Sir Hugh Palliser has good reason to believe, that before this time Mr. Cook had scarcely ever used a pencil, and that he knew nothing of drawing. But such was his capacity, that he speedily made himself master of every object to which he applied his attention. Another important service was performed by Mr. Cook while the fleet continued in the river of St. Lawrence. The navigation of that river is exceedingly difficult and hazardous. It was particularly so to the English, who were then in a great measure strangers to this part of North America, and who had no chart, on the correctness of which they could depend. It was, therefore, ordered by the Admiral, that Mr. Cook should be employed to survey those parts of the river, below Quebec, which navigators had experienced to be attended with peculiar difficulty and danger; and he executed the business with the same diligence and skill of which he had already afforded so happy a specimen. When he had finished the undertaking, his Chart of the river St. Lawrence was published, with soundings, and directions for sailing in that river. Of the accuracy and utility of this Chart it is sufficient to say, that it hath never since been found necessary to publish any other. One which has appeared in France is only a copy of our author's, on a reduced scale. After the expedition at Quebec, Mr. Cook, by warrant from Lord Colvill, was appointed, on the 22d of September, Master of the Northumberland man of war, the ship in which his lordship staid, in the following winter, as Commodore, with the command of a squadron at Halifax. In this station Mr. Cook's behaviour did not fail to gain him the esteem and friendship of his commander. During the leisure which the season of Winter afforded him, he employed his time in the acquisition of such knowledge as eminently qualified him for future service. It was at Halifax that he first read Euclid, and applied himself to the study of astronomy and other branches of science. The books of which he had the assistance were few in number; but his industry enabled him to supply many defects, and to make a progress far superior to what could be expected from the advantages he enjoyed (g). While Mr. Cook was Master of the Northumberland under Lord Colvill, that ship came to Newfoundland, in September, 1762, to assist in the recapture of the Island from the French, by the forces under the command of Lieutenant Colonel Amherst. When the Island was recovered, the English fleet staid some days at Placentia, in order to put it in a more complete state of defence. During this time Mr. Cook manifested a diligence in surveying the harbour and heights of the place, which arrested the notice of Captain (now Admiral) Graves, Commander of the Antelope, and Governor of Newfoundland. The Governor was hence induced to ask Cook a variety of questions, from the answers to which he was led to entertain a very favourable opinion of his abilities. This opinion was increased, the more he saw of Mr. Cook's conduct; who, wherever they went, continued to display the most unremitting attention to every object that related to the knowledge of the coast, and which was calculated to facilitate the practice of navigation. The esteem which Captain Graves had conceived for him, was confirmed by the testimonies to his Character that were given by all the officers under whom he served (h). In the latter end of 1762, Mr. Cook returned to England; and, on the 21st of December, in the same year, married, at Barking in Essex, Miss Elizabeth Batts (i), an amiable and deserving woman, who was justly entitled to, and enjoyed his tenderest regard and affection. But his station in life, and the high duties to which he was called, did not permit him to partake of matrimonial felicity without many and very long interruptions. Early in the year of 1763, after the peace with France and Spain was concluded, it was determined that Captain Graves should go out again, as Governor of Newfoundland. As the country was very valuable in a commercial view, and had been

(g) From the information of Sir Hugh Palliser.

(h) From a paper of Admiral Graves's communicated by the Rev. Dr. Douglas, now Bishop of Carlisle.

(i) From the information of Mrs. Cook.

an object of great contention between the English and the French; the Captain obtained an establishment for the survey of its coasts; which, however, he procured with some difficulty, because the matter was not sufficiently understood by Government at home. In considering the execution of the plan, Mr. Cook appeared to Captain Graves to be a proper person for the purpose; and proposals were made to him, to which, notwithstanding his recent marriage, he readily and prudently acceded. Accordingly, he went out with the Captain as surveyor; and was first employed to survey Miquelon and St. Pierre, which had been ceded by the treaty to the French, who, by order of Administration, were to take possession of them at a certain period, even though the English Commander should not happen to be arrived in the country. When Captain Graves had reached that part of the world, he found there the Governor who had been sent from France (Mons. D'Anjac), with all the settlers and his own family, on board a frigate and some transports. It was contrived, however, to keep them in that disagreeable situation for a whole month, which was the time taken by Mr. Cook to complete his survey. When the business was finished, the French were put into possession of the two islands, and left in the quiet enjoyment of them, with every profession of civility (*k*). At the end of the season, Mr. Cook returned to England, but did not long continue at home. In the beginning of the year 1764, his old and constant friend and patron, Sir Hugh Palliser, was appointed Governor and Commodore of Newfoundland and Labradore; upon which occasion he was glad to take Mr. Cook with him, in the same capacity that he had sustained under Captain Graves. Indeed, no man could have been found who was better qualified for finishing the design which had been begun in the preceding year. The charts of the coasts, in that part of North America, were very erroneous; and it was highly necessary to the trade and navigation of his Majesty's subjects, that new ones should be formed, which would be more correct and useful. Accordingly, under the orders of Commodore Palliser, Mr. Cook was appointed, on the 18th of April, 1764, Marine Surveyor of Newfoundland and Labradore; and he had a vessel, the Grenville schooner, to attend him for that purpose. How well he executed his commission is known to every man acquainted with navigation. The Charts which he afterwards published of the different surveys he had made, reflected great credit on his abilities and character, and the utility of them is universally acknowledged. It is understood, that, so far as Newfoundland is concerned, they were of considerable service to the King's Ministers, in settling the terms of the last peace. Mr. Cook explored the inland parts of this Island in a much completer manner than had ever been done before. By penetrating farther into the middle of the country than any man had hitherto attempted, he discovered several large lakes, which are indicated upon the general Chart (*l*). In these services Mr. Cook appears to have been employed, with the intervals of occasionally returning to England for the winter season, till the year 1767, which was the last time that he went out upon his station of Marine Surveyor of Newfoundland. It must not be omitted, that, while he occupied this post, he had an opportunity of exhibiting to the Royal Society a proof of his progress in the study of astronomy. A short paper was written by him, and inserted in the fifty-seventh volume of the Philosophical Transactions, entitled, "An Observation of an Eclipse of the Sun at the Island of Newfoundland, August 5, 1766, with the Longitude of the Place of Observation deduced from it." The observation was made at one of the Burgeo Islands, near Cape Ray, in latitude $47^{\circ} 36' 19''$, on the south-west extremity of Newfoundland. Mr. Cook's paper having been communicated by Dr. Bevis to Mr. Witchell, the latter Gentleman compared it with an observation taken at Oxford, by the Rev. Mr. Hornsby, on the same eclipse, and thence computed the difference of longitude respecting the places of observation, making due allowance for the effect of parallax, and the prolate spheroidal figure of the earth. It appears from the "Transactions," that our navigator had already obtained the character of being an able Mathematician (*m*).

There is scarcely any thing from which the natural curiosity of man receives a higher gratification, than from the accounts of distant countries and nations. Nor is it curiosity only that is gratified by such accounts; for the sphere of human knowledge is hereby enlarged, and various objects are brought into view, an acquaintance with which greatly contributes to the improvement of life and the benefit of the world. With regard to information of this kind, the moderns have eminently the advantage over the ancients. The ancients could neither pursue their enquiries with the same accuracy, nor carry them on to the same extent. Travelling by land was much more inconvenient and dangerous than it hath been in later times; and, as navigation was principally confined to coasting, it must necessarily have been circumscribed within very narrow limits. The invention of the compass, seconded by the ardent and enterprising spirit of several able men, was followed by wonderful discoveries. Vasco di Gama doubled the Cape of Good Hope; and a new way being thus found out to the East Indies, the countries in that part of the earth became more accurately and extensively known. Another world was discovered by Columbus; and, at length, Magalhaens accomplished the arduous and hitherto unattempted task of sailing round the globe. At different periods, he was succeeded by other circum-

navigators,

navigators, of whom it is no part of the present narrative to give an account. The spirit of discovery, which was so vigorous during the latter end of the fifteenth and through the whole of the sixteenth century, began, soon after the commencement of the seventeenth century, to decline. Great navigations were only occasionally undertaken, and more from the immediate views of avarice or war, than from any noble and generous principles. But of late years they have been revived, with the enlarged and benevolent design of promoting the happiness of the human species. A beginning of this kind was made in the reign of King George the Second, during which two voyages were performed; the first under the command of Captain Middleton, and the next under the direction of Captains Smith and Moore, in order to discover a North-west passage, through Hudson's Bay (n). It was reserved, however, for the glory of the present reign to carry the spirit of discovery to its height, and to conduct it on the noblest principles; not for the purposes of covetousness or ambition; not to plunder or destroy the inhabitants of newly-explored countries; but to improve their condition, to instruct them in the arts of life, and to extend the boundaries of science. No sooner was peace restored, in 1763, than these laudable designs engaged his Majesty's patronage; and two voyages round the world had been undertaken, before Mr. Cook set out on his first command. The conductors of these voyages were the Captains Byron, Wallis, and Carteret (o), by whom several discoveries were made, which contributed, in no small degree, to increase the knowledge of geography and navigation. Nevertheless, as the purpose for which they were sent out appears to have had a principal reference to a particular object in the South Atlantic, the direct tract they were obliged to hold, on their way homeward by the East Indies, prevented them from doing so much as might otherwise have been expected towards giving the world a complete view of that immense expanse of ocean which the South Pacific comprehends (p). Before Captain Wallis and Captain Carteret had returned to Great Britain, another voyage was resolved upon, for which the improvement of astronomical science afforded the immediate occasion. It having been calculated by Astronomers, that a transit of Venus over the Sun's disk would happen in 1769, it was judged that the best place for observing it would be in some part of the South Sea, either at the Marquesas, or at one of those Islands which Tasman had called Amsterdam, Rotterdam, and Middleburg, and which are now better known under the appellation of the Friendly Islands (q). This being a matter of eminent consequence in astronomy, and which excited the attention of foreign nations as well as of our own, the affair was taken up by the Royal Society, with the zeal which has always been displayed by that learned body for the advancement of every branch of philosophical science. Accordingly, a long memorial was addressed to his Majesty, dated February the 15th, 1768, representing the great importance of the object, together with the regard which had been paid to it by the principal Courts of Europe; and intreating, among other things, that a vessel might be ordered, at the expence of Government, for the conveyance of suitable persons, to make the observation of the transit of Venus at one of the places before mentioned. This memorial having been laid before the King by the Earl of Shelburne, (now the Marquis of Lansdown) one of the principal Secretaries of State, his Majesty graciously signified his pleasure to the Lords Commissioners of the Admiralty, that they should provide a ship for carrying over such observers as the Royal Society should judge proper to send to the South Seas; and, on the 3d of April, Mr. Stephens informed the Society, that a bark had been taken up for the purpose (r). The Gentleman who had originally been fixed upon to take the direction of the expedition, was Alexander Dalrymple, Esq; an eminent Member of the Royal Society, and who, besides possessing an accurate knowledge of astronomy, had distinguished himself by his enquiries into the geography of the Southern Oceans, and by the collection he had published of several voyages to those parts of the world. Mr. Dalrymple being sensible of the difficulty, or rather of the impossibility, of carrying a ship through unknown seas, the crew of which were not subject to the military discipline of his Majesty's Navy, he made it the condition of his going, that he should have a brevet commission as Captain of the vessel, in the same manner as such a commission had been granted to Dr. Halley in his voyage of discovery. To this demand Sir Edward Hawke, who was then at the head of the Admiralty, and who possessed more of the spirit of his profession than either of education or science, absolutely refused to accede. He said at the board, that his conscience would not allow him to trust any ship of his Majesty's to a person who had not regularly been bred a seaman. On being farther pressed upon the subject, Sir Edward declared, that he would suffer his right hand to be cut off, before he would sign any such commission. In this he was, in some degree, justified by the mutinous behaviour of Halley's crew, who refused to acknowledge the legal authority of their commander, and involved him in a dispute which was attended with pernicious consequences. Mr. Dalrymple, on the other hand, was equally steady in requiring a compliance with the terms he had proposed. Such was the state of things, when Mr. Stephens, Secretary to the Admiralty, whose discrimination of the numerous characters, with which by his station he is conversant, reflects as much credit on his understanding, as his upright and able conduct does on the office he has filled, for so many years, and under so many Administrations, with honour to

(o) The Captains Wallis and Carteret went out together upon the same expedition; but the vessels they commanded having accidentally parted company, they proceeded and returned by a different route. Hence their voyages are distinctly related by Dr. Hawke's worth.

(q) *Ibid.* second voyage, vol. i. p. xx. fourth edit.

to himself and advantage to the public, observed to the board, that, since Sir Edward Hawke and Mr. Dalrymple were equally inflexible, no method remained but that of finding out another person capable of the service. He knew, he said, a Mr. Cook, who had been employed as Marine Surveyor of Newfoundland, who had been regularly educated in the Navy, in which he was a Master, and whom he judged to be fully qualified for the direction of the present undertaking. Mr. Stephens, at the same time, recommended it to the Board, to take the opinion of Sir Hugh Palliser, who had lately been Governor of Newfoundland, and was intimately acquainted with Cook's character. Sir Hugh rejoiced in the opportunity of serving his friend. He strengthened Mr. Stephens's recommendation to the utmost of his power; and added many things in Mr. Cook's favour, arising from the particular knowledge which he had of his abilities and merit (s). Accordingly, Mr. Cook was appointed to the command of the expedition by the Lords of the Admiralty; and, on this occasion, he was promoted to the rank of a Lieutenant in the Royal Navy, his commission bearing date on the twenty-fifth of May, 1768 (t).

(s) From the information of Philip Stephens, Esq; communicated by Sir Joseph Banks.

(t) From the books of the Admiralty.

When the appointment had taken place, the first object was to provide a vessel adapted to the purposes of the voyage. This business was committed to Sir Hugh Palliser; who took Lieutenant Cook to his assistance, and they examined together a great number of the ships which then lay in the river Thames. At length, they fixed upon one, of three hundred and seventy tons, to which was given the name of the Endeavour (u). While preparations were making for Lieutenant Cook's expedition, Captain Wallis returned from his voyage round the world. The Earl of Morton, President of the Royal Society, had recommended it to this Gentleman, on his going out, to fix upon a proper place for observing the transit of Venus. He kept, accordingly, the object in view; and having discovered, in the course of his enterprise, an Island, called by him George's Island, but which hath since been found to bear the name of Otaheite, he judged that Port Royal harbour in this Island would afford an eligible situation for the purpose. Having, immediately on his return to England, signified his opinion to the Earl of Morton, the Captain's idea was adopted by the Society, and an answer conformable to it was sent to the Commissioners of the Admiralty, who had applied for directions to what place the observers should be sent (w).

(w) General Introduction to Hawke's Voyages, vol. i. p. iii.

(x) Minutes of the Council.

Mr. Charles Green, a Gentleman who had been assistant to Dr. Bradley at the Royal Observatory at Greenwich, was united with Lieutenant Cook in conducting the astronomical part of the voyage; and, soon after their appointment, they received ample instructions, from the Council of the Royal Society, with regard to the method of carrying on their enquiries (x). The Lieutenant was also accompanied by Joseph Banks, Esq. (now Sir Joseph Banks, Bart.) and Dr. Solander, who, in the prime of life, and the first of them at great expence to himself, quitted all the gratifications of polished society, and engaged in a very tedious, fatiguing, and hazardous navigation, with the laudable views, of acquiring knowledge in general, of promoting natural knowledge in particular, and of contributing something to the improvement and the happiness of the rude inhabitants of the earth. Though it was the principal, it was not the sole object of Lieutenant Cook's voyage to observe the transit of Venus. A more accurate examination of the Pacific Ocean was committed to him, although in subserviency to his main design; and, when his chief business was accomplished, he was directed to proceed in making farther discoveries in the great Southern Seas (y).

(y) Hawke's worth, ubi supra, p. iv.

The complement of Lieutenant Cook's ship consisted of eighty-four persons, besides the Commander. Her victualling was for eighteen months; and there were put on board of her ten carriage and twelve swivel guns, together with an ample store of ammunition and other necessaries (z). On the 25th of May, 1768, Lieutenant Cook was appointed, by the Lords of the Admiralty, to the command of the Endeavour, in consequence of which he went on board on the 27th, and took charge of the ship. She then lay in the basin in Deptford-yard, where she continued to lie till she was completely fitted for sea. On the 30th of July she sailed down the river, and on the 13th of August anchored in Plymouth Sound. The wind becoming fair on the 26th of that month, our navigators got under sail, and on the 13th of September anchored in Funchiale Road, in the Island of Madeira (a). While Lieutenant Cook and his company were in this Island, they were treated with the utmost kindness and liberality by Mr. Cheap, the English Consul there, and one of the most considerable Merchants in the town of Funchiale. He insisted upon their taking possession of his house, and furnished them with every possible accommodation during their stay at Madeira. They received, likewise, great marks of attention and civility from Dr. Thomas Heberden, the principal Physician of the Island, and brother to the excellent and learned Dr. William Heberden, of London. Dr. Thomas Heberden afforded all the assistance in his power to Mr. Banks and Dr. Solander in their botanical enquiries (b). It was not solely from the English that the Lieutenant and his friends experienced a kind reception. The fathers of the Franciscan Convent displayed a liberality of sentiment towards them, which might not have been expected from Portuguese Friars; and in a visit which they paid to a Convent of Nuns, the Ladies expressed a particular pleasure in seeing them. At this visit the good Nuns gave an amusing proof of the progress they had made in the cultivation of their understandings. Having heard that there were great Philosophers among the English

Gentlemen, they asked them a variety of questions; one of which was, when it would thunder; and another, whether a spring of fresh water, which was much wanted, was any where to be found within the walls of the Convent. Eminent as our Philosophers were, they were puzzled by these questions (c). Lieutenant Cook, having laid in a fresh stock of beef, water, and wine, set sail from the Island of Madeira, in the night of the 18th of September, and proceeded on his voyage. By the 7th of November, several articles of the ship's provisions began to fall short; for which reason the Lieutenant determined to put into Rio de Janeiro. This place he preferred to any other port in Brasil or to Falkland's Islands, because he could there be better supplied with what he wanted, and had no doubt of meeting with a friendly reception (d). During the run between Madeira and Rio de Janeiro, Lieutenant Cook and the Gentlemen in the Endeavour had an opportunity of determining a philosophical question. On the evening of the 29th of October, they observed that luminous appearance of the sea which hath so often been mentioned by Navigators, and which has been ascribed to such a variety of causes. Flashes of light appeared to be emitted, exactly resembling those of lightning, though without being so considerable; and such was the frequency of them that sometimes eight or ten were visible almost at the same moment. It was the opinion of Mr. Cook and the other Gentlemen, that these flashes proceeded from some luminous animal; and their opinion was confirmed by experiment (e). At Rio de Janeiro, in the port of which Lieutenant Cook came to an anchor on the 13th of November, he did not meet with the polite reception that, perhaps, he had too sanguinely expected. His stay was spent in continual altercations with the Viceroy, who appeared not a little jealous of the designs of the English: nor were all the attempts of the Lieutenant to set the matter right, capable of producing any effect. The Viceroy was by no means distinguished either by his knowledge or his love of science; and the grand object of Mr. Cook's expedition was quite beyond his comprehension. When he was told that the English were bound to the Southward, by the order of his Britannic Majesty, to observe a transit of the planet Venus over the sun, an astronomical phenomenon of great importance to Navigation, he could form no other conception of the matter, than that it was the passing of the North star through the South Pole. During the whole of the contest with the Viceroy, Lieutenant Cook behaved with equal spirit and discretion. A supply of water and other necessaries could not be refused him, and these were gotten on board by the 1st of December. On that day the Lieutenant sent to the Viceroy for a pilot to carry the Endeavour to sea; but the wind preventing the ship from getting out, she was obliged to continue some time longer in the harbour. A Spanish packet having arrived at Rio de Janeiro on the 2d of December, with dispatches from Buenos Ayres for Spain, the Commander, Don Antonio de Monte Negro y Velasco, offered, with great politeness, to convey the letters of the English to Europe. This favour Lieutenant Cook accepted, and gave Don Antonio a packet for the Secretary of the Admiralty, containing copies of all the papers that had passed between himself and the Viceroy. He left, also, duplicates with the Viceroy, that he might forward them, if he thought proper, to Lisbon. On the 5th of December, it being a dead calm, our Navigators weighed anchor, and towed down the Bay; but, to their great astonishment, two shot were fired at them, when they had gotten abreast of Santa Cruz, the principal fortification of the harbour. Lieutenant Cook immediately cast anchor, and sent to the Fort to demand the reason of this conduct; the answer to which was, that the Commandant had received no order from the Viceroy to let the ship pass; and that, without such an order, no vessel was ever suffered to go below the Fort. It now became necessary to send to the Viceroy, to enquire why the order had not been given; and his behaviour appeared the more extraordinary, as notice had been transmitted to him of the departure of the English, and he had thought proper to write a polite letter to Mr. Cook, wishing him a good voyage. The Lieutenant's messenger soon returned, with the information that the order had been written several days, and that its not having been sent had arisen from some unaccountable negligence. It was not till the 7th of December that the Endeavour got under sail (f). In the account which Lieutenant Cook has given of Rio de Janeiro, and the country around it, one circumstance is recorded, which cannot be otherwise than very painful to humanity. It is the horrid expence of life at which the gold mines are wrought. No less than forty thousand negroes are annually imported for this purpose, on the King of Portugal's account; and the English were credibly informed, that, in the year 1766, this number fell so short, that twenty thousand more were drafted from the town of Rio (g). From Rio de Janeiro Lieutenant Cook pursued his voyage, and, on the 14th of January, 1769, entered the Streight of Le Maire, at which time the tide drove the ship out with so much violence, and raised such a sea off Cape St. Diego, that she frequently pitched, so that the bowsprit was under water (h). On the next day, the Lieutenant anchored, first before a small cove, which was understood to be Port Maurice, and afterwards in the Bay of Good Success. While the Endeavour was in this station, happened the memorable adventure of Mr. Banks, Dr. Solander, Mr. Monkhouse the Surgeon, and Mr. Green the Astronomer, together with their attendants and servants, and two seamen, in ascending a mountain to search for plants. In this expedition, they were all of them exposed to the

utmost extremity of danger and of cold; Dr. Solander was seized with a torpor which had nearly proved fatal to his life; and two black servants actually died. When the Gentlemen had, at length, on the second day of their adventure, gotten back to the ship, they congratulated each other on their safety, with a joy that can only be felt by those who have experienced equal perils; and Mr. Cook was relieved from a very painful anxiety. It was a dreadful testimony of the severity of the climate, that this event took place when it was the midst of summer in that part of the world (*i*), and at the close of a day the beginning of which was as mild and warm as the month of May usually is in England. In the passage through the Streight of Le Maire, Lieutenant Cook and his ingenious associates had an opportunity of gaining a considerable degree of acquaintance with the inhabitants of the adjoining country. Here it was that they saw human nature in its lowest form. The natives appeared to be the most destitute and forlorn, as well as the most stupid, of the children of men. Their lives are spent in wandering about the dreary wastes that surround them; and their dwellings are no other than wretched hovels of sticks and grass, which not only admit the wind, but the snow and the rain. They are almost naked; and so devoid are they of every convenience which is furnished by the rudest art, that they have not so much as an implement to dress their food. Nevertheless, they seemed to have no wish for acquiring more than they possessed; nor did any thing that was offered them by the English appear acceptable but beads, as an ornamental superfluity of life. A conclusion is hence drawn by Dr. Hawkesworth, that these people may be upon a level with ourselves, in respect to the happiness they enjoy (*k*). This, however, is a position which ought not hastily to be admitted. It is, indeed, a beautiful circumstance, in the order of Divine Providence, that the rudest inhabitants of the earth, and those who are situated in the most unfavourable climates, should not be sensible of their disadvantages. But still it must be allowed, that their happiness is greatly inferior, both in kind and degree, to that intellectual, social, and moral felicity which is capable of being attained in a highly-cultivated state of society.

(i) Hawkesworth, *ubi supra*, p. 43. 46—53.

(k) *Ibid.* p. 59.

In voyages to the South Pacific Ocean, the determination of the best passage from the Atlantic is a point of peculiar importance. It is well known what prodigious difficulties were experienced in this respect by former Navigators. The doubling of Cape Horn, in particular, was so much dreaded, that, in the general opinion, it was far more eligible to pass through the Streight of Magalhaens. Lieutenant Cook hath fully ascertained the erroneousness of this opinion. He was but three-and-thirty days in coming round the land of Terra del Fuego, from the East entrance of the Streight of Le Maire, till he had advanced about twelve degrees to the westward, and three and a half to the northward of the Streight of Magalhaens; and, during this time, the ship scarcely received any damage. Whereas, if he had come into the Pacific Ocean by that passage, he would not have been able to accomplish it in less than three months; besides which, his people would have been fatigued, and the anchors, cables, sails, and rigging of the vessel much injured. By the course he pursued, none of these inconveniencies were suffered. In short, Lieutenant Cook, by his own example in doubling Cape Horn, by his accurate ascertainment of the latitude and longitude of the places he came to, and by his instructions to future Voyagers, performed the most essential services to this part of navigation (*l*). It was on the 26th of January that the Endeavour took her departure from Cape Horn; and it appeared, that, from that time to the 1st of March, during a run of six hundred and sixty leagues, there was no current which affected the ship. Hence it was highly probable that our Navigators had been near no land of any considerable extent, currents being always found when land is not remote (*m*). In the prosecution of Lieutenant Cook's voyage from Cape Horn to Otaheite several Islands were discovered, to which the names were given of Lagoon Island, Thrumb-cap, Bow Island, The Groups, Bird Island, and Chain Island. It appeared that most of these Islands were inhabited; and the verdure, and groves of palm-trees, which were visible upon some of them, gave them the aspect of a terrestrial paradise to men who, excepting the dreary hills of Terra del Fuego, had seen nothing for a long time but sky and water [*A*]. On the 11th of April, the Endeavour arrived in sight of Otaheite, and on the 13th she came to an anchor in Port Royal Bay, which is called *Matavai* by the natives. As the stay of the English in the Island was not likely to be very short, and much depended on the manner in which traffic should be carried on with the inhabitants, Lieutenant Cook, with great good sense and humanity, drew up a set of regulations for the behaviour of his people, and gave it in command that they should punctually be observed [*B*]. One of the first things that occupied the Lieutenant's attention, after his arrival

(l) *Ibid.* p. 67, 68.

(m) *Ibid.* p. 66. 69.

[*A*] Had seen nothing for a long time but sky and water.] Lagoon Island lies in latitude $18^{\circ} 47'$ S. and longitude $139^{\circ} 28'$ W.; the Thrumb-cap, in latitude $18^{\circ} 35'$ S. and longitude $139^{\circ} 48'$ W.; Bow Island, in latitude $18^{\circ} 23'$ S. and longitude $141^{\circ} 12'$ W.; the south-easternmost of the Groups, in latitude $18^{\circ} 12'$ S. and longitude $142^{\circ} 42'$ W.; Bird Island, in latitude $17^{\circ} 48'$ S. and longitude $143^{\circ} 35'$ W.; and

Chain Island, in latitude $17^{\circ} 23'$ S. and longitude $145^{\circ} 54'$ W. (*1*).

[*B*] And gave it in command that they should punctually be observed.] The rules were as follows: "I. To endeavour, by every fair means, to cultivate a friendship with the natives; and to treat them with all imaginable humanity. II. A proper person, or persons, will be appointed to trade with

(1) *Ibid.* p. 72—73.

" the

arrival at Otaheite, was to prepare for the execution of his grand commission. For this purpose, as, in an excursion to the westward, he had not found any more convenient harbour than that in which the Endeavour lay, he determined to go on shore and fix upon some spot, commanded by the guns of the ship, where he might throw up a small fort for defence, and get every thing ready for making the astronomical observation. Accordingly, he took a party of men, and landed, being accompanied by Mr. Banks, Dr. Solander, and Mr. Green. They soon fixed upon a place very proper for their design, and which was at a considerable distance from any habitation of the natives. While the Gentlemen were marking out the ground which they intended to occupy, and seeing a small tent erected that belonged to Mr. Banks, a great number of the people of the country gathered gradually around them, but with no hostile appearance, as there was not among the Indians a single weapon of any kind. Mr. Cook, however, intimated that none of them were to come within the line he had drawn, excepting one, who appeared to be a chief, and Owahaw, a native who had attached himself to the English, both in Captain Wallis's expedition and in the present voyage. The Lieutenant endeavoured to make these two persons understand that the ground which had been marked out was only wanted to sleep upon for a certain number of nights, and that then it would be quitted. Whether his meaning was comprehended or not, he could not certainly determine; but the people behaved with a deference and respect that could scarcely have been expected, and which were highly pleasing. They sat down without the circle, peaceably and uninterruptedly attending to the progress of the business, which was upwards of two hours in completing. This matter being finished, and Mr. Cook having appointed thirteen Marines and a petty officer to guard the tent, he and the Gentlemen with him set out upon a little excursion into the woods of the country. They had not, however, gone far, before they were brought back by a very disagreeable event. One of the Indians, who remained about the tent after the Lieutenant and his friends had left it, watched an opportunity of taking the sentry at unawares, and snatched away his musquet. Upon this, the petty officer who commanded the party, and who was a Midshipman, ordered the Marines to fire. With equal want of consideration, and, perhaps, with equal inhumanity, the men immediately discharged their pieces among the thickest of the flying crowd, who consisted of more than a hundred. It being observed that the thief did not fall, he was pursued, and shot dead. From subsequent information it happily appeared, that none of the natives besides were either killed or wounded. Lieutenant Cook, who was highly displeased with the conduct of the petty officer, used every method in his power to dispel the terrors and apprehensions of the Indians, but not immediately with effect. The next morning but few of the inhabitants were seen upon the beach, and not one of them came off to the ship. What added particularly to the regret of the English was, that even Owahaw, who had hitherto been so constant in his attachment, and who the day before had been remarkably active in endeavouring to renew the peace which had been broken, did not now make his appearance. In the evening, however, when the Lieutenant went on shore with only a boat's crew and some of the Gentlemen, between thirty and forty of the natives gathered around them, and trafficked with them, in a friendly manner, for cocoa-nuts and other fruit (p). On the 17th, Mr. Cook and Mr. Green set up a tent on shore, and spent the night there, in order to observe an Eclipse of the first satellite of Jupiter; but they met with a disappointment, in consequence of the weather's becoming cloudy. The next day, the Lieutenant, with as many of his people as could possibly be spared from the ship, began to erect the fort. While the English were employed in this business, many of the Indians were so far from hindering, that they voluntarily assisted them, and with great alacrity brought the pickets and fascines from the wood where they had been cut. Indeed, so scrupulous had Mr. Cook been of invading their property, that every stake which was used was purchased, and not a tree was cut down till their consent had first been obtained (q). On the 26th, the Lieutenant mounted six swivel guns upon the fort, on which occasion he saw, with concern, that the natives were alarmed and terrified. Some fishermen, who lived upon the point, removed to a greater distance; and Owahaw informed the English, by signs, of his expectation that in four days they would fire their great guns. The Lieutenant, on the succeeding day, gave a striking proof of his regard to justice, and of his care to preserve the inhabitants from injury and violence, by the punishment he inflicted on the butcher of the Endeavour, who was accused of having threatened, or

attempted

(2) Hawkesworth, *ubi supra*, p. 79—82.

attempted, the life of a woman that was the wife of Tubourai Tomaide, a chief remarkable for his attachment to our navigators. The butcher wanted to purchase of her a stone hatchet for a nail. To this bargain she absolutely refused to accede; upon which the fellow caught up the hatchet, and threw down the nail; threatening, at the same time, that if she made any resistance, he would cut her throat with a reaping-hook which he had in his hand. The charge was so fully proved in the presence of Mr. Banks, and the butcher had so little to say in exculpation of himself, that not the least doubt remained of his guilt. The affair being reported by Mr. Banks to Lieutenant Cook, he took an opportunity, when the Chief and his women, with others of the natives, were on board the ship, to call up the offender, and, after recapitulating the accusation and the proof of it, to give orders for his immediate punishment. While the butcher was stripped, and tied up to the rigging, the Indians preserved a fixed attention, and waited for the event in silent suspense. But as soon as the first stroke was inflicted, such was the humanity of these people, that they interfered with great agitation, and earnestly intreated that the rest of the punishment might be remitted. To this, however, the Lieutenant, for various reasons, could not grant his consent; and, when they found that their intercessions were ineffectual, they manifested their compassion by tears (r). On the first of May, the observatory was set up, and the astronomical quadrant, together with some other instruments, was taken on shore. When, on the next morning, Mr. Cook and Mr. Green landed for the purpose of fixing the quadrant in a situation for use, to their inexpressible surprize and concern it was not to be found. It had been deposited in a tent reserved for the Lieutenant's use, where no one had slept: it had never been taken out of the packing-case, and the whole was of considerable weight: none of the other instruments were missing; and a centinel had been posted the whole night within five yards of the tent. These circumstances induced a suspicion that the robbery might have been committed by some of our own people, who having seen a deal box, and not knowing the contents, might imagine that it contained nails, or other articles for traffic with the natives. The most diligent search, therefore, was made, and a large reward was offered for the finding of the quadrant, but with no degree of success. In this exigency, Mr. Banks was of eminent service. As this Gentleman had more influence over the Indians than any other person on board the Endeavour, and as there could now be little doubt of the quadrant's having been conveyed away by some of the natives, he determined to go in search of it into the woods; and it was recovered in consequence of his judicious and spirited exertions. The pleasure with which it was brought back was equal to the importance of the event; for the grand object of the voyage could not otherwise have been accomplished (s). Another embarrassment, though not of so serious a nature, was occasioned, on the very same day, by one of our officers having inadvertently taken into custody Tootahah, a chief who had connected himself in the most friendly manner with the English. Lieutenant Cook, who had given express orders that none of the Indians should be confined, and who, therefore, was equally surprized and concerned at this transaction, instantly set Tootahah at liberty. So strongly had this Indian been possessed with the notion that it was intended to put him to death, that he could not be persuaded to the contrary till he was led out of the fort. His joy at his deliverance was so great, that it displayed itself in a liberality which our people were very unwilling to partake of, from a consciousness that on this occasion they had no claim to the reception of favours. The impression, however, of the confinement of the chief operated with such force upon the minds of the natives, that few of them appeared; and the market was so ill supplied, that the English were in want of necessaries. At length, by the prudent exertions of Lieutenant Cook, Mr. Banks, and Dr. Solander, the friendship of Tootahah was completely recovered, and the reconciliation worked upon the Indians like a charm; for it was no sooner known that he had gone voluntarily on board the Endeavour, than bread-fruit, cocoa-nuts, and other provisions, were brought to the fort in great plenty (t). The Lieutenant and the rest of the Gentlemen had hitherto, with a laudable discretion, bartered only beads for the articles of food now mentioned. But the market becoming slack, they were obliged for the first time, on the eighth of May, to bring out their nails; and such was the effect of this new commodity, that one of the smallest size, which was about four inches long, procured twenty cocoa-nuts, and bread-fruit in proportion (u). It was not till the tenth of the month that our voyagers learned that the Indian name of the Island was OTAHEITE, by which name it hath since been always distinguished (w). On Sunday the fourteenth, an instance was exhibited of the inattention of the natives to our modes of religion. The Lieutenant had directed that divine service should be performed at the fort; and he was desirous that some of the principal Indians should be present. Mr. Banks secured the attendance of Tubourai Tomaide and his wife Tomio, hoping that it would give occasion to some enquiries on their part, and to some instruction in return. During the whole service, they very attentively observed Mr. Banks's behaviour, and stood, sat, or kneeled, as they saw him do; and they appeared to be sensible that it was a serious and important employment in which the English were engaged. But when the worship was ended, neither of them asked any questions, nor would they attend to any explanations which were attempted to

be given of what had been performed (x). As the day approached for executing the grand purpose of the voyage, Lieutenant Cook determined, in consequence of some hints which he had received from the Earl of Morton, to send out two parties, to observe the transit of Venus from other situations. By this means he hoped that the success of the observation would be secured, if there should happen to be any failure at Otaheite. Accordingly, on Thursday the first of June, he dispatched Mr. Gore in the long-boat to Eimeo, a neighbouring island, together with Mr. Monkhouse, and Mr. Sporing, a Gentleman belonging to Mr. Banks. They were furnished by Mr. Green with proper instruments. Mr. Banks himself chose to go upon this expedition, in which he was accompanied by Tubourai Tomaide and Tomio, and by others of the natives. Early the next morning, the Lieutenant sent Mr. Hicks, in the pinnace, with Mr. Clerke and Mr. Pickersgill, and Mr. Saunders, one of the midshipmen, ordering them to fix upon some convenient spot to the eastward, at a distance from the principal observatory, where they also might employ the instruments they were provided with for observing the transit. The anxiety for such weather as would be favourable to the success of the experiment, was powerfully felt by all the parties concerned. They could not sleep in peace the preceding night: but their apprehensions were happily removed by the sun's rising, on the morning of the third of June, without a cloud. The weather continued with equal clearness through the whole of the day; so that the observation was successfully made in every quarter. At the fort, where Lieutenant Cook, Mr. Green, and Dr. Solander were stationed, the whole passage of the planet Venus over the sun's disk was observed with great advantage. The magnifying power of Dr. Solander's telescope was superior to that of those which belonged to the Lieutenant and to Mr. Green. They all saw an atmosphere or dusky cloud round the body of the planet; which much disturbed the times of contact, and especially of the internal ones; and, in their accounts of these times, they differed from each other in a greater degree than might have been expected. According to Mr. Green,

	Morning.	h. min. sec.
The first external contact, or first appearance of Venus on the sun, was	9 25 42	
The first internal contact, or total immersion, was	9 44 4	
	Afternoon.	
The second internal contact, or beginning of the emersion, was	3 14 8	
The second external contact, or total emersion, was	3 32 10	
The latitude of the observatory was found to be $17^{\circ} 29' 15''$; and the longitude $149^{\circ} 32' 30''$ west of Greenwich.		

A more particular account of this great astronomical event, the providing for the accurate observation of which reflects so much honour on his Majesty's munificent patronage of science, may be seen in the sixty-first volume of the Philosophical Transactions (y).

(x) *Ibid.* p. 141.

(a) *Ibid.* p. 142.

The pleasure which Lieutenant Cook and his friends derived from having thus successfully accomplished the first grand object of the voyage, was not a little abated by the conduct of some of the ship's company, who, while the attention of the officers was engrossed by the transit of Venus, broke into one of the store-rooms, and stole a quantity of spike nails, amounting to no less than an hundred weight. This was an evil of a public and serious nature; for these nails, if injudiciously circulated among the Indians, would be productive of irreparable injury to the English, by reducing the value of iron, their staple commodity. One of the thieves, from whom only seven nails were recovered, was detected; but, though the punishment of two dozen lashes was inflicted upon him, he would not impeach any of his accomplices (z). Upon account of the absence of the two parties who had been sent out to observe the transit, the King's birth-day was celebrated on the fifth, instead of the fourth of June (a); and the festivity of the day must have been greatly heightened by the happy success with which his Majesty's liberality had been crowned. On the twelfth, Lieutenant Cook was again reduced to the necessity of exercising the severity of discipline. Complaint having been made to him, by certain of the natives, that two of the seamen had taken from them several bows and arrows, and some strings of plaited hair, and the charge being fully supported, he punished each of the criminals with two dozen of lashes. On the same day it was discovered, that Otaheite, like other countries in a certain period of society, has its bards and its minstrels. Mr. Banks, in his morning's walk, had met with a number of natives, who appeared, upon enquiry, to be travelling musicians; and having learned where they were to be at night, all the Gentlemen of the Endeavour repaired to the place. The band consisted of two flutes and three drums; and the drummers accompanied the music with their voices. To the surprise of the English Gentlemen, they found that themselves were generally the subject of the song, which was unpremeditated. These minstrels were continually going about from place to place; and they were rewarded, by the master of the house and the audience, with such things as they wanted. The repeated thefts which were committed by the inhabitants of Otaheite brought our voyagers into frequent difficulties, and it required all the wisdom of Lieutenant Cook to conduct himself in a proper manner. His sentiments

VI. 107 on

on the subject displayed the liberality of his mind. He thought it of consequence, to put an end, if possible, to thievish practices at once, by doing something that should engage the natives in general to prevent them, from a regard to their common interest. Strict orders had been given by him, that they should not be fired upon, even when they were detected in attempting to steal any of the English property. For this the Lieutenant had many reasons. The common centinels were in no degree fit to be entrusted with a power of life and death; neither did Mr. Cook think that the thefts committed by the Otaheitans deserved so severe a punishment. They were not born under the law of England; nor was it one of the conditions under which they claimed the benefits of civil society, that their lives should be forfeited, unless they abstained from theft. As the Lieutenant was not willing that the natives should be exposed to fire-arms loaded with shot, neither did he approve of firing only with powder, which, if repeatedly found to be harmless, would at length be despised. At a time when a considerable robbery had been committed, an accident furnished him with what he hoped would be a happy expedient for preventing future attempts of the same kind. Above twenty of the sailing canoes of the inhabitants came in with a supply of fish. Upon these Lieutenant Cook immediately seized, and, having brought them into the river behind the fort, gave notice, that unless the things which had been stolen were returned, the canoes should be burnt. This menace, without designing to put it into execution, he ventured to publish, from a full conviction that, as restitution was thus made a common cause, the stolen goods would all of them speedily be brought back. In this, however, he was mistaken. An iron coal-rake, indeed, was restored; upon which great solicitation was made for the release of the canoes; but he still insisted on his original condition. When the next day came, he was much surprized to find that nothing farther had been returned; and, as the people were in the utmost distress for the fish, which would in a short time be spoilt, he was reduced to the disagreeable alternative, either of releasing the canoes, contrary to what he had solemnly and publicly declared, or of detaining them, to the great damage of those who were innocent. As a temporary expedient, he permitted the natives to take the fish, but still detained the canoes. So far was this measure from being attended with advantage, that it was productive of new confusion and injury; for as it was not easy at once to distinguish to what particular persons the several lots of fish belonged, the canoes were plundered by those who had no right to any part of their cargo. At length, most pressing instances being still made for the restoration of the canoes, and Lieutenant Cook having reason to believe, either that the things for which he detained them were not in the Island, or that those who suffered by their detention were absolutely incapable of prevailing upon the thieves to relinquish their booty, he determined, though not immediately, to comply with the solicitations of the natives. Our commander was, however, not a little mortified at the ill success of his project (b). About the same time, another accident occurred, which, notwithstanding all the caution of our principal voyagers, was very near embroiling them with the Indians. The Lieutenant having sent a boat on shore to get ballast for the ship, the officer, not immediately finding stones suitable to the purpose, began to pull down some part of an inclosure in which the inhabitants had deposited the bones of their dead. This action a number of the natives violently opposed; and a messenger came down to the tents, to acquaint the Gentlemen that no such thing would be suffered. Mr. Banks directly repaired to the place, and soon put an amicable end to the contest, by sending the boat's crew to the river, where a sufficient quantity of stones might be gathered without a possibility of giving offence. These Indians appeared to be much more alarmed at any injury which they apprehended to be done to the dead than to the living. This was the only measure in which they ventured to oppose the English: and the only insult that was ever offered to any individual belonging to the Endeavour was upon a similar occasion (c). It should undoubtedly be the concern of all voyagers, to abstain from wantonly offending the religious prejudices of the people among whom they come. To extend the knowledge of navigation and the sphere of discovery, objects which we need not say that Lieutenant Cook kept always steadily in view, he set out, in the pinnace, on the twenty-sixth of June, accompanied by Mr. Banks, to make the circuit of the Island. The particulars of this circuit, in which the Lieutenant and his companions were once thrown into great alarm by the apprehended loss of the boat, are fully related in Dr. Hawkesworth's Narrative. By this expedition Mr. Cook obtained an acquaintance with the several districts of Otaheite, the chiefs who presided over them, and a variety of curious circumstances respecting the manners and customs of the inhabitants. On the first of July, he got back to the fort at Matavai, having found the circuit of the island, including the two peninsulas of which it consisted, to be about thirty leagues (d). The circumnavigation of Otaheite was followed by an expedition of Mr. Banks's to trace the river up the valley from which it issues, and examine how far its banks were inhabited. During this excursion, he discerned many traces of subterraneous fire. The stones, like those of Madeira, displayed evident tokens of having been burnt; and the very clay upon the hills had the same appearance. Another valuable employment of Mr. Banks was the planting of a great quantity of the seeds of water-melons, oranges, lemons, limes, and other plants and trees which he had collected

(b) Hawkesworth's Voyages, vol. ii. p. 147—250.

(d) Ibid. p. 155—169.

(c) Ibid. p. 150, 151.

collected at Rio de Janeiro. For these he prepared ground on each side of the fort, and selected as many varieties of soil as could be found. He gave, also, liberally of these seeds to the natives, and planted many of them in the woods (e). Lieutenant Cook now began to prepare for his departure. On the seventh of July, the carpenters were employed in taking down the gates and pallisades of the fortification; and it was continued to be dismantled during the two following days. Our Commander and the rest of the Gentlemen were in hopes that they should quit Otaheite without giving or receiving any farther offence; but in this respect they were unfortunately disappointed. The Lieutenant had prudently overlooked a dispute of a smaller nature between a couple of foreign seamen and some of the Indians, when he was immediately involved in a quarrel which he greatly regretted, and which yet it was totally out of his power to avoid. In the middle of the night, between the eighth and the ninth, Clement Webb and Samuel Gibson, two of the marines, went privately from the fort. As they were not to be found in the morning, Mr. Cook was apprehensive that they intended to stay behind; but, being unwilling to endanger the harmony and good-will which at present subsisted between our people and the natives, he determined to wait a day for the chance of the men's return. As, to the great concern of the Lieutenant, the marines were not come back on the morning of the tenth, enquiry was made after them of the Indians, who acknowledged that each of them had taken a wife, and had resolved to become inhabitants of the country. After some deliberation, two of the natives undertook to conduct such persons to the place of the deserters' retreat as Mr. Cook should think proper to send; and accordingly he dispatched with the guides a petty officer, and the corporal of the marines. As it was of the utmost importance to recover the men, and to do it speedily, it was intimated to several of the Chiefs who were in the fort with the women, among whom were Tubourai Tomaide, Tomio, and Oberea, that they would not be permitted to leave it till the fugitives were returned; and the Lieutenant had the pleasure of observing that they received the intimation with very little indications of alarm, and with assurances that his people should be secured and sent back as soon as possible. While this transaction took place at the fort, our Commander sent Mr. Hicks in the pinnace to fetch Tootahah on board the ship. Mr. Cook had reason to expect, if the Indian guides proved faithful, that the deserters, and those who went in search of them, would return before the evening. Being disappointed, his suspicions increased, and thinking it not safe, when the night approached, to let the persons whom he had detained as hostages to continue at the fort, he ordered Tubourai Tomaide, Oberea, and some others, to be taken on board the Endeavour; a circumstance which excited so general an alarm, that several of them, and especially the women, expressed their apprehensions with great emotions and many tears. Webb, about nine o'clock, was brought back by some of the natives, who declared that Gibson, and the petty officer and corporal, would not be restored till Tootahah should be set at liberty. Lieutenant Cook now found that the tables were turned upon him; but, having proceeded too far to retreat, he immediately dispatched Mr. Hicks in the long-boat, with a strong party of men, to rescue the prisoners. Tootahah was, at the same time, informed, that it behoved him to send some of his people with them, for the purpose of affording them effectual assistance. With this injunction he readily complied, and the prisoners were restored without the least opposition. On the next day they were brought back to the ship, upon which the chiefs were released from their confinement. Thus ended an affair which had given the Lieutenant a great deal of trouble and concern. It appears, however, that the measure which he pursued was the result of an absolute necessity; since it was only by the seizure of the Chiefs that he could have recovered his men. Love was the seducer of the two marines. So strong was the attachment which they had formed to a couple of girls, that it was their design to conceal themselves till the ship had sailed, and to take up their residence in the Island (f). Tupia was one of the natives who had so particularly devoted himself to the English, that he had scarcely ever been absent from them during the whole of their stay at Otaheite. He had been Oberea's first Minister, while she was in the height of her power; and he was also Chief Priest of the country. To his knowledge of the religious principles and ceremonies of the Indians, he added great experience in navigation, and a particular acquaintance with the number and situation of the neighbouring Islands. This man had often expressed a desire to go with our Navigators, and when they were ready to depart, he came on board, with a boy about thirteen years of age, and intreated that he might be permitted to proceed with them on their voyage. To have such a person in the Endeavour, was desirable on many accounts; and, therefore, Lieutenant Cook gladly acceded to his proposal. On the thirteenth of July, the English weighed anchor; and as soon as the ship was under sail, the Indians on board took their leaves, and wept, with a decent and silent sorrow, in which there was something very striking and tender. Tupia sustained himself in this scene with a truly admirable firmness and resolution; for, though he wept, the effort he made to conceal his tears concurred, with them, to do him honour. The stay of our voyagers at Otaheite was three months, the greater part of which time was spent in the most cordial friendship with the inhabitants, and a perpetual reciprocation of good offices. That any differences should happen, was greatly regretted

(e) Hawkesworth, *ubi supra*, p. 172—175.

(f) *Ibid.* p. 175—180.

on the part of Lieutenant Cook and his friends, who were studious to avoid them as much as possible. The principal causes of them resulted from the peculiar situation and circumstances of the English and the Indians, and especially from the disposition of the latter to theft. The effects of this disposition could not always be submitted to or prevented. It was happy, however, that there was only a single instance in which the differences that arose were attended with any fatal consequence; and by that accident the Lieutenant was instructed to take the most effectual measures for the future prevention of similar events. He had nothing so much at heart, as that in no case the intercourse of his people with the natives should be productive of bloodshed. The traffic with the inhabitants for provisions and refreshments, which was chiefly under the management of Mr. Banks, was carried on with as much order as in any well-regulated market in Europe. Axes, hatchets, spikes, large nails, looking-glasses, knives, and beads, were found to be the best articles to deal in; and for some of these, every thing which the inhabitants possessed might be procured. They were, indeed, fond of fine linen cloth, whether white or printed; but an axe, worth half a crown, would fetch more than a piece of cloth of the value of twenty shillings (g). It would deviate from the plan of this narrative, to enter into a minute account of the nature, productions, inhabitants, customs, and manners of the countries which were discovered or visited by Mr. Cook; or to give a particular detail of every nautical, geographical, and astronomical observation. These things must be sought for in the voyages at large which have been published by authority. It will be sufficient here to take notice, that our Commander did not depart from Otaheite without accumulating a store of information and instruction for the enlargement of knowledge and the benefit of navigation.

(g) Hawkesworth, *ubi supra*, p. 180—183.

While the Endeavour proceeded on her voyage under an easy sail, Tupia informed Lieutenant Cook, that, at four of the neighbouring Islands, which he distinguished by the names of HUAHEINE, ULIETEA, OTAHA, and BOLABOLA, hogs, fowls, and other refreshments, which had latterly been sparingly supplied at Otaheite, might be procured in great plenty. The Lieutenant, however, was desirous of first examining an Island that lay to the northward, and was called TETHUROA. Accordingly, he came near it; but having found it to be only a small low Island, and being told, at the same time, that it had no settled inhabitants, he determined to drop any farther examination of it, and to go in search of Huaheine and Ulietea, which were described to be well peopled, and as large as Otaheite. On the fifteenth of July, the weather being hazy, with light breezes and calms succeeding each other, so that no land could be seen, and little way was made, Tupia afforded an amusing proof that, in the exercise of his priestly character, he knew how to unite some degree of art with his superstition. He often prayed for a wind to his god Tane, and as often boasted of his success. This, indeed, he took a most effectual method to secure; for he never began his address to his Divinity, till he perceived the breeze to be so near, that he knew it must approach the ship before his supplications could well be brought to a conclusion (b). The Endeavour, on the sixteenth, being close in with the north-west part of Huaheine, some canoes soon came off, in one of which was the King of the Island and his wife. At first the people seemed afraid; but, upon seeing Tupia, their apprehensions were in part dispersed, and, at length, in consequence of frequent and earnestly-repeated assurances of friendship, their Majesties and several others ventured on board the ship. Their astonishment at every thing which was shewn them was very great; and yet their curiosity did not extend to any objects but what were particularly pointed out to their notice. When they had become more familiar, Mr. Cook was given to understand, that the King was called OREE, and that he proposed, as a mark of amity, their making an exchange of their names. To this our Commander readily consented; and, during the remainder of their being together, the Lieutenant was Oree, and his Majesty was Cookee. In the afternoon, the Endeavour having come to an anchor, in a small but excellent harbour on the West side of the Island, the name of which was OWHARRE, Mr. Cook, accompanied by Mr. Banks, Dr. Solander, Mr. Monkhouse, Tupia, and the natives who had been on board ever since the morning, immediately went on shore. The English Gentlemen repeated their excursions on the two following days; in the course of which they found that the people of Huaheine had a very near resemblance to those of Otaheite, in person, dress, language, and every other circumstance; and that the productions of the country were exactly similar. In trafficking with our people, the inhabitants of Huaheine displayed a caution and hesitation which rendered the dealing with them slow and tedious. On the nineteenth, therefore, the English were obliged to bring out some hatchets, which it was at first hoped there would be no occasion for, in an Island that had never before been visited by any European. These procured three very large hogs; and as it was proposed to sail in the afternoon, Oree and several others came on board to take their leave. To the King Mr. Cook gave a small pewter plate, on which was stamped this inscription; "His Britannic Majesty's ship Endeavour, Lieutenant James Cook Commander, 16th July 1769, Huaheine." Among other presents made to Oree, were some medals or counters, resembling the coin of England, and struck in the year 1761; all of which, and particularly the plate, he promised carefully and violably to preserve. This the Lieutenant thought to be as lasting a testimony as any he could well provide, that the

(b) *Ibid.* p. 249, 250.

English had first discovered the Island; and having dismissed his visitors, who were highly pleased with the treatment they had met with, he sailed for Ulietea, in a good harbour of which he anchored the next day [C]. Tupia had expressed his apprehension that our Navigators, if they landed upon the Island, would be exposed to the attacks of the men of Bolabola, whom he represented as having lately conquered it, and of whom he entertained a very formidable idea. This, however, did not deter Mr. Cook, Mr. Banks, Dr. Solander, and the other Gentlemen, from going immediately on shore. Tupia, who was of the party, introduced them, by performing some ceremonies which he had practised before at Huaheine. After this, the Lieutenant hoisted an English jack, and, in the name of his Britannic Majesty, took possession of Ulietea, and the three neighbouring Islands, Huaheine, Otaha, and Bolabola, all of which were in sight. On the twenty-first, the Master was dispatched in the long-boat, to examine the coast of the South part of the Island; and one of the Mates was sent in the yawl, to sound the harbour where the Endeavour lay [D]. At the same time, Lieutenant Cook went himself in the pinnace, to survey that part of Ulietea which lies to the North. Mr. Banks, likewise, and the Gentlemen again went on shore, and employed themselves in trading with the natives, and in examining the productions and curiosities of the country; but they saw nothing worthy of notice, excepting some human jaw-bones, which, like scalps among the Indians of North America, were trophies of war, and had probably been hung up, by the warriors of Bolabola, as a memorial of their conquest. The weather being hazy on the twenty-second and twenty-third, with strong gales, the Lieutenant did not venture to put to sea; but, on the twenty-fourth, though the wind continued to be variable, he got under sail, and plied to the northward within the reef, purposing to go out at a wider opening than that by which he had entered the harbour. However, in doing this, he was in imminent danger of striking on the rock. The Master, who by his order had kept continually sounding in the chains, suddenly called out, "two fathom." Though our Commander knew that the ship drew at least fourteen feet, and consequently that the shoal could not possibly be under her keel, he was, nevertheless justly, alarmed. Happily, the Master was either mistaken, or the Endeavour went along the edge of a coral rock, many of which, in the neighbourhood of these Islands, are as steep as a wall (i). After a tedious navigation of some days, during which several small Islands were seen, and the long-boat landed at Otaha, Lieutenant Cook returned to Ulietea, but to a different part of it from that which he had visited before. In a harbour, belonging to the West side of the Island, he came to an anchor on the first of August. This measure was necessary, in order to stop a leak which the ship had sprung in the powder-room, and to take in more ballast, as she was found too light to carry sail upon a wind. The place where the Endeavour was secured was conveniently situated for the Lieutenant's purpose of obtaining ballast and water. Mr. Banks, Dr. Solander, and the Gentlemen who went on shore this day, spent their time much to their satisfaction. The reception they met was respectful in the highest degree, and the behaviour of the Indians to the English indicated a fear of them, mixed with a confidence that they had no propensity to commit any kind of injury. In an intercourse which the Lieutenant and his friends carried on, for several days, with the inhabitants of this part of the Island, it appeared that the terrors which Tupia had expressed of the Bolabola conquerors were wholly groundless. Even Opoony, the formidable King of Bolabola, treated our Navigators with respect. Being at Ulietea on the fifth of August, he sent Mr. Cook a present of three hogs, some fowls, and several pieces of cloth, of uncommon length, together with a considerable quantity of plantains, cocoa-nuts, and other refreshments. This present was accompanied with a message, that, on the next day, he intended to pay our Commander a visit. Accordingly, on the sixth, the Lieutenant and the rest of the Gentlemen all staid at home, in expectation of this important visiter; who did not, however, make his appearance, but sent three very pretty girls as his messengers, to demand something in return for his present. In the afternoon, as the great King would not go to the English, the English determined to go to the great King. From the account which had been given of him, as lord of the Bolabola men, who were the conquerors of Ulietea, and the terror of all the other Islands, Lieutenant Cook and his companions expected to see a young and vigorous Chief, with an intelligent countenance, and the marks of an enterprising spirit; instead of which, they found a feeble wretch, withered and decrepit, half blind with age, and so sluggish and stupid that he scarcely appeared to be possessed even of a common degree of understanding. Otaha being the principal place of Opoony's residence, he went with our Navigators to that Island on the next day; and they were in hopes of deriving some advantage from his influence, in obtaining such provision as they wanted. In this respect, however, they were disappointed; for, though

[C] In a good harbour of which he anchored the next day.] Huaheine is situated in the latitude of $16^{\circ} 43'$ S. and longitude $150^{\circ} 52'$ W. from Greenwich. Its distance from Otahaite is about thirty-one leagues, in the direction of N. 58° W. and it is about seven leagues in compass (3).

(3) Hawkesworth, *ubi supra*, p. 150—156.

[D] To sound the harbour where the Endeavour lay.] This harbour or bay is called by the natives OOROA, and extends almost the whole length of the east side of the Island. In its greatest extent it is capable of holding any number of shipping.

they

they had presented him with an axe, as an inducement to him to encourage his subjects in dealing with them, they were obliged to leave him without having procured a single article. The time which the Carpenters had taken up in stopping the leak of the ship, having detained our Voyagers longer at Ulitea than they would otherwise have staid, Lieutenant Cook determined to give up the design of going on shore at Bolabola, especially as it appeared to be difficult of access. The principal Islands, about which the English had now spent somewhat more than three weeks, were six in number; Ulitea, Otaha, Bolabola, Huaheine, Tubai, and Maurua [E]. As they lie contiguous to each other, the Lieutenant gave them the general appellation of SOCIETY ISLANDS; but did not think proper to distinguish them separately by any other names than those by which they were called by the natives. On the ninth of August, the leak of the vessel having been stopped, and the fresh stock that had been purchased being brought on board, our Commander took the opportunity of a breeze which sprang up at East, and sailed out of the harbour. As he was sailing away, Tupia strongly urged him to fire a shot towards Bolabola; and, though that Island was at seven leagues distance, the Lieutenant obliged him by complying with his request. Tupia's views probably were, to display a mark of his resentment, and to shew the power of his new allies (k). Our Voyagers pursued their course, without meeting with any event worthy of notice, till the thirteenth, when land was discovered bearing South-east, and which Tupia informed them to be an Island called OHETEROA. On the next day, Mr. Cook sent Mr. Gore, one of his Lieutenants, in the pinnace, with orders that he should endeavour to get on shore, and learn from the natives whether there was anchorage in a bay then in sight, and what land lay farther to the Southward. Mr. Gore was accompanied in this expedition by Mr. Banks, Dr. Solander, and Tupia, who used every method, but in vain, to conciliate the minds of the inhabitants, and to engage them in a friendly intercourse. As, upon making the circuit of the Island, neither harbour nor anchorage could be found upon it, and, at the same time, the disposition of the people was so hostile, that landing would be rendered impracticable without bloodshed, Mr. Cook determined, with equal wisdom and humanity, not to attempt it, having no motive that could justify the risk of life [F]. From Tupia our Navigators learned that there were various Islands lying at different distances and in different directions from Oheteroa, between the South and the North-west; and that to the North-east there was an Island called Manua, Bird Island. This he represented as being at the distance of three days sail; but he seemed most desirous that Lieutenant Cook should proceed to the Westward, and described several Islands in that situation, which he said he had visited. It appeared, from his description of them, that these were probably Boscawen and Keppel's Islands, which were discovered by Captain Wallis. The farthest Island that Tupia knew of to the Southward, lay, he said, at the distance of about two days sail from Oheteroa, and was called MOUTOU. But he added, that his father had informed him of there being Islands still more to the South. Upon the whole, our Commander determined to stand Southward in search of a Continent, and to lose no time in attempting to discover any other Islands than such as he might happen to fall in with during his course (l).

270.

(l) Ibid. p. 272—
279.

On the fifteenth of August, our Voyagers sailed from Oheteroa; and on the twenty-fifth of the same month was celebrated the anniversary of their departure from England. The comet was seen on the thirtieth. It was a little above the horizon, in the eastern part of the heavens, at one in the morning; and at about half an hour after four it passed the meridian, and its tail subtended an angle of forty-two degrees (m). Tupia, who was among others that observed the comet, instantly cried out, that as soon as it should be seen by the people of Bolabola, they would attack the inhabitants of Ulitea, who would be obliged to endeavour to preserve their lives by fleeing with the utmost precipitation to the mountains. On the sixth of October land was discovered, which appeared to be large. When, on the next day, it was more distinctly visible, it assumed a still larger appearance, and displayed four or five ranges of hills, rising one over the other, above all which was a chain of mountains of an enormous height. This land naturally became the subject of much eager conversation; and the general opinion of the Gentlemen on board the Endeavour was, that they had found the *Terra australis incognita*. In fact, it was a part of New Zealand, where the first adventures the English met with were very unpleasant, on account of the hostile disposition of the inhabitants. Lieutenant Cook, having anchored, on the eighth, in a bay, at the entrance of a small river, went on shore in

(m) The latitude
of the ship was
38° 20' south,
and the longi-
tude, by log,

[E] Ulitea, Otaha, Bolabola, Huaheine, Tubai, and Maurua.] These Islands are situated between the latitude of 16° 10' and 16° 55' south, and between the longitude of 150° 57' and 152° West from the meridian of Greenwich. The smaller Islands discovered, or seen, in the neighbourhood of Otaheite and the Society Isles, were Tethuroa, Eimeo, Tapoamanoa, Oatara, Opururu, Tamou, Toahoutu, and Whennuaia.

[F] Having no motive that could justify the risk of life.] Oheteroa is situated in the latitude of 22° 27' South, and in the longitude of 150° 47' West from the meridian of Greenwich. It is thirteen miles in circuit, and rather high than low; but it did not appear to be equal, either in populousness or fertility, to the other islands which had been seen in these seas.

the evening, with the pinnace and yawl, accompanied by Mr. Banks and Dr. Solander, and attended with a party of men. Being desirous of conversing with some natives whom he had observed on the opposite side of the river from that on which he had landed, he ordered the yawl in, to carry himself and his companions over, and left the pinnace at the entrance. When they came near the place where the Indians were assembled, the latter all ran away; and the Gentlemen, having left four boys to take care of the yawl, walked up to several huts which were about two or three hundred yards from the water-side. They had not gone very far, when four men, armed with long lances, rushed out of the woods, and running up to attack the boat would certainly have cut her off, if they had not been discovered by the people in the pinnace, who called to the boys to drop down the stream. The boys instantly obeyed; but being closely pursued by the natives, the cockswain of the pinnace, to whom the charge of the boat was committed, fired a musquet over their heads. At this they stopped and looked around them; but their alarm speedily subsiding, they brandished their lances in a threatening manner, and in a few minutes renewed the pursuit. The firing of a second musquet over their heads did not draw from them any kind of notice. At last, one of them having lifted up his spear to dart it at the boat, another piece was fired, by which he was shot dead. At the fall of their associate, the three remaining Indians stood for a while motionless, and seemed petrified with astonishment. No sooner had they recovered themselves, than they went back, dragging after them the dead body, which, however, they were obliged to leave, that it might not retard their flight. Lieutenant Cook and his friends, who had straggled to a little distance from each other, were drawn together upon the report of the first musquet, and returned speedily to the boat, in which having crossed the river, they soon beheld the Indian lying dead upon the ground. After their return to the ship, they could hear the people on shore talking with great earnestness, and in a very loud tone of voice (n). Notwithstanding this disaster, the Lieutenant, being desirous of establishing an intercourse with the natives, ordered, on the following day, three boats to be manned with seamen and marines, and proceeded towards the shore, accompanied by Mr. Banks, Dr. Solander, the other Gentlemen, and Tupia. About fifty of the inhabitants seemed to wait for their landing, having seated themselves upon the ground, on the opposite side of the river. This being regarded as a sign of fear, Mr. Cook, with only Mr. Banks, Dr. Solander, and Tupia, advanced towards them; but they had not gone many paces before all the Indians started up, and every man produced either a long pike, or a small weapon of green talk. Though Tupia called to them in the language of Otaheite, they only answered by flourishing their weapons, and making signs for the Gentlemen to depart. On a musquet's being fired wide of them, they desisted from their threats, and our Commander, who had prudently retreated till the marines could be landed, again advanced towards them, with Mr. Banks, Dr. Solander, and Tupia, to whom were now added Mr. Green and Mr. Monkhouse. Tupia was a second time directed to speak to them, and it was perceived with great pleasure that he was perfectly understood, his and their language being the same, excepting only in a diversity of dialect. He informed them that our Voyagers only wanted provision and water, in exchange for iron, the properties of which he explained as far as he was able. Though the natives seemed willing to trade, Tupia was sensible, during the course of his conversation with them, that their intentions were unfriendly; and of this he repeatedly warned the English Gentlemen. At length, twenty or thirty of the Indians were induced to cross the river, upon which presents were made them of iron and beads. On these they appeared to set little value, and particularly on the iron, not having the least conception of its use, so that nothing was obtained in return excepting a few feathers. Their arms, indeed, they offered to exchange for those of our Voyagers, and this being refused, they made various attempts to snatch them out of their hands. Tupia was now instructed to acquaint the Indians, that our Gentlemen would be obliged to kill them, if they proceeded to any farther violence; notwithstanding which, one of them, while Mr. Green happened to turn about, seized his hanger, and retired to a little distance, with a shout of exultation. The others, at the same time, began to be extremely insolent, and more of the natives were seen coming to join them from the opposite side of the river. It being, therefore, necessary to repress them, Mr. Banks fired, with small shot, at the distance of about fifteen yards, upon the man who had taken the hanger. Though he was struck, he did not return the hanger, but continued to wave it round his head, while he slowly made his retreat. Mr. Monkhouse then fired at him with ball, and he instantly dropped. So far, however, were the Indians from being sufficiently terrified, that the main body of them, who, upon the first discharge, had retired to a rock in the middle of the river, began to return, and it was with no small difficulty that Mr. Monkhouse secured the hanger. The whole number of them continuing to advance, three of the English party discharged their pieces at them, loaded only with small shot, upon which they swam back for the shore, and it appeared, upon their landing, that two or three of them were wounded. While they retired slowly up the country, Lieutenant Cook and his companions reembarked in their boats. As the Lieutenant had unhappily experienced that nothing, at this place, could be done with these people, and found that the water in the

(n) Hawkesworth, *ubi supra*, p. 280—286.

river was salt, he proceeded in the boats, round the head of the bay, in search of fresh water. Beside this, he had formed a design of surprizing some of the natives, and taking them on board, that, by kind treatment and presents, he might obtain their friendship, and render them the instruments of establishing for him an amicable intercourse with their countrymen. While, upon account of a dangerous surf which every where beat upon the shore, the boats were prevented from landing, our Commander saw two canoes coming in from the sea, one under sail, and the other worked with paddles. This he thought to be a favourable opportunity for executing his purpose. Accordingly, the boats were disposed in such a manner as appeared most likely to be successful in intercepting the canoes. Notwithstanding this, the Indians, in the canoe which was paddled, exerted themselves with so much vigour, at the first apprehension of danger, that they escaped to the nearest land. The other canoe sailed on without discerning the English, till she was in the midst of them; but no sooner had she discovered them than the people on board struck their sail, and plied their paddles so briskly as to outrun the boat by which they were pursued. Being within hearing, Tupia called to them to come alongside, with assurances that they should not in any degree be hurt or injured. They trusted, however, more to their own paddles, than to Tupia's promises, and continued to flee from our Navigators with all their power. Mr. Cook, as the least exceptionable expedient of accomplishing his design, ordered a musquet to be fired over their heads. This, he hoped, would either make them surrender or leap into the water, but it produced a contrary effect. The Indians, who were seven in number, immediately formed a resolution not to fly, but to fight. When, therefore, the boat came up, they began the attack with their paddles, and with stones and other offensive weapons; and they carried it on with so much vigour and violence, that the English thought themselves obliged to fire upon them in their own defence; the consequence of which was, that four were unhappily killed. The other three, who were boys, the eldest about nineteen, and the youngest about eleven, instantly leaped into the water, and endeavoured to make their escape; but being with some difficulty overpowered by our people, they were brought into the boat (o). It is impossible to reflect upon this part of Lieutenant Cook's conduct with any degree of satisfaction. He, himself, upon a calm review, did not approve of it; and he was sensible that it would be censured by the feelings of every reader of humanity. It is probable that his mind was so far irritated by the disagreeable preceding events of this unfortunate day, and by the unexpected violence of the Indians in the canoe, as to lose somewhat of that self-possession by which his character in general was eminently distinguished. Candour, however, requires that I should relate what he hath offered in extenuation, not in defence, of the transaction; and this shall be done in his own words, as they are given us by Dr. Hawkesworth. "These people certainly did not deserve death for not choosing to confide in my promises, or not consenting to come on board my boat, even if they had apprehended no danger. But the nature of my service required me to obtain a knowledge of their country, which I could no otherwise effect than by forcing my way into it in a hostile manner, or gaining admission through the confidence and good-will of the people. I had already tried the power of presents without effect; and I was now prompted, by my desire to avoid farther hostilities, to get some of them on board, as the only method left of convincing them that we intended them no harm, and had it in our power to contribute to their gratification and convenience. Thus far my intentions certainly were not criminal; and though in the contest, which I had not the least reason to expect, our victory might have been complete without so great an expence of life; yet in such situations, when the command to fire has been given, no man can restrain its excess, or prescribe its effect (p)."

(o) Hawkesworth, *ubi supra*, p. 286—290.

(p) *Ibid.*

Our Voyagers were successful in conciliating the minds of the three boys; to which Tupia particularly contributed. When their fears were allayed, and their cheerfulness returned, they sang a song with a degree of taste that surprized the English Gentlemen. The tune, like those of our psalms, was solemn and slow, containing many notes and semitones. Some farther attempts were made to establish an intercourse with the natives, and Mr. Cook and his friends, on the tenth, went on shore for this purpose; but being unsuccessful in their endeavours, they resolved to re-embark, lest their stay should embroil them in another quarrel, and cost more of the Indians their lives. On the next day, the Lieutenant weighed anchor, and stood away from this unfortunate and inhospitable place. As it had not afforded a single article that was wanted, excepting wood, he gave it the name of POVERTY BAY. By the inhabitants it is called TAONEROA, or Long Sand (q). I shall not regularly pursue the course of our Commander round New Zealand. In this course he spent nearly six months, and made large additions to the knowledge of navigation and geography. By making almost the whole circuit of New Zealand, he ascertained it to be two islands, with a strength of evidence which no prejudice could gainsay or resist. He obtained, likewise, a full acquaintance with the inhabitants of the different parts of the country, with regard to whom it was clearly proved, that they are eaters of human flesh. Referring to the voyage at large for a more particular display of a great number of circumstances, I shall only select a few things which mark Mr. Cook's personal conduct, and

(q) *Ibid.* p. 290, 291, 293, 296. Taoneroa lies in latitude 38° 42' south, and longitude 181° 36' west.

(r) The natives
call it TEAHOW
RAY.

relate to his intercourse with the natives. The good usage the three boys had met with, and the friendly and generous manner in which they were dismissed to their own homes, had some effect in softening the dispositions of the neighbouring Indians. Several of them, who had come on board while the ship lay becalmed in the afternoon, manifested every sign of friendship, and cordially invited the English to go back to their old bay, or to a cove which was not quite so far off. But Lieutenant Cook chose rather to prosecute his discoveries, having reason to hope that he should find a better harbour than any he had yet seen. While the ship was hauling round to the South end of a small Island, which the Lieutenant had named Portland (r), from its very great resemblance to Portland in the British Channel, she suddenly fell into shoal water and broken ground. The soundings were never twice the same, jumping at once from seven fathom to eleven. However, they were always seven fathom or more; and in a short time the Endeavour got clear of danger, and again sailed in deep water. While the ship was in apparent distress, the inhabitants of the Island, who, in vast numbers, sat on its white cliffs, and could not avoid perceiving some appearance of confusion on board, and some irregularity in the working of the vessel, were desirous of taking advantage of her critical situation. Accordingly, five canoes, full of men, and well armed, were put off with the utmost expedition; and they came so near, and shewed so hostile a disposition, by shouting, brandishing their lances, and using threatening gestures, that the Lieutenant was in pain for his small boat, which was still employed in sounding. By a musquet, which he ordered to be fired over them, they were rather provoked than intimidated. The firing of a four-pounder, loaded with grape-shot, though purposely discharged wide of them, produced a better effect. Upon the report of the piece, the Indians all rose up and shouted; but, instead of continuing the chase, they collected themselves together, and, after a short consultation, went quietly away. On the fourteenth of October, Lieutenant Cook having hoisted out his pinnace and long-boat to search for water, just as they were about to set off, several boats, full of the New Zealand people, were seen coming from the shore. After some time, five of these boats, having on board between eighty and ninety men, made towards the ship; and four more followed at no great distance, as if to sustain the attack. When the first five had gotten within about a hundred yards of the Endeavour, they began to sing their war song, and brandishing their pikes, prepared for an engagement. As the Lieutenant was extremely desirous of avoiding the unhappy necessity of using fire-arms against the natives, Tupia was ordered to acquaint them, that our Voyagers had weapons which, like thunder, would destroy them in a moment; that they would immediately convince them of their power by directing their effect so that they should not be hurt; but that if they persisted in any hostile attempt, they would be exposed to the direct attack of these formidable weapons. A four-pounder, loaded with grape-shot, was then fired wide of them; and this expedient was fortunately attended with success. The report, the flash, and, above all, the shot, which spread very far in the water, terrified the Indians to such a degree, that they began to paddle away with all their might. At the instance, however, of Tupia, the people of one of the boats were induced to lay aside their arms, and to come under the stern of the Endeavour; in consequence of which they received a variety of presents. On the next day a circumstance occurred, which shewed how ready one of the inhabitants of New Zealand was to take an advantage of our Navigators. In a large armed canoe, which came boldly alongside of the ship, was a man who had a black skin thrown over him, somewhat like that of a bear. Mr. Cook being desirous of knowing to what animal it originally belonged, offered the Indian for it a piece of red baize. With this bargain he seemed to be greatly pleased, immediately pulling off the skin, and holding it up in the boat. He would not, however, part with it till he had the cloth in his possession; and as there could be no transfer of property, if equal caution should be exercised on both sides, the Lieutenant ordered the baize to be delivered into his hands. Upon this, instead of sending up the skin, he began, with amazing coolness, to pack up both that and the cloth, which he had received as the purchase of it, in a basket: nor did he pay the least regard to Mr. Cook's demand or remonstrances, but soon after put off from the English vessel. Our Commander was too generous to revenge this insult by any act of severity. During the course of a traffic which was carrying on for some fish, little Tayeto, Tupia's boy, was placed among others over the ship's side, to hand up what was purchased. While he was thus employed, one of the New Zealanders, watching his opportunity, suddenly seized him, and dragged him into a canoe. Two of the natives then held him down in the fore part of it, and the others, with great activity, paddled her off with all possible celerity. An action so violent rendered it indispensably necessary that the marines, who were in arms upon the deck, should be ordered to fire. Though the shot was directed to that part of the canoe which was farthest from the boy, and somewhat wide of her, it being thought preferable rather to miss the rowers than to run the hazard of hurting Tayeto, it happened that one man dropped. This occasioned the Indians to quit their hold of the youth, who instantly leaped into the water, and swam towards the ship. In the mean while, the largest of the canoes pulled round and followed him; and till some musquets and a great gun were fired at her, did not desist from the pursuit. The ship being brought to, a boat was lowered, and the poor boy was taken

taken up unhurt. Some of the Gentlemen, who with their glasses traced the canoes to shore, agreed in asserting, that they saw three men carried up the beach, who appeared to be either dead or wholly disabled by their wounds [G]. While, on the eighteenth, the Endeavour lay a-breast of a peninsula within Portland Island, called TERAKAKO, two of the natives, who were judged to be Chiefs, placed an extraordinary degree of confidence in Mr. Cook. They were so well pleased with the kindness which had been shewn them in a visit to the ship, that they determined not to go on shore till the next morning. This was a circumstance by no means agreeable to the Lieutenant, and he remonstrated against it; but as they persisted in their resolution, he agreed to comply with it, provided their servants also were taken on board, and their canoe hoisted into the ship. The countenance of one of these two Chiefs was the most open and ingenuous that our Commander had ever seen, so that he soon gave up every suspicion of his entertaining any sinister design. When the guests were put on shore the next morning, they expressed some surprize at seeing themselves so far from their habitations. On Monday the twenty-third, while the ship was in Tegadoo Bay, Lieutenant Cook went on shore to examine the watering-place, and found every thing agreeable to his wishes. The boat landed in the cove, without the least surf; the water was excellent, and conveniently situated; there was plenty of wood close to the high water mark; and the disposition of the people was as favourable in all respects as could be desired [H]. Early the next morning, our Commander sent Lieutenant Gore to superintend the cutting of wood and filling of water, with a sufficient number of men for both purposes, and all the marines as a guard. Soon after, he went on shore himself, and continued there during the whole day. Mr. Banks and Dr. Solander, who had landed on the same day, found in their walks several things worthy of notice. As they were advancing in one of the valleys, the hills on each side of which were very steep, they were suddenly struck with the sight of an extraordinary natural curiosity. "It was a rock, perforated through its whole substance, so as to form a rude but stupendous arch or cavern, opening directly to the sea. This aperture was seventy-five feet long, twenty-seven broad, and five and forty feet high, commanding a view of the bay and the hills on the other side, which were seen through it; and, opening at once upon the view, produced an effect far superior to any of the contrivances of art (s)." When, on the twenty-eighth, the Gentlemen of the Endeavour went on shore upon an Island which lies to the left hand of the entrance of Tolaga Bay, they saw there the largest canoe they had yet met with; her length being sixty-eight feet and a half, her breadth five feet, and her height three feet six inches. In the same Island was a larger house than any they had hitherto seen; but it was in an unfinished state, and full of chips [I]. While the ship was in Hicks's Bay, the inhabitants of the adjoining coast were found to be very hostile. This gave much uneasiness to our Navigators, and was, indeed, contrary to their expectation; for they had hoped, that the report of their power and clemency had spread to a greater extent. At day-break, on the first of November, they counted no less than five and forty canoes that were coming from the shore towards the Endeavour; and these were followed by several more from another place. Some of the Indians traded fairly; but others of them took what was handed down to them without making any return, and added derision to fraud. The insolence of one of them was very remarkable. Some linen hanging over the ship's side to dry, this man, without any ceremony, untied it, and put it up in his bundle. Being immediately called to, and required to return it, instead of doing so, he let his canoe drop a-stern, and laughed at the English. A musquet which was fired over his head did not put a stop to his mirth. From a second musquet, which was loaded with small shot, he shrunk a little, when the shot struck him upon his back; but he regarded it no more than one of our men would have done the stroke of a rattan, and continued with great composure to pack up the linen which he had stolen. All the canoes now dropped a-stern, and set up their song of defiance, which lasted till they were at about four hundred yards distance from the ship. As they did not appear to have a design of attacking our Voyagers, Lieutenant Cook was unwilling to do them any hurt; and yet he thought that their going off in a bravado might have a bad effect when it should be reported on shore. To convince them, therefore, that they were still in his power, though far beyond the reach of any missile weapon with which they were acquainted, he

(s) Hawkesworth, *ubi supra*, p. 308, 309, 317, 318.

[G] *Who appeared to be either dead or wholly disabled by their wounds.* To the cape off which this unhappy transaction happened, Mr. Cook gave the name of CAPE KIDNAPPERS. It lies in latitude $39^{\circ} 43'$, and longitude $182^{\circ} 24'$ west. Its distance from the Isle of Portland is thirteen leagues south west and west. Between them is the bay of which it is the south point, and which, in honour of Sir Edward Hawke, the Lieutenant called Hawke's Bay (4).

[H] *And the disposition of the people was as favourable in all respects as could be desired.* Mr. Cook, with Mr. Green, having taken several observations of the sun and moon, the mean result of them gave

$180^{\circ} 47'$ west longitude; but, as all the observations made before exceeded these, the Lieutenant laid down the coast from the mean of the whole. At noon, this day, he took the sun's meridian altitude with an astronomical quadrant which was set up at the watering-place, and found the latitude to be $38^{\circ} 22' 24''$.

[I] *But it was in an unfinished state, and full of chips.* Among other trifling curiosities, which Dr. Solander purchased of the Indians, was a boy's top, shaped exactly like those which children play with in England; and the natives shewed, by signs, that it was to be whipped in order to make it spin (5).

(5) *Ibid.* p. 118 — 120.

(4) Hawkesworth's Voyages, vol. ii. p. 298—306.

ordered a four-pounder to be fired in such a manner as to pass near them. As the shot happened to strike the water, and to rise several times at a great distance beyond the canoes, the Indians were so much terrified, that, without once looking behind them, they paddled away as fast as they were able. In standing westward from a small Island called Mowtohora, the Endeavour suddenly shoaled her water from seventeen to ten fathom. As the Lieutenant knew that she was not far from some small islands and rocks which had been seen before it was dark, and which he had intended to have passed that evening, he thought it more prudent to tack, and to spend the night under Mowtohora, where he was certain that there was no danger. It was happy for himself and for all our Voyagers that he formed this resolution. In the morning they discovered, a-head of them, several rocks, some of which were level with the surface of the water, and some below it; and the striking against which could not in the hour of darkness have been avoided. In passing between these rocks and the main, the ship had only from ten to seven fathom water (*t*). While Mr. Cook was near an Island which he called the MAYOR, the inhabitants of the neighbouring coast displayed many instances of hostility, and, in their traffic with our Navigators, committed various acts of fraud and robbery. As the Lieutenant intended to continue in the place five or six days, in order to make an observation of the transit of Mercury, it was absolutely necessary, for the prevention of future mischief, to convince these people that the English were not to be ill-treated with impunity. Accordingly, some small shot were fired at a thief of uncommon insolence, and a musquet-ball was discharged through the bottom of his boat. Upon this it was paddled to about a hundred yards distance; and, to the surprise of Mr. Cook and his friends, the Indians in the other canoes took not the least notice of their wounded companion, though he bled very much, but returned to the ship, and continued to trade with the most perfect indifference and unconcern. For a considerable time they dealt fairly. At last, however, one of them thought fit to move off with two different pieces of cloth which had been given for the same weapon. When he had gotten to such a distance that he thought himself secure of his prizes, a musquet was fired after him, which fortunately struck the boat just at the water's edge, and made two holes in her side. This excited such an alarm, that not only the people who were shot at, but all the rest of the canoes, made off with the utmost expedition. As the last proof of superiority, our Commander ordered a round shot to be fired over them, and not a boat stopped till they got to land. After an early breakfast on the ninth of November, Lieutenant Cook went on shore, with Mr. Green, and proper instruments, to observe the transit of Mercury. Mr. Banks and Dr. Solander were of the party. The weather had for some time been very thick, with much rain; but this day proved so favourable, that not a cloud intervened during the whole transit. The observation of the ingress was made by Mr. Green alone, Mr. Cook being employed in taking the sun's altitude to ascertain the time [K]. While the Gentlemen were thus engaged on shore, they were alarmed by the firing of a great gun from the ship; and on their return received the following account of the transaction from Mr. Gore, the second Lieutenant, who had been left commanding officer on board. During the carrying on of a trade with some small canoes, two very large ones came up, full of men. In one of the canoes were forty-seven persons, all of whom were armed with pikes, stones, and darts, and assumed the appearance of a hostile intention. However, after a little time, they began to traffic, some of them offering their arms, and one of them a square piece of cloth, which makes a part of their dress, called a *Haahow*. Mr. Gore having agreed for it, sent down the price, which was a piece of British cloth, and expected his purchase. But as soon as the Indian had gotten Mr. Gore's cloth in his possession, he refused to part with his own, and put off his canoe. Upon being threatened for his fraud, he and his companions began to sing their war song in defiance, and shook their paddles. Though their insolence did not proceed to an attack, and only defied Mr. Gore to take any remedy in his power, he was so provoked, that he levelled a musquet loaded with ball at the offender, while he was holding the cloth in his hand, and shot him dead. When the Indian fell, all the canoes put off to some distance, but continued to keep together in such a manner that it was apprehended they might still meditate an attack. To secure, therefore, a safe passage for the boat of the Endeavour, which was wanted on shore, a round shot was fired with so much effect over their heads, as to make them all flee with the utmost precipitation. It was matter of regret to Lieutenant Cook that Mr. Gore had not, in the case of the offending Indian, tried the experiment of a few small shot, which had been successful in former instances of robbery.

(*t*) Hawkesworth, *ubi supra*, p. 325—327.

[K] Mr. Cook being employed in taking the sun's altitude to ascertain the time.] The transit came on at 7h. 20' 58" apparent time. According to Mr. Green's observations, the internal contact was at 12h. 8' 58", the external at 12h. 9' 55" P. M. According to Mr. Cook's, the internal contact was at 12h. 8' 54", and the external 12h. 9' 48". The latitude of the place of observation was 36° 48' 5½". The latitude ob-

served at noon was 36° 48' 28". The mean of this and of an observation made the day before gave 36° 48' 28" south, the latitude of the place of observation. The variation of the compass was 11° 9' east. On the preceding day, the Lieutenant had observed the sun's meridional zenith distance by an astronomical quadrant, which gave the latitude 36° 47' 43" within the south entrance of Mercury Bay.

On Friday the tenth, our Commander, accompanied by Mr. Banks and the other Gentlemen, went with two boats, to examine a large river that empties itself into the head of Mercury Bay. As the situation they were now in abounded with conveniencies, the Lieutenant has taken care to point them out for the benefit of future navigators. If any occasion should ever render it necessary for a ship either to winter here, or to stay for a considerable length of time, tents might be built on a high point or peninsula in this place, upon ground sufficiently spacious for the purpose; and they might easily be made impregnable to the whole force of the country. Indeed, the most skilful engineer in Europe could not choose a situation better adapted to enable a small number to defend themselves against a greater. Among other accommodations which the Endeavour's company met with in Mercury Bay, they derived an agreeable refreshment from some oyster beds, which they had fortunately discovered. The oysters, which were as good as ever came from Colchester, and about the same size, were so plentiful, that not the boat only, but the ship itself, might have been loaded in one tide (t). On Wednesday, the fifteenth, Lieutenant Cook sailed out of MERCURY BAY. This name had been given to it on account of the observation which had there been made of the transit of that planet over the sun (u). The river where oysters had been so plentifully found, he called OYSTER RIVER. There is another river, at the head of the bay, which is the best and safest place for a ship that wants to stay any length of time. From the number of mangroves about it, the Lieutenant named it MANGROVE RIVER. In several parts of Mercury Bay, our Voyagers saw, thrown upon the shore, great quantities of iron sand, which is brought down by every little rivulet of fresh water that finds its way from the country. This is a demonstration that there is ore of that metal not far inland; and yet none of the inhabitants of New Zealand who had yet been seen knew the use of iron, or set upon it the least degree of value. They had all of them preferred the most worthless and useless trifle, not only to a nail, but to any tool of that metal. Before the Endeavour left the bay, the ship's name and that of the Commander were cut upon one of the trees near the watering place, together with the date of the year and month when our Navigators were there. Besides this, Mr. Cook, after displaying the English colours, took formal possession of the place in the name of his Britannic Majesty, King George the Third (w). In the range from Mercury Bay, several canoes, on the eighteenth, put off from different places, and advanced towards the Endeavour. When two of them, in which there might be about sixty men, came within reach of the human voice, the Indians sang their war song; but seeing that little notice was taken of them, they threw a few stones at the English, and then rowed off towards the shore. In a short time, however, they returned, as if with a fixed resolution to provoke our Voyagers to a battle, animating themselves by their song as they had done before. Tupia, without any directions from the Gentlemen of the Endeavour, began to expostulate with the natives, and told them that our people had weapons which could destroy them in a moment. Their answer to this expostulation was, in their own language, "come on shore, and we will kill you all." "Well, replied Tupia, but why should you molest us while we are at sea? As we do not wish to fight, we shall not accept your challenge to come on shore; and here there is no pretence for a quarrel, the sea being no more your property than the ship." This eloquence, which greatly surprized Lieutenant Cook and his friends, as they had not suggested to Tupia any of the arguments he made use of, produced no effect upon the minds of the Indians, who soon renewed their attack. The oratory of a musquet, which was fired through one of their boats, quelled their courage, and sent them instantly away. While our Commander was in the Bay of Islands, he had a favourable opportunity of examining the interior part of the country and its produce. At day break, therefore, on the twentieth of the month, he set out in the pinnace and long-boat, accompanied by Mr. Banks, Dr. Solander, and Tupia, and found the inlet at which they entered end in a river, about nine miles above the ship. Up this river, to which was given the name of the Thames, they proceeded till near noon, when they were fourteen miles within its entrance. As the Gentlemen then found the face of the country to continue nearly the same, without any alteration in the course of the stream, and had no hope of tracing it to its source, they landed on the West side, to take a view of the lofty trees which every where adorned its banks. The trees were of a kind which they had seen before, both in Poverty Bay and Hawke's Bay, though only at a distance. They had not walked a hundred yards into the woods, when they met with one of the trees, which, at the height of six feet above the ground, was nineteen feet eight inches in the girth. Lieutenant Cook, having a quadrant with him, measured its height from the root to the first branch, and found it to be eighty-nine feet. It was as strait as an arrow, and tapered but very little in proportion to its height; so that, in the Lieutenant's judgment, there must have been three hundred and fifty-six feet of solid timber in it, exclusive of the branches. As the party advanced, they saw many other trees, which were still larger. A young one they cut down, the wood of which was heavy and solid, not fit for masts, but such as would make the finest plank in the world. The Carpenter of the ship, who was with the party, said that the timber resembled that of the pitch-pine, which is lightened by tapping. If it should appear that some such method would be suc-

cessful in lightening these trees, they would then furnish masts superior to those of any country in Europe. As the wood was swampy, the Gentlemen could not range far; but they found many stout trees of other kinds, with which they were totally unacquainted, and specimens of which they brought away. On the twenty-second, another instance occurred, in which the commanding officer left on board did not know how to exercise his power with the good sense and moderation of Mr. Cook. While some of the natives were in the ship below with Mr. Banks, a young man who was upon the deck stole a half-minute glass, and was detected just as he was carrying it off. Mr. Hicks, in his indignation against the offender, was pleased to order that he should be punished, by giving him twelve lashes with a cat-o-nine tails. When the other Indians who were on board saw him seized for this purpose, they attempted to rescue him; and being resisted, they called for their arms, which were handed from the canoes. At the same time, the people of one of the canoes attempted to come up the side of the Endeavour. The tumult having called up Mr. Banks and Tupia, the natives ran to the latter, and solicited his interposition. All, however, which he could do, as Mr. Hicks continued inexorable, was to assure them that nothing was intended against the life of their companion, and that it was necessary that he should suffer some punishment for his offence. With this explanation they appeared to be satisfied; and when the punishment had been inflicted, an old man among the spectators, who was supposed to be the criminal's father, gave him a severe beating, and sent him down into his canoe. Notwithstanding this, the Indians were far from being reconciled to the treatment which their countryman had received. Their cheerful confidence was gone; and though they promised, at their departure, to return with some fish, the English saw them no more (x). On the twenty-ninth of November, Lieutenant Cook, Mr. Banks, Dr. Solander, and others with them, were in a situation somewhat critical and alarming. Having landed upon an Island in the neighbourhood of Cape Bret, they were in a few minutes surrounded by two or three hundred people. Though the Indians were all armed, they came on in so confused and straggling a manner, that it did not appear that any injury was intended by them; and the English Gentlemen were determined that hostilities should not begin on their part. At first the natives continued quiet; but their weapons were held ready to strike, and they seemed to be rather irresolute than peaceable. While the Lieutenant and his friends remained in this state of suspense, another party of Indians came up; and the boldness of the whole body being increased by the augmentation of their numbers, they began the dance and song, which are their preludes to a battle. An attempt that was made by a number of them, to seize the two boats which had brought our Voyagers to land, appeared to be the signal for a general attack. It now became necessary for Mr. Cook to exert himself with vigour. Accordingly, he discharged his musquet, which was loaded with small shot, at one of the forward-est of the assailants, and Mr. Banks and two of our men fired immediately afterwards. Though this made the natives fall back in some confusion, nevertheless, one of the Chiefs, who was at the distance of about twenty yards, had the courage to rally them, and, calling loudly to his companions, led them on to the charge. Dr. Solander instantly discharged his piece at this champion, who, upon feeling the shot, stopped short, and then ran away with the rest of his countrymen. Still, however, they did not disperse, but got upon rising ground, and seemed only to want some leader of resolution to renew their assault. As they were now gotten beyond the reach of small shot, the English fired with ball, none of which taking place, the Indians continued together in a body. While our people were in this doubtful situation, which lasted about a quarter of an hour, the ship, from which a much greater number of natives were seen than could be discovered on shore, brought her broadside to bear, and entirely dispersed them, by firing a few shot over their heads. In this skirmish, only two of them were hurt with the small shot, and not a single life was lost; a case which would not have happened if Lieutenant Cook had not restrained his men, who, either from fear or the love of mischief, shewed as much impatience to destroy the Indians as a sportsman to kill his game. Such was the difference between the disposition of the common seamen and marines, and that of their humane and judicious Commander (y). On the same day Mr. Cook displayed a very exemplary act of discipline. Some of the ship's people, who, when the natives were to be punished for a fraud, assumed the inexorable justice of a Lycurgus, thought fit to break into one of their plantations, and to dig up a quantity of potatoes. For this the Lieutenant ordered each of them to receive twelve lashes, after which two of them were discharged. But the third, in a singular strain of morality, insisted upon it that it was no crime in an Englishman to plunder an Indian plantation. The method taken by our Commander to refute his casuistry, was to send him back to his confinement, and not to permit him to be released till he had been punished with six lashes more. The Endeavour, on the fifth of December, was in the most imminent hazard of being wrecked. At four o'clock in the morning of that day, our Voyagers weighed, with a light breeze; but it being variable with frequent calms, they made little way. From that time till the afternoon, they kept turning out of the bay, and about ten at night were suddenly becalmed, so that the ship could neither wear nor exactly keep her station. The tide or current setting strong, she drove toward

land so fast, that before any measures could be taken for her security, she was within a cable's length of the breakers. Though our people had thirteen fathom water, the ground was so foul, that they did not dare to drop their anchor. In this crisis, the pinnace being immediately hoisted out to take the ship in tow, and the men, sensible of their danger, exerting themselves to the utmost, a faint breeze sprang up off the land, and our Navigators perceived with unspeakable joy that the vessel made headway. So near was she to the shore, that Tupia, who was ignorant of the hair's breadth escape the company had experienced, was at this very time conversing with the Indians upon the beach, whose voices were distinctly heard, notwithstanding the roar of the breakers. Mr. Cook and his friends now thought that all danger was over; but about an hour afterwards, just as the man in the chains had cried "seventeen fathom," the ship struck. The shock threw them into the utmost consternation; and almost instantly the man in the chain cried out "five fathom." By this time, the rock on which the ship had struck being to the windward, she went off without having received the least damage; and the water very soon deepening to twenty fathom, she again sailed in security. The inhabitants in the Bay of Islands were found to be far more numerous than in any other part of New Zealand which Lieutenant Cook had hitherto visited. It did not appear that they were united under one head; and, though their towns were fortified, they seemed to live together in perfect amity. The Endeavour, on the ninth of December, lying becalmed in DOUBTLESS BAY, an opportunity was taken to enquire of the natives concerning their country; and our Navigators learned from them, by the help of Tupia, that at the distance of three days rowing in their canoes, at a place called MOORE-WHENNUA, the land would take a short turn to the southward, and thence extend no more to the West. This place the English Gentlemen concluded to be the land discovered by Tasman, and which had been named by him CAPE MARIA VAN DIEMEN. The Lieutenant, finding the inhabitants so intelligent, enquired farther, if they knew of any country besides their own. To this they answered, that they had never visited any other; but that their ancestors had told them that there was a country of great extent, to the North-west by North, or North North West, called ULIMAROA, to which some people had sailed in a very large canoe; and that only a part of them had returned, who reported, that after a passage of a month, they had seen a country where the people eat hogs. On the thirtieth of December, our Navigators saw the land, which they judged to be Cape Maria van Diemen, and which corresponded with the account that had been given of it by the Indians. The next day, from the appearance of Mount Camel, they had a demonstration that, where they now were, the breadth of New Zealand could not be more than two or three miles from sea to sea. During this part of the navigation, two particulars occurred which are very remarkable. In latitude 35° South, and in the midst of summer, Lieutenant Cook met with a gale of wind, which, from its strength and continuance, was such as he had scarcely ever been in before; and he was three weeks in getting ten leagues to the westward, and five weeks in getting fifty leagues; for at this time, being the first of January, 1770, it was so long since he had passed Cape Bret. While the gale lasted, our Voyagers were happily at a considerable distance from the land; since otherwise it was highly probable that they would never have returned to relate their adventures (z). The shore at Queen Charlotte's Sound, where the English had arrived on the fourteenth of January, seemed to form several bays, into one of which the Lieutenant proposed to carry the ship, which was now become very foul, in order to careen her, to repair some defects, and to obtain a recruit of wood and water. At day-break the next morning, he stood in for an inlet, and at eight got within the entrance. At nine o'clock, there being little wind, and what there was being variable, the Endeavour was carried by the tide or current within two cables' length of the North-west shore, where she had fifty-four fathom water. By the help of the boats she was gotten clear; and about two our people anchored in a very safe and convenient cove. Soon after, Mr. Cook, with most of the Gentlemen, landed upon the coast, where they found a fine stream of excellent water, and wood in the greatest plenty. Indeed the land, in this part of the country, was one forest, of vast extent. As the Gentlemen had brought the seine with them, it was hauled once or twice; and with such success, that different sorts of fish were caught, amounting nearly to three hundred weight. The equal distribution of these among the ship's company, furnished them with a very agreeable refreshment. When Lieutenant Cook, Mr. Banks, Dr. Solander, Tupia, and some others, landed on the sixteenth, they met with an Indian family, among whom they found horrid and indisputable proofs of the custom of eating human flesh. Not to resume so disagreeable a subject, it may here be observed once for all, that evidences of the same custom appeared on various occasions. On the next day a delightful object engaged the attention of our Voyagers. The ship lying at the distance of somewhat less than a quarter of a mile from the shore, they were awakened by the singing of an incredible number of birds, who seemed to strain their throats in emulation of each other. This wild melody was infinitely superior to any they had ever heard of the same kind, and seemed to be like small bells, most exquisitely tuned. It is probable that the distance, and the water between, might be of no small advantage to the sound. Upon enquiry, the Gentlemen were informed that the birds here always began to sing

(z) Hawkesworth, *ubi supra*, p. 366. 368, 369, 370. 372. 378, 379.

about two hours after midnight; and that, continuing their music till sun-rise, they were silent the rest of the day. In this last respect, they resemble the nightingales of our own country. On the eighteenth, Lieutenant Cook went out in the pinnace to take a view of the bay in which the ship was now at anchor; and found it to be of great extent, consisting of numberless small harbours and coves, in every direction. The Lieutenant confined his excursion to the western side, and the coast where he landed being an impenetrable forest, nothing could be seen worthy of notice. As our Commander and his friends were returning, they saw a single man in a canoe fishing: rowing up to him, to their great surprize he took not the least notice of them; and even when they were alongside of him, continued to follow his occupation, without adverting to them any more than if they had been invisible. This behaviour was not, however, the result either of fullness or stupidity; for upon being requested to draw up his net, that it might be examined, he readily complied. He shewed, likewise, to our people his mode of fishing, which was simple and ingenious. When, on the nineteenth, the armourer's forge was set up, and all hands on board were busy in careening, and in other necessary operations about the vessel, some Indians, who had brought plenty of fish, exchanged them for nails, of which they had now begun to perceive the use and value. This may be considered as one instance in which they were enlightened and benefited by their intercourse with our Navigators. While, on the twenty-second, Mr. Banks and Dr. Solander employed themselves in botanizing near the beach, our Commander, taking a seaman with him, ascended one of the hills of the country. Upon reaching its summit, he found the view of the inlet, the head of which he had a little before in vain attempted to discover in the pinnace, intercepted by hills still higher than that on which he stood, and which were rendered inaccessible by impenetrable woods. He was, however, amply rewarded for his labour; for he saw the sea on the eastern side of the country, and a passage leading from it to that on the West, a little to the eastward of the entrance of the inlet where the ship lay. The main land, which was on the South-east side of this inlet, appeared to be a narrow ridge of very high hills, and to form part of the South-west side of the strait. On the opposite side, the land trended away East as far as the eye could reach; and to the South-east there was discerned an opening to the sea, which washed the eastern coast. The Lieutenant saw, also, on the East side of the inlet, some Islands which he had before taken to be part of the main land. In returning to the ship, he examined the harbours and coves that lie behind the Islands which he had seen from the hills. The next day was employed by him in farther surveys and discoveries. During a visit to the Indians, on the twenty-fourth, Tupia being of the party, they were observed to be continually talking of guns and shooting people. For this subject of their conversation, the English Gentlemen could not at all account. But, after perplexing themselves with various conjectures, they at length learned, that, on the twenty-first, one of our officers, under the pretence of going out to fish, had rowed up to a hippah, or village, on the coast. When he had done so, two or three canoes coming off towards his boat, his fears suggested that an attack was intended, in consequence of which three musquets were fired, one with small shot, and two with ball, at the Indians, who retired with the utmost precipitation. It is highly probable that they had come out with friendly intentions; for such intentions were expressed by their behaviour, both before and afterwards. This action of the officer exhibited a fresh instance how little some of the people under Lieutenant Cook had imbibed of the wise, discreet, and humane spirit of their Commander. On the morning of the twenty-sixth, the Lieutenant went again out in the boat, with Mr. Banks and Dr. Solander, and entered one of the bays, which lie on the East side of the inlet, in order to obtain another sight of the strait which passed between the eastern and western seas. Having landed, for this purpose, at a convenient place, they climbed a hill of very considerable height, from which they had a full view of the strait, with the land on the opposite shore, which they judged to be about four leagues distant. As it was hazy in the horizon, they could not see far to the South-east; but Mr. Cook saw enough to determine him to search the passage with the ship, as soon as he should put to sea. The Gentlemen found, on the top of the hill, a parcel of loose stones, with which they erected a pyramid, and left in it some musquet balls, small shot, beads, and such other things, which they happened to have about them, as were likely to stand the test of time. These, not being of Indian workmanship, would convince any European who should come to the place and pull it down, that natives of Europe had been there before. After this, the Lieutenant and his friends went to a town of which the Indians had informed them, and which, like one they had already seen, was built upon a small Island or rock, so difficult of access, that they gratified their curiosity at the risk of their lives. Here, as had been the case in former visits to the inhabitants of that part of the country near which the ship now lay, they were received with open arms, carried through the whole of the place, and shewn all that it contained. The town consisted of between eighty and a hundred houses, and had only one fighting-stage. Mr. Cook, Mr. Banks, and Dr. Solander, happened to have with them a few nails and ribbands, and some paper, with which the people were so highly gratified, that when the Gentlemen went away, they filled the English boat with dried fish, of which it appeared that

that they had laid up large quantities. A report was spread that one of the men that had been so rashly fired upon by the officer who had visited the hippah, under the pretence of fishing, was dead of his wounds. But, on the twenty-ninth, the Lieutenant had the great consolation of discovering that this report was groundless. On the same day he went again on shore, upon the western point of the inlet, and, from a hill of considerable height, had a view of the coast to the North-west. The farthest land he could see in that quarter, was an Island at the distance of about ten leagues, lying not far from the main. Between this Island and the place where he stood, he discovered, close under the shore, several other Islands, forming many bays, in which there appeared to be good anchorage for shipping. After he had set off the different points for his survey, he erected another pile of stones, in which he left a piece of silver coin, with some musquet-balls and beads, and a fragment of an old pendant lying at the top. On the thirtieth of January, the ceremony was performed of giving name to the inlet where our Voyagers now lay, and of erecting a memorial of the visit which they had made to this place. The carpenter having prepared two posts for the purpose, our Commander ordered them to be inscribed with the ship's name, and the dates of the year and the month. One of these he set up at the watering-place, hoisting the union-flag upon the top of it; and the other he carried over to the Island that lies nearest the sea, and which is called by the natives MOTUARA. He went first, accompanied by Mr. Monkhouse and Tupia, to the neighbouring village or hippah, where he met with an old man, who had maintained a friendly intercourse with the English. To this old man, and several Indians besides, the Lieutenant, by means of Tupia, explained his design, which he informed them was to erect a mark upon the Island, in order to shew to any other ship which should happen to come thither, that our Navigators had been there before. To this the inhabitants readily consented, and promised that they would never pull it down. He then gave something to every one present, and to the old man a silver three-pence, and some spike-nails, with the King's broad arrow cut deep upon them. These were things which Mr. Cook thought were the most likely to be long preserved. After this he conveyed the post to the highest part of the Island; and, having fixed it firmly in the ground, hoisted upon it the union-flag, and honoured the inlet with the name of QUEEN CHARLOTTE'S SOUND. At the same time, he took formal possession of this and the adjacent country, in the name and for the use of his Majesty King George the Third. The ceremony was concluded by the Gentlemen drinking a bottle of wine to her Majesty's health; and the bottle being given to the old man who had attended them up the hill, he was highly delighted with his present (a). A philosopher, perhaps, might enquire, on what ground Lieutenant Cook could take formal possession of this part of New Zealand, in the name and *for the use* of the King of Great Britain, when the country was already inhabited, and of course belonged to those by whom it was occupied, and whose ancestors might have resided in it for many preceding ages. To this the best answer seems to be, that the Lieutenant, in the ceremony performed by him, had no reference to the original inhabitants, or any intention to deprive them of their natural rights, but only to preclude the claims of future European Navigators, who, under the auspices, and for the benefit of, their respective states or kingdoms, might form pretensions to which they were not entitled by prior discovery.

On the thirty-first, our Voyagers having compleated their wooding, and filled their water-casks, Mr. Cook sent out two parties, one to cut and make brooms, and another to catch fish. In the evening there was a strong gale from the North-west, with such a heavy rain that the little wild musicians on shore suspended their song, which till now had been constantly heard during the night, with a pleasure that it was impossible to lose without regret. The gale, on the first of February, encreased to a storm, with heavy gusts from the high land, one of which broke the hawser that had been fastened to the shore, and induced the necessity of letting go another anchor. Though, towards midnight, the gale became more moderate, the rain continued with so much violence that the brook which supplied the ship with water overflowed its banks; in consequence of which ten small casks, that had been filled the day before, were carried away, and notwithstanding the most diligent search for them, could not be recovered. The Endeavour, on Monday the fifth, got under sail; but the wind soon failing, our Commander was obliged again to come to an anchor, a little above Motuara. As he was desirous of making still farther enquiries whether any memory of Tasman had been preserved in New Zealand, he directed Tupia to ask of the old man before mentioned, who had come on board to take his leave of the English Gentlemen, whether he had ever heard that such a vessel as theirs had before visited the country. To this he replied in the negative; but said that his ancestors had told him that there once had arrived a small vessel from a distant land, called ULIMAROA, in which were four men, who upon their reaching the shore were all killed. On being asked where this country lay, he pointed to the northward. Of Ulimaroa Lieutenant Cook had heard something before, from the people about the Bay of Islands, who said that it had been visited by their ancestors. Tupia had also some confused traditionary notions concerning it; but no certain conclusion could be drawn either from his account or that of the old Indian. Soon after the ship came to anchor the second time, Mr. Banks,

and Dr. Solander, who had gone on shore to see if any gleanings of natural knowledge remained, fell in, by accident, with the most agreeable Indian family they had yet seen, and which afforded them a better opportunity of remarking the personal subordination among the natives than had before offered. The whole behaviour of this family was affable, obliging, and unsuspicious. It was matter of sincere regret to the two Gentlemen that they had not sooner met with these people, as a better acquaintance with the manners and disposition of the inhabitants of the country might hence have been obtained in a day, than had been acquired during the whole stay of the English upon the coast. When, on the sixth of February, Lieutenant Cook had gotten out of the sound, he stood over to the eastward, in order to get the streight well open before the tide of ebb approached. At seven in the evening, two small Islands which lie off Cape Koamaroo, at the South-east head of Queen Charlotte's Sound, bore East, at the distance of about four miles. It was nearly calm, and the tide of ebb setting out, the Endeavour, in a very short time, was carried by the rapidity of the stream close upon one of the Islands, which was a rock rising almost perpendicularly out of the sea. The danger encreased every moment, and there was but one expedient to prevent the ship's being dashed to pieces, the success of which a few moments would determine. She was now within little more than a cable's length of the rock, and had above seventy-five fathom water. But, upon dropping an anchor, and veering about one hundred and fifty fathom of cable, she was happily brought up. This, however, would not have saved our Navigators, if the tide, which set South by East, had not, upon meeting with the Island, changed its direction to South-east, and carried them beyond the first point. In this situation they were not above two cable's length from the rocks; and here they remained in the strength of the tide, which set to the South-east after the rate of at least five miles an hour, from a little after seven till midnight, when the tide abated, and the vessel began to heave. By three in the morning, a light breeze at north-west having sprung up, our Voyagers sailed for the eastern shore; though they made but little way, in consequence of the tide being against them. The wind, however, having afterwards freshened, and come to North and North-east, with this, and the tide of ebb, they were in a short time hurried through the narrowest part of the streight, and then stood away for the southernmost land they had in prospect. There appeared over this land a mountain of stupendous height, which was covered with snow. The narrowest part of the streight, through which the Endeavour had been driven with such rapidity, lies between Cape Tierawitte, on the coast of Eaheinomauwe, and Cape Koamaroo; the distance between which our Commander judged to be four or five leagues. Notwithstanding the difficulties arising from this tide, now its strength is known, the streight may be passed without danger. Some of the officers started a notion that Eaheinomauwe was not an Island, and that the land might stretch away to the South-east, from between Cape Turnagain and Cape Palliser, there being a space of between twelve and fifteen leagues which had not yet been seen. Though Lieutenant Cook, from what he had observed the first time he discovered the streight, and from many other concurrent circumstances, had the strongest conviction that they were mistaken, he, nevertheless, resolved to leave no possibility of doubt with respect to an object of so much importance. For this purpose he gave such a direction to the navigation of the ship as would most effectually tend to determine the matter. After a course of two days, he called the officers upon deck, and asked them, whether they were not now satisfied that Eaheinomauwe was an Island? To this question they readily answered in the affirmative; and all doubts being removed, the Lieutenant proceeded to farther researches (b). During Mr. Cook's long and minute examination of the coast of New Zealand, he gave names to the bays, capes, promontories, islands, and rivers, and other places which were seen or visited by him; excepting in those cases where their original appellations were learned from the natives. The names he fixed upon were either derived from certain characteristic or adventitious circumstances, or were conferred in honour of his friends and acquaintance, chiefly those of the naval line. Such of the readers of the present work as desire to be particularly informed concerning them, will naturally have recourse to the history of the Voyage at large, or, at least, to the indications of them in the several maps on which they are described. The ascertaining of New Zealand to be an island did not conclude Lieutenant Cook's examination of the nature, situation, and extent of the country. After this, he completed his circumnavigation, by ranging from Cape Turnagain southward along the eastern coast of Poenammoo, round Cape South, and back to the western entrance of the streight he had passed, and which was very properly named Cook's Streight. This range, which commenced on the ninth of February, I shall not minutely and regularly pursue; but content myself, as in the former course, with mentioning such circumstances as are more directly adapted to my immediate design. In the afternoon of the fourteenth, when Mr. Banks was out in the boat a-shooting, our Voyagers saw, with their glasses, four double canoes put off from the shore towards him, having on board fifty-seven men. The Lieutenant, being alarmed for the safety of his friend, immediately ordered signals to be made for his return; but he was prevented from seeing them by the situation of the sun with regard to the ship. However, it was soon with pleasure observed that his boat was in motion; and he was taken on

(b) Hawkesworth's Voyages, vol. ii. p. 401—410.

on board before the Indians, who perhaps had not discerned him, came up. Their attention seemed to be wholly fixed upon the ship. They came within about a stone's cast of her, and then stopped, gazing at the English with a look of vacant astonishment. Tupia in vain exerted his eloquence to prevail upon them to make a nearer approach. After surveying our Navigators some time, they left them, and made towards the shore. The Gentlemen could not help remarking, on this occasion, the different dispositions and behaviour of the different inhabitants of the country, at the first sight of the Endeavour. The people now seen kept aloof with a mixture of timidity and wonder; others had immediately commenced hostilities; the man who was found fishing alone in his canoe appeared to regard our Voyagers as totally unworthy of notice; and some had come on board almost without invitation, and with an air of perfect confidence and good-will. From the conduct of the last visitors, Lieutenant Cook gave the land from which they had put off, and which had the appearance of an Island, the name of LOOKERS-ON. When an Island, which lies about five leagues from the coast of Tovy-Poenammoo, and which was named Banks's Island, was first discovered in the direction of South by West, some persons on board were of opinion that they saw land bearing South-south-east, and South-east by East. Our Commander, who was himself upon the deck at the time, told them, that in his judgment it was no more than a cloud, which as the sun rose would dissipate and vanish. Being however determined to leave no subject for disputation which experiment could remove, he ordered the ship to steer in the direction which the supposed country was said to bear. Having gone in this direction eight and twenty miles, without discovering any signs of land, the Endeavour resumed her intended course to the southward, it being the particular view of the Lieutenant to ascertain whether Poenammoo was an Island or a continent (c). In passing some rocks on the ninth of March, in the night, it appeared in the morning that the ship had been in the most imminent danger. Her escape was indeed critical in the highest degree. To these rocks, therefore, which, from their situation, are so well adapted to catch unwary strangers, Mr. Cook gave the name of the TRAPS. On the same day he reached a point of land which he called the SOUTH CAPE, and which he supposed, as proved in fact to be the case, the southern extremity of the country (d). In sailing, on Wednesday the fourteenth, the Endeavour passed a small narrow opening in the land, where there seemed to be a very safe and convenient harbour, formed by an Island, which lay eastward in the middle of the opening. On the land behind the opening are mountains, the summits of which were covered with snow, that appeared to have recently fallen. Indeed our Voyagers, for two days past, had found the weather extremely cold. On each side the entrance of the opening, the land rises almost perpendicularly from the sea to a stupendous height. For this reason Lieutenant Cook did not choose to carry the ship into the harbour. He was sensible that no wind could blow there but right in or right out; and he did not think it by any means advisable to put into a place whence he could not have gotten out but with a wind which experience had taught him did not blow more than one day in a month. Sagacious as this determination of our Commander was, it did not give universal satisfaction. He acted in it contrary to the opinion of some persons on board, who expressed in strong terms their desire of coming to harbour; not sufficiently considering, that present convenience ought not to be purchased at the expence of incurring great future disadvantages (e). By the twenty-seventh of March, Mr. Cook had circumnavigated the whole country of Tovy-Poenammoo, and arrived within sight of the Island formerly mentioned, which lies at the distance of nine leagues from the entrance of Queen Charlotte's Sound. Having at this time thirty tons of empty water-casks on board, it was necessary to fill them before he finally proceeded on his voyage. For this purpose he hauled round the Island and entered a bay, situated between that and Queen Charlotte's Sound, and to which the name was given of ADMIRALTY BAY. The business of wooding and watering having been completed on the thirtieth, and the ship being ready for the sea, the point now to be determined was, what route should be pursued in returning home that would be of most advantage to the public service. Upon this subject the Lieutenant thought proper to take the opinion of his officers. He had himself a strong desire to return by Cape Horn, because that would have enabled him to determine, whether there is or is not a southern continent. But against this scheme it was a sufficient objection, that our Navigators must have kept in a high southern latitude, in the very depth of winter, and in a vessel which was not thought to be in a condition fit for the undertaking. The same reason was urged, with still greater force, against their proceeding directly for the Cape of Good Hope, because no discovery of moment could be expected in that route. It was, therefore, resolved that they should return by the East Indies; and that with this view they should steer westward, till they should fall in with the East coast of New Holland, and then follow the direction of that coast to the northward, till they should arrive at its northern extremity. If that should be found impracticable, it was farther resolved that they should endeavour to fall in with the land, or Islands, said to have been discovered by Quiros (f). In the six months which Lieutenant Cook had spent in the examination of New Zealand, he made very large additions to the knowledge of geography and navigation. That country was first discovered in the year 1642, by

(f) *Ibid* p. 431—433.

Abel Jansen Tasman, a Dutch navigator. He traversed the eastern coast from latitude $34^{\circ} 43'$, and entered the streight now called Cook's Streight; but being attacked by the natives soon after he came to an anchor, in the place which he named Murderer's Bay, he never went on shore. Nevertheless, he assumed a kind of claim to the country, by calling it STAATEN LAND, or the Land of the States, in honour of the States-General. It is now usually distinguished in maps and charts by the name of NEW ZEALAND. The whole of the country, excepting that part of the coast which was seen by Tasman from on board his ship, continued from his time, to the voyage of the Endeavour, altogether unknown. By many persons it has been supposed to constitute a part of a southern continent; but it was now ascertained by Mr. Cook to consist of two large Islands, divided from each other by a streight or passage, which is about four or five leagues broad. These Islands are situated between the latitudes of 34° and 48° South, and between the longitudes of 181° and 194° West; a matter which Mr. Green determined with uncommon exactness, from innumerable observations of the sun and moon, and one of the transits of Mercury. The northernmost of these Islands is called by the natives Eaheinomauwe, and the southernmost Tovy, or Tavai Poenammoo. It is not, however, certain, whether the whole southern Island, or only part of it, is comprehended under the latter name. Tovy Poenammoo is principally a mountainous, and to all appearance a barren country. The only inhabitants, and signs of inhabitants, that were discovered upon all the Island, were the people whom our Voyagers saw in Queen Charlotte's Sound, some that came off to them under the snowy mountains, and several fires which were discerned to the West of Cape Saunders. Eaheinomauwe has a much better appearance. Though it is not only hilly but mountainous, even the hills and mountains are covered with wood, and every valley has a rivulet of water. The soil in these vallies, and in the plains, many of which are not overgrown with wood, is in general light, but fertile. It was the opinion of Mr. Banks and Dr. Solander, as well as of the other Gentlemen on board, that all kinds of European grain, plants, and fruit, would flourish here in the utmost luxuriance. There is reason to conclude, from the vegetables which our Navigators found in Eaheinomauwe, that the winters are milder than those in England; and the summer was experienced not to be hotter, though it was more equally warm. If this country, therefore, should be settled by people from Europe, they might, with a little industry, very soon be supplied, in great abundance, not merely with the necessaries, but even with the luxuries of life. In Eaheinomauwe there are no quadrupeds but dogs and rats. At least, no other were seen by our Voyagers; and the rats are so scarce, that they wholly escaped the notice of many on board. Of birds the species are not numerous; and of these no one kind, excepting perhaps the gannet, is exactly the same with those of Europe. Insects are not in greater plenty than birds. The sea makes abundant recompence for this scarcity of animals upon the land. Every creek swarms with fish, which are not only wholesome, but equally delicious with those in our part of the world. The Endeavour seldom anchored in any station, or with a light gale passed any place, that did not afford enough, with hook and line, to serve the whole ship's company. If the seine was made use of, it seldom failed of producing a still more ample supply. The highest luxury of this kind, with which the English were gratified, was the lobster, or sea cray-fish. Among the vegetable productions of the country, the trees claim a principal place; there being forests of vast extent, full of the straightest, the cleanest, and the largest timber Mr. Cook and his friends had ever seen. Mr. Banks and Dr. Solander were gratified by the novelty, if not by the variety, of the plants. Out of about four hundred species, there were not many which had hitherto been described by botanists. There is one plant that serves the natives instead of hemp and flax, and which excels all that are applied to the same purposes in other countries. If the settling of New Zealand should ever be deemed an object deserving the attention of Great Britain, our Commander thought that the best place for establishing a colony would either be on the banks of the Thames, or in the territory adjoining to the Bay of Islands. Each of these places possesses the advantage of an excellent harbour. By means of the river, settlements might be extended, and a communication established with the inland parts of the country. Vessels might, likewise, be built of the fine timber which is every where to be met with, at very little trouble and expence (g). But I am in danger of forgetting myself, and of running into a detail, which may be thought rather to exceed the intentions of the present narrative. It is difficult to restrain the pen, when such a variety of curious and entertaining matter lies before it; and I must entreat the indulgence of my readers while I mention two or three farther particulars. One circumstance peculiarly worthy of notice, is the perfect and uninterrupted health of the inhabitants of New Zealand. In all the visits made to their towns, where old and young, men and women, crowded about our Voyagers, they never observed a single person who appeared to have any bodily complaint; nor among the numbers that were seen naked, was once perceived the slightest eruption upon the skin, or the least mark which indicated that such an eruption had formerly existed. Another proof of the health of these people is the facility with which the wounds they at any time receive are healed. In the man who had been shot with a musquet-ball through the fleshy part of his arm, the wound seemed to be

(g) Hawke-
worth, *ubi supra*,
p. 435—444.

so well digested, and in so fair a way of being perfectly healed, that if Mr. Cook had not known that no application had been made to it, he declared that he should certainly have enquired, with a very interested curiosity, after the vulnerary herbs and surgical art of the country. An additional evidence of human nature's being untainted with disease in New Zealand, is the great number of old men with whom it abounds. Many of them, by the loss of their hair and teeth, appeared to be very ancient, and yet none of them were decrepid. Although they were not equal to the young in muscular strength, they did not come in the least behind them with regard to cheerfulness and vivacity. Water, as far as our Navigators could discover, is the universal and only liquor of the New Zealanders (g). It is greatly to be wished, that their happiness in this respect may never be destroyed by such a connection with the European nations, as shall introduce that fondness for spirituous liquors which hath been so fatal to the Indians of North America. From the observations which Lieutenant Cook and his friends made on the people of New Zealand, and from the similitude which was discerned between them and the inhabitants of the South Sea Islands, a strong proof arose that both of them had one common origin; and this proof was rendered indubitable by the conformity of their language. When Tupia addressed himself to the natives of Eaheinomomauwe and Poenammoo, he was perfectly understood. Indeed, it did not appear that the language of Otaheite differed more from that of New Zealand, than the language of the two Islands, into which it is divided, did from each other (h). Hitherto the navigation of Lieutenant Cook had been unfavourable to the notion of a southern continent; having swept away at least three-fourths of the positions upon which that notion had been founded. The track of the Endeavour had demonstrated that the land seen by Tasman, Juan Fernandes, Hermite, the commander of a Dutch Squadron, Quiros, and Roggewein, was not, as they had supposed, part of such a continent. It had also totally destroyed the theoretical arguments in favour of a southern continent, which had been drawn from the necessity of it to preserve an equilibrium between the two hemispheres. As, however, Mr. Cook's discoveries, so far as he had already proceeded, extended only to the northward of forty degrees, South latitude, he could not, therefore, give an opinion concerning what land might lie farther to the southward. This was a matter, therefore, which he earnestly wished to be examined (i); and to him was, at length, reserved the honour, as we shall hereafter see, of putting a final end to the question.

(k) Cape Farewell
lies in latitude
40° 33' South,
and longitude
186° West.

On Saturday the thirty-first of March, our Commander sailed from Cape Farewell in New Zealand (k) and pursued his voyage to the westward. New Holland, or as it is now called, New South Wales, came in sight on the nineteenth of April; and on the twenty-eighth of that month the ship anchored in BOTANY BAY. On the preceding day, in consequence of its falling calm when the vessel was not more than a mile and a half from the shore, and within some breakers, our Navigators had been in a very disagreeable situation; but happily a light breeze had sprang from the land, and carried them out of danger. In the afternoon the boats were manned; and Lieutenant Cook and his friends, having Tupia of their party, set out from the Endeavour. They intended to land where they had seen some Indians, and began to hope, that as these Indians had paid no regard to the ship when she came into the bay, they would be as inattentive to the advances of the English towards the shore. In this, however, the Gentlemen were disappointed; for as soon as they approached the rocks, two of the men came down upon them to dispute their landing, and the rest ran away. These champions, who were armed with lances about ten feet long, called to our Navigators, in a very loud tone, and in a harsh dissonant language, of which even Tupia did not understand a single word. At the same time, they brandished their weapons, and seemed resolved to defend their coast to the uttermost, though they were but two to forty. The Lieutenant, who could not but admire their courage, and who was unwilling that hostilities should commence with such inequality of force on their side, ordered his boat to lie upon her oars. He and the other Gentlemen then parlied with them by signs; and, to obtain their good-will, he threw them nails, beads, and several trifles besides, with which they appeared to be well pleased. After this our Commander endeavoured to make them understand that he wanted water, and attempted to convince them, by all the methods in his power, that he had no injurious design against them. Being willing to interpret the waving of their hands as an invitation to proceed, the boat put in to the shore; but no sooner was this perceived, than it was opposed by the two Indians, one of whom seemed to be a youth about nineteen or twenty years old, and the other a man of middle age. The only resource now left for Mr. Cook was to fire a musquet between them, which being done, the youngest of them dropped a bundle of lances on the rock, but recollecting himself in an instant, he snatched them up again in great haste. A stone was then thrown at the English, upon which the Lieutenant ordered a musquet to be fired with small-shot. This struck the eldest upon the legs, and he immediately ran to one of the houses, which was about a hundred yards distance. Mr. Cook, who now hoped that the contest was over, instantly landed with his party; but they had scarcely quitted the boat when the Indian returned, having only left the rock to fetch a shield or target for his defence. As soon as he came up, he and his comrade

threw each of them a lance in the midst of our people, but happily without hurting a single person. At the firing of a third musquet, one of the two men darted another lance, and then both of them ran away. After this the Gentlemen repaired to the huts, and threw into the house where the children were, some beads, ribbons, pieces of cloth, and other presents. These they hoped would procure them the good will of the inhabitants. When, however, the Lieutenant and his companions returned the next day, they had the mortification of finding that the beads and ribbons which they had left the night before, had not been removed from their places, and that not an Indian was to be seen (1). Several of the natives of the country came in sight on the thirtieth, but they could not be engaged to begin an intercourse with our people. They approached within a certain distance of them, and after shouting several times went back into the woods. Having done this once more, Mr. Cook followed them himself, alone and unarmed, a considerable way along the shore, but without prevailing upon them to stop [L]. On the first of May, he resolved to make an excursion into the country. Accordingly, our Commander, Mr. Banks, Dr. Solander, and seven others, all of them properly accoutred for the expedition, set out, and repaired first to the huts near the watering-place, whither some of the Indians continued every day to resort. Though the little presents which had been left there before had not yet been taken away, our Gentlemen added others of still greater value, consisting of cloth, beads, combs, and looking glasses. After this they went up into the country, the face of which is finely diversified by wood and lawn. The soil they found to be either swamp or light sand [M]. In cultivating the ground there would be no obstruction from the trees, which are tall, strait, and without underwood, and stand at a sufficient distance from each other. Between the trees, the land is abundantly covered with grass. Our Voyagers saw many houses of the inhabitants, but met with only one of the people, who ran away as soon as he discovered the English. At every place where they went they left presents, hoping that at length they might procure the confidence and good will of the Indians. They perceived some traces of animals; and the trees over their heads abounded with birds of various kinds, among which were many of exquisite beauty. Loriquets and cockatoos, in particular, were so numerous, that they flew in flocks of several scores together. While the Lieutenant and his friends were upon this excursion, Mr. Gore, who had been sent out in the morning to dredge for oysters, having performed that service, dismissed his boat, and taking a midshipman with him, set out to join the waterers by land. In his way he fell in with a body of two and twenty Indians, who followed him, and were often at no greater distance than that of twenty yards. When he perceived them so near, he stopped, and faced about, upon which they likewise stopped; and when he went on again, they continued their pursuit. But though they were all armed with lances, they did not attack Mr. Gore; so that he and the midshipman got in safety to the watering-place. When the natives came in sight of the main body of the English, they halted at about the distance of a quarter of a mile, and stood still. By this Mr. Monkhouse and two or three of the waterers were encouraged to march up to them; but seeing the Indians keep their ground, they were seized with a sudden fear, which is not uncommon to the rash and fool-hardy, and made a hasty retreat. This step increased the danger which it was intended to avoid. Four of the Indians immediately ran forward, and discharged their lances at the fugitives, with such force that they went beyond them. Our people, recovering their spirits, stopped to collect the lances, upon which the natives, in their turn, began to retire. At this time Mr. Cook came up, with Mr. Banks, Dr. Solander, and Tupia; and being desirous of convincing the Indians that they were neither afraid of them, nor designed to do them any injury, they advanced towards them, endeavouring, by signs of expostulation and entreaty, to engage them to an intercourse, but without effect. From the boldness which the natives discovered on the first landing of our Voyagers, and the terror that afterwards seized them at the sight of the English, it appears that they were sufficiently intimidated by our fire-arms. There was not, indeed, the least reason to believe that any of them had been much hurt by the small shot which had been fired at them when they attacked our people on their coming out of the boat. Nevertheless, they had probably seen, from their lurking places, the effects which the musquets had upon birds. Tupia, who was become a good marksman, frequently strayed abroad to shoot parrots; and while he was thus employed, he once met with nine Indians, who, as soon as they perceived that he saw them, ran from him, in great alarm and confusion. While, on the third of May, Mr. Banks was gathering plants near the watering-place, Lieutenant Cook went with Dr. Solander and Mr. Monkhouse to the head of the bay, for the purpose of examining that part of the country, and of making farther attempts to form some connections with the natives. In this excursion they acquired additional knowledge concerning the nature of the soil, and its capacities for cultivation, but had no success in their endeavours to en-

(1) Hawkesworth, *ubi supra*, p. 481. 483. 490. 495.

[L] But without prevailing upon them to stop.] This day Mr. Green took the sun's meridian altitude a little within the South entrance of the bay, which gave the latitude 34° South.

[M] The soil they found to be either swamp or light

sand.] In a part of the country that was afterwards examined, the soil was found to be much richer; being a deep black mold, which the Lieutenant thought very fit for the production of grain of any kind.

gage the inhabitants in coming to a friendly intercourse. Several parties that were sent into the country, on the next day, with the same view, were equally unsuccessful. In the afternoon our Commander himself, with a number of attendants, made an excursion to the north shore, which he found to be without wood, and to resemble, in some degree, our moors in England. The surface of the ground was, however, covered with a thin brush of plants, rising to about the height of the knee. Near the coast the hills are low, but there are others behind them, which gradually ascend to a considerable distance, and are intersected with marshes and morasses. Among the articles of fish which, at different times, were caught, were large stingrays. One of them, when his entrails were taken out, weighed three hundred and thirty-six pounds. It was upon account of the great quantity of plants which Mr. Banks and Dr. Solander collected in this place, that Lieutenant Cook was induced to give it the name of BOTANY BAY. It is situated in the latitude of 34° South, and in the longitude of $208^{\circ} 37'$ West; and affords a capacious, safe, and convenient shelter for shipping. The Endeavour anchored near the South shore, about a mile within the entrance, for the convenience of sailing with a southerly wind, and because the Lieutenant thought it the best situation for watering. But afterwards he found a very fine stream on the North shore, where was a sandy cove, in which a ship might lie almost land-locked, and procure wood and water in the greatest abundance. Though wood is every where plentiful, our Commander saw only two species of it that could be considered as timber. Not only the inhabitants who were first discovered, but all who afterwards came in sight, were entirely naked. Of their mode of life our Voyagers could know but little, as not the least connection could be formed with them; but it did not appear that they were numerous, or that they lived in societies. They seemed, like other animals, to be scattered about along the coast, and in the woods. Not a single article was touched by them of all that were left at their huts, or at the places which they frequented; so little sense had they of those small conveniencies and ornaments which are generally very alluring to the uncivilized tribes of the globe. During Mr. Cook's stay at this place, he caused the English colours to be displayed every day on shore, and took care that the ship's name, and the date of the year, should be inscribed upon one of the trees near the watering-place (m). At day-break, on Sunday the sixth of May, our Navigators sailed from Botany Bay; and as they proceeded on their voyage the Lieutenant gave the names that are indicated upon the map to the bays, capes, points, and remarkable hills which successively appeared in sight. On the fourteenth, as the Endeavour advanced to the northward, being then in latitude $30^{\circ} 22'$ South, and longitude $206^{\circ} 39'$ West, the land gradually increased in height, so that it may be called a hilly country. Between this latitude and Botany Bay, it exhibits a pleasing variety of ridges, hills, valleys, and plains, all clothed with wood, of the same appearance with that which has been mentioned before. The land near the shore is in general low and sandy, excepting the points, which are rocky, and over many of which are high hills, that, at their first rising out of the water, have the semblance of Islands. On the next day, the vessel being about a league from the shore, our Voyagers discovered smoke in many places, and having recourse to their glasses, they saw about twenty of the natives, who had each of them a large bundle upon his back. The bundles our people conjectured to be palm leaves for covering the houses of the Indians, and continued to observe them above an hour, during which they walked upon the beach, and up a path that led over a hill of gentle ascent. It was remarkable, that not one of them was seen to stop and look towards the Endeavour. They marched along without the least apparent emotion either of curiosity or surprize, though it was impossible that they should not have discerned the ship by some casual glance as they went along the shore, and though she must have been the most stupendous and unaccountable object they had ever beheld (n). While, on the seventeenth, our Navigators were in a bay, to which Lieutenant Cook had given the name of Moreton's Bay (o), and at a place where the land was not at that time visible, some on board, having observed that the sea looked paler than usual, were of opinion that the bottom of the bay opened into a river. The Lieutenant was sensible that there was no real ground for this supposition. As the Endeavour had here thirty-four fathom water, and a fine sandy bottom, these circumstances alone were sufficient to produce the change which had been noticed in the colour of the sea. Nor was it by any means necessary to suppose a river, in order to account for the land at the bottom of the bay not being visible. If the land there was as low as it had been experienced to be in a hundred other parts of the coast, it would be impossible to see it from the station of the ship. Our Commander would, however, have brought the matter to the test of experiment, if the wind had been favourable to such a purpose. Should any future Navigator be disposed to determine the question, whether there is or is not a river in this place, Mr. Cook has taken care to leave the best directions for finding its situation. On the twenty-second, as our Voyagers were pursuing their course from HARVEY'S BAY, they discovered with their glasses that the land was covered with palm-nut trees, which they had not seen from the time of their leaving the Islands within the tropic. They saw also two men walking along the shore, who paid them as little attention as they had met with on former occasions. At eight o'clock in the evening of this day, the ship came to

(o) The latitude of Moreton's Bay is $26^{\circ} 56'$ South, and its longitude $206^{\circ} 28'$ West.

an anchor in five fathom, with a fine sandy bottom. Early in the morning of the next day, the Lieutenant, accompanied by Mr. Banks, Dr. Solander, the other Gentlemen, Tupia, and a party of men, went on shore, in order to examine the country. The wind blew fresh, and the weather was so cold, that, being at a considerable distance from land, they took their cloaks as a necessary equipment for the voyage. When they landed, they found a channel leading into a large lagoon. Both the channel and the lagoon were examined by our Commander with his usual accuracy. There is in the place a small river of fresh water, and room for a few ships to lie in great security. Near the lagoon grows the true mangrove, such as exists in the West India Islands, and the first of the kind that had been yet met with by our Navigators. Among the shoals and sand banks of the coast, they saw many large birds, and some in particular of the same kind which they had seen in Botany Bay. These they judged to be pelicans, but they were so shy as never to come within reach of a musquet. On the shore was found a species of the bustard, one of which was shot that was equal in size to a turkey, weighing seventeen pounds and a half. All the Gentlemen agreed that this was the best bird they had eaten since they left England; and in honour of it they called the inlet **BUSTARD BAY** (p). Upon the mud banks, and under the mangroves, were innumerable oysters of various kinds, and among others the hammer oyster, with a large proportion of small pearl oysters. If in deeper water there should be equal plenty of such oysters at their full growth, Mr. Cook was of opinion that a pearl fishery might be established here to very great advantage (q). The people who were left on board the ship asserted, that, while the Gentlemen were in the woods, about twenty of the natives came down to the beach, a-breast of the Endeavour, and after having looked at her for some time, went away. Not a single Indian was seen by the Gentlemen themselves, though they found various proofs, in smook, fires, and the fragments of recent meals, that the country was inhabited. The place seemed to be much trodden, and yet not a house, or the remains of a house, could be discerned. Hence the Lieutenant and his friends were disposed to believe that the people were destitute of dwellings, as well as of clothes; and that, like the other commoners of nature, they spent their nights in the open air. Tupia himself was struck with their apparently unhappy condition; and shaking his head, with an air of superiority and compassion, said that they were *Taata Enos*, "poor wretches [N]." On the twenty-fifth, our Voyagers, at the distance of one mile from the land, were a-breast of a point which Mr. Cook found to lie directly under the tropic of Capricorn; and for this reason he called it **CAPE CAPRICORN** (r). In the night of the next day, when the ship had anchored at a place which was distant four leagues from Cape Capricorn, the tide rose and fell near seven feet; and the flood set to the westward, and the ebb to the eastward. This circumstance was just the reverse of what had been experienced when the Endeavour was at anchor to the eastward of Bustard Bay. While our people were under sail, on the twenty-sixth, and were surrounded with Islands, which lay at different distances from the main land, they suddenly fell into three fathom of water. Upon this the Lieutenant anchored, and sent away the Master to found a channel which lay between the northernmost Island and the main. Though the channel appeared to have a considerable breadth, our Commander suspected it to be shallow, and such was in fact the case. The Master reported, at his return, that he had only two fathom and a half in many places; and where the vessel lay at anchor she had only sixteen feet, which was not two feet more than she drew. Mr. Banks, who, while the Master was founding the channel, tried to fish from the cabin window with hook and line, was successful in catching two sorts of crabs, both of them such as our Navigators had not seen before. One of them was adorned with a most beautiful blue, in every respect equal to the ultramarine. With this blue all his claws and joints were deeply tinged; while the under part of him was white, and so exquisitely polished, that in colour and brightness it bore an exact resemblance to the white of old china. The other crab was also marked, though somewhat more sparingly, with the ultramarine on his joints and his toes; and on his back were three brown spots of a singular appearance. Early the next morning, Lieutenant Cook, having found a passage between the Islands, sailed to the northward, and on the evening of the succeeding day anchored at about two miles distance from the main. At this time a great number of Islands, lying a long way without the ship, were in sight. On the twenty-ninth, the Lieutenant sent away the Master with two boats to found the entrance of an inlet which lay to the West, and into which he intended to go with the vessel, that he might wait a few days for the moon's encrease, and have an opportunity of examining the country. As the tide was observed to ebb and flow considerably, when the Endeavour had anchored within the inlet, our Commander judged it to be a river that might run pretty far up into land. Thinking that this might afford a commodious situation for laying the ship ashore, and cleaning her bottom, he landed with the Master, in search of a proper place for the purpose. He was accompanied in the excursion by Mr.

(r) Its latitude is $208^{\circ} 58'$ West.

[N] *Poor wretches.* From measuring the perpendicular height of the last tide, and ascertaining the time of low-water this day, the Lieutenant found

that it must be high-water, at the full and change of the moon, at eight o'clock.

Banks

Banks and Dr. Solander; and they found walking exceedingly troublesome, in consequence of the ground's being covered with a kind of grass, the seeds of which were very sharp and bearded. Whenever these seeds stuck into their clothes, which happened at every step, they worked forwards by means of the beard, till they got at the flesh. Another disagreeable circumstance was, that the Gentlemen were incessantly tormented with the stings of a cloud of musquitos. They soon met with several places where the ship might conveniently be laid ashore; but were much disappointed in not being able to find any fresh water. In proceeding up the country, they found gum trees, the gum upon which existed only in very small quantities. Gum trees of a similar kind, and as little productive, had occurred in other parts of the Coast of New South Wales. Upon the branches of the trees were ants nests, made of clay, as big as a bushel. The ants themselves, by which the nests were inhabited, were small, and their bodies white. Upon another species of the gum tree, was found a small black ant, which perforated all the twigs, and, having worked out the pith, occupied the pipe in which it had been contained. Notwithstanding this, the parts in which these insects, to an amazing number, had formed a lodgment, bore leaves and flowers, and appeared to be entirely in a flourishing state. Butterflies were found in such multitudes that the account of them seems almost to be incredible. The air was so crowded with them, for the space of three or four acres, that millions might be seen in every direction; and the branches and twigs of the trees were at the same time covered with others that were not upon the wing. A small fish of a singular kind was likewise met with in this place. Its size was about that of a minnow, and it had two very strong breast-fins. It was found in places which were quite dry, and where it might be supposed that it had been left by the tide; and yet it did not appear to have become languid from that circumstance: for when it was approached, it leaped away as nimbly as a frog. Indeed it did not seem to prefer water to land. Though the curiosity of Mr. Cook and his friends were gratified by the sight of these various objects, they were disappointed in the attainment of their main purpose, the discovery of fresh water; and a second excursion, which was made by them on the afternoon of the same day, was equally unsuccessful. This failure of the Lieutenant's hopes determined him to make but a short stay in the place. Having, however, observed from an eminence that the inlet penetrated a considerable way into the country, he formed a resolution of tracing it in the morning. Accordingly, at sun-rise, on Wednesday the thirtieth of May, he went on shore, and took a view of the coast and the Islands that lie off it, with their bearings. For this purpose he had with him an azimuth compass; but he found that the needle differed very considerably in its position, even to thirty degrees; the variation being in some places more, in others less. Once the needle varied from itself no less than two points in the distance of fourteen feet. Mr. Cook having taken up some of the loose stones which lay upon the ground, applied them to the needle, but they produced no effect; whence he concluded that in the hills there was iron ore, traces of which he had remarked both here and in the neighbouring parts. After he had made his observations upon the hill, he proceeded with Dr. Solander up the inlet. He set out with the first of the flood, and had advanced above eight leagues long before it was high water. The breadth of the inlet thus far was from two to five miles, upon a direction South-west by South; but here it opened every way, and formed a large lake, which to the North-west communicated with the sea. Our Commander not only saw the sea in this direction, but found the tide of flood coming strongly in from that point. He observed, also, an arm of this lake extending to the eastward. Hence he thought it not improbable that it might communicate with the sea in the bottom of the bay, which lies to the westward of the cape that on the Chart is designated by the name of CAPE TOWNSHEND. On the South side of the lake is a ridge of hills which the Lieutenant was very desirous of climbing. As, however, it was high-water, and the day was far spent; and as the weather, in particular, was dark and rainy, he was afraid of being bewildered among the shoals in the night, and therefore was obliged to give up his inclination, and to make the best of his way to the ship. Two people only were seen by him, who followed the boat along the shore a good way at some distance; but he could not prudently wait for them, as the tide ran strongly in his favour. Several fires in one direction, and smoke in another, exhibited farther proofs of the country's being in a certain degree inhabited. While Mr. Cook, with Dr. Solander, was tracing the inlet, Mr. Banks and a party with him engaged in a separate excursion, in which they had not proceeded far within land, before their course was obstructed by a swamp, covered with mangroves. This, however, they determined to pass; and having done it with great difficulty, they came up to a place where there had been four small fires, near to which lay some shells and bones of fish that had been roasted. Heaps of grass were also found lying together, on which four or five people appeared to have slept. Mr. Gore, in another place, observed the track of a large animal. Some bustards were likewise seen, but not any other bird, excepting a few beautiful loriquets, of the same kind with those which had been noticed in Botany Bay. The country in general, in this part of New South Wales, appeared sandy and barren, and destitute of the accommodations which could fit it for being possessed by settled inhabitants. From the ill success that attended the searching for fresh water,

Lieutenant Cook called the inlet in which the ship lay THIRSTY SOUND (s). No refreshment of any other sort was here procured by our Voyagers (t). Our Commander, not having a single inducement to stay longer in this place, weighed anchor in the morning of the thirty-first, and put to sea. In the prosecution of the voyage, when the Endeavour was close under CAPE UPSTART, the variation of the needle, at sun-set, on the fourth of June, was 9° East, and at sun-rise the next day, it was no more than 5° 35'. Hence the Lieutenant concluded that it had been influenced by iron ore, or by some other magnetical matter contained under the surface of the earth. In the afternoon of the seventh, our Navigators saw upon one of the Islands what had the appearance of cocoa-nut trees; and as a few nuts would at this time have been very acceptable, Mr. Cook sent Lieutenant Hicks ashore, to see if he could procure any refreshment. He was accompanied by Mr. Banks and Dr. Solander; and in the evening the Gentlemen returned, with an account that what had been taken for cocoa-nut trees were a small kind of cabbage palm, and that, excepting about fourteen or fifteen plants, nothing could be obtained which was worth bringing away. On the eighth, when the Endeavour was in the midst of a cluster of small Islands our Voyagers discerned, with their glasses, upon one of the nearest of these Islands, about thirty of the natives, men, women, and children, all standing together, and looking with great attention at the ship. This was the first instance of curiosity that had been observed among the people of the country. The present Indian spectators were entirely naked. Their hair was short, and their complexion the same with that of such of the inhabitants as had been seen before (u).

(u) *Ibid.* p. 532.
538. 541.

In navigating the coast of New South Wales, where the sea in all parts conceals shoals which suddenly project from the shore, and rocks that rise abruptly like a pyramid from the bottom, our Commander had hitherto conducted his vessel in safety, for an extent of two and twenty degrees of latitude, being more than one thousand three hundred miles. But, on the tenth of June, as he was pursuing his course from a bay to which he had given the name of TRINITY BAY, the Endeavour fell into a situation as critical and dangerous as any that is recorded in the history of navigation; a history which abounds with perilous adventures, and almost miraculous escapes. Our Voyagers were now near the latitude assigned to the Islands that were discovered by Quiros, and which, without sufficient reason, some geographers have thought proper to join to this land. The ship had the advantage of a fine breeze, and a clear moonlight night; and in standing off from six till near nine o'clock, she had deepened her water from fourteen to twenty-one fathom. But while our Navigators were at supper it suddenly shoaled, and they fell into twelve, ten, and eight fathom, within the compass of a few minutes. Mr. Cook immediately ordered every man to his station, and all was ready to put about and come to an anchor; when deep water being met with again at the next cast of the lead, it was concluded that the vessel had gone over the tail of the shoals which had been seen at sun-set, and that the danger was now over. This idea of security was confirmed by the water's continuing to deepen to twenty and twenty-one fathom, so that the Gentlemen left the deck in great tranquillity, and went to bed. However, a little before eleven, the water shoaled at once from twenty to seventeen fathom, and before the lead could be cast again, the ship struck, and remained immoveable, excepting so far as she was influenced by the heaving of the surge, that beat her against the crags of the rock upon which she lay. A few moments brought every person upon deck, with countenances suited to the horrors of the situation. As our people knew, from the breeze which they had in the evening, that they could not be very near the shore, there was too much reason to conclude that they were upon a rock of coral, which, on account of the sharpness of its points, and the roughness of its surface, is more fatal than any other. On examining the depth of water round the ship, it was speedily discovered that the misfortune of our Voyagers was equal to their apprehensions. The vessel had been lifted over a ledge of the rock, and lay in a hollow within it, in some places of which hollow there were from three to four fathom, and in others not so many feet of water. To complete the scene of distress, it appeared, from the light of the moon, that the sheathing boards from the bottom of the ship were floating away all round her, and at last her false keel; so that every moment was making way for the whole company's being swallowed up by the rushing in of the sea. There was now no chance but to lighten her, and the opportunity had unhappily been lost of doing it to the best advantage, for as the Endeavour had gone ashore just at high-water, and by this time it had considerably fallen, she would, when lightened, be but in the same situation as at first. The only alleviation of this circumstance was, that as the tide ebbed, the vessel settled to the rocks, and was not beaten against them with so much violence. Our people had, indeed, some hope from the next tide, though it was doubtful whether the ship would hold together so long, especially as the rock kept grating part of her bottom with such force as to be heard in the fore store-room. No effort, however, was remitted from despair of success. That no time might be lost, the water was immediately started in the hold, and pumped up: six guns, being all that were upon the deck, a quantity of iron and stone ballast, casks, hoop staves, oil jars, decayed stores, and a variety of things besides, were thrown overboard with the utmost expedition. Every one exerted himself, not only

(s) Thirsty Sound lies in latitude 22° 10' South, and longitude 210° 18' West.
(t) Hawke's worth, *ubi supra*, p. 521—532.

without

without murmuring and discontent, but even with an alacrity which almost approached to cheerfulness. So sensible, at the same time, were the men of the awfulness of their situation, that not an oath was heard among them, the detestable habit of profane swearing being instantly subdued by the dread of incurring guilt when a speedy death was in view. While Lieutenant Cook and all the people about him were thus employed, the opening of the morning of the eleventh of June presented them with a fuller prospect of their danger. The land was seen by them at about eight leagues distance, without any Island in the intermediate space, upon which, if the ship had gone to pieces, they might have been set ashore by the boats, and carried thence by different turns to the main. Gradually, however, the wind died away, and early in the forenoon it became a dead calm; a circumstance this, peculiarly happy in the order of Divine Providence; for if it had blown hard, the vessel must inevitably have been destroyed. High-water being expected at eleven in the morning, and every thing being made ready to heave her off if she should float; to the inexpressible surprize and concern of our Navigators, so much did the day-tide fall short of that of the night, that though they had lightened the ship nearly fifty ton, she did not float by a foot and a half. Hence it became necessary to lighten her still more, and every thing was thrown overboard that could possibly be spared. Hitherto the Endeavour had not admitted much water; but as the tide fell, it rushed in so fast, that she could scarcely be kept free, though two pumps were incessantly worked. There were now no hopes but from the tide at midnight; to prepare for taking the advantage of which the most vigorous efforts were exerted. About five o'clock in the afternoon the tide began to rise, but, at the same time, the leak increased to a most alarming degree. Two more pumps, therefore, were manned, one of which unhappily would not work. Three pumps, however, were kept going, and at nine o'clock the ship righted. Nevertheless, the leak had gained so considerably upon her, that it was imagined that she must go to the bottom as soon as she ceased to be supported by the rock. It was, indeed, a dreadful circumstance to our Commander and his people, that they were obliged to anticipate the floating of the vessel not as an earnest of their deliverance, but as an event which probably would precipitate their destruction. They knew that their boats were not capable of carrying the whole of them on shore, and that when the dreadful crisis should arrive, all command and subordination being at an end, a contest for preference might be expected, which would increase even the horrors of shipwreck, and turn their rage against each other. Some of them were sensible that if they should escape to the main land, they were likely to suffer more upon the whole than those who would be left on board to perish in the waves. The latter would only be exposed to instant death; whereas the former, when they got on shore, would have no lasting or effectual defence against the natives, in a part of the country where even nets and fire-arms could scarcely furnish them with food. But supposing that they should find the means of subsistence; how horrible must be their state, to be condemned to languish out the remainder of their lives in a desolate wilderness, without the possession or hope of domestic comfort; and to be cut off from all commerce with mankind, excepting that of the naked savages who prowl the desert, and who perhaps are some of the most rude and uncivilized inhabitants of the earth! The dreadful moment which was to determine the fate of our Voyagers now drew on; and every one saw, in the countenances of his companions, the picture of his own sensations. Not, however, giving way to despair, the Lieutenant ordered the capstan and windlace to be manned with as many hands as could be spared from the pumps; and the ship having floated about twenty minutes after ten o'clock, the grand effort was made, and she was heaved into deep water. It was no small consolation to find that she did not now admit of more water than she had done when upon the rock. By the gaining, indeed, of the leak upon the pumps, three feet and nine inches of water were in the hold; notwithstanding which, the men did not relinquish their labour. Thus they held the water as it were at bay: but having endured excessive fatigue of body, and agitation of mind, for more than twenty-four hours, and all this being attended with little hope of final success, they began, at length, to flag. None of them could work at the pump above five or six minutes together, after which, being totally exhausted, they threw themselves down upon the deck, though a stream of water, between three or four inches deep, was running over it from the pumps. When those who succeeded them had worked their time, and in their turn were exhausted, they threw themselves down in the same manner, and the others started up again, to renew their labour. While thus they were employed in relieving each other, an accident was very nearly putting an immediate end to all their efforts. The planking which lines the ship's bottom is called the cieling, between which and the outside planking there is a space of about eighteen inches. From this cieling only, the man who had hitherto attended the well had taken the depth of the water, and had given the measure accordingly. But, upon his being relieved, the person who came in his room reckoned the depth to the outside planking, which had the appearance of the leak's having gained upon the pumps eighteen inches in a few minutes. The mistake, however, was soon detected; and the accident, which in its commencement was very formidable to them, became, in fact, highly advantageous. Such was the joy which every man felt at finding his situation better

better than his fears had suggested, that it operated with wonderful energy, and seemed to possess him with a strong persuasion that scarcely any real danger remained. New confidence and new hope inspired fresh vigour; and the efforts of the men were exerted with so much alacrity and spirit, that before eight o'clock in the morning the pumps had gained considerably upon the leak. All the conversation now turned upon carrying the ship into some harbour, as a thing not to be doubted; and as hands could be spared from the pumps, they were employed in getting up the anchors. It being found impossible to save the little bower anchor, it was cut away at a whole cable, and the cable of the stream anchor was lost among the rocks; but in the situation of our people these were trifles which scarcely attracted their notice. The fore-topmast and fore-yard were next erected, and there being a breeze from the sea, the Endeavour, at eleven o'clock, got once more under sail, and stood for the land. Notwithstanding these favourable circumstances, our Voyagers were still very far from being in a state of safety. It was not possible long to continue the labour by which the pumps had been made to gain upon the leak; and as the exact place of it could not be discovered, there was no hope of stopping it within. At this crisis, Mr. Monkhouse, one of the midshipmen, came to Lieutenant Cook, and proposed an expedient he had once seen used on board a merchant ship which had sprung a leak that admitted more than four feet water in an hour, and which by this means had been safely brought from Virginia to London. To Mr. Monkhouse, therefore, the care of the expedient, which is called fothering the ship, was, with proper assistance, committed; and his method of proceeding was as follows. He took a lower studding sail, and having mixed together a large quantity of oakham and wool, he stitched it down, as lightly as possible, in handfals upon the sail, and spread over it the dung of the sheep of the vessel, and other filth. The sail being thus prepared, it was hauled under the ship's bottom by ropes, which kept it extended. When it came under the leak, the suction that carried in the water, carried in with it the oakham and wool from the surface of the sail. In other parts the water was not sufficiently agitated to wash off the oakham and the wool. The success of the expedient was answerable to the warmest expectations; for hereby the leak was so far reduced, that, instead of gaining upon three pumps, it was easily kept under with one. Here was such a new source of confidence and comfort, that our people could scarcely have expressed more joy if they had been already in port. It had lately been the utmost object of their hope, to run the ship a-shore in some harbour, either of an Island or the main, and to build a vessel out of her materials, to carry them to the East Indies. Nothing, however, was now thought of but to range along the coast in search of a convenient place to repair the damage the Endeavour had sustained, and then to prosecute the voyage upon the same plan, as if no impediment happened. In justice and gratitude to the ship's company, and the Gentlemen on board, Mr. Cook has recorded, that although in the midst of their distress all of them seemed to have a just sense of their danger, no man gave way to passionate exclamations, or frantic gestures. "Every one appeared to have the perfect possession of his mind, and every one exerted himself to the uttermost, with a quiet and patient perseverance, equally distant from the tumultuous violence of terror, and the gloomy inactivity of despair (w)." Though the Lieutenant hath said nothing of himself, it is well known that his own composure, fortitude, and activity were equal to the greatness of the occasion. To complete the history of this wonderful preservation, it is necessary to bring forward a circumstance, which could not be discovered till the ship was laid down to be repaired. It was then found that one of her holes, which was large enough to have sunk our Navigators, if they had had eight pumps instead of four, and had been able to keep them incessantly going, was in a great measure filled up by a fragment of the rock, upon which the Endeavour had struck. To this singular event, therefore, it was owing, that the water did not pour in with a violence which must speedily have involved the Endeavour and all her company in inevitable destruction (x). Hitherto (x) *Ibid.* p. 559. none of the names, by which our Commander had distinguished the several parts of the country seen by him, were memorials of distress. But the anxiety and danger which he and his people had now experienced, induced him to call a point in sight, which lay to the Northward, CAPE TRIBULATION (y). The next object after this event was to look out for a harbour where the defects of the ship might be repaired, and the vessel put into proper order for future navigation. On the fourteenth, a small harbour was happily discovered, which was excellently adapted to the purpose. It was, indeed, remarkable, that, during the whole course of the voyage, our people had seen no place which, in their present circumstances, could have afforded them the same relief. They could not, however, immediately get into it; and in the midst of all their joy for their unexpected deliverance, they had not forgotten that there was nothing but a lock of wool between them and destruction.

(w) Hawkesworth, *ubi supra*, p. 544—552.

(y) *Ibid.* p. 544. Cape Tribulation lies in latitude 16° 6' South; and longitude 114° 39' West.

At this time, the scurvy, with many formidable symptoms, began to make its appearance among our Navigators. Tupia, in particular, was so grievously affected with the disease, that all the remedies prescribed by the Surgeon could not retard its progress. Mr. Green, the Astronomer, was also upon the decline. These and other circumstances embittered the delay which prevented our Commander and his companions from getting on shore.

shore. In the morning of the seventeenth, though the wind was still fresh, the Lieutenant ventured to weigh, and to put in for the harbour, the entrance into which was by a very narrow channel. In making the attempt the ship was twice run aground. At the first time she went off without any trouble, but the second time she stuck fast. Nevertheless, by proper exertions, in conjunction with the rising of the tide, she floated about one o'clock in the afternoon, and was soon warped into the harbour. The succeeding day was employed in erecting two tents, in landing the provisions and stores, and in making every preparation for repairing the damages which the Endeavour had sustained. In the mean while, Mr. Cook, who had ascended one of the highest hills that overlooked the harbour, was by no means entertained with a comfortable prospect; the low land near the river being wholly over-run with mangroves, among which the salt-water flows at every tide, and the high land appearing to be altogether stoney and barren. Mr. Banks also took a walk up the country, and met with the frames of several old Indian houses, and places where the natives, though not recently, had dressed shell-fish. The boat, which had this day been dispatched to haul the seine, with a view of procuring some fish for the refreshment of the sick, returned without success. Tupia was more fortunate. Having employed himself in angling, and lived entirely upon what he caught, he recovered in a surprising degree. Mr. Green, to the regret of his friends, exhibited no symptoms of returning health. On the nineteenth, Mr. Banks crossed the river to take a farther view of the country; which he found to consist principally of sand-hills. Some Indian houses were seen by him, that appeared to have been very lately inhabited; and in his walk he met with large flocks of pigeons and crows. The pigeons were exceedingly beautiful. Of these he shot several; but the crows, which were exactly like those in England, were so shy that they never came within the reach of his gun. It was not till the twenty-second that the tide so far left the Endeavour, as to give our people an opportunity of examining her leak. In the place where it was found, the rocks had made their way through four planks, and even into the timbers. Three more planks were greatly damaged, and there was something very extraordinary in the appearances of the breaches. Not a splinter was to be seen, but all was as smooth as if the whole had been cut away by an instrument. It was a peculiarly happy circumstance that the timbers were here very close, since otherwise the ship could not possibly have been saved. Now also it was that the fragment of the rock was discovered, which, by sticking in the leak of the vessel, had been such a providential instrument of her preservation. On the same day, some of the people who had been sent to shoot pigeons for the sick, and who had discovered many Indian houses, and a fine stream of fresh water, reported at their return, that they had seen an animal as large as a greyhound, of a slender make, of a mouse colour, and extremely swift. As the Lieutenant was walking, on the morning of the twenty-fourth, at a little distance from the ship, he had an opportunity of seeing an animal of the same kind. From the description he gave of it, and from an imperfect view which occurred to Mr. Banks, the latter Gentleman was of opinion that its species was hitherto unknown. The position of the vessel, while she was refitting for sea, was very near depriving the world of that botanical knowledge, which Mr. Banks had procured at the expence of so much labour, and such various perils. For the greater security of the curious collection of plants which he had made during the whole voyage, he had removed them into the bread room. This room is in the after part of the ship, the head of which, for the purpose of repairing her, was laid much higher than the stern. No one having thought of the danger to which this circumstance might expose the plants, they were found to be under water. However, by the exercise of unremitting care and attention, the larger part of them were restored to a state of preservation. On the twenty-ninth of June, at two o'clock in the morning Mr. Cook, in conjunction with Mr. Green, observed an emersion of Jupiter's first satellite. The time here was $2^h 18' 53''$, which gave the longitude of the place at $214^\circ 43' 30''$ West: its latitude is $15^\circ 26'$ South. The next morning the Lieutenant sent some of the young Gentlemen to take a plan of the harbour, whilst he himself ascended a hill, that he might gain a full prospect of the sea: and it was a prospect which presented him with a lively view of the difficulties of his situation. To his great concern he saw innumerable sand banks and shoals, lying in every direction of the coast. Some of them extended as far as he could discern with his glass, and many of them did but just rise above water. To the northward there was an appearance of a passage, and this was the only direction in which our Commander could hope to get clear, in the prosecution of his voyage; for as the wind blew constantly from the South-east, to return by the southward would have been extremely difficult, if not absolutely impossible. On this, and the preceding day, our people had been very successful in hauling the seine. The supply of fish was so great, that the Lieutenant was now able to distribute two pounds and a half to each man. A quantity of greens having likewise been gathered, he ordered them to be boiled with the peas. Hence an excellent mess was produced, which, in conjunction with the fish, afforded an unspeakable refreshment to the whole of the ship's company [O]. Early in the morning of the

[O] Afforded an unspeakable refreshment to the whole of the ship's company.] On the first of July, the thermometer, in the shade, rose to 87° , which was higher than it had been on any day since our Navigators had come upon the coast of New South Wales.

second of July, Lieutenant Cook sent the Master out of the harbour, in the pinnace, to sound about the shoals, and to search for a channel to the northward. A second attempt, which was made this day to heave off the ship, was as unsuccessful as a former one had been. The next day the Master returned, and reported that he had found a passage out to sea, between the shoals. On one of these shoals, which consisted of coral rocks, many of which were dry at low water, he had landed, and found there cockles of so enormous a size, that a single cockle was more than two men could eat. At the same place, he met with a great variety of other shell-fish, and brought back with him a plentiful supply for the use of his fellow Voyagers. At high-water, this day, another effort was made to float the ship, which happily succeeded; but it being found that she had sprung a plank between decks, it became necessary to lay her a-shore a second time. The Lieutenant being anxious to attain a perfect knowledge of the state of the vessel, got one of the Carpenter's crew, a man in whom he could confide, to dive, on the fifth, to her bottom, that he might examine the place where the sheathing had been rubbed off. His report, which was, that three streaks of the sheathing, about eight feet long, were wanting, and that the main plank had been a little rubbed, was perfectly agreeable to the account that had been given before by the Master and others, who had made the same examination; and our Commander had the consolation of finding that, in the opinion of the Carpenter, this matter would be of little consequence. The other damage, therefore, being repaired, the ship was again floated at high water, and all hands were employed in taking the stores on board, and in putting her into a condition for proceeding on her voyage (z). To the harbour in which she was refitted for the sea, Mr. Cook gave the name of the ENDEAVOUR RIVER. On the morning of the sixth, Mr. Banks, accompanied by Lieutenant Gore, and three men, set out in a small boat up the river, with a view of spending a few days in examining the country. In this expedition nothing escaped his notice which related either to the natural history or the inhabitants of the places he visited. Though he met with undoubted proofs that several of the natives were at no great distance, none of them came within sight. Having found, upon the whole, that the country did not promise much advantage from a farther search, he and his party reembarked in their boat, and returned, on the eighth, to the ship. During their excursion, they had slept upon the ground in perfect security, and without once reflecting upon the danger they would have incurred, if in that situation they had been discovered by the Indians. Lieutenant Cook had not been satisfied with the account which the Master had given of his having traced a passage, between the shoals, into the sea. He sent him out, therefore, a second time, upon the same business; and, on his return, he made a different report. Having been seven leagues out to sea, the Master was now of opinion that there was no such passage as he had before imagined. His expedition, however, though in this respect unsuccessful, was not wholly without its advantage. On the very rock where he had seen the large cockles, he met with a great number of turtle; and though he had no better an instrument than a boat-hook, three of them were caught, which together weighed seven hundred and ninety-one pounds. An attempt, which, by order of the Lieutenant, was made the next morning to obtain some more turtle, failed through the misconduct of the same officer, who had been so fortunate on the preceding day. Hitherto the natives of this part of the country had eagerly avoided holding any intercourse with our people: but at length their minds, through the good management of Mr. Cook, became more favourably disposed. Four of them having appeared, on the tenth, in a small canoe, and seeming to be busily employed in striking fish, some of the ship's company were for going over to them in a boat. This, however, the Lieutenant would not permit, repeated experience having convinced him that it was more likely to prevent than to procure an interview. He determined to pursue a contrary method, and to try what could be done by letting them alone, and not appearing to make them, in the least degree, the objects of his notice. So successful was this plan, that, after some preparatory intercourse, they came along-side the ship, without expressing any fear or distrust. The conference was carried on, by signs, with the utmost cordiality till dinner-time, when, being invited by our people to go with them and partake of their provision, they declined it, and went away in their canoe. One of these Indians was somewhat above the middle age; the three others were young. Their stature was of the common size, but their limbs were remarkably small. The colour of their skin was a dark chocolate. Their hair was black, but not woolly; and their features were far from being disagreeable. They had lively eyes, and their teeth were even and white. The tones of their voices were soft and musical, and there was a flexibility in their organs of speech, which enabled them to repeat, with great facility, many of the words pronounced by the English. On the next morning, our Voyagers had another visit from four of the natives. Three of them were the same who had appeared the day before, but the fourth was a stranger, to whom his companions gave the name of YAPARICO. He was distinguished by a very peculiar ornament. This was the bone of a bird, nearly as thick as a man's finger, and five or six inches long, which he had thrust into a hole, made in the gristle that divides the nostrils. An instance of the like kind, and only one, had been seen in New Zealand. It was found, however, that among all these people the same part of the

(z) Hawkesworth's Voyages, vol. ii. p. 557—568.

nose

nose was perforated; that they had holes in their ears; and that they had bracelets, made of plaited hair, upon the upper part of their arms. Thus the love of ornament takes place among them, though they are absolutely destitute of apparel. Three Indians, on the twelfth, ventured down to Tupia's tent, and were so well pleased with their reception, that one of them went with his canoe to fetch two others, who had never been seen by the English. On his return, he introduced the strangers by name, a ceremony which was never omitted upon such occasions. From a farther acquaintance with the natives, it was found that the colour of their skins was not so dark as had at first been apprehended, and that all of them were remarkably clean limbed, and extremely active and nimble. Their language appeared to be more harsh than that of the Islanders in the South sea. On the fourteenth, Mr. Gore had the good fortune to kill one of the animals before-mentioned, and which had been the subject of much speculation. It is called by the natives *Kangaroo*; and when dressed proved most excellent meat. Indeed, our Navigators might now be said to fare sumptuously every day; for they had turtle in great plenty, and it was agreed that these were far superior to any which our people had ever tasted in England. This the Gentlemen justly imputed to their being eaten fresh from the sea, before their natural fat had been wasted, or their juices changed, by the situation and diet they are exposed to when kept in tubs. Most of the turtle here caught were of the kind called green turtle, and their weight was from two to three hundred pounds. In the morning of the sixteenth, while the men were engaged in their usual employment of getting the ship ready for the sea, our Commander climbed one of the heights on the North side of the river, and obtained from it an extensive view of the inland country, which he found agreeably diversified by hills, valleys, and large plains, that in many places were richly covered with wood. This evening, the Lieutenant and Mr. Green observed an emerfion of the first satellite of Jupiter, which gave $214^{\circ} 53' 45''$ of longitude. The observation taken on the twenty-ninth of June had given $214^{\circ} 48' 30''$; and the mean was $214^{\circ} 48' 7\frac{1}{2}''$, being the longitude of the place West of Greenwich. On the seventeenth, Mr. Cook sent the Master and one of the Mates in the pinnace, to search for a channel to the northward; after which, accompanied by Mr. Banks and Dr. Solander, he went into the woods on the other side of the water. In this excursion the Gentlemen had a farther opportunity of improving their acquaintance with the Indians, who by degrees became so familiar, that several of them the next day ventured on board the ship. There the Lieutenant left them, apparently much entertained, that he might go with Mr. Banks to take a farther survey of the country, and especially to indulge an anxious curiosity they had of looking round about them upon the sea; of which they earnestly wished, but scarcely dared to hope, that they might obtain a favourable and encouraging prospect. When, after having walked along the shore seven or eight miles to the northward, they ascended a very high hill, the view which presented itself to them inspired nothing but melancholy apprehensions. In every direction, they saw rocks and shoals without number; and there appeared to be no passage out to sea, but through the winding channels between them, the navigation of which could not be accomplished without the utmost degree of difficulty and danger. The spirits of the two Gentlemen were not raised by this excursion. On the nineteenth our Voyagers were visited by ten of the natives; and six or seven more were seen at a distance, chiefly women, who were as naked as the male inhabitants of the country. There being at that time a number of turtles on the deck of the ship, the Indians who came on board were determined to get one of them; and expressed great disappointment and anger, when our people refused to comply with their wishes. Several attempts were made by them to secure what they wanted by force; but all their efforts proving unsuccessful, they suddenly leaped into their canoe in a transport of rage, and paddled towards the shore. The Lieutenant, with Mr. Banks, and five or six of the ship's crew, immediately went into the boat, and got a-shore, where many of the English were engaged in various employments. As soon as the natives reached the land, they seized their arms, which had been laid up in a tree, and having snatched a brand from under a pitch-kettle that was boiling, made a circuit to the windward of the few things our people had on shore, and with surprizing quickness and dexterity set fire to the grass in their way. The grass, which was as dry as stubble, and five or six feet high, burnt with surprizing fury; and a tent of Mr. Banks's would have been destroyed, if that Gentleman had not immediately got some of the men to save it, by hauling it down upon the beach. Every part of the Smith's forge that would burn was consumed. This transaction was followed by another of the same nature. In spite of threats and entreaties, the Indians went to a different place, where several of the Endeavour's crew were washing, and where the seine, the other nets, and a large quantity of linen were laid out to dry, and again set fire to the grass. The audacity of this fresh attack rendered it necessary that a musquet, loaded with small shot, should be discharged at one of them; who being wounded, at the distance of about forty yards, they all betook themselves to flight. In the last instance the fire was extinguished before it had made any considerable progress; but where it had first begun it spread far into the woods. The natives being still in sight, Mr. Cook, to convince them that they had not yet gotten out of his reach, fired a musquet, charged with ball, a-breast of them among the mangroves, upon which they quickened their

their pace, and were soon out of view. It was now expected that they would have given our Navigators no farther trouble; but in a little time their voices were heard in the woods, and it was perceived that they came nearer and nearer. The Lieutenant, therefore, together with Mr. Banks, and three or four more persons, set out to meet them; and the result of the interview, in consequence of the prudent and lenient conduct of our Commander and his friends, was a complete reconciliation. Soon after the Indians went away, the woods were seen to be on fire at the distance of about two miles. This accident, if it had happened a little sooner, might have produced dreadful effects; for the powder had been but a few days on board, and it was not many hours that the store tent, with all the valuable things contained in it, had been removed. From the fury with which the grass would burn in this hot climate, and the difficulty of extinguishing the fire, our Voyagers determined never to expose themselves to the like danger, but to clear the ground around them, if ever again they should be under a necessity of pitching their tents in such a situation. In the evening of this day, when every thing was gotten on board the ship, and she was nearly ready for sailing, the Master returned with the disagreeable account that there was no passage for her to the northward. The next morning the Lieutenant himself founded and buoyed the bar. At this time all the hills for many miles round were on fire, and the appearance they assumed at night was eminently striking and splendid. In an excursion which was made by Mr. Banks, on the twenty-third, to gather plants, he found the greatest part of the cloth that had been given to the Indians lying in a heap together. This, as well as the trinkets which were bestowed upon them, they probably regarded as useless lumber. Indeed, they seemed to set little value on any thing possessed by our people, excepting their turtle; and that was a commodity which could not be spared. As Lieutenant Cook was prevented by blowing weather from attempting to get out to sea, Mr. Banks and Dr. Solander seized another opportunity, on the twenty-fourth, of pursuing their botanical researches. Having traversed the woods the greater part of the day without success, as they were returning through a deep valley, they discovered lying upon the ground several marking nuts, the *Anacardium orientale*. Animated with the hope of meeting with the tree that bore them, a tree which perhaps no European botanist had ever seen, they sought for it with great diligence and labour, but to no purpose. While Mr. Banks was again gleaning the country, on the twenty-sixth, to enlarge his treasure of natural history, he had the good fortune to take an animal of the *Opossum* tribe, together with two young ones. It was a female, and, though not exactly of the same species, much resembled the remarkable animal which Mons. de Buffon hath described by the name of *phalanger*. On the morning of the twenty-ninth, the weather becoming calm, and a light breeze having sprung up by land, Lieutenant Cook sent a boat to see what water was upon the bar, and all things were made ready for putting to sea. But, on the return of the boat, the officer reported that there were only thirteen feet of water on the bar. As the ship drew thirteen feet six inches, and the sea breeze set in again in the evening, all hope of sailing on that day was given up. The weather being more moderate on the thirty-first, the Lieutenant had thoughts of trying to warp the vessel out of the harbour; but upon going out himself in the boat, he found that the wind still blew so fresh, that it would not be proper to make the attempt. A disagreeable piece of intelligence occurred on the succeeding day. The Carpenter, who had examined the pumps, reported that they were all of them in a state of decay. One of them was so rotten, that, when hoisted up, it dropped to pieces, and the rest were not in a much better condition. The chief confidence, therefore, of our Navigators was now in the soundness of the ship; and it was a happy circumstance that she did not admit more than one inch of water in an hour. Early on the third of August, another unsuccessful attempt was made to warp the vessel out of the harbour: but in the morning of the next day the efforts of our Voyagers were more prosperous, and the Endeavour got once more under sail, with a light air from the land, which soon died away, and was followed by sea breezes from South-east by South. With these breezes the ship stood off to sea, East by North, having the pinnace a-head, which was ordered to keep sounding without intermission. A little before noon the Lieutenant anchored in fifteen fathom water, with a sandy bottom; the reason of which was, that he did not think it safe to run in among the shoals, till, by taking a view of them from the mast-head, at low-water, he might be able to form some judgment which way it would be proper for him to steer. This was a matter of nice and arduous determination. As yet Mr. Cook was in doubt whether he should beat back to the southward, round all the shoals, or seek a passage to the eastward or the northward: nor was it possible to say whether each of these courses might not be attended with equal difficulty and danger (a). The impartiality and humanity of Lieutenant Cook's conduct in the distribution of provisions ought not to pass unnoticed. Whatever turtle or other fish were caught, they were always equally divided among the whole ship's crew, the meanest person on board having the same share with the Lieutenant himself. He hath justly observed, that this is a rule which every commander will find it his interest to follow, in any voyage of a similar nature. Great difficulties occurred in the navigation from the Endeavour river. On the fifth of August, the Lieutenant had not kept his course long,

before

(a) Hawkef-
worth, *ubi supra*,
p. 568—588.

before the shoals were discovered in every quarter, which obliged him, as night approached, to come to an anchor. In the morning of the sixth, there was so strong a gale, that our Voyagers were prevented from weighing. When it was low-water, Mr. Cook, with several of his officers, kept a look-out at the mast-head, to see if any passage could be discovered between the shoals. Nothing, however, was in view excepting breakers, which extended from the South round by the East as far as to the North-west, and reached out to sea, beyond the sight of any of the Gentlemen. It did not appear that these breakers were caused by one continued shoal, but by several, which lay detached from each other. On that which was farthest to the eastward the sea broke very high, so that the Lieutenant was induced to think that it was the outermost shoal. He was now convinced that there was no passage to sea, but through the labyrinth formed by these shoals; and, at the same time, he was wholly at a loss what course to steer, when the weather should permit the vessel to sail. The Master's opinion was, that our Navigators should beat back the way they came; but, as the wind blew strongly, and almost without intermission, from that quarter, this would have been an endless labour: and yet, if a passage could not be found to the northward, there was no other alternative. Amidst these anxious deliberations, the gale increased, and continued, with little remission, till the morning of the tenth, when, the weather becoming more moderate, our Commander weighed, and stood in for the land. He had now come to a final determination of seeking a passage along the shore to the northward (b). In pursuance of this resolution, the Endeavour proceeded in her course, and at noon came between the farthest headland that lay in sight, and three Islands which were four or five leagues to the North of it, out at sea. Here our Navigators thought that they saw a clear opening before them, and began to hope that they were once more out of danger. Of this hope, however, they were soon deprived; on which account the Lieutenant gave to the headland the name of CAPE FLATTERY (c). After he had steered some time along the shore, for what was believed to be the open channel, the petty officer at the mast-head cried aloud that he saw land a-head, which extended quite round to the three Islands, and that between the ship and them there was a large reef. Mr. Cook upon this ran up the mast-head himself, and plainly discerned the reef, which was so far to the windward that it could not be weathered. As to the land which the petty officer had supposed to be the main, our Commander was of opinion that it was only a cluster of small Islands. The Master and some others, who went up the mast-head after the Lieutenant, were entirely of a different opinion. All of them were positive that the land in sight did not consist of Islands, but that it was a part of the main; and they rendered their report still more alarming, by adding, that they saw breakers around them on every side. In a situation so critical and doubtful, Mr. Cook thought proper to come to an anchor, under a high point, which he immediately ascended, that he might have a farther view of the sea and country. The prospect he had from this place, which he called POINT LOOK-OUT, clearly confirmed him in his former opinion; the justness of which displayed one of the numerous instances wherein it was manifest how much he exceeded the people about him in the sagacity of his judgment concerning matters of navigation. The Lieutenant, being anxious to discover more distinctly the situation of the shoals, and the channel between them, determined to visit the northernmost and largest of the three Islands before-mentioned; which, from its height, and its lying five leagues out to sea, was peculiarly adapted to his purpose. Accordingly, in company with Mr. Banks, whose fortitude and curiosity stimulated him to take a share in every undertaking, he set out in the pinnace, on the morning of the eleventh, upon this expedition. He sent, at the same time, the Master in the yawl, to sound between the low Islands and the main land. About one o'clock, the Gentlemen reached the place of their destination, and immediately, with a mixture of hope and fear, proportioned to the importance of the business, and the uncertainty of the event, ascended the highest hill they could find. When the Lieutenant took a survey of the prospect around him, he discovered, on the outside of the Islands, and at the distance of two or three leagues from them, a reef of rocks, upon which the sea broke in a dreadful surf, and which extended farther than his sight could reach. Hence, however, he collected that there were no shoals beyond them; and, as he perceived several breaks or openings in the reef, and deep water between that and the Islands, he entertained hopes of getting without the rocks. But though he saw reason to indulge, in some degree, this expectation, the haziness of the weather prevented him from obtaining that satisfactory intelligence which he ardently desired. He determined, therefore, by staying all night upon the Island, to try whether the next day would not afford him a more distinct and comprehensive prospect. Accordingly, the Gentlemen took up their lodging under the shelter of a bush which grew upon the beach. Not many hours were devoted by them to sleep; for at three in the morning Mr. Cook mounted the hill a second time, but had the mortification of finding the weather much more hazy than it had been on the preceding day. He had early sent the pinnace, with one of the mates, to sound between the Island and reefs, and to examine what appeared to be a channel through them. The mate, in consequence of its blowing hard, did not dare to venture into the channel, which he reported to be very narrow. Nevertheless, our Commander, who judged from the

(b) Hawke-
worth, *ubi supra*,

description of the place that it had been seen to disadvantage, was not discouraged by this account. While the Lieutenant was engaged in his survey, Mr. Banks, always attentive to the great object of natural history, collected some plants which he had never met with before. No animals were perceived upon the place excepting lizards, for which reason the Gentlemen gave it the name of LIZARD ISLAND. In their return to the ship, they landed on a low sandy Island that had trees upon it, and which abounded with an incredible number of birds, principally sea-fowl. Here they found the nest of an eagle, and the nest of some other bird, of what species they could not distinguish; but it must certainly be one of the largest kinds that exists. This was apparent from the enormous size of the nest, which was built with sticks upon the ground, and was no less than six and twenty feet in circumference, and two feet eight inches in height [P]. The spot which the Gentlemen were now upon, they called EAGLE ISLAND.

When Lieutenant Cook got on board, he entered into a very serious deliberation concerning the course he should pursue. After considering what he had seen himself, and the Master's report, he was of opinion that by keeping in with the main land, he should run the risk of being locked in by the great reef, and of being compelled at last to return back in search of another passage. By the delay that would hence be occasioned, our Navigators would almost certainly be prevented from getting in time to the East Indies, which was a matter of the utmost importance, and indeed of absolute necessity; for they had now not much more than three months provision on board, at short allowance. The judgment the Lieutenant had formed, together with the facts and appearances on which it was grounded, he stated to his officers, by whom it was unanimously agreed, that the best thing they could do would be to quit the coast entirely, till they could approach it again with less danger. In pursuance of this resolution, the Endeavour, early in the morning of the thirteenth, got under sail, and successfully passed through one of the channels or openings in the outer reef, which Mr. Cook had seen from the Island. When the ship had gotten without the breakers, there was no ground within one hundred and fifty fathom, and our people found a large sea rolling in upon them from the South-east. This was a certain sign that neither land nor shoals were near them in that direction. So happy a change in the situation of our Voyagers was sensibly felt in every breast, and was visible in every countenance. They had been little less than three months in a state that perpetually threatened them with destruction. Frequently had they passed their nights at anchor within hearing of the surge that broke over the shoals and rocks; and they knew that, if by any accident the anchors should not hold against an almost continual tempest, they must in a few minutes inevitably perish. They had sailed three hundred and sixty leagues, without once, even for a moment, having a man out of the chains heaving the lead. This was a circumstance which perhaps had never happened to any other vessel. But now, our Navigators found themselves in an open sea, with deep water; and the joy they experienced was proportioned to their late danger, and their present security. Nevertheless, the very waves, which proved by their swell that our people had no rocks or shoals to fear, convinced them, at the same time, that they could not put a confidence in the ship equal to what they had done before she struck. So far were her leaks widened by the blows she received from the waves, that she admitted no less than nine inches of water in an hour. If the company had not been lately in so much more imminent danger, this fact, considering the state of the pumps, and the navigation which was still in view, would have been a matter of very serious concern. The passage or channel, through which the Endeavour passed into the open sea beyond the reef, lies in latitude $14^{\circ} 32'$ South. It may always be known by the three high Islands within it, to which, on account of the use they may be of in guiding the way of future voyagers, our Commander gave the appellation of the ISLANDS OF DIRECTION. It was not a long time that our Navigators enjoyed the satisfaction of being free from the alarm of danger. As they were pursuing their course in the night of the fifteenth, they sounded frequently, but had no bottom with one hundred and forty fathom, nor any ground with the same length of line. Nevertheless, at four in the morning of the sixteenth, they plainly heard the roaring of the surf, and at break of day saw it foaming to a vast height, at not more than the distance of a mile. The waves which rolled in upon the reef carried the vessel towards it with great rapidity; and, at the same time, our people could reach no ground with an anchor, and had not a breath of wind for the sail. In a situation so dreadful, there was no resource but in the boats; and, most unhappily, the pinnacle was under repair. By the help, however, of the long-boat and the yawl, which were sent a-head to tow, the ship's head was got round to the northward, a circumstance which might delay, if it could not prevent destruction. This was not effected till six o'clock, and our Voyagers were not then a hundred yards from the rock, upon which the same billow that washed the side of the vessel broke to a tremendous height the very next time it rose. There was only, therefore, a dreary valley between the English

[P] *And two feet eight inches in height.* In the Holland, a bird's nest is mentioned, larger than that twentieth volume of the Philosophical Transactions, which is described above. (p. 361.) where there is a short account of New

and destruction; a valley no wider than the base of one wave, while the sea under them was unfathomable. The Carpenter, in the mean while, having hastily patched up the pinnace, she was hoisted out, and sent a-head to tow, in aid of the other boats. But all these efforts would have been ineffectual, if a light air of wind had not sprung up, just at the crisis of our people's fate. It was so light an air, that at any other time it would not have been observed: but it was sufficient to turn the scale in favour of our Navigators; and, in conjunction with the assistance which was afforded by the boats, it gave the ship a perceptible motion obliquely from the reef. The hopes of the company now revived: but in less than ten minutes a dead calm succeeded, and the vessel was again driven towards the breakers, which were not at the distance of two hundred yards. However, before the ground was lost which had already been gained, the same light breeze returned, and lasted ten minutes more. During this time, a small opening, about a quarter of a mile distant, was discovered in the reef; upon which, Mr. Cook immediately sent one of the Mates to examine it, who reported that its breadth was not more than the length of the ship, but that within it there was smooth water. This discovery presented the prospect of a possibility of escape, by pushing the vessel through the opening. Accordingly, the attempt was made, but it failed of success; for when our people, by the joint assistance of their boats and the breeze, had reached the opening, they found that it had become high-water; and, to their great surprize, they met the tide of ebb running out like a mill-stream. In direct contrariety to their expectations, some advantage was gained by this event. Though it was impossible to go through the opening, the stream which prevented the Endeavour from doing it, carried her out about a quarter of a mile; and the boats were so much assisted in towing her, by the tide of ebb, that at noon she had gained the distance of nearly two miles. However, there was yet too much reason to despair of deliverance. For even if the breeze, which had now died away, had revived, our Navigators were still embayed in the reef: and the tide of ebb being spent, the tide of flood, notwithstanding their utmost efforts, drove the ship back again into her former perilous situation. Happily, about this time, another opening was perceived, nearly a mile to the westward. Our Commander immediately sent Mr. Hicks, the first Lieutenant, to examine it; and in the mean while the Endeavour struggled hard with the flood, sometimes gaining and sometimes losing ground. During this severe service, every man did his duty with as much calmness and regularity as if no danger had been near. At length, Mr. Hicks returned with the intelligence that the opening, though narrow and hazardous, was capable of being passed. The bare possibility of passing it was encouragement sufficient to make the attempt; and indeed all danger was less to be dreaded by our people than that of continuing in their present situation. A light breeze having fortunately sprung up, this, in conjunction with the aid of the boats, and the very tide of flood that would otherwise have been their destruction, enabled them to enter the opening, through which they were hurried with amazing rapidity. Such was the force of the torrent by which they were carried along, that they were kept from driving against either side of the channel, which in breadth was not more than a quarter of a mile. While they were shooting this gulph, their soundings were remarkably irregular, varying from thirty to seven fathom, and the ground at bottom was foul. As soon as our Navigators had gotten within the reef, they came to an anchor; and their joy was exceedingly great at having regained a situation which three days before they had quitted with the utmost pleasure and transport. Rocks and shoals, which are always dangerous to the mariner even when they are previously known and marked, are peculiarly dangerous in seas which have never been navigated before; and in this part of the globe they are more perilous than in any other. Here they consist of reefs of coral rock, which rise like a wall almost perpendicularly out of the deep, and are always overflowed at high-water. Here, too, the enormous waves of the vast southern ocean, meeting with so abrupt a resistance, break, with inconceivable violence, in a surf which cannot be produced by any rocks or storms in the northern hemisphere. A crazy ship, shortness of provision, and a want of every necessary, greatly increased the danger to our present Voyagers of navigating in this ocean. Nevertheless, such is the ardour of the human mind, and so flattering is the distinction of a first discoverer, that Lieutenant Cook and his companions cheerfully encountered every peril, and submitted to every inconvenience. They chose rather to incur the charge of imprudence and temerity, than to leave a country unexplored which they had discovered, or to afford the least colour for its being said, that they were deficient in perseverance and fortitude (*d*). It scarcely needs to be added, that it was the high and magnanimous spirit of our Commander, in particular, which inspired his people with so much resolution and vigour. The Lieutenant, having now gotten within the reef, determined, whatever might be the consequence, to keep the main land on board in his future route to the northward. His reason for this determination was, that, if he had gone without the reef again, he might have been carried by it so far from the coast, as to prevent his being able to ascertain whether this country did, or did not, join to New Guinea; a question which he had fixed upon resolving, from the first moment that he had come within sight of land. To the opening through which the Endeavour had passed, our Commander, with a proper sense of

(*d*) Hawke's worth, *ubi supra*, p. 595—607.

of gratitude to the Supreme Being, gave the name of PROVIDENTIAL CHANNEL. In the morning of the seventeenth, the boats had been sent out, to see what refreshments could be procured; and returned in the afternoon with two hundred and forty pounds of the meat of shell-fish, chiefly of cockles. Some of the cockles were as much as two men could move, and contained twenty pounds of good meat. Mr. Banks, who had gone out in his little boat, accompanied by Dr. Solander, brought back a variety of curious shells, and many species of corals. In the prosecution of the voyage, our people, on the nineteenth, were encompassed on every side with rocks and shoals: but, as they had lately been exposed to much greater danger, and these objects were now become familiar, they began to regard them comparatively with little concern. On the twenty-first, there being two points in view, between which our Navigators could see no land, they conceived hopes of having at last found a passage into the Indian sea. Mr. Cook, however, that he might be able to determine the matter with greater certainty, resolved to land upon an Island which lies at the South-east point of the passage. Accordingly, he went into the boat, with a party of men, accompanied by Mr. Banks and Dr. Solander. As they were getting to shore, some of the natives seemed inclined to oppose their landing, but soon walked leisurely away. The Gentlemen immediately climbed the highest hill, from which no land could be seen between the South-west and West-south-west; so that the Lieutenant had not the least doubt of finding a channel through which he could pass to New Guinea. As he was now about to quit the coast of New Holland, which he had traced from latitude thirty-eight to this place, and which he was certain no European had ever seen before, he once more hoisted English colours. He had, indeed, already taken possession of several particular parts of the country, but he now took possession of the whole eastern coast, with all the bays harbours, rivers, and Islands situated upon it, from latitude 38° to latitude $10^{\circ} \frac{1}{2}'$ South, in right of His Majesty King George the Third, and by the name of NEW SOUTH WALES. The party then fired three volleys of small arms, which were answered by the same number from the ship. When the Gentlemen had performed this ceremony upon the Island, which they called POSSESSION ISLAND, they reembarked in their boat, and, in consequence of a rapid ebb tide, had a very difficult and tedious return to the vessel. On the twenty-third, the wind had come round to the South-west; and though it was but a gentle breeze, yet it was accompanied by a swell from the same quarter, which, in conjunction with other circumstances, confirmed Mr. Cook in his opinion that he had arrived to the northern extremity of New Holland, and that he had now an open sea to the westward. These circumstances afforded him peculiar satisfaction, not only because the dangers and fatigues of the voyage were drawing to a conclusion, but because it could no longer be doubted whether New Holland and New Guinea were two separate Islands. The North-east entrance of the strait lies in the latitude of $10^{\circ} 39'$ South, and in the longitude of $218^{\circ} 36'$ West; and the passage is formed by the main land, and by a congeries of Islands, to the North-west, called by the Lieutenant the PRINCE OF WALES'S ISLANDS, and which may probably extend as far as to New Guinea. Their difference is very great both in height and circuit, and many seemed to be well covered with herbage and wood: nor was there any doubt of their being inhabited. Our Commander was persuaded, that among these Islands as good passages might be found as that through which the vessel came, and the access to which might be less perilous. The determination of this matter he would not have left to future navigators, if he had been less harrassed by danger and fatigue, and had possessed a ship in better condition for the purpose. To the channel through which he passed, he gave the name of ENDEAVOUR STRAIGHTS (e).

(e) Hawkesworth, *ubi supra*, p. 607—619.

New Holland, or, as the eastern part of it was called by Lieutenant Cook, New South Wales, is the largest country in the known world which does not bear the name of a continent. The length of coast along which our people sailed, when reduced to a strait line, was no less than twenty-seven degrees of latitude, amounting nearly to two thousand miles. In fact, the square surface of the Island is much more than equal to the whole of Europe. For a particular account of the natural and animal productions of the country, and a minute description of its inhabitants, we must refer to the voyage at large. In general, we may observe, with regard to the natives, that their number bears no proportion to the extent of their territory. So many as thirty of them had never been seen together but once, and that was at Botany Bay. Even when they appeared determined to engage the English, they could not muster above fourteen or fifteen fighting men; and it was manifest that their sheds and houses did not lie so close together, as to be capable of accommodating a larger party. Indeed our Navigators saw only the sea-coast on the eastern side; between which and the western shore there is an immense tract of land that is wholly unexplored. But it is evident, from the totally uncultivated state of the country which was seen by our people, that this immense tract must either be altogether desolate, or at least more thinly inhabited than the parts which were visited. Of traffic the natives had no idea, nor could any be communicated to them. The things which were given them they received, but did not appear to understand the signs of the English requiring a return. There was no reason to believe that they eat animal food raw. As they have no vessel in which water can be boiled, they either broil their meat upon the coals, or bake it in a hole by the help

of hot stones, agreeably to the custom of the inhabitants of the South-Sea Islands. Fire is produced by them with great facility, and they spread it in a surprizing manner. For producing it they take two pieces of soft wood, one of which is a stick about eight or nine inches long, while the other piece is flat. The stick they shape into an obtuse point at one end, and pressing it upon the flat wood, turn it nimbly by holding it between both their hands. In doing this, they often shift their hands up, and then move them down, with a view of increasing the pressure as much as possible. By this process they obtain fire in less than two minutes, and from the smallest spark they carry it to any height or extent with great speed and dexterity. It was not possible, considering the limited intercourse which our Navigators had with the natives of New South Wales, that much could be learned with regard to their language. Nevertheless, as this is an object of no small curiosity to the learned, and is, indeed, of peculiar importance in searching into the origin of the various nations that have been discovered, Mr. Cook and his friends took some pains to collect such a specimen of it as might, in a certain degree, answer the purpose. Our Commander did not quit the country without making such observations, relative to the currents and tides upon the coast, as, while they increase the general knowledge of navigation, may be of service to future voyagers. The irregularity of the tides is an object worthy of notice (f).

(f) Hawkesworth, *ubi supra*, p. 622. 631. 634. 638. 645. 647, 648.

From the coast of New South Wales the Lieutenant steered, on the twenty-third of August, for the coast of New Guinea, and on the twenty-fifth fell upon a dangerous shoal. The ship was in six fathom, but scarcely two were found, upon sounding round her, at the distance of half a cable's length. This shoal was of such an extent, reaching from the East round by the North and West to the South-west, that there was no method for the vessel to get clear of it, but by her going back the way in which she came. Here was another hair's-breadth escape; for it was nearly high-water, and there ran a short cockling sea, which if the ship had struck must very soon have bulged her. So dangerous was her situation, that if her direction had been half a cable's length more either to the right or left, she must have struck before the signal for the shoal could have been made. It had been Lieutenant Cook's intention to steer North-west till he had made the South coast of New Guinea, and it was his purpose to touch upon it, if that could be found practicable. But in consequence of the shoals he met with, he altered his course, in the hope of finding a clearer channel, and deeper water. His hope was agreeably verified; for by noon, on the twenty-sixth, the depth of water was gradually increased to seventeen fathom (g). On the twenty-eighth, our Voyagers found the sea to be in many places covered with a brown scum, such as the sailors usually call spawn. When the Lieutenant first saw it he was alarmed, fearing that the ship was again among shoals; but the depth of water, upon sounding, was discovered to be equal to what it was in other places. The same appearance had been observed upon the coasts of Brazil and New Holland, in which cases it was at no great distance from the shore. Mr. Banks and Dr. Solander examined the scum, but could not determine what it was, any farther than as they saw reason to suppose that it belonged to the vegetable kingdom. The sailors, upon meeting with more of it, gave up the notion of its being spawn, and finding a new name for it, called it sea-saw-dust. At day-break, on the third of September, our Navigators came in sight of New Guinea, and stood in for it, with a fresh gale, till nine o'clock, when they brought to, being in three fathom water, and within about three or four miles of land. Upon this the pinnace was hoisted, and the Lieutenant set off from the ship with the boat's crew, accompanied by Mr. Banks, Dr. Solander, and Mr. Banks's servants, being in all twelve persons well armed. As soon as they came a-shore, they discovered the prints of human feet, which could not long have been impressed upon the sand. Concluding, therefore, that the natives were at no great distance, and there being a thick wood which reached to within a hundred yards of the water, the Gentlemen thought it necessary to proceed with caution, lest their retreat to the boat should be cut off. When they had walked some way along the skirts of the wood, they came to a grove of cocoa-nut trees, at the fruit of which they looked very wishfully; but not thinking it safe to climb, they were obliged to leave it without tasting a single nut. After they had advanced about a quarter of a mile from the boat, three Indians rushed out of the wood with a hideous shout, and as they ran towards the English, the foremost threw something out of his hand, which flew on one side of him, and burned exactly like gunpowder, though without making any report. The two other natives having at the same instant discharged their arrows, the Lieutenant and his party were under a necessity of firing, first with small shot, and a second time with ball. Upon this, the three Indians ran away with great agility. As Mr. Cook had no disposition forcibly to invade this country, either to gratify the appetites or the curiosity of his people, and was convinced that nothing was to be done upon friendly terms, he and his companions returned with all expedition towards their boat. When they were aboard, they rowed abreast of the natives, who had come down to the shore in aid of their countrymen, and whose number now amounted to between sixty and a hundred. Their appearance was much the same as that of the New Hollanders: they nearly resembled them in stature, and in having their hair short and cropped. Like them, also, they were absolutely

(g) The latitude was now 10° 10' South, and the longitude 220° 12' West.

naked; but the colour of their skin did not seem quite so dark, which, however, might be owing to their being less dirty. While the English Gentlemen were viewing them, they were shouting defiance, and letting off their fires by four or five at a time. Our people could not imagine what these fires were, or what purposes they were intended to answer. Those who discharged them had in their hands a short piece of stick, which they swung sideways from them, and immediately there issued fire and smoke, exactly resembling those of a musquet, and of as short a duration. The men on board the ship who observed this surprizing phænomenon, were so far deceived by it as to believe that the Indians had fire-arms. To the persons in the boat it had the appearance of the firing of volleys, without a report. The place where this transaction happened lies in the latitude of $6^{\circ} 15'$ South, and is about sixty-five leagues to the North-east of Port Saint Augustine, or Walche Caep, and is near what is called in the charts C. de la Colta de St. Bonaventura. In every part of the coast, the land is covered with a vast luxuriance of wood and herbage. The cocoa-nut, the bread-fruit, and the plantain-tree, flourish here in the highest perfection; besides which the country abounds with most of the trees, shrubs, and plants, that are common to the South Sea Islands, New Zealand, and New Holland (b).

(b) Hawke-
worth's Voyages,
vol. ii. p. 650—
658.

Soon after Mr. Cook and his party had returned to the ship, our Voyagers made sail to the westward, the Lieutenant having resolved to spend no more time upon this coast; a resolution which was greatly to the satisfaction of a very considerable majority of his people. Some of the officers indeed were particularly urgent that a number of men might be sent ashore, to cut down the cocoa-nut trees for the sake of their fruit. This, however, our Commander absolutely refused, as equally unjust and cruel. It was morally certain, from the preceding behaviour of the natives, that if their property had been invaded they would have made a vigorous effort to defend it; in which case the lives of many of them must have been sacrificed; and perhaps, too, several of the English would have fallen in the contest. The necessity of a quarrel with the Indians would have been regretted by the Lieutenant, even if he had been impelled to it by a want of the necessaries of life; but to engage in it for the transient gratification that would arise from obtaining two or three hundred green cocoa-nuts, appeared in his view highly criminal. The same calamity, at least with regard to the natives, would probably have occurred, if he had sought for any other place on the coast, to the northward and westward, where the ship might have lain so near the shore as to cover his people with the guns when they had landed. Besides, there was cause to believe, that, before such a place could have been found, our Navigators would have been carried so far to the Westward as to be obliged to go to Batavia, on the North side of Java. This, in Mr. Cook's opinion, would not have been so safe a passage as that to the South of Java, through the straits of Sunda. Another reason for his making the best of his way to Batavia, was the leakiness of the vessel, which rendered it doubtful whether it would not be necessary to heave her down when she arrived at that port. Our Commander's resolution was farther confirmed by the consideration, that no discovery could be expected in seas which had already been navigated, and where the coast had been sufficiently described both by Spanish and Dutch geographers, and especially by the latter. The only merit claimed by the Lieutenant, in this part of his voyage, was the having established it as a fact beyond all controversy, that New Holland and New Guinea are two distinct countries. Without staying, therefore, on the coast of New Guinea, the Endeavour, on the same day, directed her course to the westward, in pursuing which Mr. Cook had an opportunity of rectifying the errors of former navigators. Very early in the morning of the sixth of September, our Voyagers passed a small Island which lay to the North-north-west; and at day-break they discovered another low Island, extending from that quarter to North-north-east. Upon the last Island, which appeared to be of considerable extent, the Lieutenant would have landed to examine its produce, if the wind had not blown so fresh as to render his design impracticable. Unless these two Islands belong to the Arrou Islands, they have no place in the charts; and if they do belong to the Arrou Islands, they are laid down at too great a distance from New Guinea (i). Some other land which was seen this day ought, by its distance from New Guinea, to have been part of the Arrou Islands; but if any dependence can be placed on former charts, it lies a degree farther to the South. On the seventh, when the ship was in latitude $9^{\circ} 30'$ South, and longitude $229^{\circ} 34'$ West, our people ought to have been in sight of the Weasel Isles, which in the charts are laid down at the distance of twenty or twenty-five leagues from the coast of New Holland. But as our Commander saw nothing of them, he concluded that they must have been placed erroneously. Nor will this be deemed surprizing, when it is considered that not only these Islands, but the coast which bounds this sea, have been explored at different times, and by different persons, who had not all the requisites for keeping accurate journals which are now possessed; and whose various discoveries have been delineated upon charts by others, perhaps at the distance of more than a century after such discoveries had been made. In pursuing their course, our Navigators passed the Islands of Timor, Timor-lavet, Rotte, and Seman. While they were near the two latter Islands, they observed about ten o'clock at night, on the sixteenth of the month, a phænomenon in the heavens, which in many particulars re-

(i) Mr. Cook found the South part of them in latitude $7^{\circ} 6'$ South, and in longitude 225° West.

sembled

sembled the Aurora Borealis, though in others it was very different. It consisted of a dull reddish light, which reached about twenty degrees above the horizon; and though its extent, at times, varied much, it never comprehended less than eight or ten points of the compass. Through, and out of the general appearance, there passed rays of light of a brighter colour, which vanished, and were renewed nearly in the same manner as those of the Aurora Borealis, but entirely without the tremulous or vibratory motion which is seen in that phenomenon. The body of this light bore South-south-east from the ship, and continued, without any diminution of its brightness, till twelve o'clock, and probably a longer time, as the Gentlemen were prevented from observing it farther, by their retiring to sleep. By the sixteenth, Lieutenant Cook had gotten clear of all the Islands which had then been laid down in the maps as situated between Timor and Java, and did not expect to meet with any other in that quarter. But the next morning an Island was seen bearing West-south-west, and at first he believed that he had made a new discovery. As soon as our Voyagers had come close in with the North side of it, they had the pleasing prospect of houses and cocoa-nut trees, and of what still more agreeably surprized them, numerous flocks of sheep. Many of the people on board were at this time in a bad state of health, and no small number of them had been dissatisfied with the Lieutenant for not having touched at Timor. He readily embraced, therefore, the opportunity of landing at a place which appeared so well calculated to supply the necessities of the company, and to remove both the sickness and the discontent which had spread among them (k). This place proved to be the Island of Savu, where a settlement had lately been made by the Dutch. The great design of our Commander was to obtain provisions, which, after some difficulty, and some jealousy on the part of Mr. Lange, the Dutch Resident, were procured. These provisions were nine buffaloes, six sheep, three hogs, thirty dozen of fowls, many dozens of eggs, some cocoa nuts, a few limes, a little garlic, and several hundred gallons of palm-syrup. In obtaining these refreshments at a reasonable price, the English were not a little assisted by an old Indian, who appeared to be a person of considerable authority under the King of the country. The Lieutenant and his friends were one day very hospitably entertained by the King himself, though the royal etiquette did not permit his Majesty to partake of the banquet (l). So little, in general, had the Island of Savu been known, that Mr. Cook had never seen a map or chart in which it is clearly or accurately laid down. The middle of it lies in about the latitude of $10^{\circ} 35'$ South, and longitude $237^{\circ} 30'$ West; and from the ship it presented a prospect than which nothing can be more beautiful. This prospect, from the verdure and culture of the country, from the hills, richly clothed, which rise in a gentle and regular ascent, and from the stateliness and beauty of the trees, is delightful to a degree that can scarcely be conceived by the most lively imagination. With regard to the productions and natives of the Island, the account which our Navigators were enabled to give of them, and which is copious and entertaining, was, in a great measure, derived from the information of Mr. Lange. An extraordinary relation is given of the morals of the people of this Island, and which, if true, must fill every virtuous mind with pleasure. Their characters and conduct are represented as irreproachable, even upon the principles of Christianity. Though no man is permitted to have more than one wife, an illicit commerce between the sexes is scarcely known among them. Instances of theft are very rare; and so far are they from revenging a supposed injury by murder, that when any differences arise between them, they immediately and implicitly refer it to the determination of their King. They will not so much as make it the subject of private debate, lest they should hence be provoked to resentment and ill-will. Their delicacy and cleanliness are suited to the purity of their morals. From the specimen which is given of the language of Savu, it appears to have some affinity with that of the South Sea Islands. Many of the words are exactly the same, and the terms of numbers are derived from the same origin (m).

(k) Hawkesworth, *ubi supra*, p. 659—669.

(l) *Ibid.* p. 675—680.

(m) *Ibid.* p. 687, 688, 694, 695, 697, 702, 703—Parkinson's Journal of a voyage to the South Seas, p. 163—169.

On the twenty-first of September, our Navigators got under sail, and having pursued their voyage till the first of October, on that day they came within sight of the Island of Java. During their course from Savu, Lieutenant Cook allowed twenty minutes a day for the westerly current, which he concluded must run strong at this time, especially on the coast of Java; and accordingly, he found that this allowance was exactly equivalent to the effect of the current upon the ship. Such was the sagacity of our Commander's judgment in whatever related to navigation. On the second, two Dutch ships being seen to lie off Anger Point, the Lieutenant sent Mr. Hicks on board one of them, to enquire news concerning England, from which our people had so long been absent. Mr. Hicks brought back the agreeable intelligence, that the Swallow, commanded by Captain Carteret, had been at Batavia two years before. In the morning of the fifth, a prow came alongside of the Endeavour, with a Dutch officer, who sent down to Mr. Cook a printed paper in English, duplicates of which he had in other languages. This paper was regularly signed, in the name of the Governor and Council of the Indies, by their Secretary, and contained nine questions, very ill expressed, two of which only the Lieutenant thought proper to answer. These were what regarded the nation and name of his vessel, and whither

naked; but the colour of their skin did not seem quite so dark, which, however, might be owing to their being less dirty. While the English Gentlemen were viewing them, they were shouting defiance, and letting off their fires by four or five at a time. Our people could not imagine what these fires were, or what purposes they were intended to answer. Those who discharged them had in their hands a short piece of stick, which they swung sideways from them, and immediately there issued fire and smoke, exactly resembling those of a musquet, and of as short a duration. The men on board the ship who observed this surprizing phænomenon, were so far deceived by it as to believe that the Indians had fire-arms. To the persons in the boat it had the appearance of the firing of vollies, without a report. The place where this transaction happened lies in the latitude of $6^{\circ} 15'$ South, and is about sixty-five leagues to the North-east of Port Saint Augustine, or Walche Caep, and is near what is called in the charts C. de la Colta de St. Bonaventura. In every part of the coast, the land is covered with a vast luxuriance of wood and herbage. The cocoa-nut, the bread-fruit, and the plantain-tree, flourish here in the highest perfection; besides which the country abounds with most of the trees, shrubs, and plants, that are common to the South Sea Islands, New Zealand, and New Holland (b).

(b) Hawke-
worth's Voyages,
vol. ii. p. 650—
658.

Soon after Mr. Cook and his party had returned to the ship, our Voyagers made sail to the westward, the Lieutenant having resolved to spend no more time upon this coast; a resolution which was greatly to the satisfaction of a very considerable majority of his people. Some of the officers indeed were particularly urgent that a number of men might be sent ashore, to cut down the cocoa-nut trees for the sake of their fruit. This, however, our Commander absolutely refused, as equally unjust and cruel. It was morally certain, from the preceding behaviour of the natives, that if their property had been invaded they would have made a vigorous effort to defend it; in which case the lives of many of them must have been sacrificed; and perhaps, too, several of the English would have fallen in the contest. The necessity of a quarrel with the Indians would have been regretted by the Lieutenant, even if he had been impelled to it by a want of the necessaries of life; but to engage in it for the transient gratification that would arise from obtaining two or three hundred green cocoa-nuts, appeared in his view highly criminal. The same calamity, at least with regard to the natives, would probably have occurred, if he had sought for any other place on the coast, to the northward and westward, where the ship might have lain so near the shore as to cover his people with the guns when they had landed. Besides, there was cause to believe, that, before such a place could have been found, our Navigators would have been carried so far to the Westward as to be obliged to go to Batavia, on the North side of Java. This, in Mr. Cook's opinion, would not have been so safe a passage as that to the South of Java, through the streights of Sunda. Another reason for his making the best of his way to Batavia, was the leakiness of the vessel, which rendered it doubtful whether it would not be necessary to heave her down when she arrived at that port. Our Commander's resolution was farther confirmed by the consideration, that no discovery could be expected in seas which had already been navigated, and where the coast had been sufficiently described both by Spanish and Dutch geographers, and especially by the latter. The only merit claimed by the Lieutenant, in this part of his voyage, was the having established it as a fact beyond all controversy, that New Holland and New Guinea are two distinct countries. Without staying, therefore, on the coast of New Guinea, the Endeavour, on the same day, directed her course to the westward, in pursuing which Mr. Cook had an opportunity of rectifying the errors of former navigators. Very early in the morning of the sixth of September, our Voyagers passed a small Island which lay to the North-north-west; and at day-break they discovered another low Island, extending from that quarter to North-north-east. Upon the last Island, which appeared to be of considerable extent, the Lieutenant would have landed to examine its produce, if the wind had not blown so fresh as to render his design impracticable. Unless these two Islands belong to the Arrou Islands, they have no place in the charts; and if they do belong to the Arrou Islands, they are laid down at too great a distance from New Guinea (i). Some other land which was seen this day ought, by its distance from New Guinea, to have been part of the Arrou Islands; but if any dependence can be placed on former charts, it lies a degree farther to the South. On the seventh, when the ship was in latitude $9^{\circ} 30'$ South, and longitude $229^{\circ} 34'$ West, our people ought to have been in sight of the Weasel Isles, which in the charts are laid down at the distance of twenty or twenty-five leagues from the coast of New Holland. But as our Commander saw nothing of them, he concluded that they must have been placed erroneously. Nor will this be deemed surprizing, when it is considered that not only these Islands, but the coast which bounds this sea, have been explored at different times, and by different persons, who had not all the requisites for keeping accurate journals which are now possessed; and whose various discoveries have been delineated upon charts by others, perhaps at the distance of more than a century after such discoveries had been made. In pursuing their course, our Navigators passed the Islands of Timor, Timor-lavet, Rotte, and Seman. While they were near the two latter Islands, they observed about ten o'clock at night, on the sixteenth of the month, a phænomenon in the heavens, which in many particulars re-

(i) Mr. Cook found the South part of them in latitude $7^{\circ} 6'$ South, and in longitude 225° West.

sembled

sembled the Aurora Borealis, though in others it was very different. It consisted of a dull reddish light, which reached about twenty degrees above the horizon; and though its extent, at times, varied much, it never comprehended less than eight or ten points of the compass. Through, and out of the general appearance, there passed rays of light of a brighter colour, which vanished, and were renewed nearly in the same manner as those of the Aurora Borealis, but entirely without the tremulous or vibratory motion which is seen in that phenomenon. The body of this light bore South-south-east from the ship, and continued, without any diminution of its brightness, till twelve o'clock, and probably a longer time, as the Gentlemen were prevented from observing it farther, by their retiring to sleep. By the sixteenth, Lieutenant Cook had gotten clear of all the Islands which had then been laid down in the maps as situated between Timor and Java, and did not expect to meet with any other in that quarter. But the next morning an Island was seen bearing West-south-west, and at first he believed that he had made a new discovery. As soon as our Voyagers had come close in with the North side of it, they had the pleasing prospect of houses and cocoa-nut trees, and of what still more agreeably surprized them, numerous flocks of sheep. Many of the people on board were at this time in a bad state of health, and no small number of them had been dissatisfied with the Lieutenant for not having touched at Timor. He readily embraced, therefore, the opportunity of landing at a place which appeared so well calculated to supply the necessities of the company, and to remove both the sickness and the discontent which had spread among them (k). This place proved to be the Island of SAVU, where a settlement had lately been made by the Dutch. The great design of our Commander was to obtain provisions, which, after some difficulty, and some jealousy on the part of Mr. Lange, the Dutch Resident, were procured. These provisions were nine buffaloes, six sheep, three hogs, thirty dozen of fowls, many dozens of eggs, some cocoa nuts, a few limes, a little garlic, and several hundred gallons of palm-syrup. In obtaining these refreshments at a reasonable price, the English were not a little assisted by an old Indian, who appeared to be a person of considerable authority under the King of the country. The Lieutenant and his friends were one day very hospitably entertained by the King himself, though the royal etiquette did not permit his Majesty to partake of the banquet (l). So little, in general, had the Island of Savu been known, that Mr. Cook had never seen a map or chart in which it is clearly or accurately laid down. The middle of it lies in about the latitude of $10^{\circ} 35'$ South, and longitude $237^{\circ} 30'$ West; and from the ship it presented a prospect than which nothing can be more beautiful. This prospect, from the verdure and culture of the country, from the hills, richly clothed, which rise in a gentle and regular ascent, and from the stateliness and beauty of the trees, is delightful to a degree that can scarcely be conceived by the most lively imagination. With regard to the productions and natives of the Island, the account which our Navigators were enabled to give of them, and which is copious and entertaining, was, in a great measure, derived from the information of Mr. Lange. An extraordinary relation is given of the morals of the people of this Island, and which, if true, must fill every virtuous mind with pleasure. Their characters and conduct are represented as irreproachable, even upon the principles of Christianity. Though no man is permitted to have more than one wife, an illicit commerce between the sexes is scarcely known among them. Instances of theft are very rare; and so far are they from revenging a supposed injury by murder, that when any differences arise between them, they immediately and implicitly refer it to the determination of their King. They will not so much as make it the subject of private debate, lest they should hence be provoked to resentment and ill-will. Their delicacy and cleanliness are suited to the purity of their morals. From the specimen which is given of the language of Savu, it appears to have some affinity with that of the South Sea Islands. Many of the words are exactly the same, and the terms of numbers are derived from the same origin (m).

(l) *Ibid.* p. 675—680.

(m) *Ibid.* p. 687, 688, 694, 695, 697, 702, 703—Parkinson's *Journal of a voyage to the South Seas*, p. 163—169.

On the twenty-first of September, our Navigators got under sail, and having pursued their voyage till the first of October, on that day they came within sight of the Island of Java. During their course from Savu, Lieutenant Cook allowed twenty minutes a day for the westerly current, which he concluded must run strong at this time, especially on the coast of Java; and accordingly, he found that this allowance was exactly equivalent to the effect of the current upon the ship. Such was the sagacity of our Commander's judgment in whatever related to navigation. On the second, two Dutch ships being seen to lie off Anger Point, the Lieutenant sent Mr. Hicks on board one of them, to enquire news concerning England, from which our people had so long been absent. Mr. Hicks brought back the agreeable intelligence, that the *Swallow*, commanded by Captain Carteret, had been at Batavia two years before. In the morning of the fifth, a prow came alongside of the *Endeavour*, with a Dutch officer, who sent down to Mr. Cook a printed paper in English, duplicates of which he had in other languages. This paper was regularly signed, in the name of the Governor and Council of the Indies, by their Secretary, and contained nine questions, very ill expressed, two of which only the Lieutenant thought proper to answer. These were what regarded the nation and name of his vessel, and whither

naked; but the colour of their skin did not seem quite so dark, which, however, might be owing to their being less dirty. While the English Gentlemen were viewing them, they were shouting defiance, and letting off their fires by four or five at a time. Our people could not imagine what these fires were, or what purposes they were intended to answer. Those who discharged them had in their hands a short piece of stick, which they swung sideways from them, and immediately there issued fire and smoke, exactly resembling those of a musquet, and of as short a duration. The men on board the ship who observed this surprizing phænomenon, were so far deceived by it as to believe that the Indians had fire-arms. To the persons in the boat it had the appearance of the firing of vollies, without a report. The place where this transaction happened lies in the latitude of $6^{\circ} 15'$ South, and is about sixty-five leagues to the North-east of Port Saint Augustine, or Walche Caep, and is near what is called in the charts C. de la Colta de St. Bonaventura. In every part of the coast, the land is covered with a vast luxuriance of wood and herbage. The cocoa-nut, the bread-fruit, and the plantain-tree, flourish here in the highest perfection; besides which the country abounds with most of the trees, shrubs, and plants, that are common to the South Sea Islands, New Zealand, and New Holland (b).

(b) Hawke-
worth's Voyages,
vol. ii. p. 650—
658.

Soon after Mr. Cook and his party had returned to the ship, our Voyagers made sail to the westward, the Lieutenant having resolved to spend no more time upon this coast; a resolution which was greatly to the satisfaction of a very considerable majority of his people. Some of the officers indeed were particularly urgent that a number of men might be sent ashore, to cut down the cocoa-nut trees for the sake of their fruit. This, however, our Commander absolutely refused, as equally unjust and cruel. It was morally certain, from the preceding behaviour of the natives, that if their property had been invaded they would have made a vigorous effort to defend it; in which case the lives of many of them must have been sacrificed; and perhaps, too, several of the English would have fallen in the contest. The necessity of a quarrel with the Indians would have been regretted by the Lieutenant, even if he had been impelled to it by a want of the necessaries of life; but to engage in it for the transient gratification that would arise from obtaining two or three hundred green cocoa-nuts, appeared in his view highly criminal. The same calamity, at least with regard to the natives, would probably have occurred, if he had sought for any other place on the coast, to the northward and westward, where the ship might have lain so near the shore as to cover his people with the guns when they had landed. Besides, there was cause to believe, that, before such a place could have been found, our Navigators would have been carried so far to the Westward as to be obliged to go to Batavia, on the North side of Java. This, in Mr. Cook's opinion, would not have been so safe a passage as that to the South of Java, through the streights of Sunda. Another reason for his making the best of his way to Batavia, was the leakiness of the vessel, which rendered it doubtful whether it would not be necessary to heave her down when she arrived at that port. Our Commander's resolution was farther confirmed by the consideration, that no discovery could be expected in seas which had already been navigated, and where the coast had been sufficiently described both by Spanish and Dutch geographers, and especially by the latter. The only merit claimed by the Lieutenant, in this part of his voyage, was the having established it as a fact beyond all controversy, that New Holland and New Guinea are two distinct countries. Without staying, therefore, on the coast of New Guinea, the Endeavour, on the same day, directed her course to the westward, in pursuing which Mr. Cook had an opportunity of rectifying the errors of former navigators. On the twenty-first of September, our Navigators got under sail, and having pursued their voyage till the first of October, on that day they came within sight of the Island of Java. During their course from Savu, Lieutenant Cook allowed twenty minutes a day for the westerly current, which he concluded must run strong at this time, especially on the coast of Java; and accordingly, he found that this allowance was exactly equivalent to the effect of the current upon the ship. Such was the sagacity of our Commander's judgment in whatever related to navigation. On the second, two Dutch ships being seen to lie off Anger Point, the Lieutenant sent Mr. Hicks on board one of them, to enquire news concerning England, from which our people had so long been absent. Mr. Hicks brought back the agreeable intelligence, that the Swallow, commanded by Captain Carteret, had been at Batavia two years before. In the morning of the fifth, a prow came alongside of the Endeavour, with a Dutch officer, who sent down to Mr. Cook a printed paper in English, duplicates of which he had in other languages. This paper was regularly signed, in the name of the Governor and Council of the Indies, by their Secretary, and contained nine questions, very ill expressed, two of which only the Lieutenant thought proper to answer. These were what regarded the nation and name of his vessel, and whither

whither she was bound. On the ninth, our Voyagers stood in for Batavia road, where they found the Harcourt Indiaman from England, two English private traders, and a number of Dutch ships. Immediately a boat came on board the Endeavour, and the officer who commanded having enquired who our people were, and whence they came, instantly returned with such answers as were given him. In the mean time, Mr. Cook sent a Lieutenant ashore to acquaint the Governor of his arrival, and to make an apology for not having saluted; a ceremony he had judged better to omit; as he could only make use of three guns, excepting the swivels, which he was of opinion would not be heard. It being universally agreed that the ship could not safely proceed to Europe without an examination of her bottom, our Commander determined to apply for leave to heave her down at Batavia; and for this purpose he drew up a request in writing, which, after he had waited first upon the Governor-General, and then upon the Council, was readily complied with, and he was told that he should have every thing he wanted. In the evening of the tenth, there was a dreadful storm of thunder, lightning, and rain, during which the main-mast of one of the Dutch East Indiamen was split, and carried away by the deck; and the main-top-mast, and top-gallant-mast were shivered to pieces. The stroke was probably directed by an iron spindle which was at the main-top-gallant-mast head. As this ship lay very near the Endeavour, she could scarcely have avoided sharing the same fate, had it not been for the conducting chain, which fortunately had been just gotten up, and which conveyed the lightning over the side of the vessel. But though she escaped the lightning, the explosion shook her like an earthquake; and the chain, at the same time, appeared like a line of fire. Mr. Cook has embraced this occasion of earnestly recommending similar chains to every ship; and hath expressed his hope that all who read his narrative will be warned against having an iron spindle at the mast-head. The English Gentlemen had taken up their lodging and boarding at a hotel, or kind of inn, kept by the order of Government. Here they met with those impositions, in point of expence and treatment, which are too common to admit of much surprize. It was not long, however, that they submitted to ill usage. By a farther acquaintance with the manner of dealing with their host, and by spirited remonstrances, they procured a better furnished table. Mr. Banks, in a few days, hired a small house for himself and his party; and as soon as he was settled in his new habitation, sent for Tupia, who had hitherto continued on board on account of sickness. When he quitted the ship, and after he came into the boat, he was exceedingly lifeless and dejected; but no sooner did he enter the town than he appeared to be inspired with another soul. A scene so entirely new and extraordinary filled him with amazement. The houses, carriages, streets, people, and a multiplicity of other objects, rushing upon him at once, produced an effect similar to what is ascribed to enchantment. His boy, Tayeto, expressed his wonder and delight in a still more rapturous manner. He danced along the streets in a kind of extacy, examining every object with a restless and eager curiosity, which was excited and gratified every moment. Tupia's attention was particularly excited by the various dresses of the passing multitude; and when he was informed that at Batavia every one wore the dress of his own country, he expressed his desire of appearing in the garb of Otaheite. Accordingly, South Sea cloth being sent for from the ship, he equipped himself with great expedition and dexterity. Lieutenant Cook imagined that at Batavia he should find it easy to take up what money he might want for repairing and refitting the Endeavour; but in this he was mistaken. No private person could be found who had ability and inclination to furnish the sum which was necessary. In this exigency, the Lieutenant had recourse, by a written request, to the Governor, from whom he obtained an order for being supplied out of the Dutch Company's treasury. When our Voyagers had been only nine days at Batavia, they began to feel the fatal effects of the climate and situation. Tupia, after his first flow of spirits had subsided, grew every day worse and worse; and Tayeto was seized with an inflammation upon his lungs. Mr. Banks and Dr. Solander were attacked by fevers, and, in a little time, almost every person, both on board and on shore, was sick. The distress of our people was indeed very great, and the prospect before them discouraging in the highest degree. Tupia, being desirous of breathing a freer air than among the numerous houses that obstructed it ashore, had a tent erected for him on Cooper's Island, to which he was accompanied by Mr. Banks, who attended this poor Indian with the greatest humanity, till he was rendered incapable of doing it, by the violent increase of his own disorder. On the fifth of November, Mr. Monkhouse, the Surgeon of the ship, a sensible, skilful man, whose loss was not a little aggravated by the situation of the English, fell the first sacrifice to this fatal country. Tayeto died on the ninth, and Tupia, who loved him with the tenderness of a parent, sunk at once after the loss of the boy, and survived him only a few days. The disorders of Mr. Banks and Dr. Solander grew to such a height, that the Physician declared they had no chance of preserving their lives but by removing into the country. Accordingly, a house was hired for them at the distance of about two miles from the town; where, in consequence of enjoying a purer air, and being better nursed by two Malayan women, whom they had bought, they recovered by slow degrees. At length, Lieutenant Cook was himself taken ill; and out of the whole ship's company, not more than ten were able to do duty.

duty. In the midst of these distresses, our Commander was diligently and vigorously attentive to the repair of his vessel. When her bottom came to be examined, she was found to be in a worse condition than had been apprehended. Her false keel and main keel were both of them greatly injured; a large quantity of the sheathing was torn off; and among several planks which were much damaged, two of them, and the half of a third, were so worn for the length of six feet, that they were not above the eighth part of an inch in thickness: and here the worms had made way quite into the timbers. In this state the Endeavour had sailed many hundred leagues, in a quarter of the globe where navigation is dangerous in the highest degree. It was happy for our Voyagers that they were ignorant of their perilous situation; for it must have deeply affected them, to have known that a considerable part of the bottom of the vessel was thinner than the sole of a shoe, and that all their lives depended upon so slight and fragile a barrier between them and the unfathomable ocean. The repair of the Endeavour was carried on very much to Mr. Cook's satisfaction. In justice to the Dutch officers and workmen, he hath declared that, in his opinion, there is not a marine yard in the world, where a ship can be laid with more convenience, safety, and dispatch, or repaired with greater diligence and skill. He was particularly pleased with the manner of heaving down by two masts, and gives it a decided preference to the method which had hitherto been practised by the English. The Lieutenant was not one of those on whom the bigotry could be charged of adhering to old customs, in opposition to the dictates of reason and experience. By the eighth of December, the Endeavour was perfectly refitted. From that time to the twenty-fourth, our people were employed in completing her stock of water, provisions, and stores, in erecting some new pumps, and in various other necessary operations. All this business could have been effected much sooner, if it had not been retarded by the general sickness of the men. In the afternoon of the twenty-fourth, our Commander took leave of the Governor of Batavia, and of several other Gentlemen belonging to the place, with whom he had formed connections, and to whom he had been greatly obliged for their civilities and assistance. In the mean while, an accident intervened, which might have been attended with disagreeable effects. A seaman, who had run away from one of the Dutch ships in the road, entered on board the Endeavour. Upon his being reclaimed as a subject of Holland, Mr. Cook, who was on shore, declared, that, if the man appeared to be a Dutchman, he should certainly be delivered up. When, however, the order was carried to Mr. Hicks, who commanded on board, he refused to surrender the seaman, alledging, that he was a subject of Great Britain, born in Ireland. In this conduct Mr. Hicks acted in perfect conformity to the Lieutenant's intention and directions. The captain of the Dutch vessel, in the next place, by a message from the Governor General, demanded the man as a subject of Denmark. To this Mr. Cook replied, that there must be some mistake in the General's message, since he would never demand of him a Danish seaman, whose only crime was that of preferring the English to the Dutch service. At the same time the Lieutenant added, that to shew the sincerity of his desire to avoid disputes, if the man was a Dane he should be delivered up as a courtesy; but that if he appeared to be an English subject, he should be kept at all events. Soon after, a letter was brought from Mr. Hicks, containing indubitable proofs that the seaman in question was a subject of his Britannic Majesty. This letter Mr. Cook sent to the Governor, with an assurance to his Excellency that he would not part with the man on any terms. A conduct so firm and decisive produced the desired effect, no more being heard of the affair. In the evening of the twenty-fifth, our Commander went on board, together with Mr. Banks and the rest of the Gentlemen who had resided constantly on shore. The Gentlemen, though considerably better, were far from being perfectly recovered. At this time, the sick persons in the ship amounted to forty, and the rest of the company were in a very feeble condition. It was remarkable, that every individual had been ill excepting the sail-maker, who was an old man between seventy and eighty years of age, and who was drunk every day, during the residence of our people at Batavia. Three seamen, and Mr. Green's servant, died, besides the Surgeon, Tupia, and Tayeto. Tupia did not entirely fall a sacrifice to the unwholesome, stagnant, and putrid air of the country. As he had been accustomed, from his birth, to subsist chiefly upon vegetable food, and particularly on ripe fruit, he soon contracted the disorders which are incident to a sea life, and would probably have sunk under them, before the voyage of the English could have been completed, even if they had not been obliged to go to Batavia to refit their vessel (*n*). Our Navigators did not stay at this place without gaining an extensive acquaintance with the productions of the country, and the manners and customs of the inhabitants. The information which was obtained on these heads is detailed at large in Dr. Hawkesworth's narrative, and will be found to constitute a very valuable addition to what was heretofore known upon the subject.

(*n*) Hawkesworth, *ubi supra*, p. 704—723.

On Thursday the twenty-seventh of December, the Endeavour stood out to sea; and on the fifth of January, 1771, she came to an anchor, under the South-east side of Prince's Island. The design of this was to obtain a recruit of wood and water, and to procure some refreshments for the sick, many of whom had become much worse than they were

when they left Batavia. As soon as the vessel was secured, the Lieutenant, Mr. Banks, and Dr. Solander went on shore, and were conducted, by some Indians they met with, to a person who was represented to be the King of the country. After exchanging a few compliments with his Majesty, the Gentlemen proceeded to business, but could not immediately come to a settlement with him, in respect to the price of turtle. They were more successful in their search of a watering-place, having found water conveniently situated, and which they had reason to believe would prove good. As they were going off, some of the natives sold them three turtle, under a promise that the King should not be informed of the transaction. On the next day, a traffic was established with the Indians, upon such terms as were offered by the English; so that by night our people had plenty of turtle. The three which had been purchased the evening before, were in the mean time dressed for the ship's company, who, excepting on the preceding day, had not, for nearly the space of four months, been once served with salt provisions. Mr. Banks, in the evening, paid his respects to the King at his Palace, which was situated in the middle of a rice field. His Majesty was busily employed in dressing his own supper; but this did not prevent him from receiving his visitant in a very gracious manner. During the following days, the commerce with the natives for provisions was continued; in the course of which they brought down to the trading place, not only a quantity of turtle, but fowls, fish, monkeys, small deer, and some vegetables. On the evening of the eleventh, when Mr. Cook went on shore to see how those of his people conducted their business who were employed in wooding and watering, he was informed that an axe had been stolen. As it was a matter of consequence to prevent others from being encouraged to commit thefts of the like kind, he resolved not to pass over the offence, but to insist upon redress from the King. Accordingly, after some altercation, his Majesty promised that the axe should be restored in the morning, and the promise was faithfully performed. On the fifteenth, our Commander weighed, and stood out for sea (o). Prince's Island, where he lay about ten days, was formerly much frequented by the India ships of many nations, and especially those of England; but it had lately been forsaken, on account of the supposed badness of its water. This supposition, however, arose from a want of duly examining the brook by which the water is supplied. It is, indeed, brackish at the lower part of the brook, but higher up it will be found excellent. The Lieutenant, therefore, was clearly of opinion, that Prince's Island is a more eligible place for ships to touch at, than either at North Island or New Bay; from neither of which places any considerable quantity of other refreshments can be procured. As the Endeavour proceeded on her voyage to the Cape of Good Hope, the seeds of disease, which had been received at Batavia, appeared with the most threatening symptoms, and reduced our Navigators to a very melancholy situation. The ship was, in fact, nothing better than an hospital, in which those who could go about were not sufficient for a due attendance upon those who were sick. Left the water which had been taken in at Prince's Island should have had any share in adding to the disorder of the men, the Lieutenant ordered it to be purified with lime; and as a farther remedy against infection, he directed all the parts of the vessel between the decks to be washed with vinegar. The malady had taken too deep root to be speedily eradicated. Mr. Banks was reduced so low by it, that for some time there was no hope of his life; and so fatal was the disease to many others, that almost every night a dead body was committed to the sea. There were buried, in about the course of six weeks, Mr. Sporing, a Gentleman who was one of Mr. Banks's assistants, Mr. Parkinson, his Natural History Painter, Mr. Green the Astronomer [2], the Boatswain, the Carpenter and his mate, Mr. Monkhouse

(e) Java Head, from which the Lieutenant took his departure, lies in latitude $6^{\circ}49'$ South, and in longitude $253^{\circ}12'$ West.

[2] *Mr. Green the Astronomer.* Mr. Charles Green (the youngest son of Mr. Joshua Green of Swinton, near Rotherham, in Yorkshire, a considerable farmer, and a freeholder of the county) was born in the year 1735. The principal part of his education he derived from his eldest brother, the Rev. John Green, late of Denmark-street, Soho. Mr. John Green was master of a school in that place, and, after some time, took in his brother Charles, as an assistant teacher. In this situation, he made such a progress in astronomical knowledge, that, in the latter end of the year 1760, he became assistant to Dr. Bradley, at the Royal Observatory, at Greenwich. This was upon the occasion of Mr. Charles Mason's having quitted that office, to go to the Cape of Good Hope, for the purpose of observing the transit of Venus, in 1761. With Dr. Bradley Mr. Green remained at the observatory, till the Doctor's death, which happened in 1762. Upon Mr. Bliss's appointment to the place of Astronomer Royal, Mr. Green continued to be assistant to that Gentleman. As Mr. Bliss's health was very precarious, and his residence chiefly at Oxford, the principal care of the observations de-

veloped on Mr. Green. Indeed, he was so useful to Mr. Bliss, that when, in 1763, in conjunction with Dr. Maskelyne, he was appointed by the Commissioners of the Board of Longitude to go to Barbadoes, to make observations for the trial of Mr. Harrison's time-keeper, it was agreed that a temporary assistant only should be provided at Greenwich, till his return. Accordingly, he remained at the Observatory till the death of Mr. Bliss, in September, 1764, and the appointment of Dr. Maskelyne, in the spring following. After this, he was employed by a number of Gentlemen, who had formed a scheme of bringing water from some part of the river Coln, below Uxbridge, to Marybone. But Mr. Green having proved, by this survey, that there would be a deficiency of fall, if the water should be taken from the tail of the lowest mill in that stream, and objections being raised, by the proprietors of those mills, to the water's being taken above them, the design dropped. Mr. Green's appointment, by the Royal Society, to observe, together with Lieutenant Cook, the transit of Venus in 1769, having already been related in the course of this work, it is sufficient to add, that he fell a martyr to the

779—780.

house the Midshipman, another Midshipman, the old jolly Sail-maker and his assistant, the ship's Cook, the Corporal of the marines, two of the Carpenter's crew, and nine seamen. In all, the loss amounted to three and twenty persons, besides the seven who died at Batavia (p). It is probable that these calamitous events, which could not fail of making a powerful impression on the mind of Lieutenant Cook, might give occasion to his turning his thoughts more zealously to those methods of preserving the health of seamen, which he afterwards pursued with such remarkable success. On Friday the fifteenth of March, the Endeavour arrived off the Cape of Good Hope; and as soon as she was brought to an anchor, our Commander waited upon the Governor, from whom he received assurances that he should be furnished with every supply which the country could afford. His first care was to provide a proper place for the sick, whose number was not small; and a house was speedily found, where it was agreed that they should be lodged and boarded at the rate of two shillings a day for each person. The run from Java Head to the Cape of Good Hope did not furnish many subjects of remark that could be of any great use to future voyagers. Such observations, however, as occurred to him the Lieutenant has been careful to record, not being willing to omit the least circumstance that may contribute to the safety and facility of navigation. The Cape of Good Hope had been so often described before our people stopped there, that even if it had entered into my plan to give a particular account of the countries visited by Mr. Cook, and of the manners of their inhabitants, I should have omitted what Dr. Hawkesworth hath related concerning the place. It is sufficient, therefore, to say, that the Lieutenant, having lain at the Cape to recover the sick, to procure stores, and to refit his vessel, till the fourteenth of April, then stood out of the Bay, and proceeded in his voyage homeward. In the morning of the twenty-ninth, he crossed his first meridian, having circumnavigated the globe in the direction from East to West. The consequence of this was, that he had lost a day, an allowance for which had been made at Batavia. On the first of May he arrived at St. Helena, where he staid till the fourth to refresh; during which time Mr. Banks employed himself in making the complete circuit of the Island, and in visiting the places most worthy of observation. The manner in which slaves are described as being treated in this Island must be mentioned with indignation. According to our Commander's representation, while every kind of labour is performed by them, they are not furnished either with horses or with any of the various machines which art has invented to facilitate their task. Carts might conveniently be used in some parts, and where the ground is too steep for them, wheelbarrows might be employed to great advantage; and yet there is not a wheelbarrow in the whole Island. Though every thing which is conveyed from place to place is done by slaves alone, they have not the simple convenience of a porter's knot, but carry their burden upon their heads. They appeared to be a miserable race, worn out by the united operation of excessive labour and ill usage; and Mr. Cook was sorry to observe, and to say, that instances of wanton cruelty were much more frequent among his countrymen at St. Helena, than among the Dutch, who are generally reproached with want of humanity, both at Batavia and the Cape of Good Hope (q). It is impossible for a feeling mind to avoid being concerned that such an account should be given of the conduct of any who are entitled to the name of Britons. The Lieutenant's reproof, if just, hath, it may be hoped, long before this, reached the place, and produced some good effect [R]. If slavery, that

(q) *Ibid.* p. 781
—784-794-797.

the unwholesome air of Batavia; for though he lived to quit that place, he died twelve days afterwards, of a dysentery, on the 29th of January, 1771.

Mr. Green was tolerably well versed in most branches of the mathematics, and had a tincture of various other sciences. Metaphysical enquiries were his favourite pursuits; and he was more fond of displaying his knowledge in this respect than was conducive to his advantage. Though he loved his friend much, he sometimes shewed that he loved his jest better, by which he made himself enemies. He was a most excellent observer. Of this Dr. Maskelyne was so well convinced, that, though they had disagreed at Barbadoes, and were not afterwards on terms of friendship, the Doctor not only proposed him to the Royal Society, as the most proper person to observe the transit of Venus, but supported his interest with great earnestness, against some others of the Society, who wished to send out a different person. The observations of Mr. Green which particularly related to the transit of Venus, were printed in conjunction with those of Lieutenant Cook. His remaining ones, which are pretty numerous, are now preparing for publication, under the direction of the Commissioners of Longitude. Mr. Green was engaged for a time, in concert with Dr. Scott, the present Rector of Simonburn, Mr. Falconer, the author of the Shipwreck,

and some other persons, in writing a dictionary of arts and sciences; but he did not continue his assistance through more than half the work. Mr. Green, as a reward for his going to Barbadoes, had been appointed Purser of the Aurora frigate, which was afterwards made choice of to carry Mr. Vansittart, and the other Supervisors, out to India. As Mr. Green was then absent with Lieutenant Cook, his old colleague, Mr. Falconer, applied to the Commissioners of the Navy, for leave to exchange the Bristol, to which he belonged, for the Aurora. In consequence of this he was lost with her; and, probably, at no great distance, either of time or space, from where the body of her quondam purser, Mr. Green, was committed to the deep (6).

[R] *And produced some good effect.* Near the conclusion of Captain Cook's second voyage, there is the following short note. "In the account given of St. Helena, in the narrative of my former voyage, I find some mistakes. Its inhabitants are far from exercising a wanton cruelty over their slaves; and they have had wheel-carriages and porter's knots for many years." [vol. ii. p. 270.] This note I insert with pleasure. Nevertheless, I cannot think that the Lieutenant could have given so strong a representation of things, if, at the time in which it was written, it had been wholly without foundation.

(6) From the information of Mr. Wales.

disgrace

disgrace to religion, to humanity, and, I will add, to sound policy, must still be continued, every thing ought to be done which can tend to soften its horrors. When our Commander departed from St. Helena, on the fourth, it was in company with the Portland man of war, and twelve Indiamen. With this fleet he continued to sail till the tenth, when perceiving that the Endeavour proceeded much more heavily than any of the other vessels, and that she was not likely to get home so soon as the rest, he made a signal to speak with the Portland. Upon this Captain Elliot himself came on board, and Mr. Cook delivered to him the common log-books of his ship, and the journals of some of the officers. The Endeavour, however, kept in company with the fleet till the morning of the twenty-third, at which time there was not a single vessel in sight. On that day died Mr. Hicks, and in the evening his body was committed to the sea, with the usual ceremonies. Mr. Charles Clerke, a young man extremely well qualified for the station, and whose name will hereafter frequently occur, received an order from Mr. Cook to act as Lieutenant in Mr. Hicks's room. The rigging and sails of the ship were now become so bad, that something was continually giving way. Nevertheless, our Commander pursued his course in safety; and on the tenth of June, land, which proved to be the Lizard, was discovered by Nicholas Young, the boy who had first seen New Zealand. On the eleventh, the Lieutenant ran up the channel. At six the next morning he passed Beachy Head; and in the afternoon of the same day he came to an anchor in the Downs, and went on shore at Deal (r). Thus ended Mr. Cook's first voyage round the world, in which he had gone through so many dangers, explored so many countries, and exhibited the strongest proofs of his possessing an eminently sagacious and active mind; a mind that was equal to every perilous enterprize, and to the boldest and most successful efforts of navigation and discovery.

(r) Hawkesworth, *ubi supra*, p. 798, 799.

The manner in which Lieutenant Cook had performed his circumnavigation of the globe, justly entitled him to the protection of Government, and the favour of his Sovereign. Accordingly, he was promoted to be a Commander in his Majesty's navy, by commission bearing date on the twenty-ninth of August, 1771 (s). Mr. Cook, on this occasion, from a certain consciousness of his own merit, wished to have been appointed a Post Captain. But the Earl of Sandwich, who was now at the head of the Admiralty Board, though he had the greatest regard for our Navigator, could not concede to his request, because a compliance with it would have been inconsistent with the order of the naval service. The difference was in point of rank only, and not of advantage. A Commander has the same pay as a Post Captain, and his authority is the same when he is in actual employment. The distinction is a necessary step in the progress to the higher honours of the profession (t). It cannot be doubted, but that the President and Council of the Royal Society were highly satisfied with the manner in which the transit of Venus had been observed. The papers of Mr. Cook and Mr. Green, relative to this subject, were put into the hands of the Astronomer Royal, to be by him digested, and that he might deduce from them the important consequences to science which resulted from the observation. This was done by him with an accuracy and ability becoming his high knowledge and character. On the twenty-first of May, 1772, Captain Cook communicated to the Royal Society, in a letter addressed to Dr. Maskelyne, an "account of the flowing of the tides in the South Sea, as observed on board His Majesty's bark, the Endeavour (u)." The reputation our Navigator had acquired by his late voyage was deservedly great; and the desire of the public to be acquainted with the new scenes and new objects which were now brought to light, was ardently excited. It is not surprising, therefore, that different attempts were made to satisfy the general curiosity. There soon appeared a publication, entitled, "a Journal of a Voyage round the World." This was the production of some person who had been upon the expedition; and, though his account was dry and imperfect, it served, in a certain degree, to relieve the eagerness of enquiry. The Journal of Sydney Parkinson, draughtsman to Sir Joseph Banks, to whom it belonged by ample purchase, was likewise printed, from a copy surreptitiously obtained; but an injunction from the Court of Chancery for some time prevented its appearance. This work, though dishonestly given to the world, was recommended by its plates. But it was Dr. Hawkesworth's account of Lieutenant Cook's voyage which completely gratified the public curiosity. This account, which was written by authority, was drawn up from the journal of the Lieutenant, and the papers of Sir Joseph Banks; and, besides the merit of the composition, derived an extraordinary advantage from the number and excellence of its charts and engravings, which were furnished at the expence of Government. The large price given by the booksellers for this work, and the avidity with which it was read, displayed, in the strongest light, the anxiety of the nation to be fully informed in every thing that belonged to the late navigation and discoveries. Captain Cook, during his voyage, had sailed over the Pacific Ocean in many of those latitudes in which a southern continent had been expected to lie. He had ascertained that neither New Zealand nor New Holland were parts of such a continent. But the general question concerning its existence had not been determined by him, nor did he go out for that purpose, though some of the reasons on which the notion of it had been adopted were dispelled in the course of his navigation. It is well known

(s) From the books of the Admiralty.

(t) From the information of the Right Honourable the Earl of Sandwich.

(u) Philosophical Transactions, vol. lxii, p. 357, 358.

how fondly the idea of a *Terra Australis incognita* had for nearly two centuries been entertained. Many plausible philosophical arguments had been urged in its support, and many facts alleged in its favour. The writer of this narrative fully remembers how much his imagination was captivated, in the more early part of his life, with the hypothesis of a southern continent. He has often dwelt upon it with rapture, and been highly delighted with the authors who contended for its existence, and displayed the mighty consequences which would result from its being discovered. Though his knowledge was infinitely exceeded by that of some able men who had paid a particular attention to the subject, he did not come behind them in the sanguineness of his hopes and expectations. Every thing, however, which relates to science must be separated from fancy, and brought to the test of experiment: and here was an experiment richly deserving to be tried. The object, indeed, was of peculiar magnitude, and worthy to be pursued by a great Prince, and a great nation. Happily, the period was arrived in Britain for the execution of the most important scientific designs. As regard to matters of this kind, though so honourable to crowned heads, had heretofore been too much neglected even by some of the best of our Princes. Our present Sovereign had already distinguished his reign by his patronage of science and literature; but the beginnings which had hitherto been made were only the pledges of future munificence. With respect to the object now in view, the gracious dispositions of His Majesty were ardently seconded by the noble Lord who had been placed at the head of the Board of Admiralty. The Earl of Sandwich was possessed of a mind which was capable of comprehending and encouraging the most enlarged views and schemes with regard to navigation and discovery. Accordingly, it was by his particular recommendation that a resolution was formed for the appointment of an expedition, finally to determine the question concerning the existence of a southern continent [S]. Quiros seems to have been the first person who had any idea that such a continent existed, and he was the first that was sent out for the sole purpose of ascertaining the fact. He did not succeed in the attempt; and the attempts of various navigators, down to the present century, were equally unsuccessful (x). When the design of accomplishing this great object was resolved upon, it did not admit of any hesitation by whom it was to be carried into execution. No person was esteemed equally qualified with Captain Cook, for conducting an enterprize the view of which was to give the utmost possible extent to the geography of the globe, and the knowledge of navigation. For the greater advantage of the undertaking, it was determined that two ships should be employed; and much attention was paid to the choice of them, and to their equipment for the service. After mature deliberation by the Navy Board, during which particular regard was had to the Captain's wisdom and experience, it was agreed, that no vessels were so proper for discoveries in distant unknown parts, as those which were constructed like the Endeavour. This opinion concurring with that of the Earl of Sandwich, the Admiralty came to a resolution, that two ships should be provided of a similar construction. Accordingly, two vessels, both of which had been built at Whitby, by the same person who built the Endeavour, were purchased of Captain William Hammond, of Hull. They were about fourteen or sixteen months old at the time when they were bought, and, in Captain Cook's judgment, were as well adapted to the intended service as if they had been expressly constructed for that purpose. The largest of the two, which consisted of four hundred and sixty-two tons burthen, was named the Resolution. To the other, which was three hundred and thirty-six tons burthen, was given the name of the Adventure. On the twenty-eighth of November, 1771, Captain Cook was appointed to the command of the former; and, about the same time, Mr. Tobias Furneaux was promoted to the command of the latter. The complement of the Resolution, including officers and men, was fixed at a hundred and twelve persons; and that of the Adventure, at eighty-one. In the equipment of these ships, every circumstance was attended to that could contribute to the comfort and success of the voyage. They were fitted in the most complete manner, and supplied with every extraordinary article which was suggested to be necessary or useful. Lord Sandwich, whose zeal was indefatigable upon this occasion, visited the vessels from time to time, to be assured that the whole equipment was agreeable to his wishes, and to the satisfaction of those who were to engage in the expedition. Nor were the Navy and Victualling Boards wanting in procuring for the ships the very best of stores and provisions, with some alterations in the species of them, that were adapted to the nature of the enterprize; besides which, there was an ample supply of antiscorbutic articles, such as malt, sour krout, salted cabbage, portable broth, saloup, mustard, marmalade of carrots, and inspissated juice of wort and beer. No less attention was paid to the cause of science in general. The Admiralty engaged Mr. William Hodges, an excellent landscape painter, to embark in the voyage, in order to make drawings and paintings of such objects as could not so well be comprehended from written descriptions. Mr. John Reinhold Forster and his son were fixed

(x) Introduction to the Voyage towards the South Pole, and round the World, p. xi.

[S] Concerning the existence of a southern continent.] lumes, quarto, of the several voyages and discoveries Mr. Dalrymple had renewed the attention of the public in the South Pacific Ocean. The first volume appeared in 1770, and the second in 1771.

(y) General Introduction, *ubi supra*, p. xxiii—xxxv.

upon to explore and collect the natural history of the countries which might be visited, and an ample sum was granted by Parliament for the purpose. That nothing might be wanting to accomplish the scientific views of the expedition, the Board of Longitude agreed with Mr. William Wales and Mr. William Bayley, to make astronomical observations. Mr. Wales was stationed in the *Resolution*, and Mr. Bayley in the *Adventure*. By the same Board they were furnished with the best of instruments, and particularly with four time-pieces, three constructed by Mr. Arnold, and one by Mr. Kendal on Mr. Harrison's principles (y). Though Captain Cook had been appointed to the command of the *Resolution* on the twenty-eighth of November, 1771, such were the preparations necessary for so long and important a voyage, and the impediments which occasionally and unavoidably occurred, that the ship did not sail from Deptford till the ninth of April following, nor did she leave Long Reach till the tenth of May. In plying down the river, it was found necessary to put into Sheerness, in order to make some alterations in her upper works. These the officers of the yard were directed immediately to take in hand; and Lord Sandwich and Sir Hugh Palliser came down to see them executed in the most effectual manner. The ship being again completed for sea by the twenty-second of June, Captain Cook on that day sailed from Sheerness, and, on the third of July, joined the *Adventure* in Plymouth Sound. Lord Sandwich, in his return from a visit to the dockyards, having met the *Resolution* on the preceding evening, his Lordship and Sir Hugh Palliser gave the last mark of their great attention to the object of the voyage, by coming on board, to assure themselves that every thing was done which was agreeable to our Commander's wishes, and that his vessel was equipped entirely to his satisfaction. At Plymouth Captain Cook received his instructions; with regard to which, without entering into a minute detail of them, it is sufficient to say, that he was sent out upon the most enlarged plan of discovery that is known in the history of navigation. He was instructed not only to circumnavigate the whole globe, but to circumnavigate it in high southern latitudes, making such traverses, from time to time, into every corner of the Pacific Ocean not before examined, as might finally and effectually resolve the much agitated question about the existence of a southern continent, in any part of the southern hemisphere to which access could be had by the efforts of the boldest and most skilful navigators (z).

(z) Cook's Voyage towards the South Pole, and round the World, p. 1, 2. Introduction to the Voyage to the Pacific Ocean, p. xix.

On the thirteenth of July, Captain Cook sailed from Plymouth, and on the twenty-ninth of the same month anchored in Funchiale Road, in the Island of Madeira. Having obtained a supply of water, wine, and other necessaries at that Island, he left it on the first of August, and sailed to the southward. As he proceeded in his voyage, he made three puncheons of beer of the inspissated juice of malt; and the liquor produced was very brisk and drinkable. The heat of the weather, and the agitation of the ship, had hitherto withstood all the endeavours of our people to prevent this juice from being in a high state of fermentation. If it could be kept from fermenting, it would be a most valuable article at sea. The Captain having found that his stock of water would not last to the Cape of Good Hope, without putting his men to a scanty allowance, resolved to stop at St. Jago, one of the Cape de Verd Islands, for a supply. At Port Praya, in this Island, he anchored on the tenth of August, and by the fourteenth had completed his water, and procured some other refreshments; upon which he set sail, and prosecuted his course. He embraced the occasion, which his touching at St. Jago afforded him, of giving such a delineation and description of Port Praya, and of the supplies there to be obtained, as might be of service to future navigators. On the twentieth of the month, the rain poured down upon our Voyagers, not in drops, but in streams; and the wind, at the same time, being variable and rough, the people were obliged to attend so constantly upon the decks, that few of them escaped being completely soaked. This circumstance is mentioned to shew the method that was taken by Captain Cook to preserve his men from the evil consequences of the wet to which they had been exposed. He had every thing to fear from the rain, which is a great promoter of sickness in hot climates. But to guard against this effect, he pursued some hints that had been suggested to him by Sir Hugh Palliser and Captain Campbell, and took care that the ship should be aired and dried with fires made between the decks, and that the damp places of the vessel should be smoked; beside which, the people were ordered to air their bedding, and to wash and dry their clothes, whenever there was an opportunity. The result of these precautions was, that there was not one sick person on board the *Resolution*. Captain Cook, on the eighth of September, crossed the line in the longitude of 8° West, and proceeded, without meeting any thing remarkable, till the eleventh of October, when at 6^h 24^m 12^s, by Mr. Kendal's watch, the moon rose about four digits eclipsed; soon after which the Gentlemen prepared to observe the end of the eclipse. The observers were, the Captain himself, and Mr. Forster, Mr. Wales, Mr. Pickersgill, Mr. Gilbert, and Mr. Harvey. Our Commander had been informed, before he left England, that he sailed at an improper season of the year, and that he should meet with much calm weather, near and under the line. But though such weather may happen in some years, it is not always, or even generally, to be expected. So far was it

it from being the case with Captain Cook, that he had a brisk South-west wind in those very latitudes where the calms had been predicted: nor was he exposed to any of the tornadoes, which are so much spoken of by other navigators. On the twenty-ninth of the month, between eight and nine o'clock at night, when our Voyagers were near the Cape of Good Hope, the whole sea, within the compass of their sight, became at once, as it were, illuminated. The Captain had been formerly convinced, by Mr. Banks and Dr. Solander, that such appearances in the ocean were occasioned by insects. Mr. Forster, however, seemed disposed to adopt a different opinion. To determine the question, our Commander ordered some buckets of water to be drawn up from along-side the ship, which were found full of an innumerable quantity of small globular insects, about the size of a common pin's head, and quite transparent. Though no life was perceived in them, there could be no doubt of their being living animals, when in their own proper element; and Mr. Forster became now well satisfied that they were the cause of the sea's illumination (a). On the thirtieth, the Resolution and Adventure anchored in Table Bay; soon after which Captain Cook went on shore, and, accompanied by Captain Furneaux, and the two Mr. Forsters, waited on Baron Plettenberg, the Governor of the Cape of Good Hope, who received the Gentlemen with great politeness, and promised them every assistance the place could afford. From him our Commander learned that two French ships from the Mauritius, about eight months before, had discovered land, in the latitude of 48° South, along which they sailed forty miles, till they came to a bay, into which they were upon the point of entering, when they were driven off and separated in a hard gale of wind. Previously to this misfortune, they had lost some of their boats and people, that had been sent to sound the bay. Captain Cook was also informed by Baron Plettenberg, that in the month of March, two other French ships from the Island of Mauritius, had touched at the Cape in their way to the South Pacific Ocean; where they were going to make discoveries, under the command of M. Marion. From the healthy condition of the crews both of the Resolution and Adventure, it was imagined by the Captain that his stay at the Cape would be very short. But the necessity of waiting till the requisite provisions could be prepared and collected, kept him more than three weeks at this place; which time was improved by him in ordering both the ships to be caulked and painted, and in taking care that, in every respect, their condition should be as good as when they left England. On the twenty-second of November, our Commander sailed from the Cape of Good Hope, and proceeded on his voyage, in search of a southern continent. Having gotten clear of the land, he directed his course for Cape Circumcision; and judging that cold weather would soon approach, he ordered slops to be served to such of the people as were in want of them, and gave to each man the farnought jacket and trowsers allowed by the Admiralty. On the twenty-ninth, the wind, which was West-north-west, increased to a storm, that continued, with some few intervals of moderate weather, till the sixth of December (b). By this gale, which was attended with hail and rain, and which blew at times with such violence that the ships could carry no sails, our Voyagers were driven far to the eastward of their intended course, and no hopes were left to the Captain of reaching Cape Circumcision. A still greater misfortune was the loss of the principal part of the live stock on board, consisting of sheep, hogs, and geese. At the same time, the sudden transition from warm, mild weather, to weather which was extremely cold and wet, was so severely felt by our people, that it was necessary to make some addition to their allowance of spirits, by giving each of them a dram on particular occasions. Our Navigators, on the tenth of December, began to meet with islands of ice (c). One of these islands was so much concealed from them by the haziness of the weather, accompanied with snow and fleet, that they were steering directly towards it, and did not see it till it was at a less distance than that of a mile. Captain Cook judged it to be about fifty feet high, and half a mile in circuit. It was flat at the top, and its sides rose in a perpendicular direction, against which the sea broke to a great height. The weather continuing to be hazy, the Captain, on account of the ice islands, was obliged to proceed with the utmost caution. Six of them were passed on the twelfth, some of which were nearly two miles in circuit, and sixty feet high: nevertheless, such were the force and height of the waves, that the sea broke quite over them. Hence was exhibited a view that for a few moments was pleasing to the eye; but the pleasure was soon swallowed up in the horror which seized upon the mind, from the prospect of danger. For if a ship should be so unfortunate as to get on the weather side of one of these islands, she would be dashed to pieces in a moment. The vessels, on the fourteenth, were stopped by an immense field of low ice, to which no end could be seen, either to the East, West, or South. In different parts of this field, were islands or hills of ice, like those which our Voyagers had found floating in the sea, and twenty of which had presented themselves to view the day before. Some of the people on board imagined that they saw land over the ice, and Captain Cook himself at first entertained the same sentiment. But upon more narrowly examining these ice hills, and the various appearances they made when seen through the haze, he was induced to change his opinion. On the eighteenth, though in the morning our Navigators had been quite imbayed, they were, notwithstanding, at length enabled to get clear of the field

(a) Cook's Voyage, *ubi supra*, p. 5—15.
Forster's Voyage round the World, vol. i. p. 54—57.

(b) The ships were now in the latitude of 48° 41' South, and longitude 28° 24' East.

(c) They were then in the latitude of 50° 40' South, and longitude 2° 0' East of the Cape of Good Hope.

field of ice. They were, however, at the same time, carried in among the ice islands, which perpetually succeeded one another; which were almost equally dangerous; and the avoiding of which was a matter of the greatest difficulty. But perilous as it is to sail in a thick fog, among these floating rocks, as our Commander properly called them; this is preferable to the being entangled with immense fields of ice under the same circumstances. In this latter case the great danger to be apprehended, is the getting fast in the ice; a situation which would be alarming in the highest degree (*d*). It had been a generally received opinion, that such ice as hath now been described, is formed in bays and rivers. Agreeably to this supposition, our Voyagers were led to believe that land was not far distant, and that it lay to the southward behind the ice. As, therefore, they had sailed above thirty leagues along the edge of the ice, without finding a passage to the South, Captain Cook determined to run thirty or forty leagues to the East, and afterwards to endeavour to get to the southward. If in this attempt he met with no land or other impediment, his design was to stretch behind the ice, and thus to bring the matter to a decision. The weather, at this time, affected the senses with a feeling of cold much greater than that which was pointed out by the thermometer (*e*), so that the whole crew complained. In order the better to enable them to sustain the severity of the cold, the Captain directed the sleeves of their jackets to be lengthened with baize; and had a cap made for each man of the same stuff, strengthened with canvass. These precautions greatly contributed to their comfort and advantage. It is worthy of observation, that although the weather was as sharp, on the twenty-fifth of December, as might have been expected, in the same month of the year, in any part of England, this was the middle of summer with our Navigators. Some of the people now appearing to have symptoms of the scurvy, fresh wort was given them every day, prepared, under the direction of the Surgeons, from the malt which had been provided for the purpose. By the twenty-ninth, it became sufficiently ascertained, from the course our Commander had pursued, that the field of ice, along which the ships had sailed, did not join to any land, as had been conjectured (*f*). At this time, Captain Cook came to a resolution, provided he met with no impediment, to run as far West as the meridian of Cape Circumcision. While he was prosecuting this design, a gale arose, on the thirty-first, which brought with it such a sea as rendered it very dangerous for the vessels to remain among the ice; and the danger was increased by discovering an immense field to the North, which extended farther than the eye could reach. As our Voyagers were not above two or three miles from this field, and were surrounded by loose ice, there was no time to deliberate. They hauled to the South; and though they happily got clear, it was not till the ships had received several hard knocks from the loose pieces, which were of the largest kind. On Friday the first of January, 1773, the gale abated; and, on the next day in the afternoon, our people had the felicity of enjoying the sight of the moon, the face of which had been seen by them but once since they had departed from the Cape of Good Hope. Hence a judgment may be formed of the sort of weather they had been exposed to, from the time of their leaving that place. The present opportunity was eagerly seized, for making several observations of the sun and moon (*g*). Captain Cook was now nearly in the same longitude which is assigned to Cape Circumcision, and about ninety five leagues to the South of the latitude in which it is said to lie. At the same time, the weather was so clear, that land might have been seen at the distance of fourteen or fifteen leagues. He concluded it, therefore, to be very probable, that what Bouvet took for land was nothing but mountains of ice, surrounded by loose or field ice. Our present Navigators had naturally been led into a similar mistake. The conjecture, that such ice as had lately been seen was joined to land, was a very plausible one, though not founded on fact. Upon the whole, there was good reason to believe, that no land was to be met with, under this meridian, between the latitude of fifty-five and fifty-nine, where some had been supposed to exist. Amidst the obstructions Captain Cook was exposed to, from the ice islands which perpetually succeeded each other, he derived one advantage from them, and that was, a supply of fresh water. Though the melting and flowing away the ice takes up some time, and is, indeed, rather tedious, this method of watering is otherwise the most expeditious our Commander had ever known. The water produced was perfectly sweet and well tasted. Upon the ice islands penguins, albatrosses, and other birds were frequently seen. It had hitherto been the received opinion, that such birds never go far from land, and that the sight of them is a sure indication of its vicinity. That this opinion is not well founded, at least where ice islands exist, was now evinced by multiplied experience. By Sunday the seventeenth of January, Captain Cook reached the latitude of $67^{\circ} 15'$ South, when he could advance no farther. At this time the ice was entirely closed to the South, in the whole extent from East to West-south-west, without the least appearance of any opening. The Captain, therefore, thought it no longer prudent to persevere in sailing southward; especially as the summer was already half spent, and there was little reason to hope that it would be found practicable to get round the ice. Having taken this resolution, he determined to proceed directly in search of the land which had lately been discovered by the French; and as, in pursuing his purpose, the weather was clear at intervals, he spread the ships abreast four miles from each other,

 $58^{\circ} 53' 30''$
South.

other, in order the better to investigate any thing that might lie in their way. On the first of February, our Voyagers were in the latitude of $48^{\circ} 30'$ South, and in longitude $58^{\circ} 7'$ East, nearly in the meridian of the Island of St. Mauritius. This was the situation in which the land said to have been discovered by the French was to be expected; but as no signs of it had appeared, our Commander bore away to the East. Captain Furneaux, on the same day, informed Captain Cook that he had just seen a large float of sea or rock weed, and about it several of the birds called divers. These were certain signs of the vicinity of land, though whether it lay to the East or West could not possibly be known. Our Commander, therefore, formed the design of proceeding in his present latitude four or five degrees of longitude to the West of the meridian he was now in, and then to pursue his researches eastward. The West and North-west winds, which had continued for some days, prevented him from carrying this purpose into execution. However, he was convinced, from the perpetual high sea he had lately met with, that there could be no great extent of land to the West. While Captain Cook, on the next day, was steering eastward (b), Captain Furneaux told him that he thought the land was to the North-west of them; as he had, at one time, observed the sea to be smooth when the wind blew in that direction. This observation was by no means conformable to the remarks which had been made by our Commander himself. Nevertheless, such was his readiness to attend to every suggestion, that he resolved to clear up the point, if the wind would admit of his getting to the West in any reasonable time. The wind, by veering to the North, did admit of his pursuing the search; and the result of it was, his conviction that if any land was near, it could only be an Island of no considerable extent. Captain Cook and his philosophical friends, while they were traversing this part of the southern ocean, paid particular attention to the variation of the compass, which they found to be from $27^{\circ} 50'$, to $30^{\circ} 26'$ West. Probably the mean of the two extremes, viz. $29^{\circ} 4'$, was the nearest the truth, as it coincided with the variation observed on board the Adventure. One unaccountable circumstance is worthy of notice, though it did not now occur for the first time. It is, that when the sun was on the starboard of the ship, the variation was the least; and when on the larboard side, the greatest. On the eighth, our Commander, in consequence of no signals having been answered by the Adventure, had reason to apprehend that a separation had taken place. After waiting two days, during which guns were kept discharging, and false fires were burnt in the night, the fact was confirmed; so that the Resolution was obliged to proceed alone in her voyage. As she pursued her course, penguins and other birds, from time to time, appeared in great numbers; the meeting with which gave our Navigators some hopes of finding land, and occasioned various speculations with regard to its situation. Experience, however, convinced them that no stress was to be laid on such hopes. They were so often deceived, that they could no longer look upon any of the oceanic birds, which frequent high latitudes, as sure signs of the vicinity of land. In the morning of the seventeenth, between midnight and three o'clock, lights were seen in the heavens, similar to those which are known in the northern hemisphere, by the name of the Aurora Borealis. Captain Cook had never heard that an Aurora Australis had been seen before. The officer of the watch observed that it sometimes broke out in spiral rays, and in a circular form; at which time its light was very strong, and its appearance beautiful. It was not perceived to have any particular direction. On the contrary, at various times, it was conspicuous in different parts of the heavens, and diffused its light throughout the whole atmosphere. On the twentieth, our Navigators imagined that they saw land to the South-west. Their conviction of its real existence was so strong, that they had no doubt of the matter; and accordingly they endeavoured to work up to it, in doing which the weather was favourable to their purpose. However, what had been taken for land proved only to be clouds, that in the evening entirely disappeared, and left a clear horizon, in which nothing could be discerned but ice islands. At night the Aurora Australis was again seen, and the appearance it assumed was very brilliant and luminous. It first discovered itself in the east, and in a short time spread over the whole heavens. In the night of the twenty-third, when the ship was in latitude $61^{\circ} 52'$ South, and longitude $95^{\circ} 2'$ East, the weather being exceedingly stormy, thick, and hazy, with sleet and snow, our Voyagers were on every side surrounded with danger. In such a situation, it was natural for them to wish for day-light: but day-light, when it came, served only to increase their apprehensions, by exhibiting those huge mountains of ice to their view, which the darkness had prevented them from seeing. These unfavourable circumstances, at so advanced a season of the year, discouraged Captain Cook from putting in execution a resolution he had formed of once more crossing the antarctic circle. Accordingly, early in the morning of the twenty-fourth, he stood to the North, with a very hard gale, and a very high sea, which made great destruction among the ice islands. But so far was this incident from being of any advantage to our Navigators, that it greatly increased the number of pieces they had to avoid. The large pieces which broke from the ice islands, were found to be much more dangerous than the islands themselves. While the latter rose so high out of the water, that they could generally be seen, unless the weather was very thick and hazy, before our people nearly approached them, the others could not be discerned, in the night,

(b) He was now
in the latitude
of $49^{\circ} 33'$
South.

till they were under the ship's bows. These dangers, however, were now become so familiar to the Captain and his company, that the apprehensions they caused were never of long duration; and a compensation was, in some degree, made for them, by the seasonable supplies of fresh water which the ice islands afforded, and by their very romantic appearance. The foaming and dashing of the waves into the curious holes and caverns which were formed in many of them, greatly heightened the scene; and the whole exhibited a view that at once filled the mind with admiration and horror, and could only be described by the hand of an able painter. In sailing from the twenty-fifth to the twenty-eighth, the wind was accompanied with a large hollow sea, which rendered Captain Cook certain that no land, of any considerable extent, could lie within a hundred or a hundred and fifty leagues from East to South-west. Though this was still the summer season in that part of the world, and the weather was becoming somewhat warmer than it had been before, yet such were the effects of the cold, that a sow having farrowed nine pigs in the morning, all of them, notwithstanding the utmost care to prevent it, were killed before four o'clock in the afternoon. From the same cause, the Captain himself and several of his people had their fingers and toes chilblained. For some days afterward, the cold considerably abated; but still it could not be said that there was summer weather, according to our Commander's ideas of summer in the northern hemisphere as far as sixty degrees of latitude, which was nearly as far as he had then been. As he proceeded on his voyage, from the twenty-eighth of February to the eleventh of March, he had ample reason to conclude, from the swell of the sea and other circumstances, that there could be no land to the South, but what must lie at a great distance. The weather having been clear on the thirteenth and fourteenth, Mr. Wales had an opportunity of getting some observations of the sun and moon; the results of which, reduced to noon, when the latitude was $58^{\circ} 22'$ South, gave $136^{\circ} 22'$ East longitude. Mr. Kendal's and Mr. Arnold's watches gave each of them $134^{\circ} 42'$; and this was the first and only time in which they had pointed out the same longitude since the ships had departed from England. The greatest difference, however, between them, since our Voyagers had left the Cape, had not much exceeded two degrees. From the moderate, and what might almost be called pleasant weather, which had occurred for two or three days, Captain Cook began to wish that he had been a few degrees of latitude farther South; and he was even tempted to incline his course that way. But he soon met with weather which convinced him that he had proceeded full far enough; and that the time was approaching when these seas could not be navigated without enduring intense cold. As he advanced in his course, he became perfectly assured, from repeated proofs, that he had left no land behind him in the direction of West-south-west; and that no land lay to the South on this side sixty degrees of latitude. He came, therefore, to a resolution, on the seventeenth (i), to quit the high southern latitudes, and to proceed to New Zealand, with a view of looking for the Adventure, and of refreshing his people. He had, also, some thoughts, and even a desire of visiting the East coast of Van Diemen's Land, in order to satisfy himself whether it joined the coast of New South Wales. The wind, however, not permitting him to execute this part of his design, he shaped his course for New Zealand, in sight of which he arrived on the twenty-fifth, and where he came to anchor on the day following, in Dusky Bay. He had now been a hundred and seventeen days at sea, during which time he had sailed three thousand six hundred and sixty leagues, without once coming within sight of land.

(i) The Resolution was now in latitude $59^{\circ} 7'$ South, and longitude $146^{\circ} 53'$ East.

(k) Cook's Voyage, *ubi supra*, p. 28—68.

After so long a voyage, in a high southern latitude, it might reasonably have been expected that many of Captain Cook's people would be ill of the scurvy. This, however, was not the case. So salutary were the effects of the sweet wort, and several articles of provision, and especially of the frequent airing and sweetening of the ship, that there was only one man on board who could be said to be much afflicted with the disease; and even in that man, it was chiefly occasioned by a bad habit of body, and a complication of other disorders (k). As our commander did not like the place in which he had anchored, he sent Lieutenant Pickersgill over to the South-east side of the bay, in search of a better; and the Lieutenant succeeded in finding a harbour that was in every respect desirable. In the mean while, the fishing-boat was very successful; returning with fish sufficient for the whole crew's supper; and in the morning of the next day, as many were caught as served for dinner. Hence were derived certain hopes of being plentifully supplied with this article. Nor did the shores and woods appear less destitute of wild-fowl; so that our people had the prospect of enjoying, with ease, what, in their situation, might be called the luxuries of life. These agreeable circumstances determined Captain Cook to stay some time in the bay, in order to examine it thoroughly; as no one had ever landed before on any of the southern parts of New Zealand. On the twenty-seventh, the ship entered PICKERSGILL HARBOUR; for so it was called, from the name of the Gentleman by whom it had first been discovered. Here wood, for fuel and other purposes, was immediately at hand; and a fine stream of fresh-water was not above a hundred yards from the stern of the vessel. Our voyagers, being thus advantageously situated, began vigorously to prepare for their necessary occupations, by clearing places in the woods, in order to set up the Astronomer's observatory, and the forge for the iron work, and to erect tents for the sail-

fail-makers and coopers. They applied themselves, also, to the brewing of beer from the branches or leaves of a tree which greatly resembled the American black spruce. Captain Cook was persuaded, from the knowledge which he had of this tree, and from the similarity it bore to the spruce, that, with the addition of inspissated juice of wort and melasses, it would make a very wholesome liquor, and supply the want of vegetables, of which the country was destitute. It appeared, by the event, that he was not mistaken in his judgment. Several of the natives were seen on the twenty-eighth, who took little notice of the English, and were very shy of access; and the Captain did not choose to force an intercourse with them, as he had been instructed, by former experience, that the best method of obtaining it was to leave the time and place to themselves. While our Commander continued in his present situation, he took every opportunity of examining the bay. As he was prosecuting his survey of it, on the sixth of April, his attention was directed to the North side, where he discovered a fine capacious cove, in the bottom of which is a fresh-water river. On the West side are several beautiful cascades; and the shores are so steep, that water might directly be conveyed from them into the ship. Fourteen ducks, besides other birds, having been shot in this place, he gave it the name of **Duck Cove**. When he was returning in the evening, he met with three of the natives, one man and two women, whose fears he soon dissipated, and whom he engaged in a conversation, that was little understood on either side. The youngest of the women had a volubility of tongue that could not be exceeded; and she entertained Captain Cook, and the Gentlemen who accompanied him, with a dance. By degrees, our Commander obtained the good-will and confidence of the Indians. His presents, however, were at first received with much indifference, hatchets and spike-nails excepted. At a visit, on the twelfth, from a family of the natives, the Captain, perceiving that they approached the ship with great caution, met them in a boat, which he quitted when he came near them, and went into their canoe. After all, he could not prevail upon them to go on board the *Resolution*; but at length they put on shore in a little creek, and seating themselves abreast of the English vessel, entered into familiar conversation with several of the officers and seamen; in which they paid a much greater regard to some, whom they probably mistook for females, than to others. So well, indeed, were they now reconciled to our Voyagers, that they took up their quarters nearly within the distance of a hundred yards from the ship's watering-place. Captain Cook, in his interview with them, had caused the bag-pipes and fife to play, and the drum to beat. The two former they heard with apparent insensibility; but the latter excited in them a certain degree of attention. On the eighteenth, a Chief, with whom some connections had already been formed, was induced, together with his daughter, to come on board the *Resolution*. Previously to his doing it, he presented the Captain with a piece of cloth and a green talk hatchet. He gave also a piece of cloth to Mr. Forster; and the girl gave another to Mr. Hodges. Though this custom of making presents, before any are received, is common with the natives of the South Sea Isles, our Commander had never till now seen it practised in New Zealand. Another thing performed by the Chief before he went on board, was the taking of a small green branch in his hand, with which he struck the ship's side several times, repeating a speech or prayer. This manner, as it were, of making peace, is likewise prevalent among all the nations of the South Seas. When the Chief was carried into the cabin, he viewed every part of it with some degree of surprise; but it was not possible to fix his attention to any one object for a single moment. The works of art appeared to him in the same light as those of nature, and were equally distant from his powers of comprehension. He and his daughter seemed to be the most struck with the number of the decks, and other parts of the ship. As Captain Cook proceeded in examining Dusky Bay, he occasionally met with some few more of the natives, with regard to whom he used every mode of conciliation. On the twentieth, the Chief and his family, who had been more intimate with our Navigators than any of the rest of the Indians, went away, and never returned again. This was the more extraordinary, as in all his visits he had been gratified with presents. From different persons, he had gotten nine or ten hatchets, and three or four times that number of large spike-nails, besides a variety of other articles. So far as these things might be deemed riches in New Zealand, he was undoubtedly become by far the most wealthy man in the whole country. One employment of our Voyagers, while in Dusky Bay, consisted in seal-hunting, an animal which was found serviceable for three purposes. The skins were made use of for rigging, the fat afforded oil for the lamps, and the flesh was eaten. On the twenty-fourth, the Captain, having five geese remaining of those he had brought with him from the Cape of Good Hope, went and left them at a place to which he gave the name of **Goose Cove**. This place he fixed upon for two reasons; first, because there were no inhabitants to disturb them; and secondly, because here was the greatest supply of proper food; so that he had no doubt of their breeding, and hoped that in time they might spread over the whole country, to its eminent advantage. Some days afterward, when every thing belonging to the ship had been removed from the shore, he set fire to the topwood, in order to dry a piece of ground, which he dug up, and sowed with several sorts of garden seeds. The soil, indeed, was not such as to promise much success to the planter; but it was the best that

that could be discovered. The twenty-fifth of April was the eighth fair day our people had successively enjoyed; and there was reason to believe that such a circumstance was very uncommon in the place where they now lay, and at that season of the year. This favourable weather afforded them the opportunity of more speedily completing their wood and water, and of putting the ship into a condition for sea. On the evening of the twenty-fifth, it began to rain; and the weather was afterward extremely variable, being, at times, in a high degree, wet, cold, and stormy. Nothing, however, prevented Captain Cook from prosecuting, with his usual sagacity and diligence, his search into every part of Dusky Bay; and, as there are few places in New Zealand where necessary refreshments may be so plentifully obtained as in this bay, he hath taken care to give such a description of it, and of the adjacent country, as may be of service to succeeding navigators. Although this country lies far remote from what is now the trading part of the world, yet, as he justly observes, we can by no means tell what use future ages may derive from the discoveries made in the present. The various anchoring places are delineated on our Commander's chart, and the most convenient of them he has particularly described. Not only about Dusky Bay, but through all the southern part of the western coast of Tavai-poenam-moo, the country is exceedingly mountainous. A prospect more rude and craggy is rarely to be met with; for inland there are only to be seen the summits of mountains of a tremendous height, and consisting of rocks that are totally barren and naked, excepting where they are covered with snow. But the land which borders on the sea coast is thickly clothed with wood, almost down to the water's edge; and this is the case with regard to all the adjoining Islands. The trees are of various kinds, and are fit for almost every possible use. Excepting in the river Thames, Captain Cook had not found finer timber in all New Zealand; the most considerable species of which is the spruce-tree; for that name he had given it from the similarity of its foliage to the American spruce, though the wood is more ponderous, and bears a greater resemblance to the pitch pine. Many of these trees are so large, that they would be able to furnish main-masts for fifty gun ships. Amidst the variety of aromatic trees and shrubs which this part of New Zealand produced, there were none which bore fruit fit to be eaten. But for a farther account of the soils, vegetable productions, and animals of the coast, I must refer to the Captain's own narrative; only taking notice, that the country was not found so destitute of quadrupeds as was formerly imagined. As Dusky Bay presented many advantages to our Navigators, so it was attended with some disagreeable circumstances. There were great numbers of small black sand flies, which were troublesome to a degree that our Commander had never experienced before. Another evil arose from the continual quantity of rain that occurred in the bay. This might, indeed, in part proceed from the season of the year: but it is probable that the country must at all times be subject to much wet weather, in consequence of the vast height, and vicinity of the mountains. It was remarkable that the rain, though our people were perpetually exposed to it, was not productive of any evil consequences. On the contrary, such of the men as were sick and complaining when they entered the bay, recovered daily, and the whole crew soon became strong and vigorous. So happy a circumstance could only be attributed to the healthiness of the place, and the fresh provisions it afforded; among which, the beer was a very material article. The inhabitants of Dusky Bay are of the same race with the other natives of New Zealand, speak the same language, and adhere nearly to the same customs. Their mode of life appears to be a wandering one; and though they are few in number, no traces were remarked of their families being connected together in any close bonds of union or friendship. While the Resolution lay in the bay, Mr. Wales made a variety of scientific observations, relative to latitude and longitude^(l), the variation of the compass, and the diversities of the tides; a short account of which Captain Cook has given in his voyage, for the instruction and benefit of the public^(m).

(l) The latitude of Mr. Wales's observatory at Pickersgill harbour was $45^{\circ} 47' 26\frac{1}{2}''$ South; and its longitude $166^{\circ} 18'$ East.
(m) Cook, *ubi supra*, p. 69—102.

When Captain Cook left Dusky Bay, he directed his course for Queen Charlotte's Sound, where he expected to find the Adventure. This was on the eleventh of May, and nothing remarkable occurred till the seventeenth, when the wind at once flattened to a calm, the sky became suddenly obscured by dark dense clouds, and there was every prognostication of a tempest. Soon after, six water-spouts were seen, four of which rose and spent themselves between the ship and the land; the fifth was at a considerable distance on the other side of the vessel; and the sixth, the progressive motion of which was not in a straight, but in a crooked line, passed within fifty yards of the stern of the Resolution, without producing any evil effect. As the Captain had been informed that the firing of a gun would dissipate water-spouts, he was sorry that he had not tried the experiment. But, though he was near enough, and had a gun ready for the purpose, his mind was so deeply engaged in viewing these extraordinary meteors, that he forgot to give the necessary directions. On the next day, the Resolution came within sight of Queen Charlotte's Sound, where Captain Cook had the satisfaction of discovering the Adventure; and both ships felt uncommon joy at thus meeting again, after an absence of fourteen weeks. As the events which happened to Captain Furneaux, during the separation of the two vessels, do not fall within the immediate design of the present narrative, it may be sufficient to observe, that he

he had an opportunity of examining, with somewhat more accuracy than had hitherto been done, Van Diemen's land; and his opinion was, that there are no straights between this land and New Holland, but a very deep bay. He met, likewise, with farther proofs that the natives of New Zealand are eaters of human flesh (*n*). The morning after Captain Cook's arrival in Queen Charlotte's Sound, he went himself, at day-break, to look for scurvy-grass, celery, and other vegetables; and he had the good fortune to return with a boat-load, in a very short space of time. Having found that a sufficient quantity of these articles might be obtained for the crews of both the ships, he gave orders that they should be boiled, with wheat and portable broth, every day for breakfast; and with pease and broth for dinner. Experience had taught him that the vegetables now mentioned, when thus dressed, are extremely beneficial to seamen, in removing the various scorbutic complaints to which they are subject. Our Commander had entertained a desire of visiting Van Diemen's Land, in order to inform himself whether it made a part of New Holland. But as this point had been, in a great measure, cleared up by Captain Furneaux, he came to a resolution to continue his researches to the East, between the latitudes of 41° and 46° ; and he directed accordingly, that the ships should be gotten ready for putting to sea as soon as possible. On the twentieth, he sent on shore the only ewe and ram that remained of those which, with the intention of leaving them in this country, he had brought from the Cape of Good Hope. Soon after he visited several gardens, that by order of Captain Furneaux had been made and planted with various articles; all of which were in such a flourishing state that, if duly attended to, they promised to be of great utility to the natives. The next day, Captain Cook himself set some men to work to form a garden on Long Island, which he stocked with different seeds, and particularly with the roots of turnips, carrots, parsnips, and potatoes. These were the vegetables that would be of the most real use to the Indians, and of these it was easy to give them an idea, by comparing them with such roots as they themselves knew. On the twenty-second, Captain Cook received the unpleasant intelligence that the ewe and ram, which with so much care and trouble he had brought to this place, were both of them found dead. It was supposed that they had eaten some poisonous plant; and by this accident all the Captain's hopes of stocking New Zealand with a breed of sheep were instantly blasted. The intercourse which our great Navigator had with the inhabitants of the country, during this his second visit to Queen Charlotte's Sound, was of a friendly nature. Two or three families took up their abode near the ships, and employed themselves daily in fishing, and in supplying the English with the fruits of their labour. No small advantage hence accrued to our people, who were by no means such expert fishers as the natives, nor were any of our methods of fishing equal to theirs. Thus in almost every state of society particular arts of life are carried to perfection; and there is something which the most polished nations may learn from the most barbarous. On the second of June, when the *Resolution* and *Adventure* were almost ready to put to sea, Captain Cook sent on shore, on the East side of the sound, two goats, a male and a female; and Captain Furneaux left, near Cannibal Cove, a boar and two breeding sows. The Gentlemen had little doubt but that the country would, in time, be stocked with these animals, provided they were not destroyed by the Indians before they became wild. Afterwards there would be no danger, and as the natives knew nothing of their being left behind, it was hoped that it might be some time before they would be discovered. It is remarkable that, during Captain Cook's second visit to Charlotte Sound, he was not able to recollect the face of any one person whom he had seen there three years before. Nor did it once appear, that even a single Indian had the least knowledge of our Commander, or of any of our people who had been with him in his last voyage. Hence he thought it highly probable, that the greatest part of the natives who inhabited this sound in the beginning of the year 1770, had either since been driven out of it, or had removed, of their own accord, to some other situation. Not one third of the inhabitants were there now, that had been seen at that time. Their strong hold on the Point of Motuara was deserted, and in every part of the sound many forsaken habitations were discovered. In the Captain's opinion, there was not any reason to believe that the place had ever been very populous. From comparing the two voyages together, it may be collected, that the Indians of *Eahel-nomauwe* are in somewhat of a more improved state of society than those of *Tavai-poehamido*. Part of the fourth of June was employed by Captain Cook in visiting a Chief and a whole tribe of the natives, consisting of between ninety and a hundred persons, including men, women, and children. After the Captain had distributed some presents among these people, and shewn to the Chief the gardens which had been made, he returned on board, and spent the remainder of the day in the celebration of his Royal Master's nativity. Captain Furneaux and all his officers were invited upon the occasion; and the seamen were enabled, by a double allowance, to partake of the general joy. As some might think it an extraordinary step in our Commander to proceed in discoveries so far South as forty-six degrees of latitude, in the very depth of winter, he has recorded his motives for this part of his conduct. Winter, he acknowledges, is by no means favourable for discoveries. Nevertheless, it appeared to him to be necessary that something should be done in that season, in order to lessen the work in

which he was engaged; and lest he should not be able to finish the discovery of the southern part of the South Pacific Ocean in the ensuing summer. Besides, if he should discover any land in his route to the East, he would be ready to begin to explore it, as soon as ever the season should be favourable. Independently of all these considerations, he had little to fear; having two good ships well provided, and both the crews being healthy. Where then could he better employ his time? If he did nothing more, he was at least in hopes of being enabled to point out to posterity, that these seas may be navigated, and that it is practicable to pursue discoveries, even in the depth of winter. Such was the ardour of our Navigator for prosecuting the ends of his voyage, in circumstances which would have induced most men to act a more cautious part! During Captain Cook's stay in the Sound, he had observed that the second visit to this country had not mended the morals of the natives of either sex. He had always looked upon the females of New Zealand as more chaste than the generality of Indian women. Whatever favours a few of them might have granted to the people in the Endeavour, such intercourses usually took place in a private manner, and did not appear to be encouraged by the men. But now the Captain was told that the male Indians were the chief promoters of a shameful traffic, and that, for a spikenail, or any other thing they valued, they would oblige the women to prostitute themselves, whether it were agreeable or contrary to their inclinations. At the same time, no regard was paid to the privacy which decency required. The account of this fact must be read with concern by every well wisher to the good order and happiness of society, even without advertent to considerations of a higher nature (v).

On the seventh of June, Captain Cook put to sea from Queen Charlotte's Sound, with the Adventure in company. For the nautical part of the route from New Zealand to Otaheite, which continued till the fifteenth of August, I shall refer my readers to the Captain's voyage; and shall only select such circumstances as are more immediately suitable to the design of the present narrative. It was found, on the twenty-ninth of July, that the crew of the Adventure were in a sickly state. Her Cook was dead, and about twenty of her best men were rendered incapable of duty by the scurvy and flux. At this time, no more than three men were on the sick list on board the Resolution; and only one of these was attacked with the scurvy. Some others, however, began to discover the symptoms of it; and accordingly, recourse was had to wort, marmalade of carrots, and the rob of lemons and oranges, with the usual success. Captain Cook could not account for the prevalence of the scurvy being so much greater in the Adventure than in the Resolution, unless it was owing to the crew of the former's being more scorbutic when they arrived in New Zealand than the crew of the latter, and to their eating few or no vegetables while they lay in Queen Charlotte's Sound. This arose partly from their want of knowing the right sorts, and partly from the dislike which seamen have to the introduction of a new diet. Their aversion to any unusual change of food is so great, that it can only be overcome by the steady and persevering example and authority of a commander. Many of Captain Cook's people, officers as well as common sailors, disliked the boiling of celery, scurvy-grass, and other greens with the peas and wheat; and by some the provision, thus prepared, was refused to be eaten. But, as this had no effect on the Captain's conduct, their prejudice gradually subsided: they began to like their diet as much as the rest of their companions; and, at length, there was hardly a man in the ship who did not attribute the freedom of the crew from the scurvy, to the beer and vegetables which had been made use of at New Zealand. Henceforward, whenever the seamen came to a place where vegetables could be obtained, our Commander seldom found it necessary to order them to be gathered; and, if they were scarce, happy was the person who could lay hold on them first. On the first of August, when the ships were in the latitude of $25^{\circ} 1'$, and the longitude of $134^{\circ} 6'$ West, they were nearly in the same situation with that which is assigned by Captain Carteret for Pitcairn's Island, discovered by him in 1767. For this Island, therefore, our Voyagers diligently looked; but saw nothing. According to the longitude in which he had placed it, Captain Cook must have passed it fifteen leagues to the West. But as this was uncertain, he did not think it prudent to lose any time in searching for it, as the sickly state of the Adventure's people required as speedy an arrival as possible at a place of refreshment. A sight of it, however, would have been of use in verifying, or correcting, not only the longitude of Pitcairn's Island, but of the others discovered by Captain Carteret in that neighbourhood. It is a diminution of the value of that Gentleman's voyage, that his longitude was not confirmed by astronomical observations, and that hence it was liable to errors, the correction of which was out of his power. As Captain Cook had now gotten to the northward of Captain Carteret's tracks, he no longer entertained any hopes of discovering a continent. Islands were all that he could expect to find, until he returned again to the South. In this and his former voyage, he had crossed the ocean in the latitude of 40° and upwards, without meeting any thing which could, in the least, induce him to believe that he should attain the great object of his pursuit. Every circumstance concurred to convince him that, between the meridian of America and New Zealand, there is no southern continent; and that there is no continent farther to the South, unless in a very high latitude. This, however, was a point too important to be

(v) Cook's Voyage, *ubi supra* p. 121—130.

left to opinions and conjectures. It was to be determined by facts; and the ascertainment of it was appointed, by our Commander, for the employment of the ensuing summer. It was the sixth of August before the ships had the advantage of the trade wind (p). This they got at South-east, being at that time in the latitude of $19^{\circ} 36'$ South, and the longitude of $131^{\circ} 32'$ West. As Captain Cook had obtained the South-east trade wind, he directed his course to the West-north-west; not only with a view of keeping in with the strength of the wind, but also to get to the North of the Islands discovered in his former voyage, that he might have a chance of meeting with any other Islands which might lie in the way. It was in the track which had been pursued by M. de Bougainville that our Commander now proceeded. He was sorry that he could not spare time to sail to the North of this track; but at present, on account of the sickly state of the Adventure's crew, the arriving at a place where refreshments could be procured, was an object superior to that of discovery. To four of the Islands which were passed by Captain Cook, he gave the names of Resolution Island, Doubtful Island, Furneaux Island, and Adventure Island [T]. They are supposed to be the same that were seen by M. de Bougainville; and these with several others, which constitute a cluster of low and half drowned isles, that Gentleman distinguished by the appellation of the Dangerous Archipelago. The smoothness of the sea sufficiently convinced our Navigators that they were surrounded by them, and that it was highly necessary to proceed with the utmost caution, especially in the night (q). Early in the morning, on the fifteenth of August, the ships came within sight of Osnaburg Island, or Maitea, which had been discovered by Captain Wallis. Soon after, Captain Cook acquainted Captain Furneaux that it was his intention to put into Oaiti-piba Bay, near the South-east end of Otaheite, for the purpose of procuring what refreshments he could from that part of the Island, before he went down to Matavai. At six in the evening the Island was seen bearing West; and our people continued to advance towards it till midnight, when they brought to till four o'clock in the morning; after which they sailed in for the land with a fine breeze at East. At day-break, they found themselves within the distance of half a league from the reef; and, at the same time, the breeze began to fail them, and was at last succeeded by a calm. It now became necessary for the boats to be hoisted out, in order to tow off the ships; but all the efforts of our Voyagers, to keep them from being carried near the reef, were insufficient for the purpose. As the calm continued, the situation of the vessels became still more dangerous. Captain Cook, however, entertained hopes of getting round the western point of the reef, and into the bay. But, about two o'clock in the afternoon, when he came before an opening or break of the reef, through which he had flattered himself that he might get with the ships, he found, on sending to examine it, that there was not a sufficient depth of water. Nevertheless, this opening caused such an indraught of the tide of flood through it, as was very near proving fatal to the Resolution; for as soon as the vessels got into the stream, they were carried towards the reef with great impetuosity. The moment the Captain perceived this, he ordered one of the warping machines, which was held in readiness, to be carried out with about four hundred fathoms of rope; but it did not produce the least effect; and our Navigators had now in prospect the horrors of shipwreck. They were not more than two cables length from the breakers; and, though it was the only probable method which was left of saving the ships, they could find no bottom to anchor. An anchor, however, they did drop; but before it took hold, and brought them up, the Resolution was in less than three fathom water, and struck at every fall of the sea, which broke close under her stern in a dreadful surf, and threatened her crew every moment with destruction. Happily, the Adventure brought up without striking. Presently, the Resolution's people carried out two kedge-anchors, with hawsers to each; and these found ground a little without the bower. By heaving upon them, and cutting away the bower anchor, the ship was gotten afloat, where Captain Cook and his men lay for some time in the greatest anxiety, expecting every minute that either the kedges would come home, or the hawsers be cut in two by the rocks. At length, the tide ceased to act in the same direction; upon which the Captain ordered all the boats to try to tow off the vessel. Having found this to be practicable, the two kedges were hove up; and at that moment a light air came off from the land, by which the boats were so much assisted, that the Resolution soon got clear of all danger. Our Commander then ordered all the boats to assist the Adventure; but before they reached her, she was under sail with the land breeze, and in a little time joined her companion, leaving behind her three anchors, her coasting cable, and two hawsers, which were never recovered. Thus were our Voyagers once more safe at sea, after narrowly escaping being wrecked on the very Island at which, but a few days before, they had most ardently wished to arrive. It was a peculiarly happy circumstance, that the calm continued, after bringing the ships into so dangerous a state. For if the sea breeze, as is usually the case, had set in, the Resolution must inevitably have been lost, and probably the Adventure

(p) The not meeting with the South-east trade wind sooner is no new thing in this sea.

(q) Cook, *ubi supra*, p. 131—132.

[T] And Adventure Island.] Resolution Island is $141^{\circ} 38'$; Furneaux Island, latitude $17^{\circ} 5'$, longitude in latitude $17^{\circ} 24'$ South, and longitude $141^{\circ} 39'$, $143^{\circ} 16'$; and Adventure Island, latitude $17^{\circ} 4'$ West; Doubtful Island, latitude $17^{\circ} 20'$, longitude $144^{\circ} 30'$ West.

likewise.

likewise. During the time in which the English were in this critical situation, a number of the natives were either on board or near the vessels in their canoes. Nevertheless, they seemed to be insensible of our people's danger, shewing not the least surprize, joy, or fear, when the ships were striking; and they went away a little before sunset, quite unconcerned. Though most of them knew Captain Cook again, and many enquired for Mr. Banks and others who had been with the Captain before, it was remarkable that not one of them asked for Tupia. On the seventeenth, the Resolution and Adventure anchored in Oaiti-piha Bay, immediately upon which they were crowded with the inhabitants of the country, who brought with them cocoa-nuts, plantains, bananoes, apples, yams, and other roots, which were exchanged for nails and beads. To some who called themselves Chiefs, our Commander made presents of shirts, axes, and several articles beside, in return for which they promised to bring him hogs and fowls; a promise which they did not perform, and which, as might be judged from their conduct, they had never had the least intention of performing. In the afternoon of the same day, Captain Cook landed in company with Captain Furneaux, for the purpose of viewing the watering-place, and of founding the disposition of the natives. The article of water, which was now much wanted on board, he found might conveniently be obtained, and the inhabitants behaved with great civility. Notwithstanding this civility, nothing was brought to market, the next day, but fruit and roots, though it was said that many hogs were seen about the houses in the neighbourhood. The cry was, that they belonged to Waeatoua the Earee de hi, or King; who had not yet appeared, nor, indeed, any other Chief of note. Among the Indians that came on board the Resolution, and no small number of whom did not scruple to call themselves *Earees*, there was one of this sort, who had been entertained in the cabin most of the day, and to all of whose friends Captain Cook had made presents, as well as liberally to himself. At length, however, he was caught taking things which did not belong to him, and handing them out of the quarter gallery. Various complaints of the like nature being, at the same time, made against the natives who were on deck, our Commander turned them all out of the ship. His cabin guest was very rapid in his retreat; and the Captain was so exasperated at his behaviour, that after the *Earee* had gotten to some distance from the Resolution, he fired two musquets over his head, by which he was so terrified, that he quitted his canoe, and took to the water. Captain Cook then sent a boat to take the canoe; but when the boat approached the shore, the people on land began to pelt her with stones. The Captain, therefore, being in some pain for her safety, as she was unarmed, went himself in another boat to protect her, and ordered a great gun, loaded with ball, to be fired along the coast, which made all the Indians retire from the shore, and he was suffered to bring away two canoes without the least shew of opposition. In a few hours peace was restored, and the canoes were returned to the first person who came for them. It was not till the evening of this day that any one enquired after Tupia, and then the enquiry was made by only two or three of the natives. When they learned the cause of his death, they were perfectly satisfied; nor did it appear to our Commander that they would have felt a moment's uneasiness, if Tupia's decease had proceeded from any other cause than sickness. They were as little concerned about Aotourou, the man who had gone away with M. de Bougainville. But they were continually asking for Mr. Banks, and for several others who had accompanied Captain Cook in his former voyage. Since that voyage, very considerable changes had happened in the country. Toutaha, the regent of the greater peninsula of Otahite, had been killed in a battle which was fought between the two kingdoms about five months before the Resolution's arrival; and Otoo was now the reigning Prince. Tubourai Tamaide, and several more of the principal friends to the English, had fallen in this battle, together with a large number of the common people. A peace subsisted, at present, between the two grand divisions of the Island. On the twentieth, one of the natives carried off a musquet belonging to the guard on shore. Captain Cook, who was himself a witness of the transaction, sent some of his people after him; but this would have been to very little purpose, if the thief had not been intercepted by several of his own countrymen, who pursued him voluntarily, knocked him down, and returned the musquet to the English. This act of justice prevented our Commander from being placed in a disagreeable situation. If the natives had not given their immediate assistance, it would scarcely have been in his power to have recovered the musquet, by any gentle means whatever; and if he had been obliged to have recourse to other methods, he was sure of losing more than ten times its value. The fraud of one who appeared as a Chief, is, perhaps, not unworthy of notice. This man, in a visit to Captain Cook, presented him with a quantity of fruit; among which were a number of cocoa-nuts that had already been exhausted of their liquor by our people, and afterwards thrown overboard. These the Chief had picked up, and tied so artfully in bundles, that at first the deception was not perceived. When he was informed of it, without betraying the least emotion, and affecting a total ignorance of the matter, he opened two or three of the nuts himself, signified that he was satisfied of the fact, and then went on shore and sent off a quantity of plantains and bananoes. The ingenuity and the impudence of fraud are not solely the productions of polished society. Captain Cook, on the twenty-third, had an interview

with Waheatoua, the result of which was, that our Navigators obtained this day as much pork as furnished a meal to the crews of both the vessels. In the Captain's last voyage, Waheatoua, who was then little more than a boy, was called Tearee; but having succeeded to his father's authority, he had assumed his father's name. The fruits which were procured at Oaiti-piha Bay contributed greatly to the recovery of the sick people belonging to the Adventure. Many of them, who had been so ill as to be incapable of moving without assistance, were, in the compass of a few days, so far recovered that they were able to walk about of themselves. When the Resolution entered the bay, she had but one scorbutic man on board. A Marine, who had long been sick, and who died, the second day after her arrival, of a complication of disorders, had not the least mixture of the scurvy.

On the twenty-fourth, the ships put to sea, and arrived the next evening in Matavai Bay. Before they could come to an anchor, the decks were crowded with the natives, many of whom Captain Cook knew, and by most of whom he was well remembered. Among a large multitude of people, who were collected together upon the shore, was Otoo the King of the Island. Our Commander paid him a visit on the following day, at Oparree, the place of his residence; and found him to be a fine, personable, well-made man, six feet high, and about thirty years of age. The qualities of his mind were not correspondent to his external appearance: for when Captain Cook endeavoured to obtain from him the promise of a visit on board, he acknowledged that he was afraid of the guns, and, indeed, manifested in all his actions that he was a prince of a timorous disposition. Upon the Captain's return from Oparree, he found the tents, and the Astronomer's observatories, set up, on the same spot from which the transit of Venus had been observed in 1769. The sick, being twenty in number from the Adventure, and one from the Resolution, all of whom were ill of the scurvy, he ordered to be landed; and he appointed a guard of Marines on shore, under the command of Lieutenant Edgcumbe. On the twenty-seventh, Otoo was prevailed upon, with some degree of reluctance, to pay our Commander a visit. He came attended with a numerous train, and brought with him fruits, a hog, two large fish, and a quantity of cloth; for which he and all his retinue were gratified with suitable presents. When Captain Cook conveyed his guests to land, he was met by a venerable Lady, the mother of the late Toutaha, who seized him by both hands, and burst into a flood of tears, saying *Toutaba Tiyo no Toutee matty Toutaba*; that is, "Toutaha, your friend, or the friend of Cook, is dead." He was so much affected with her behaviour, that it would have been impossible for him to have refrained from mingling his tears with her's, had not Otoo, who was displeased with the interview, taken him from her. It was with difficulty that the Captain could obtain permission to see her again, when he gave her an axe and some other articles. Captain Furneaux, at this time, presented the King with two fine goats, which, if no accident befel them, might be expected to multiply. Several days had passed in a friendly intercourse with the natives, and in procuring of provisions, when, in the evening of the thirtieth, the Gentlemen on board the Resolution were alarmed with the cry of murder, and with a great noise on shore, near the bottom of the bay, and at a distance from the English encampment. Upon this, Captain Cook, who suspected that some of his own men were concerned in the affair, immediately dispatched an armed boat, to know the cause of the disturbance, and to bring off such of his people as should be found in the place. He sent, also, to the Adventure, and to the post on shore, to learn who were missing; for none but those who were upon duty were absent from the Resolution. The boats speedily returned with three Marines and a Seaman. Some others, likewise, were taken, belonging to the Adventure; and all of them being put under confinement, our Commander, the next morning, ordered them to be punished according to their deserts. He did not find that any mischief had been done, and the men would confess nothing. Some liberties which they had taken with the women had probably given occasion to the disturbance. To whatever cause it was owing, the natives were so much alarmed, that they fled from their habitations in the dead of night, and the alarm was spread many miles along the coast. In the morning, when Captain Cook went to visit Otoo, by appointment, he found that he had removed, or rather fled, to a great distance from the usual place of his abode. After arriving where he was, it was some hours before the Captain could be admitted to the sight of him; and then he complained of the riot of the preceding evening. The sick being nearly recovered, the water completed, and the necessary repairs of the ships finished, Captain Cook determined to put to sea without delay. Accordingly, on the first of September, he ordered every thing to be removed from the shore, and the vessels to be unmoored, in which employment his people were engaged the greater part of the day. In the afternoon of the same day, Lieutenant Pickersgill returned from Attahourou, to which place he had been sent by the Captain, for the purpose of procuring some hogs that had been promised. In this expedition, the Lieutenant had seen the celebrated Oberea, who has been so much the object of poetical fancy. Her situation was very humble, compared with what it had formerly been. She was not only altered much for the worse in her person, but appeared to be poor, and of little or no consequence or authority in the Island. In the evening a favourable wind

having sprung up, our Commander put to sea; on which occasion he was obliged to dismiss his Otaheite friends sooner than they wished to depart; but well satisfied with his kind and liberal treatment (r).

From Matavai Bay Captain Cook directed his course for the Island Huaheine, where he intended to touch. This Island he reached the next day, and, early in the morning of the third of September, made sail for the harbour of Owharre, in which he soon came to an anchor. The Adventure, not happening to turn into the harbour with equal facility, got ashore on the North side of the channel; but, by the timely assistance which Capt. Cook had previously provided, in case such an accident should occur, she was gotten off again, without receiving any damage. As soon as both the ships were in safety, our Commander, together with Captain Furneaux, landed upon the Island, and was received by the natives with the utmost cordiality. A trade immediately commenced; so that our Navigators had a fair prospect of being plentifully supplied with fresh pork and fowls, which, to people in their situation, was a very desirable circumstance. On the fourth, Lieutenant Pickersgill sailed with the cutter, on a trading party, toward the south end of the Isle. Another trading party was also sent on shore near the ships, which party Captain Cook attended himself, to see that the business was properly conducted at the first setting out, this being a point of no small importance. Every thing being settled to his mind, he went, accompanied by Captain Furneaux and Mr. Forster, to pay a visit to his old friend Oree, the Chief of the Island. This visit was preceded by many preparatory ceremonies. Among other things, the Chief sent to our Commander the inscription engraved on a small piece of pewter, which he had left with him in July 1769. It was in the bag that Captain Cook had made for it, together with a piece of counterfeit English coin, and a few beads, which had been put in at the same time; whence it was evident what particular care had been taken of the whole. After the previous ceremonies had been discharged, the Captain wanted to go to the King, but he was informed that the King would come to him. Accordingly, Oree went up to our Commander, and fell on his neck, and embraced him; nor was it a ceremonious embrace, for the tears which trickled down the venerable old man's cheeks, sufficiently bespoke the language of his heart. The presents which Captain Cook made to the Chief on this occasion, consisted of the most valuable articles he had; for he regarded him as a father. Oree, in return, gave the Captain a hog, and a quantity of cloth, promising that all the wants of the English should be supplied; and it was a promise to which he faithfully adhered. Indeed, he carried his kindness to Captain Cook so far, as not to fail sending him every day, for his table, a plentiful supply of the very best of ready-dressed fruit and roots. Hitherto all things had gone on in the most agreeable manner; but on Monday the sixth, several circumstances occurred, which rendered it an unpleasant and troublesome day. When our Commander went to the trading-place he was informed that one of the inhabitants had behaved with remarkable insolence. The man was completely equipped in the war habit, had a club in each hand, and seemed bent upon mischief. Captain Cook took, therefore, the clubs from him, broke them before his eyes, and, with some difficulty, compelled him to retire. About the same time, Mr. Sparrman, who had imprudently gone out alone to botanize, was assaulted by two men, who stripped him of every thing which he had about him, excepting his trowsers, and struck him again and again with his own hanger, though happily without doing him any harm. When they had accomplished their purpose, they made off; after which another of the natives brought a piece of cloth to cover him, and conducted him to the trading-place, where the inhabitants, in a large number, were assembled. The instant that Mr. Sparrman appeared in the condition now described, they all fled with the utmost precipitation. Captain Cook, having recalled a few of the Indians, and convinced them that he should take no step to injure those who were innocent, went to Oree to complain of the outrage. When the Chief had heard the whole affair related, he wept aloud, and many other of the inhabitants did the same. After the first transports of his grief had subsided, he began to expostulate with his people, telling them (for so his language was understood by the English) how well Captain Cook had treated them, both in this and his former voyage, and how base it was in them to commit such actions. He then took a minute account of the things of which Mr. Sparrman had been robbed, and, after having promised to use his utmost endeavours for the recovery of them, desired to go into the Captain's boat. At this, the natives, apprehensive doubtless for the safety of their Prince, expressed the utmost alarm, and used every argument to dissuade him from so rash a measure. All their remonstrances, however, were in vain. He hastened into the boat; and as soon as they saw that their beloved Chief was wholly in our Commander's power, they set up a great outcry. Indeed, their grief was inexpressible: they prayed, entreated, nay, attempted to pull him out of the boat; and every face was bedewed with tears. Even Captain Cook himself was so moved by their distress, that he united his entreaties with theirs, but all to no purpose. Oree insisted upon the Captain's coming into the boat, which was no sooner done than he ordered it to be put off. His sister was the only person among the Indians who behaved with a becoming magnanimity on this occasion; for, with a spirit equal to that of her royal brother, she alone did not oppose his going. It was his design, in coming into the boat of
the

the English, to proceed with them in search of the robbers. Accordingly, he went with Captain Cook, as far as it was convenient, by water, when they landed, entered the country, and travelled some miles inland; in doing which the Chief led the way, and enquired after the criminals of every person whom he saw. In this search he would have gone to the very extremity of the Island, if our Commander, who did not think the object worthy of so laborious a pursuit, had not refused to proceed any farther. Besides, as he intended to sail the next morning, and all manner of trade was stopped in consequence of the alarm of the natives, it became the more necessary for him to return, that he might restore things to their former state. It was with great reluctance that Oree was prevailed upon to discontinue the search, and to content himself with sending, at Captain Cook's request, some of his people for the things which had been carried off. When he and the Captain had gotten back to the boat, they found there the Chief's sister, and several other persons, who had travelled by land to the place. The English Gentlemen immediately stepped into their boat, in order to return on board, without so much as asking Oree to accompany them; notwithstanding which, he insisted upon doing it; nor could the opposition and entreaties of those who were about him induce him to desist from his purpose. His sister followed his example, uninfluenced, on this occasion, by the supplications and tears of her daughter. Captain Cook amply rewarded the Chief and his sister for the confidence they had placed in him; and, after dinner, conveyed them both on shore, where some hundreds of people waited to receive them, many of whom embraced Oree with tears of joy. All was now peace and gladness: the inhabitants crowded in from every part, with such a plentiful supply of hogs, fowls, and vegetable productions, that the English presently filled two boats; and the Chief himself presented the Captain with a large hog and a quantity of fruit. Mr. Sparrman's hanger, the only thing of value which he had lost, was brought back, together with part of his coat; and our Navigators were told, that the remaining articles should be restored the next day. Some things which had been stolen from a party of officers, who had gone out a shooting, were returned in like manner. The transactions of this day have been the more particularly related, as they shew the high opinion which the Chief had formed of our Commander, and the unreserved confidence that he placed in his integrity and honour. Oree had entered into a solemn friendship with Captain Cook, according to all the forms which were customary in the country; and he seemed to think that this friendship could not be broken by the act of any other persons. It is justly observed by the Captain, that another Chief may never be found, who, under similar circumstances, will act in the same manner. Oree, indeed, had nothing to fear: for it was not our Commander's intention to hurt a hair of his head, or to detain him a moment longer than was agreeable to his own desire. But of this how could he and his people be assured? They were not ignorant, that when he was once in Captain Cook's power, the whole force of the Island would not be sufficient to recover him, and that they must have complied with any demands, however great, for his ransom. The apprehensions, therefore, of the inhabitants, for their Chief's and their own safety, had a reasonable foundation. Early on the seventh, while the ships were unmooring, the Captain went to pay his farewell visit to Oree, and took with him such presents as had not only a fancied value, but a real utility. He left, also, with the Chief the inscription plate that had before been in his possession, and another small copper plate, on which were engraved these words: "Anchored here, his Britannic Majesty's ships, Resolution and Adventure, September, 1773." These plates, together with some medals, were put up in a bag; of which Oree promised to take care, and to produce them to the first ship or ships that should arrive at the Island. Having, in return, given a hog to Captain Cook, and loaded his boat with fruit, they took leave of each other, when the good old Chief embraced our Commander with tears in his eyes. Nothing was mentioned, at this interview, concerning the remainder of Mr. Sparrman's property. As it was early in the morning, the Captain judged that it had not been brought in, and he was not willing to speak of it to Oree, lest he should give him pain about things which there had not been time to recover. The robbers having soon afterwards been taken, Oree came on board again, to request that our Commander would go on shore, either to punish them, or to be present at their punishment; but this not being convenient to him, he left them to the correction of their own Chief. It was from the Island of Huaheine that Captain Furneaux received into his ship a young man named Omai, a native of Ulietea, of whom so much hath since been known and written. This choice Captain Cook at first disapproved, as thinking that the youth was not a proper sample of the inhabitants of the Society Islands; being inferior to many of them in birth and acquired rank, and not having any peculiar advantage in point of shape, figure, or complexion. The Captain afterwards found reason to be better satisfied with Omai's having accompanied our Navigators to England. During the short stay of the vessels at Huaheine, our people were very successful in obtaining supplies of provisions. No less than three hundred hogs, besides fowls and fruit, were procured; and had the ships continued longer at the place, the quantity might have been greatly increased. Such was the fertility of this small Island, that none of these articles of refreshment were seemingly diminished, but appeared to be as plentiful as ever (s).

From Matavai Bay Captain Cook directed his course for the Island Huaheine, where he intended to touch. This Island he reached the next day, and, early in the morning of the third of September, made sail for the harbour of Owharre, in which he soon came to an anchor. The Adventure, not happening to turn into the harbour with equal facility, got ashore on the North side of the channel; but, by the timely assistance which Capt. Cook had previously provided, in case such an accident should occur, she was gotten off again, without receiving any damage. As soon as both the ships were in safety, our Commander, together with Captain Furneaux, landed upon the Island, and was received by the natives with the utmost cordiality. A trade immediately commenced; so that our Navigators had a fair prospect of being plentifully supplied with fresh pork and fowls, which, to people in their situation, was a very desirable circumstance. On the fourth, Lieutenant Pickersgill sailed with the cutter, on a trading party, toward the south end of the Isle. Another trading party was also sent on shore near the ships, which party Captain Cook attended himself, to see that the business was properly conducted at the first setting out, this being a point of no small importance. Every thing being settled to his mind, he went, accompanied by Captain Furneaux and Mr. Forster, to pay a visit to his old friend Oree, the Chief of the Island. This visit was preceded by many preparatory ceremonies. Among other things, the Chief sent to our Commander the inscription engraved on a small piece of pewter, which he had left with him in July 1769. It was in the bag that Captain Cook had made for it, together with a piece of counterfeit English coin, and a few beads, which had been put in at the same time; whence it was evident what particular care had been taken of the whole. After the previous ceremonies had been discharged, the Captain wanted to go to the King, but he was informed that the King would come to him. Accordingly, Oree went up to our Commander, and fell on his neck, and embraced him; nor was it a ceremonious embrace, for the tears which trickled down the venerable old man's cheeks, sufficiently bespoke the language of his heart. The presents which Captain Cook made to the Chief on this occasion, consisted of the most valuable articles he had; for he regarded him as a father. Oree, in return, gave the Captain a hog, and a quantity of cloth, promising that all the wants of the English should be supplied; and it was a promise to which he faithfully adhered. Indeed, he carried his kindness to Captain Cook so far, as not to fail sending him every day, for his table, a plentiful supply of the very best of ready-dressed fruit and roots. Hitherto all things had gone on in the most agreeable manner; but on Monday the sixth, several circumstances occurred, which rendered it an unpleasant and troublesome day. When our Commander went to the trading-place he was informed that one of the inhabitants had behaved with remarkable insolence. The man was completely equipped in the war habit, had a club in each hand, and seemed bent upon mischief. Captain Cook took, therefore, the clubs from him, broke them before his eyes, and, with some difficulty, compelled him to retire. About the same time, Mr. Sparrman, who had imprudently gone out alone to botanize, was assaulted by two men, who stripped him of every thing which he had about him, excepting his trowsers, and struck him again and again with his own hanger, though happily without doing him any harm. When they had accomplished their purpose, they made off; after which another of the natives brought a piece of cloth to cover him, and conducted him to the trading-place, where the inhabitants, in a large number, were assembled. The instant that Mr. Sparrman appeared in the condition now described, they all fled with the utmost precipitation. Captain Cook, having recalled a few of the Indians, and convinced them that he should take no step to injure those who were innocent, went to Oree to complain of the outrage. When the Chief had heard the whole affair related, he wept aloud, and many other of the inhabitants did the same. After the first transports of his grief had subsided, he began to expostulate with his people, telling them (for so his language was understood by the English) how well Captain Cook had treated them, both in this and his former voyage, and how base it was in them to commit such actions. He then took a minute account of the things of which Mr. Sparrman had been robbed, and, after having promised to use his utmost endeavours for the recovery of them, desired to go into the Captain's boat. At this, the natives, apprehensive doubtless for the safety of their Prince, expressed the utmost alarm, and used every argument to dissuade him from so rash a measure. All their remonstrances, however, were in vain. He hastened into the boat; and as soon as they saw that their beloved Chief was wholly in our Commander's power, they set up a great outcry. Indeed, their grief was inexpressible: they prayed, entreated, nay, attempted to pull him out of the boat; and every face was bedewed with tears. Even Captain Cook himself was so moved by their distress, that he united his entreaties with theirs, but all to no purpose. Oree insisted upon the Captain's coming into the boat, which was no sooner done than he ordered it to be put off. His sister was the only person among the Indians who behaved with a becoming magnanimity on this occasion; for, with a spirit equal to that of her royal brother, she alone did not oppose his going. It was his design, in coming into the boat of
the

the English, to proceed with them in search of the robbers. Accordingly, he went with Captain Cook, as far as it was convenient, by water, when they landed, entered the country, and travelled some miles inland; in doing which the Chief led the way, and enquired after the criminals of every person whom he saw. In this search he would have gone to the very extremity of the Island, if our Commander, who did not think the object worthy of so laborious a pursuit, had not refused to proceed any farther. Besides, as he intended to sail the next morning, and all manner of trade was stopped in consequence of the alarm of the natives, it became the more necessary for him to return, that he might restore things to their former state. It was with great reluctance that Oree was prevailed upon to discontinue the search, and to content himself with sending, at Captain Cook's request, some of his people for the things which had been carried off. When he and the Captain had gotten back to the boat, they found there the Chief's sister, and several other persons, who had travelled by land to the place. The English Gentlemen immediately stepped into their boat, in order to return on board, without so much as asking Oree to accompany them; notwithstanding which, he insisted upon doing it; nor could the opposition and entreaties of those who were about him induce him to desist from his purpose. His sister followed his example, uninfluenced, on this occasion, by the supplications and tears of her daughter. Captain Cook amply rewarded the Chief and his sister for the confidence they had placed in him; and, after dinner, conveyed them both on shore, where some hundreds of people waited to receive them, many of whom embraced Oree with tears of joy. All was now peace and gladness: the inhabitants crowded in from every part, with such a plentiful supply of hogs, fowls, and vegetable productions, that the English presently filled two boats; and the Chief himself presented the Captain with a large hog and a quantity of fruit. Mr. Sparrman's hanger, the only thing of value which he had lost, was brought back, together with part of his coat; and our Navigators were told, that the remaining articles should be restored the next day. Some things which had been stolen from a party of officers, who had gone out a shooting, were returned in like manner. The transactions of this day have been the more particularly related, as they shew the high opinion which the Chief had formed of our Commander, and the unreserved confidence that he placed in his integrity and honour. Oree had entered into a solemn friendship with Captain Cook, according to all the forms which were customary in the country; and he seemed to think that this friendship could not be broken by the act of any other persons. It is justly observed by the Captain, that another Chief may never be found, who, under similar circumstances, will act in the same manner. Oree, indeed, had nothing to fear: for it was not our Commander's intention to hurt a hair of his head, or to detain him a moment longer than was agreeable to his own desire. But of this how could he and his people be assured? They were not ignorant, that when he was once in Captain Cook's power, the whole force of the Island would not be sufficient to recover him, and that they must have complied with any demands, however great, for his ransom. The apprehensions, therefore, of the inhabitants, for their Chief's and their own safety, had a reasonable foundation. Early on the seventh, while the ships were unmooring, the Captain went to pay his farewell visit to Oree, and took with him such presents as had not only a fancied value, but a real utility. He left, also, with the Chief the inscription plate that had before been in his possession, and another small copper plate, on which were engraved these words: "Anchored here, his Britannic Majesty's ships, Resolution and Adventure, September, 1773." These plates, together with some medals, were put up in a bag; of which Oree promised to take care, and to produce them to the first ship or ships that should arrive at the Island. Having, in return, given a hog to Captain Cook, and loaded his boat with fruit, they took leave of each other, when the good old Chief embraced our Commander with tears in his eyes. Nothing was mentioned, at this interview, concerning the remainder of Mr. Sparrman's property. As it was early in the morning, the Captain judged that it had not been brought in, and he was not willing to speak of it to Oree, lest he should give him pain about things which there had not been time to recover. The robbers having soon afterwards been taken, Oree came on board again, to request that our Commander would go on shore, either to punish them, or to be present at their punishment; but this not being convenient to him, he left them to the correction of their own Chief. It was from the Island of Huaheine that Captain Furneaux received into his ship a young man named Omai, a native of Ulitea, of whom so much hath since been known and written. This choice Captain Cook at first disapproved, as thinking that the youth was not a proper sample of the inhabitants of the Society Islands; being inferior to many of them in birth and acquired rank, and not having any peculiar advantage in point of shape, figure, or complexion. The Captain afterwards found reason to be better satisfied with Omai's having accompanied our Navigators to England. During the short stay of the vessels at Huaheine, our people were very successful in obtaining supplies of provisions. No less than three hundred hogs, besides fowls and fruit, were procured; and had the ships continued longer at the place, the quantity might have been greatly increased. Such was the fertility of this small Island, that none of these articles of refreshment were seemingly diminished, but appeared to be as plentiful as ever (s).

(s) Cook, *ubi supra*, p. 161.
From 171.

From Huaheine our Navigators sailed for Ulietea, where trade was carried on in the usual manner, and a most friendly intercourse renewed between Captain Cook and Oreo, the Chief of the Island. Here Tupia was enquired after with particular eagerness, and the enquirers were perfectly satisfied with the account which was given of the occasion of that Indian's decease. On the morning of the fifteenth, the English were surprized at finding that none of the inhabitants of Ulietea came off to the ships, as had hitherto been customary. As two men belonging to the Adventure had stayed on shore all night, contrary to orders, Captain Cook's first conjectures were, that the natives had stripped them, and were afraid of the revenge which would be taken of the insult. This, however, was not the case. The men had been treated with great civility, and could assign no cause for the precipitate flight of the Indians. All that the Captain could learn was, that several were killed, and others wounded, by the guns of the English. This information alarmed him for the safety of some of our people, who had been sent out in two boats to the Island of Otaha. He determined, therefore, if possible, to see the Chief himself. When he came up to him, Oreo threw his arms around our Commander's neck, and burst into tears; in which he was accompanied by all the women, and some of the men; so that the lamentation became general. Astonishment alone kept Captain Cook from joining in their grief. At last, the whole which he could collect from his enquiries was, that the natives had been alarmed on account of the absence of the English boats, and imagined that the Captain, upon the supposition of the desertion of his men, would use violent means for the recovery of his loss. When the matter was explained, it was acknowledged that not a single inhabitant, or a single Englishman, had been hurt. This groundless consternation displayed in a strong light the timorous disposition of the people of the Society Islands. Our Navigators were as successful in procuring provisions at Ulietea as they had been at Huaheine. Captain Cook judged, that the number of hogs obtained amounted to four hundred, or upwards: many of them, indeed, were only roasters, while others exceeded a hundred pounds in weight; but the general run was from forty to sixty. A larger quantity was offered than the ships could contain; so that our countrymen were enabled to proceed on their voyage with no small degree of comfort and advantage (*t*). Our Commander, by his second visit to the Society Islands, gained a farther knowledge of their general state, and of the customs of the inhabitants. It appeared that a Spanish ship had been lately at Otaheite, and the natives complained that a disease had been communicated to them by the people of this vessel, which, according to their account, affected the head, the throat, and the stomach, and at length ended in death. With regard to a certain disorder, the effects of which have so fatally been felt in the later ages of the world, Captain Cook's enquiries could not absolutely determine whether it was known to the Islanders before they were visited by the Europeans. If it was of recent origin, the introduction of it was, without a dissentient voice, ascribed to the voyage of M. de Bougainville. One thing which our Commander was solicitous to ascertain, was, whether human sacrifices constituted a part of the religious customs of these people. The man of whom he made his enquiries, and several other natives, took some pains to explain the matter; but, from our people's ignorance of the language of the country, their explications could not be understood. Captain Cook afterwards learned from Omai, that the inhabitants of the Society Islands offer human sacrifices to the Supreme Being. What relates to funeral ceremonies excepted, all the knowledge he could obtain concerning their religion was very imperfect and defective. The Captain had an opportunity, in this voyage, of rectifying the great injustice which had been done to the women of Otaheite and the neighbouring Isles. They had been represented as ready, without exception, to grant the last favour to any man who would come up to their price: but our Commander found that this was by no means the case. The favours both of the married women and of the unmarried, of the better sort, were as difficult to be obtained in the Society Islands as in any other country whatever. Even with respect to the unmarried females of the lower class, the charge was not indiscriminately true. There were many of these who would not admit of indecent familiarities. The setting this subject in a proper light, a subject upon which Dr. Hawkesworth had enlarged more than wisdom seemed to require, must be considered as one of the agreeable effects of Captain Cook's second voyage. Every enlightened mind will rejoice at what conduces to the honour of human nature in general, and of the female sex in particular. Chastity is so eminently the glory of that sex, and, indeed, is so essentially connected with the good order of society, that it must be a satisfaction to reflect, that there is no country, however ignorant or barbarous, in which this virtue is not regarded as an object of moral obligation. This voyage enabled our Commander to gain some farther knowledge concerning the geography of the Society Isles; and he found it highly probable, that Otaheite is of greater extent than he had computed it in his former estimation (*u*). The Astronomers did not neglect to set up their observatories, and to make observations suited to their purpose.

(*u*) The latitude of Oaiti-piha Bay, in Otaheite, was found to be $17^{\circ} 46' 28''$ South, and longitude $0^{\circ} 21' 25'' \frac{1}{2}$ East from Point Venus; or $149^{\circ} 13' 24''$ West from Greenwich.

On the seventeenth of September, Captain Cook sailed from Ulietea, directing his course to the West, with an inclination to the South. Land was discovered on the twenty-third of the month, to which he gave the name of Harvey's Island (*w*). On the first of

(*t*) Cook's Voyage, *ubi supra*, p. 171—180.

(*w*) It is situated in the latitude of $19^{\circ} 18'$ South, and $158^{\circ} 54'$ West.

October, he reached the Island of Middleburg. While he was looking about for a landing-place, two canoes, each of them conducted by two or three men, came boldly alongside the ship, and some of the people entered it without hesitation. This mark of confidence inspired our Commander with so good an opinion of the inhabitants, that he determined, if possible, to pay them a visit, which he did the next day. Scarcely had the vessels gotten to an anchor before they were surrounded by a great number of canoes, full of the natives, who brought with them cloth, and various curiosities, which they exchanged for nails, and such other articles as were adapted to their fancy. Among those who came on board, was a Chief, named Tioony, whose friendship Captain Cook immediately gained by proper presents, consisting principally of a hatchet and some spike-nails. A party of our Navigators, with the Captain at the head of them, having embarked in two boats, proceeded to shore, where they found an immense croud of people, who welcomed them to the Island with loud acclamations. There was not so much as a stick, or any other weapon, in the hands of a single native, so pacific were their dispositions and intentions. They seemed to be more desirous of giving than receiving; and many of them, who could not approach near to the boats, threw into them, over the heads of others, whole bales of cloth, and then retired, without either asking or waiting for any thing in return. The whole day was spent by our Navigators in the most agreeable manner. When they returned on board in the evening, every one expressed how much he was delighted with the country, and the very obliging behaviour of the inhabitants, who seemed to vie with each other in their endeavours to give pleasure to our people. All this conduct appeared to be the result of the most pure good-nature, perhaps without being accompanied with much sentiment or feeling; for when Captain Cook signified to the Chief his intention of quitting the Island, he did not seem to be in the least moved. Among other articles presented by the Captain to Tioony, he left him an assortment of garden-seeds, which, if properly used, might be of great future benefit to the country. From Middleburg the ships sailed down to Amsterdam, the natives of which Island were equally ready with those of the former place to maintain a friendly intercourse with the English. Like the people of Middleburg, they brought nothing with them but cloth, matting, and such other articles as could be of little service; and for these our seamen were so simple as to barter away their clothes. To put a stop, therefore, to so injurious a traffic, and to obtain the necessary refreshments, the Captain gave orders that no sort of curiosities should be purchased by any person whatever. This injunction produced the desired effect. When the inhabitants saw that the English would deal with them for nothing but eatables, they brought off bananoes and cocoa-nuts in abundance, together with some fowls and pigs; all of which they exchanged for small nails and pieces of cloth. Even a few old rags were sufficient for the purchase of a pig or a fowl. The method of carrying on trade being settled, and proper officers having been appointed to prevent disputes, our Commander's next object was to obtain as complete a knowledge as possible of the Island of Amsterdam. In this he was much facilitated by a friendship which he had formed with Attago, one of the Chiefs of the country. Captain Cook was struck with admiration, when he surveyed the beauty and cultivation of the Island. He thought himself transported into the most fertile plains of Europe. There was not an inch of waste ground. The roads occupied no larger a space than was absolutely necessary, and the fences did not take up above four inches each. Even such a small portion of ground was not wholly lost; for many of the fences themselves contained useful trees or plants. The scene was every where the same; and nature, assisted by a little art, no where assumes a more splendid appearance than in this Island. Friendly as were the natives of Amsterdam, they were not entirely free from the thievish disposition which hath so often been remarked in the Islanders of the Southern Ocean. The instances, however, of this kind, which occurred, were not of such a nature as to produce any extraordinary degree of trouble, or to involve our people in a quarrel with the inhabitants. Captain Cook's introduction to the King of the Island afforded a scene somewhat remarkable. His Majesty was seated with so much sullen and stupid gravity, that the Captain took him for an idiot, whom the Indians, from some superstitious reasons, were ready to worship. When our Commander saluted and spoke to him, he neither answered, nor took the least notice of him; nor did he alter a single feature of his countenance. Even the presents which were made to him could not induce him to resign a bit of his gravity, or to speak one word, or to turn his head either to the right hand or to the left. As he was in the prime of life, it is possible that a false sense of dignity might engage him to assume so solemn a stupidity of appearance. In the history of mankind, instances might probably be found which would confirm this supposition (x).

(x) Cook, *ubi*
supra, p. 181—
210.

For a general description of the two Islands of Middleburg and Amsterdam, and an account of the cultivation, customs, and manners of the inhabitants, recourse must be had to Capt. Cook's Voyage. In slightly touching upon a few particulars, I shall hope to obtain the forgiveness of some of my readers. It is observable, that these two Islands are guarded from the sea by a reef of coral rocks, which extend out from the shore about one hundred fathoms. On this reef the force of the sea is spent before it reaches the land. The same, indeed, is, in a great measure, the situation of all the tropical Isles which our Com-

mander had seen in that part of the globe; and hence arises an evidence of the wisdom and goodness of Providence; as by such a provision, nature has effectually secured them from the encroachments of the sea, though many of them are mere points, when compared with the vast ocean by which they are surrounded (y). In Amsterdam, Mr. Forster not only found the same plants that are at Otaheite and the neighbouring Islands, but several others which are not to be met with in those places. Captain Cook took care, by a proper assortment of garden-seeds and pulse, to increase the vegetable stock of the inhabitants. Hogs and fowls were the only domestic animals that were seen in these Islands. The former are of the same sort with those which had been met with in other parts of the Southern Ocean; but the latter are far superior, being as large as any in Europe, and equal, if not preferable, with respect to the goodness of their flesh. Both the men and women are of a common size with Europeans. Their colour is that of a lightish copper, and with a greater uniformity than occurs among the natives of Otaheite and the Society Isles. Some of the English Gentlemen were of opinion, that the inhabitants of Middleburg and Amsterdam were a much handsomer race; while others, with whom Captain Cook concurred, maintained a contrary sentiment. However this may be, their shape is good, their features regular, and they are active, brisk, and lively. The women, in particular, are the merriest creatures our Commander had ever met with; and, provided any person seemed pleased with them, they would keep chattering by his side, without the least invitation, or considering whether they were understood. They appeared in general to be modest, though there were several amongst them of a different character. As there were yet on board some complaints of a certain disorder, the Captain took all possible care to prevent its communication. Our Navigators were frequently entertained by the women with songs, and this in a manner which was by no means disagreeable. They had a method of keeping time, by snapping their fingers. Their music was harmonious as well as their voices, and there was a considerable degree of compass in their notes. A singular custom was found to prevail in these Islands. The greater part of the people were observed to have lost one or both of their little fingers; and this was not peculiar to rank, age, or sex; nor was the amputation restricted to any specific period of life. Our Navigators endeavoured in vain to discover the reason of so extraordinary a practice. A very extensive knowledge of the language of Middleburg and Amsterdam could not be obtained during the short stay which was made there by the English. However, the more they enquired into it, the more they found that it was, in general, the same with that which is spoken at Otaheite and the Society Isles. The difference is not greater than what frequently occurs betwixt the most northern and western parts of England (z).

(y) The Islands of Middleburg and Amsterdam are situated between the latitude of $21^{\circ} 29'$ and $21^{\circ} 3'$ South, and between the longitude of $174^{\circ} 40'$ and $175^{\circ} 15'$ West, deduced from observations made on the spot.

(z) Cook's Voyage, *ubi supra*, p. 211, 213, 214, 217, 218, 222, 225.

(a) Pilsart is situated in the latitude of $22^{\circ} 26'$ South, and in the longitude of $175^{\circ} 59'$ West. It is distant thirty-two leagues from the South end of Middleburg.

On the seventh of October, Captain Cook proceeded on his voyage. His intention was to sail directly to Queen Charlotte's Sound in New Zealand, for the purpose of taking in wood and water, after which he was to pursue his discoveries to the South and the East. The day after he quitted Amsterdam, he passed the Island of Pilsart; an Island which had been discovered by Tasman (a). On the twenty-first, he made the land of New Zealand, at the distance of eight or ten leagues from Table Cape. As our Commander was very desirous of leaving in the country such an assortment of animals and vegetables as might greatly contribute to the future benefit of the inhabitants, one of the first things which he did was to give to a Chief, who had come off in a canoe, two boars, two fows, four hens, and two cocks, together with a quantity of seeds. The seeds were of the most useful kind; such as wheat, french and kidney beans, pease, cabbage, turnips, onions, carrots, parsnips, and yams. The man to whom these several articles were presented, though he was much more enraptured with a spike-nail half the length of his arm, promised, however, to take care of them, and, in particular, not to kill any of the animals. If he adhered to his promise, they would be sufficient, in a due course of time, to stock the whole Island. It was the third of November before Captain Cook brought the Resolution into Ship Cove, in Queen Charlotte's Sound. He had been beating about the Island from the twenty-first of October, during which time his vessel was exposed to a variety of tempestuous weather. In one instance he had been driven off the land by a furious storm, which lasted two days, and which would have been dangerous in the highest degree, had it not fortunately happened that it was fair overhead, and that there was no reason to be apprehensive of a lee-shore. In the course of the bad weather which succeeded this storm, the Adventure was separated from the Resolution, and was never seen or heard of through the whole remainder of the voyage. The first object of our Commander's attention, after his arrival in Queen Charlotte's Sound, was to provide for the repair of his ship, which had suffered in various respects, and especially in her sails and rigging. Another matter which called for his notice, was the state of the bread belonging to the vessel; and he had the mortification of finding that a large quantity of it was damaged. To repair this loss in the best manner he was able, he ordered all the casks to be opened, the bread to be picked, and such parcels of it to be baked, in the copper oven, as could by that means be recovered. Notwithstanding this care, four thousand two hundred and ninety-two pounds were found totally unfit for use; and about three thousand pounds more could only be eaten by people in the situation of our Navigators. Captain Cook was early in his enquiries concerning the

the animals which had been left at New Zealand, in the former part of his voyage. He saw the youngest of the two sows that Captain Furneaux had put on shore in Cannibal Cove. She was in good condition, and very tame. The boar and other sow, if our Commander was rightly informed, were taken away and separated, but not killed. He was told that the two goats, which he had landed up the Sound, had been destroyed by a rascally native, of the name of Goubiah; so that the Captain had the grief of discovering that all his benevolent endeavours to stock the country with useful animals were likely to be frustrated by the very people whom he was anxious to serve. The gardens had met with a better fate. Every thing in them, excepting potatoes, the inhabitants had left entirely to nature, who had so well performed her part, that most of the articles were in a flourishing condition. Notwithstanding the inattention and folly of the New Zealanders, Captain Cook still continued his zeal for their benefit. To the inhabitants who resided at the Cove, he gave a boar, a young sow, two cocks, and two hens, which had been brought from the Society Islands. At the bottom of the West Bay, he ordered to be landed, without the knowledge of the Indians, four hogs, being three sows and one boar, together with two cocks and two hens. They were carried a little way into the woods, and as much food was left them as would serve them for ten or twelve days; which was done to prevent their coming down to the shore in search of sustenance, and by that means being discovered by the natives. The Captain was desirous of replacing the two goats which Goubiah was understood to have killed, by leaving behind him the only two that yet remained in his possession. But he had the misfortune, soon after his arrival at Queen Charlotte's Sound, to lose the ram; and this in a manner for which it was not easy to assign the cause. Whether it was owing to any thing he had eaten, or to his being stung with nettles, which were very plentiful in the place, he was seized with fits that bordered upon madness. In one of these fits, he was supposed to have run into the sea, and to have been drowned: and thus every method, which our Commander had taken to stock the country with sheep and goats, proved ineffectual. He hoped to be more successful with respect to the boars and sows, and the cocks and hens, which he left in the Island. While the boatswain, one day, and a party of men were employed in cutting broom, some of them stole several things from a private hut of the natives, in which was deposited most of the treasure they had received from the English, as well as property of their own. Complaint being made by the Indians to Captain Cook, and a particular man of the boatswain's party having been pointed out to the Captain as the person who had committed the theft, he ordered him to be punished in their presence. With this they went away seemingly satisfied, although they did not recover any of the articles which they had lost. It was always a maxim with our Commander, to punish the least crimes which any of his people were guilty of with regard to uncivilized nations. Their robbing us with impunity he by no means considered as a reason for our treating them in the same manner. Addicted as the New Zealanders were, in a certain degree, to stealing, a disposition which must have been very much increased by the novelty and allurements of the objects presented to their view; they had, nevertheless, when injured themselves, such a sense of justice, as to apply to Captain Cook for redress. The best method, in his opinion, of preserving a good understanding with the inhabitants of countries in this state of society, is, first, to convince them of the superiority we have over them in consequence of our fire-arms, and then to be always upon our guard. Such a conduct, united with strict honesty and gentle treatment, will convince them that it is their interest not to disturb us, and prevent them from forming any general plan of attack. In this second visit of our Navigators to New Zealand, they met with indubitable evidence that the natives were eaters of human flesh. The proofs of this fact had a most powerful influence on the mind of Oedidee, a youth of Bolabola, whom Captain Cook had brought in the Resolution from Ulitea. He was so affected that he became perfectly motionless, and exhibited such a picture of horror, that it would have been impossible for art to describe that passion with half the force with which it appeared in his countenance. When he was roused from this state by some of the English, he burst into tears; continued to weep and scold by turns; told the New Zealanders that they were vile men; and assured them that he would not be any longer their friend. He would not so much as permit them to come near him; and he refused to accept, or even to touch the knife by which some human flesh had been cut off. Such was Oedidee's indignation against the abominable custom; and our Commander has justly remarked, that it was an indignation worthy to be imitated by every rational being. The conduct of this young man upon the present occasion, strongly points out the difference which had taken place, in the progress of civilization, between the inhabitants of the Society Islands and those of New Zealand. It was our Commander's firm opinion, that the only human flesh which was eaten by these people was that of their enemies who had been slain in battle. During the stay of our Voyagers in Queen Charlotte's Sound, they were plentifully supplied with fish, procured from the natives at a very easy rate; and, besides the vegetables afforded by their own gardens, they every where found plenty of scurvy-grass and celery. These Captain Cook ordered to be dressed every day for all his hands. By the attention which he paid to his men in the article of provisions, they had for three months lived principally on

on a fresh diet, and, at this time, there was not a sick or scorbutic person on board. The morning before the Captain sailed, he wrote a memorandum, contain such information as he thought necessary for Captain Furneaux, in case he should put into the Sound. This memorandum was buried in a bottle under the root of a tree in the garden; and in such a manner that it could not avoid being discovered, if either Captain Furneaux or any other European should chance to arrive at the Cove. Our Commander did not leave New Zealand without making such remarks on the coast between Cape Teerawhitte and Cape Palliser as may be of service to future navigators. It being now the unanimous opinion, that the Adventure was no where upon the Island, Captain Cook gave up all expectations of seeing her any more during the voyage. This circumstance, however, did not discourage him from fully exploring the southern parts of the Pacific Ocean, in the doing of which he intended to employ the whole of the ensuing season. When he quitted the coast, he had the satisfaction to find that not a man of the crew was dejected, or thought that the dangers they had yet to go through, were in the least augmented by their being alone. Such was the confidence they placed in their Commander, that they were as ready to proceed cheerfully to the South, or wherever he might lead them, as if the Adventure, or even a larger number of ships had been in company (b).

(b) Cook, *ubi*
supra, p. 225—
250.

(c) This was in
the latitude of
62° 10' South,
and longitude
172° West.

On the twenty-sixth of November, Captain Cook sailed from New Zealand in search of a continent, and steered to the South, inclining to the East. Some days after this, our Navigators reckoned themselves to be antipodes to their friends in London, and consequently were at as great a distance from them as possible. The first ice Island was seen on the twelfth of December (c), farther South than the first ice which had been met with after leaving the Cape of Good Hope in the preceding year. In the progress of the voyage, ice islands continually occurred, and the navigation became more and more difficult and dangerous. When our people were in the latitude of 67° 5' South, they all at once got within such a cluster of these islands, together with a large quantity of loose pieces, that to keep clear of them was a matter of the utmost difficulty. On the twenty-second of the month, the Resolution was in the highest latitude she had yet reached (d); and circumstances now became so unfavourable, that our Commander thought of returning more to the North. Here there was no probability of finding any land, or a possibility of getting farther South. To have proceeded, therefore, to the East in this latitude, must have been improper, not only on account of the ice, but because a vast space of sea to the North must have been left unexplored, in which there might lie a large tract of country. It was only by visiting those parts that it could be determined whether such a supposition was well founded. As our Navigators advanced to the North-east on the twenty-fourth, the ice islands increased so fast upon them, that, at noon, they could see nearly a hundred around them, besides an immense number of small pieces. In this situation they spent Christmas-day, much in the same manner as they had done in the former year. Happily our people had continual day-light, and clear weather; for had it been as foggy as it was on some preceding days, nothing less than a miracle could have saved them from being dashed to pieces. While the Resolution was in the high latitudes, many of her company were attacked with a slight fever, occasioned by colds. The disorder, however, yielded to the simplest remedies, and was generally removed in a few days. On the fifth of January, 1774, the ship not being then in much more than fifty degrees of latitude, there were only one or two persons on the sick list. After Captain Cook, agreeably to his late resolution, had traversed a large extent of ocean without discovering land, he again directed his course to the southward. By the thirtieth of the month, through obstructions and difficulties, which, from their similar nature to those already mentioned, it would be tedious to repeat, he reached to the seventy-first degree of latitude (e). Thus far had he gone; but to have proceeded farther would have been the height of folly and madness. It would have been exposing himself, his men, and his ship to the utmost danger, and perhaps to destruction, without the least prospect of advantage. The Captain was of opinion, as indeed were most of the Gentlemen on board, that the ice now in sight extended quite to the pole, or might join to some land, to which it might be fixed from the earliest time. If, however, there be such land, it can afford no better retreat for birds, or any other animals, than the ice itself, with which it must be wholly covered. Though our Commander had not only the ambition of going farther than any one had done before, but of proceeding as far as it was possible for man to go, he was the less dissatisfied with the interruption he now met with, as it shortened the dangers and hardships inseparable from the navigation of the southern polar regions. In fact, he was impelled by inevitable necessity to tack, and stand back to the North. The determination which Captain Cook now formed was to spend the ensuing winter within the tropic, if he met with no employment before he came there. He was well satisfied that no continent was to be found in this ocean but what must lie so far to the South as to be wholly inaccessible on account of ice. If there existed a continent in the Southern Atlantic Ocean, he was sensible that he could not explore it without having the whole summer before him. Upon a supposition, on the other hand, that there is no land there, he might undoubtedly have reached the Cape of Good Hope by April. In that case, he would have put an end to the finding of a continent; which was indeed the first object of the voyage.

(d) This was
67° 31'. The
longitude was
142° 54' West.

(e) The exact
latitude at this
time was 71° 10'
South; and the
longitude 106°
54' West.

But this could not satisfy the extensive and magnanimous mind of our Commander. He had a good ship, expressly sent out on discoveries, a healthy crew, and was not in want either of stores or of provisions. In such circumstances, to have quitted this Southern Pacific Ocean, would, he thought, have been betraying not only a want of perseverance, but of judgment, in supposing it to have been so well explored, that nothing farther could be done. Although he had proved that there was no continent but what must lie far to the South, there remained, nevertheless, room for very large Islands in places wholly unexamined. Many, likewise, of those which had formerly been discovered had been but imperfectly explored, and their situations were as imperfectly known. He was also persuaded, that his continuing some time longer in this sea would be productive of improvements in navigation and geography, as well as in other sciences. In consequence of these views, it was Captain Cook's intention first to go in search of the land said to have been discovered by Juan Fernandez, in the last century (f). If he should fail in finding this land, he proposed to direct his course in quest of Easter Island or Davis's Land, the situation of which was known with so little certainty, that none of the attempts lately made for its discovery had been successful. He next intended to get within the tropic, and then to proceed to the West, touching at, and settling the situations of such Islands as he might meet with till he arrived at Otaheite, where it was necessary for him to stop, to look for the Adventure. It was also in his contemplation to run as far West as the Tierra Austral del Espiritu Santo, which was discovered by Quiros, and to which M. de Bougainville has given the name of the Great Cyclades. From this land it was the Captain's plan to steer to the South, and so back to the East, between the latitudes of fifty and sixty. In the execution of this plan, it was his purpose, if possible, to attain the length of Cape Horn in the ensuing November, when he should have the best part of the summer before him, to explore the southern part of the Atlantic Ocean. Great as was this design, our Commander thought it capable of being carried into execution; and when he communicated it to his officers, he had the satisfaction of finding that it received their zealous and cheerful concurrence. They displayed the utmost readiness for executing, in the most effectual manner, every measure he thought proper to adopt. With such good examples to direct them, the seamen were always obedient and alert; and on the present occasion, so far were they from wishing the voyage to be concluded, that they rejoiced at the prospect of its being prolonged another year, and of soon enjoying the benefits of a milder climate (g).

(f) In about the latitude of 38°.

(g) Cook, *ubi supra*, p. 250—271.

In pursuing his course to the North, Captain Cook became well assured that the discovery of Juan Fernandez, if any such was ever made, could be nothing more than a small Island. At this time, the Captain was attacked by a bilious colic, the violence of which confined him to his bed. The management of the ship, upon this occasion, was left to Mr. Cooper, the first officer, who conducted her entirely to his Commander's satisfaction. It was several days before the most dangerous symptoms of Captain Cook's disorder were removed; during which time, Mr. Patten the Surgeon, in attending upon him, manifested not only the skillfulness of a Physician, but the tenderness of a nurse. When the Captain began to recover, a favourite dog, belonging to Mr. Forster, fell a sacrifice to his tender stomach. There was no other fresh meat whatever on board, and he could eat not only of the broth which was made of it, but of the flesh itself, when there was nothing else that he was capable of tasting. Thus did he derive nourishment and strength from food which to most people in Europe would have been in the highest degree disgusting, and productive of sickness. The necessity of the case overcame every feeling of dislike. On the eleventh of March, our Navigators came within sight of Easter Island, or Davis's Land (h); their transactions at which place were of too little moment to deserve a particular recital. The inhabitants are, in general, a slender race. In colour, features, and language, they bear such an affinity to the people of the more western Isles, that there can be no doubt of their having been descended from one common original. It is indeed extraordinary that the same nation should have spread themselves to so wide an extent, as to take in almost a fourth part of the circumference of the globe. With regard to the disposition of the natives of Easter Island, it is friendly and hospitable; but they are as much addicted to stealing as any of their neighbours. The Island itself hath so little to recommend it, that no nation need to contend for the honour of its discovery. So sparing has nature been of her favours to this spot, that there is in it no safe anchorage, no wood for fuel, no fresh water worth taking on board. The most remarkable objects in the country are some surprising gigantic statues, which were first seen by Roggewein, and of which Captain Cook has given a particular description (i). It was with pleasure that our Commander quitted a place which could afford such slender accommodations to voyagers, and directed his course for the Marquesas Islands. He had not been long at sea, before he was again attacked by his bilious disorder. The attack, however, was not so violent as the former one had been. He had reason to believe, that the return of his disease was owing to his having exposed and fatigued himself too much at Easter Island. On the sixth and seventh of April, our Navigators came within sight of four Islands, which they knew to be the Marquesas. To one of them, which was a new discovery, Captain Cook gave the name of Hoop's Island, after that of the young Gentleman by whom it was first seen. As soon as the ship was

(h) It is situated in the latitude of 27° 5' 30" South, and the longitude of 109° 46' 20" West.

(i) Cook's Voyages, *ubi supra*, p. 274, 275, 288, 290, 294—296.

brought to an anchor in Madre de Dios, or Resolution Bay, in the Island of St. Christina, a traffic commenced, in the course of which the natives would frequently keep our goods, without making any return. At last the Captain was obliged to fire a musquet-ball over one man who had several times treated the English in this manner. This produced only a temporary effect. Too many of the Indians having come on board, our Commander, who was going in a boat, to find a convenient place for mooring the ship, said to the officers, "You must look well after these people, or they will certainly carry off something or other." Scarcely had he gotten into the boat, when he was informed that they had stolen an iron stanchion from the opposite gangway, and were carrying it off. Upon this he ordered his men to fire over the canoe till he could get round in the boat, but not to kill any one. Such, however, was the noise made by the natives, that the order was not heard; and the unhappy thief was killed at the first shot. All the Indians having retired with precipitation, in consequence of this unfortunate accident, Captain Cook followed them into the bay, prevailed upon some of them to come alongside his boat, and, by suitable presents, so far conciliated their minds, that their fears seemed to be in a great measure allayed. The death of their countryman did not cure them of their thievish disposition; but, at length, it was somewhat restrained by their conviction that no distance secured them from the reach of our musquets. Several smaller instances of their talent at stealing, the Captain thought proper to overlook. The provisions obtained at St. Christina were yams, plantains, bread-fruit, a few cocoa nuts, fowls, and small pigs. For a time, the trade was carried on upon reasonable terms; but the market was at last ruined by the indiscretion of some young Gentlemen, who gave away in exchange various articles which the inhabitants had not seen before, and which captivated their fancy above nails, or more useful iron tools. One of the Gentlemen had given for a pig a very large quantity of red feathers, which he had gotten at Amsterdam. The effect of this was particularly fatal. It was not possible to support the trade, in the manner in which it was now begun, even for a single day. When, therefore, our Commander found that he was not likely to be supplied, on any conditions, with sufficient refreshments, and that the Island was neither very convenient for taking in wood and water, nor for affording the necessary repairs of the ship, he determined to proceed immediately to some other place, where the wants of his people could be effectually relieved. After having been nineteen weeks at sea, and having lived all that time upon salt diet, a change in their food could not avoid being peculiarly desirable: and yet, on their arrival at St. Christina, it could scarcely be asserted that a single man was sick; and there were but a few who had the least complaint of any kind. "This," says Captain Cook, in the narrative of his voyage, "was undoubtedly owing to the many antiscorbutic articles we had on board, and to the great attention of the Surgeon, who was remarkably careful to apply them in time (k)." It may justly be added, that this was likewise owing to the singular care of the Captain himself, and to the exertions of his authority, in enforcing the excellent regulations, which his wisdom and humanity had adopted. The chief reason for our Commander's touching at the Marquesas Islands, was to fix their situation; that being the only circumstance in which the nautical account of them, given in Mr. Dalrymple's collection, is deficient. It was farther desirable to settle this point, as it would lead to a more accurate knowledge of Mendana's other discoveries. Accordingly, Captain Cook has marked the situation of the Marquesas with his usual correctness [U]. He has also taken care to describe the particular cove in Resolution Bay, in the Island of St. Christina, which is most convenient for obtaining wood and water. It is remarkable, with respect to the inhabitants of the Marquesas Islands, that, collectively taken, they are without exception the finest race of people in this sea. Perhaps they surpass all other nations in symmetry of form, and regularity of features. It is plain, however, from the affinity of their language to that of Otaheite and the Society Isles, that they are of the same origin. Of this affinity the English were fully sensible, though they could not converse with them; but Oedidee was capable of doing it tolerably well (l).

(k) Cook, *ubi supra*, p. 297—305

(l) *Ibid.* p. 306—308.

(m) Tiookea is situated in the latitude of 14° 27' 30" South, and the longitude of 144° 56' West.

From the Marquesas Captain Cook steered for Otaheite, with a view of falling in with some of the Islands discovered by former navigators, and especially by the Dutch, the situation of which had not been accurately determined. In the course of the voyage, he passed a number of low islets, connected together by reefs of coral rocks. One of the Islands, on which Lieutenant Cooper went ashore, with two boats well armed, was called by the natives Tiookea (m). It had been discovered and visited by Captain Byron. The inhabitants of Tiookea are of a much darker colour than those of the higher Islands, and appeared to be more fierce in their dispositions. This may be owing to their manner of

[U] Captain Cook has marked the situation of the Marquesas with his usual correctness.] The Marquesas Islands, four of which were first discovered by Mendana, a Spaniard, are five in number, viz. La Magdalena, St. Pedro, La Dominica, Santa Christina, and Hood's Island, which is the northern-

most. La Dominica is the largest of them, being about fifteen or sixteen leagues in circuit. These Islands occupy one degree of latitude, and nearly half a degree in longitude. Their latitude is from 9 to 10, and their longitude from 138° 47' to 139° 13' West.

gaining

gaining their subsistence, which is chiefly from the sea, and to their being much exposed to the sun and the weather. Our Voyagers observed that they were stout, well-made men, and that they had marked on their bodies the figure of a fish, which was a good emblem of their profession. Besides passing by St. George's Islands, which had been so named by Captain Byron, our Commander made the discovery of four others (*n*). These he called **PALLISER'S ISLES**, in honour of his particular friend, Sir Hugh Palliser. The inhabitants seemed to be the same sort of people as those of Tiookea, and, like them, were armed with long pikes. Captain Cook could not determine, with any degree of certainty, whether the group of Isles he had lately seen were, or were not, any of those that had been discovered by the Dutch navigators. This was owing to the neglect of recording, with sufficient accuracy, the situation of their discoveries. Our Commander hath, in general, observed, with regard to this part of the ocean, that, from the latitude of twenty down to fourteen or twelve, and from the meridian of a hundred and thirty-eight to a hundred and forty-eight or a hundred and fifty West, it is so strewed with low isles, that a navigator cannot proceed with too much caution. On the twenty-second of April, Captain Cook reached the Island of Otaheite, and anchored in Matavai Bay. As his chief reason for putting in at this place was to give Mr. Wales an opportunity of ascertaining the error of the watch by the known longitude, and to determine anew her rate of going, the first object was to land the instruments, and to erect tents for the reception of a guard, and such other people as it was necessary to have on shore. Sick there were none; for the refreshments which had been obtained at the Marquesas had removed every complaint of that kind. From the quantity of provisions, which, contrary to expectation, our Commander now found at Otaheite, he determined to make a longer stay in the Island than he had at first intended. Accordingly, he took measures for the repairs of the ship, which the high southern latitudes had rendered indispensably necessary. During Captain Cook's stay at Otaheite, he maintained a most friendly connection with the inhabitants; and a continual interchange of visits was preserved between him and Otoo, Towha, and other Chiefs of the country. His traffic with them was greatly facilitated by his having fortunately brought with him some red parrot feathers from the Island of Amsterdam. These were jewels of high value in the eyes of the Otaheitans. The Captain's stock in trade was by this time greatly exhausted; so that, if it had not been for the feathers, he would have found it difficult to have supplied the ship with the necessary refreshments. Among other entertainments which our Commander and the rest of the English Gentlemen met with at Otaheite, one was a grand naval review. The vessels of war consisted of a hundred and sixty large double canoes, well equipped, manned, and armed. They were decorated with flags and streamers; and the Chiefs, together with all those who were on the fighting stages, were dressed in their war habits. The whole fleet made a noble appearance; such as our Voyagers had never seen before in this sea, or could ever have expected. Besides the vessels of war, there were a hundred and seventy sail of smaller double canoes, which seemed to be designed for transports and victuallers. Upon each of them was a little house; and they were rigged with mast and sail, which was not the case with the war canoes. Captain Cook guessed that there were no less than seven thousand seven hundred and sixty men in the whole fleet. He was not able to obtain full information concerning the design of this armament. Notwithstanding the agreeable intercourse that was, in general, maintained between our Commander and the people of Otaheite, circumstances occasionally happened, which called for peculiar exertions of his prudence and resolution. One of the natives who had attempted to steal a water-cask from the watering-place, was caught in the fact, sent on board, and put in irons. In this situation, he was seen by King Otoo, and other Chiefs. Captain Cook having made known to them the crime of their countryman, Otoo entreated that he might be set at liberty. This the Captain however refused, alleging, that since he punished his own people, when they committed the least offence against Otoo's, it was but just that this man should also be punished. As Captain Cook knew that Otoo would not punish him, he resolved to do it himself. Accordingly, he directed the criminal to be carried on shore to the tents, and having himself followed, with the Chiefs and other Otaheitans, he ordered the guard out, under arms, and commanded the man to be tied up to a post. Otoo again solicited the culprit's release, and in this he was seconded by his sister, but in vain. The Captain expostulated with him on the conduct of the man, and of the Indians in general; telling him, that neither he, nor any of the ship's company, took the smallest matter of property from them without first paying for it; enumerating the articles which the English had given in exchange for such and such things; and urging that it was wrong in them to steal from those who were their friends. He added, that the punishing of the guilty person would be the means of saving the lives of several of Otoo's people, by deterring them from committing crimes of the like nature, and thus preventing them from the danger of being shot to death, which would certainly happen, at one time or other, if they persisted in their robberies. With these arguments the King appeared to be satisfied, and only desired that the man might not be killed. Captain Cook then directed that the croud, which was very great, should be kept at a proper distance, and, in the presence of them all, ordered the fellow two dozen of lashes with a

(*n*) The situation of one of them was in latitude 15° 26' South, and in longitude 146° 20' West. Another was in latitude 15° 27' and longitude 146° 3'.

cat-of-nine tails. This punishment the man sustained with great firmness, after which he was set at liberty. When the natives were going away, Towha called them back, and, with much gracefulness of action, addressed them in a speech of nearly half an hour in length, the design of which was to condemn their present conduct, and to recommend a different one for the future. To make a farther impression upon the minds of the inhabitants, our Commander ordered his Marines to go through their exercises, and to load and fire in volleys with ball. As they were very quick in their manœuvres, it is more easy to conceive than to describe the amazement which possessed the Indians during the whole time, and especially those of them who had not seen anything of the kind before. The judicious will discern, with regard to this narrative, that it throws peculiar light on Captain Cook's character. Nor is it an uncurious circumstance in the history of human society, that a stranger should thus exercise jurisdiction over the natives of a country, in the presence of the Prince of that country, without his authority, and even contrary to his solicitations. Another disagreeable altercation with the inhabitants of Otaheite, arose from the negligence of one of the English centinels on shore. Having either slept or quitted his post, an Indian seized the opportunity of carrying off his musquet. When any extraordinary theft was committed, it immediately excited such an alarm among the natives in general, from their fear of Captain Cook's resentment, that they fled from their habitations, and a stop was put to the traffic for provisions. On the present occasion, the Captain had no small degree of trouble; but, by his prudent conduct, the musquet was recovered, peace restored, and commerce again opened. In the differences which happened with the several people he met with in his voyages, it was a rule with him, never to touch the least article of their property, any farther than to detain their canoes for a while, when it became absolutely necessary. He always chose the most mild and equitable methods of bringing them to reason; and in this he not only succeeded, but frequently put things upon a better footing than if no contention had taken place. During this visit to Otaheite, fruit and other refreshments were obtained in great plenty. The relief arising from them was the more agreeable and salutary, as the bread of the ship was in a bad condition. Though the biscuit had been aired and picked at New Zealand, it was now in such a state of decay, that it was necessary for it to undergo another airing and cleaning, in which much of it was found wholly rotten, and unfit to be eaten. This decay was judged to be owing to the ice our Navigators had frequently taken in when to the southward, which made the hold of the vessel cold and damp, and to the great heat that succeeded when they came to the North. Whatever was the cause, the loss was so considerable, that the men were put to a scanty allowance in this article, with the additional mortification of the bread's being bad that could be used. Two goats, that had been given by Captain Furneaux to Otoo, in the former part of the voyage, seemed to promise fair for answering the purposes for which they were left upon the Island. The ewe, soon after, had two female kids, which were now so far grown as to be almost ready to propagate. At the same time, the old ewe was again with kid. The people were very fond of them, and they were in excellent condition. From these circumstances, Captain Cook entertained a hope that, in a course of years, they would multiply so much as to be extended over all the Isles of the Southern Ocean. The like success did not attend the sheep which had been left in the country. These speedily died, one excepted, which was said to be yet alive. Our Navigators also furnished the natives with cats, having given away no less than twenty at Otaheite, besides some which had been made presents of at Ulietea and Huaheine. With regard to the number of the inhabitants of Otaheite, our Commander collected, from comparing several facts together, that, including women and children, there could not be less, in the whole Island, than two hundred and four thousand. This number, at first sight, exceeded his belief. But when he came to reflect on the vast swarms of people that appeared wherever he went, he was convinced that the estimate was agreeable to truth. Such was the friendly treatment which our Voyagers met with at Otaheite, that one of the gunner's mates was induced to form a plan for remaining in the country. As he knew that he could not execute his scheme with success while the Resolution continued in Matavai Bay, he took the opportunity, when she was ready to quit it, and the sails were set for that purpose, to slip overboard. Being a good swimmer, he had no doubt of getting safe to a canoe, which was at some distance ready to receive him; for his design was concerted with the natives, and had even been encouraged by Otoo. However, he was discovered before he had gotten clear of the ship, and a boat being presently hoisted out, he was taken up, and brought back to the vessel. When our Commander reflected on this man's situation, he did not think him very culpable, or his desire of staying in the Island so extraordinary as might at first view be imagined. He was a native of Ireland, and had sailed in the Dutch service. Captain Cook, on his return from his former voyage, had picked him up at Batavia, and had kept him in his employment ever since. It did not appear that he had either friends or connections which could bind him to any particular part of the world. All nations being alike to him, where could he be more happy than at Otaheite? Here, in one of the finest climates of the globe, he could enjoy not only the necessities, but the luxuries of life, in ease and plenty. The

Captain

Captain seems to think, that if the man had applied to him in time, he might have given his consent to his remaining in the country.

On the fifteenth of May, Captain Cook anchored in O'Wharre Harbour, in the Island of Huaheine. He was immediately visited by his friend Oree, and the same agreeable intercourse subsisted between the Captain and this good old Chief which had formerly taken place. Red feathers were not here in such estimation as they had been at Otaheite; the natives of Huaheine having the good sense to give a preference to the more useful articles of nails and axes. During the stay of our Voyagers in the Island, some alarms were occasioned by the thievish disposition of several of the inhabitants; but matters subsided without any material consequences. A solemn march, which our Commander made through part of the country, at the head of forty-eight men, tended to impress the Indians with a sense of his power and authority. In fact, their attempts at stealing had been too much invited by the indiscretion of some of the English, who unguardedly separated themselves in the woods, for the purpose of killing birds; and who managed their musquets so unskilfully, as to render them less formidable in the eyes of the natives. I cannot persuade myself to omit a dramatic entertainment, at which several of the Gentlemen belonging to the Resolution attended one evening. The piece represented a girl as running away with our Navigators from Otaheite; and the story was partly founded in truth; for a young woman had taken a passage in the ship, down to Ulietea. She happened to be present at the representation of her own adventures; which had such an effect upon her, that it was with great difficulty that she could be prevailed upon by the English Gentlemen to see the play out, or to refrain from tears while it was acting. The piece concluded with the reception which she was supposed to meet with from her friends at her return; and it was a reception that was by no means favourable. As these people, when they see occasion, can add little extempore pieces to their entertainments, it is reasonable to imagine that the representation now described was intended as a satire against the girl, and to discourage others from following her steps. Such is the sense which they entertain of the propriety of female decorum. During Captain Cook's stay at Huaheine, bread-fruit, cocoa-nuts, and other vegetable productions were procured in abundance, but not a sufficiency of hogs to supply the daily expence of the ship. This was partly owing to a want of proper articles for traffic. The Captain was obliged, therefore, to set the Smiths at work, to make different sorts of nails, iron tools, and instruments, in order to enable him to obtain refreshments at the Islands he was yet to visit, and to support his credit and influence among the natives. When our Commander was ready to sail from Huaheine, Oree was the last man that went out of the vessel. At parting, Captain Cook told him that they should meet each other no more; at which he wept, and said, "Let your sons come, we will treat them well."

At Ulietea, to which the Captain next directed his course, the events that occurred were nearly similar to those which have already been related. He had always been received by the people of this Island in the most hospitable manner, and they were justly entitled to every thing which it was in his power to grant. They expressed the deepest concern at his departure, and were continually importuning him to return. Oreo the Chief, and his wife and daughter, but especially the two latter, scarcely ever ceased weeping. Their grief was so excessive, that it might perhaps be doubted whether it was entirely sincere and unaffected; but our Commander was of opinion that it was real. At length, when he was ready to sail, they took a most affectionate leave. Oreo's last request to Captain Cook was that he would return; and when he could not obtain a promise to that effect, he asked the name of his burying-place. To this strange question the Captain answered, without hesitation, that it was Stepney; that being the parish in which he lived when in London. Mr. Forster, to whom the same question was proposed, replied, with greater wisdom and recollection, that no man, who used the sea, could say where he should be buried. As our Commander could not promise, or even then suppose, that more English ships would be sent to the southern isles, Oedidee, who for so many months had been the faithful companion of our Navigators, chose to remain in his native country. But he left them with a regret fully demonstrative of his esteem and affection, nor could any thing have torn him from them, but the fear of never returning. When Oreo pressed so ardently Captain Cook's return, he sometimes gave such answers as left room for hope. At these answers Oedidee would eagerly catch, take him on one side, and ask him over again. The Captain declares, that he had not words to describe the anguish which appeared in this young man's breast, when he went away. "He looked up at the ship, burst into tears, and then sunk down into the canoe." Oedidee was a youth of good parts, and of a docile, gentle, and humane disposition; but as he was almost wholly ignorant of the religion, government, manners, customs, and traditions of his countrymen, and the neighbouring Islands, no material knowledge could have been collected from him, had our Commander brought him away. He would, however, in every respect, have been a better specimen of the nation than Omai. When Captain Cook first came to these Islands, he had some thoughts of visiting Tupia's famous Bolabola. But having obtained a plentiful supply of refreshments, and the route he had in view allowing him no time to spare, he laid this

design aside, and directed his course to the West. Thus did he take his leave, as he then thought, for ever, of these happy isles, on which benevolent nature has spread her luxuriant sweets with a lavish hand; and in which the natives, copying the bounty of Providence, are equally liberal; being ready to contribute plentifully and cheerfully to the wants of navigators (o).

(o) Cook, *ubi supra*, p. 312—378.

From Mr. Wales's observations it appeared, that, during five months, in which the watch had passed through the extremes of heat and cold, it went better in the cold than in the hot climates. (p) It is situated in latitude $18^{\circ} 4'$ South, and longitude $163^{\circ} 10'$ West.

On the sixth of June, the day after our Voyagers left Ulietea, they saw land, which they found to be a low reef Island, about four leagues in compass, and of a circular form. This was Howe Island, which had been discovered by Captain Wallis (p). Nothing remarkable occurred from this day to the sixteenth, when land was again seen. It was another reef Island; and being a new discovery, Captain Cook gave it the name of PALMERSTON ISLAND, in honour of Lord Palmerston (q).

(p) Its latitude is $16^{\circ} 46'$ South, and its longitude $154^{\circ} 8'$ West.

On the twentieth, fresh land appeared, which was perceived to be inhabited. This induced our Commander to go on shore with a party of Gentlemen; but the natives were found to be fierce and untractable. All endeavours to bring them to a parley were to no purpose; for they came on with the ferocity of wild boars, and instantly threw their darts. Two or three musquets discharged in the air, did not prevent one of them from advancing still farther, and throwing another dart, or rather a spear, which passed close over Captain Cook's shoulder. The courage of this man had nearly cost him his life. When he threw his spear, he was not five paces from the Captain, who had resolved to shoot him for his own preservation. It happened, however, that his musquet missed fire; a circumstance on which he afterwards reflected with pleasure. When he joined his party, and tried his musquet in the air, it went off perfectly well. This Island, from the disposition and behaviour of the natives, with whom no intercourse could be established, and from whom no benefit could be received, was called by our Commander SAVAGE ISLAND (r).

(r) Its situation is in latitude $19^{\circ} 1'$ South, and in longitude $169^{\circ} 37'$ West.

It is about eleven leagues in circuit; is of a round form, and good height; and has deep waters close to its shores. Among its other disadvantages, it is not furnished with a harbour. In pursuing his course to the West-south-west, Captain Cook passed by a number of small Islands, and, on the twenty-sixth, anchored on the North side of Anamocka, or Rotterdam. A traffic immediately commenced with the natives, who brought what provisions they had, being chiefly yams and shaddocks, which they exchanged for nails, beads, and other small articles. Here, as in many former cases, the Captain was put to some trouble on account of the thievish disposition of the inhabitants. As they had gotten possession of an adze and two musquets, he found it necessary to exert himself with peculiar vigour, in order to oblige them to make restitution. For this purpose he commanded all the Marines to be armed, and sent on shore; and the result of this measure was, that the things which had been stolen were restored. In the contest, Captain Cook was under a necessity of firing some small shot at a native who had distinguished himself by his resistance. His countrymen afterwards reported that he was dead; but he was only wounded, and that not in a dangerous manner. Though his sufferings were the effects of his own misbehaviour, the Captain endeavoured to soften them, by making him a present, and directing his wounds to be dressed by the Surgeon of the ship. The first time that our Commander landed at Anamocka, an old Lady presented him with a girl, and gave him to understand that she was at his service. Miss, who had previously been instructed, wanted a spike-nail, or a shirt, neither of which he had to give her; and he flattered himself that, by making the two women sensible of his poverty, he should easily get clear of their importunities. In this, however, he was mistaken. The favours of the young Lady were offered upon credit; and on his declining the proposal, the old woman began to argue with him, and then to abuse him. As far as he could collect from her countenance and her actions, the design of her speech was both to ridicule and reproach him, for refusing to entertain so fine a young woman. Indeed, the girl was by no means destitute of beauty; but Captain Cook found it more easy to withstand her allurements than the abuses of the ancient matron, and therefore hastened into his boat. While the Captain was on shore at Anamocka, he got the names of twenty Islands, which lie between the North-west and the North-east. Some of them were in sight; and two of them, which are most to the West, are remarkable on account of their great height. These are Amattafoa and Oghao. From a continual column of smoke which was seen daily ascending from the middle of Amattafoa, it was judged that there was a volcano in that Island. Anamocka was first discovered by Tasman, and by him was named Rotterdam (s).

(s) It is situated in the latitude of $20^{\circ} 15'$ South, and the longitude of $174^{\circ} 31'$ West.

It is of a triangular form, and each side extends about three and a half or four miles. From the North-west to the South of the Island, round by the East and North, it is encompassed by a number of small isles, sand-banks, and breakers. An end could not be seen to their extent to the North, and they may possibly reach as far to the South as Amsterdam, or Tongataboo. Together with Middleburg, or Eaoowe, and Pilstart, these form a group, containing about three degrees of latitude, and two of longitude. To this group Captain Cook had given the name of the Friendly Isles, or Archipelago, from the firm alliance and friendship which seemed to subsist among their inhabitants, and from their courteous behaviour to strangers. The same group may perhaps be extended much farther, even down to Boscawen and Keppel's Isles, which were discovered by Captain Wallis, and lie nearly in the same meridian (t).

(t) In the latitude of $15^{\circ} 53'$.

Whilst our Commander

mander was at Anamocka, he was particularly assiduous to prevent the introduction of a certain disorder. As some of his people brought with them the remains of this disease from the Society Isles, he prohibited them from having any female intercourse; and he had reason to believe that his endeavours were successful. The productions of Rotterdam, and the persons, manners, and customs of its inhabitants, are similar to those of Amsterdam. It is not, however, equally plentiful in its fruits, nor is every part of it in so high a state of cultivation. Neither hath it arisen to the same degree of wealth, with regard to cloth, matting, ornaments, and other articles, which constitute the chief riches of the Islanders of the Southern Ocean (*u*).

(*u*) Capt. Cook's Voyage towards the South Pole, and round the World, vol. ii. p. 1—21.

(*w*) It is situated in latitude 19° 43' South, and in longitude 178° 2' West.

Pursuing their course to the West, our Navigators discovered land on the first of July; and, upon a nearer approach, found it to be a small Island, to which, on account of the number of turtle that were seen upon the coast, Captain Cook gave the name of *TURTLE ISLE* (*w*). On the sixteenth, high land was seen bearing South-west, which no one doubted to be the *Australis del Espiritu Santo* of Quiros, and which is called by M. de Bougainville the *Great Cyclades*. After exploring the coast for some days, the Captain came to an anchor, in a harbour in the Island of *Mallicollo*. One of his first objects was to commence a friendly intercourse with the natives; but, while he was thus employed, an accident occurred which threw all into confusion, though in the end it was rather advantageous than hurtful to the English. A fellow in a canoe, having been refused admittance into one of our boats, bent his bow to shoot a poisoned arrow at the boat keeper. Some of his countrymen having prevented his doing it at that instant, time was given to acquaint our Commander with the transaction, who immediately ran upon deck. At this minute, the Indian had directed his bow to the boat-keeper; but upon being called to by Captain Cook, he pointed it at him. Happily, the Captain had a musquet in his hand loaded with small shot, and gave him the contents. By this, however, he was only staggered for a moment; for he still held his bow in the attitude of shooting. A second discharge of the same nature made him drop it, and obliged him, together with the other natives who were in the canoe, to paddle off with all possible celerity. At this time, some of the inhabitants began to shoot arrows from another quarter. A musquet discharged in the air had no effect upon them; but no sooner was a four-pound ball shot over their heads than they fled in the utmost confusion. A few hours after these transactions, the English put off in two boats, and landed in the face of four or five hundred people, who were assembled on the shore; and who, though they were all armed with bows and arrows, clubs and spears, made not the least opposition. On the contrary, when they saw Captain Cook advance with nothing but a green branch in his hand, one of them, who appeared to be a Chief, giving his bow and arrows to another, met the Captain in the water, bearing also a green branch. These being mutually exchanged in token of friendship, the Chief led our Commander to the crowd, to whom he immediately distributed presents. The Marines, in the mean time, were drawn up on the beach. Captain Cook then acquainted the Indians, by signs, that he wanted wood; and in the same manner permission was granted him to cut down the trees. Much traffic could not be carried on with these people, because they set no value on nails, or iron tools, or, indeed, on any of the articles which our Navigators could furnish. In such exchanges as they did make, and which were principally of arrows for pieces of cloth, they distinguished themselves by their honesty. When the ship had begun to sail from the Island, and they might easily, in consequence of their canoes dropping astern, have avoided delivering the things they had been paid for, they used their utmost efforts to get up with her, that they might discharge their obligations. One man, in particular, followed the *Resolution* a considerable time, and did not reach her till the object which brought him was forgotten. As soon as he came alongside the vessel, he held up the thing which had been purchased; and though several of the crew offered to buy it, he insisted upon delivering it to the person to whom it had been sold. That person, not knowing him again, would have given something in return; but this he refused, and shewed him what he had before received. There was only a single instance in which the natives took, or even attempted to take, any thing from our Voyagers, by any means whatever; and in that case restitution was immediately made, without trouble and without altercation. The inhabitants of *Mallicollo*, in general, are the most ugly and ill-proportioned people that Captain Cook had ever seen, and are in every respect different from all the nations which had been met with in the Southern Ocean. They are a very dark-coloured, and rather a diminutive race, with long heads, flat faces, and countenances which have some resemblance to that of the monkey. Their hair, which is mostly black or brown, is short and curly; but not altogether so soft and woolly as that of a negro. The difference of this people from any whom our Commander had yet visited, appeared not only in their persons but their language. Of about eighty words which were collected by Mr. Forster, scarcely one was found to bear any affinity to the language spoken in any country or Island hitherto described. It was observed by Captain Cook, that the natives could pronounce most of the English words with great ease. They had not so much as a name for a dog, and knew nothing of that animal; for which reason the Captain left them a dog and a bitch; and as they were very fond of them, it was highly probable that the breed

(x) It is situated on the North-east side of Mallicollo, not far from the South-east end, in latitude $16^{\circ} 25' 20''$ South, and longitude $167^{\circ} 57' 23''$ East.
(y) Cook's Voyage, *ubi supra*, p. 23—37.

breed would be fostered and encreased, To the harbour, in which our Commander anchored, while he lay at Mallicollo, he gave the name of PORT SANDWICH (x). It has many advantages, with regard to the depth of water, shelter from winds, and lying so near the shore as to be a cover to those of a ship's company who may be carrying on any necessary operations at land (y).

Soon after our Navigators had gotten to sea, which was on the twenty-third of July, they discovered three or four small Islands, that before had appeared to be connected. At this time the Resolution was not far from the Isle of Ambrym, the Isle of Paoom, and the Isle of Apee. On the next morning, several more Islands were discovered, lying off the South-east point of Apee, and constituting a group which Captain Cook called SHEPHERD'S ISLES, in honour of his learned and valuable friend, Dr. Shepherd, Plumian Professor of Astronomy at Cambridge. The ship was this day in some danger. It suddenly fell calm, and our Voyagers were left to the mercy of the current, close by the Isles, where no soundings could be found with a line of a hundred and eighty fathoms. The lands or Islands, which lay around the vessel in every direction, were so numerous that they could not be counted. At this crisis a breeze sprung up, which happily relieved the Captain and his company from the anxiety the calm had occasioned. Amidst the number of Islands, that were continually seen by our Navigators, there was only one on which no inhabitants were discerned. This consisted chiefly of a remarkable peaked rock, which was only accessible to birds, and which obtained the name of the MONUMENT. In the farther course of the ship to the southward, our Navigators drew near to certain Islands, which they found to consist of one large Island, the southern and western extremities of which extended beyond their sight. Three or four smaller ones lay off its North side. To the two principal of these Captain Cook gave the name of MONTAGU and HINCHINBROOK; and the large Island he named SANDWICH, in honour of his noble patron the Earl of Sandwich. This Island, which was spotted with woods and lawns, agreeably diversified over the whole surface, and which had a gentle slope from the hills down to the sea-coast, exhibited a most beautiful and delightful prospect. The examination of it was not, however, so much an object with our Commander, as to proceed to the South, in order to find the southern extremity of the Archipelago. Pursuing his discoveries, Captain Cook came in sight of an Island, which was afterwards known to be called by the natives Erromango. After coasting it for three days, he brought his vessel to anchor in a bay there, on the third of August. The next day, he went with two boats to examine the coast, and to look for a proper landing-place, that he might obtain a supply of wood and water. At this time, the inhabitants began to assemble on the shore, and by signs to invite our people to land. Their behaviour was apparently so friendly, that the Captain was charmed with it; and the only thing which could give him the least suspicion was, that most of them were armed with clubs, spears, darts, and bows and arrows. He did not, therefore, remit his vigilance; but kept his eye continually upon the Chief, watching his looks, as well as his actions. It soon was evident that the intentions of the Indians were totally hostile. They made a violent attempt to seize upon one of the boats; and though, on our Commander's pointing a musquet at them, they in some measure desisted, yet they returned in an instant, seemingly determined to carry their design into execution. At the head of the party was the Chief; while others, who could not come at the boat, stood behind with darts, stones, and bows and arrows in hand, ready to support their countrymen. As signs and threats had no effect, the safety of Captain Cook and his people became the only object of consideration; and yet he was unwilling to fire on the multitude. He resolved, therefore, to make the Chief alone the victim of his own treachery, and accordingly, aimed his musquet at him; but at this critical moment it missed fire. This circumstance encouraged the natives to despise our weapons, and to show the superiority of their own, by throwing stones and darts, and by shooting arrows. Hence it became absolutely necessary for the Captain to give orders to his men to fire upon the assailants. The first discharge threw them into confusion; but a second was scarcely sufficient to drive them off the beach. In consequence of this skirmish, four of the Indians lay, to all appearance, dead on the shore. However, two of them were afterwards perceived to crawl into the bushes; and it was happy for these people that not half of the musquets of the English would go off, since otherwise many more must have fallen. The inhabitants were, at length, so terrified as to make no farther appearance; and two oars, which had been lost in the conflict, were left standing up against the bushes. It was observed of these Islanders, that they seemed of a different race from those of Mallicollo, and that they spoke a different language. They are of a middle size, with a good shape, and tolerable features. Their colour is very dark; and their aspect is not mended by a custom they have of painting their faces, some with a black, and others with a red pigment. As to their hair, it is curly and crisp, and somewhat woolly. The few women who were seen, and who appeared to be ugly, wore a kind of petticoat, made either of palm leaves or of a plant similar in its nature; but the men, like those of Mallicollo, were almost entirely naked. On account of the treacherous behaviour of the inhabitants of Erromango, Captain Cook called a promontory, or peninsula, near which the skirmish happened, TRAITOR'S HEAD (z).

(z) It is the North-east point of the Island, and is situated in the latitude of $18^{\circ} 43'$ South, and the longitude of $169^{\circ} 28'$ East.

From

From this place the Captain sailed for an Island which had been discovered before, at a distance, and at which, on account of his wanting a large quantity of wood and water, he was resolved to make some stay. At first the natives were disposed to be very hostile; but our Commander, with equal wisdom and humanity, contrived to terrify them, without danger to their lives. This was principally effected by firing a few great guns, at which they were so much alarmed, as afterwards to be brought to tolerable order. Among these Islanders, many were inclined to be on friendly terms with our Navigators, and especially the old people; whilst most of the younger were daring and insolent, and obliged the English to keep to their arms. It was natural enough that age should be prudent and cautious, and youth bold and impetuous; and yet this distinction, with regard to the behaviour of the various nations which had been visited by Captain Cook, had not occurred before. The Island where the Captain now stayed, was found, upon enquiry, to be called, by the inhabitants, Tanna; and three others in its neighbourhood, and which could be seen from it, were distinguished by the names of Immer, Erronan or Footoona, and Annatom. From such information of the natives as our commander could see no reason to doubt, it appeared that circumcision was practised among them, and that they were eaters of human flesh. Concerning the latter subject, he should never have thought of asking them a single question, if they had not introduced it themselves, by enquiring whether the English had the same custom. It hath been argued, that necessity alone could be the origin of this horrid practice. But as the people of Tanna are possessed of fine pork and fowls, together with an abundance of roots and fruits, the plea of necessity cannot be urged in their behalf. In fact, no instance was seen of their eating human flesh; and, therefore, there might, perhaps, be some reason to hesitate, in pronouncing them to be cannibals. By degrees the inhabitants grew so courteous and civil, as to permit the English Gentlemen to ramble about in the skirts of the woods, and to shoot in them, without affording them the least molestation, or shewing any dislike. One day, some boys of the Island having gotten behind thickets, and thrown two or three stones at our people who were cutting wood, they were fired at by the petty officers on duty. Captain Cook, who was then on shore, was alarmed at the report of the musquets; and, when he was informed of the cause, was much displeased that so wanton an use should be made of our fire-arms. Proper measures were taken by him to prevent such conduct for the future. In the Island of Tanna was a volcano, which sometimes made a dreadful noise, and, at each explosion, which happened every three or four minutes, threw up fire and smoke in prodigious columns. At one time, great stones were seen high in the air. At the foot of the hill were several hot springs; and on the side of it Mr. Forster found some places whence smoke of a sulphureous smell issued, through cracks or fissures of the earth. A thermometer, that was placed in a little hole made in one of them, and which in the open air stood only at eighty, rose to a hundred and seventy. In another instance, the mercury rose to hundred and ninety-one. Our Commander being desirous of getting a near and good view of the volcano, set out with a party for that purpose. But the Gentlemen met with so many obstructions from the inhabitants, who were jealous of their penetrating far into the country, that they thought proper to return. For this jealousy of the Islanders Captain Cook, in his narrative, has made a very judicious and candid apology. It is observable, with respect to the volcano of Tanna, that it is not on the ridge of the hill to which it belongs, but on its side. Nor is that hill the highest in the country; for there are others near it of more than double its height. It was in moist and wet weather that the volcano was most violent. When our Commander was ready to sail from Tanna, an event happened, which gave him much concern. Just as our people were getting some logs into the boat, four or five of the natives stepped forward to see what they were doing. In consequence of the Indians not being allowed to come within certain limits, the centinel ordered them back, upon which they readily complied. At this time, Captain Cook, who had his eyes fixed upon them, observed the centry present his piece to the men. The Captain was going to reprove him for this action, when, to his inexpressible astonishment, the centry fired. An attack so causeless and extraordinary naturally threw the natives into great confusion. Most of them fled, and it was with difficulty that our Commander could prevail upon a few of them to remain. As they ran off, he perceived one of them to fall, who was immediately lifted up by two others, who took him into the water, washed his wound, and then led him off. The wounded person not being carried far, Captain Cook sent for the Surgeon of the ship, and accompanied him to the man, whom they found expiring. The rascal that had fired pretended that an Indian had laid an arrow across his bow, and was going to shoot at him; so that he apprehended himself to be in danger. This, however, was no more than what the Islanders had always done, to shew that they were armed as well as our Voyagers. What rendered the present incident the more unfortunate was, that it was not the man who bent the bow, but one who stood near him, that was shot by the centry. The harbour where the Captain anchored, during his stay at Tanna, was called by him **PORT RESOLUTION**, after the name of the ship, she being the first vessel by which it was ever entered. It is no more than a little creek, three quarters of a mile in length, and about half that space in breadth^(a). No

(a) It is situated on the North side of the most eastern point of the Island, in the latitude of $19^{\circ} 32' 25''$ South, and in the longitude of $169^{\circ} 44' 35''$ East.

place can exceed it in its convenience for taking in wood and water, which are both close to the shore. The inhabitant of the Island, with whom our Commander had the most frequent and friendly connections, was named Paowang. Very little trade could be carried on with the people of Tanna. They had not the least knowledge of iron; and consequently nails, tools, and other articles made of that metal, and which are so greedily sought for in the more eastern isles, were here of no consideration. Cloth could be of no service to persons who go naked. Among the productions of the Island, there is reason to believe that the nutmeg-tree might be mentioned. This is collected from the circumstance of Mr. Forster's having shot a pigeon, in the craw of which a wild nutmeg was discovered. However, though he took some pains to find the tree, his endeavours were not attended with success. It was at first thought by our Navigators, that the inhabitants of Tanna were a race between the natives of the Friendly Islands, and those of Mallicollo; but by a short acquaintance with them they were convinced that they had little or no affinity to either, excepting in their hair. Some few men, women, and children were seen, whose hair resembled that of the English. With regard, however, to these persons it was obvious, that they were of another nation; and it was understood that they came from Erronan. Two languages were found to be spoken in Tanna. One of them, which appeared to have been introduced from Erronan, is nearly, if not exactly, the same with that of the Friendly Islands. The other, which is the proper language of the country, and which is judged to be peculiar to Tanna, Erromango, and Annatom, is different from any that had hitherto been met with by our Voyagers. The people of Tanna are of the middle size, and for the most part slender. There are few tall or stout men among them. In general, they have good features and agreeable countenances. Like all the tropical race, they are active and nimble; and seem to excel in the use of arms, but not to be fond of labour. With respect to the management of their weapons, Mr. Wales hath made an observation so honourable to Homer, that were I to omit it, I should not be forgiven by my classical readers. "I must confess," says Mr. Wales, "I have often been led to think the feats which Homer represents his heroes as performing with their spears, a little too much of the marvellous to be admitted into an heroic poem; I mean when confined within the strait stays of Aristotle. Nay, even so great an advocate for him as Mr. Pope, acknowledges them to be surprizing. But since I have seen what these people can do with their wooden spears, and them badly pointed, and not of a hard nature, I have not the least exception to any one passage in that great poet on this account. But if I see fewer exceptions, I can find infinitely more beauties in him; as he has, I think, scarcely an action, circumstance, or description of any kind whatever, relating to a spear, which I have not seen and recognized among these people; as, their whirling motion, and whistling noise, as they fly; their quivering motion, as they stick in the ground when they fall; their meditating their aim, when they are going to throw; and their shaking them in their hand as they go along (b)." On the twentieth of August Captain Cook sailed from Tanna, and employed all the remainder of the month in a farther examination of the Islands around him. He had now finished his survey of the whole Archipelago, and had gained a knowledge of it infinitely superior to what had ever been attained before. The northern Islands of this Archipelago were first discovered in 1606, by that eminent navigator Quiros, who considered them as part of the southern continent, which, at that time, and till very lately, was supposed to exist. M. de Bougainville was the next person by whom they were visited, in 1768. This Gentleman, however, besides landing in the Isle of Lepers, only made the discovery that the country was not connected, but composed of Islands, which he called the Great Cyclades. Captain Cook, besides ascertaining the situation and extent of these Islands, added to them several new ones which had hitherto been unknown, and explored the whole. He thought, therefore, that he had obtained a right to name them; and accordingly he bestowed upon them the appellation of the NEW HEBRIDES [W]. His title to this honour will not be disputed in any part of Europe, and certainly not by so enlightened and liberal a people as the French nation.

(b) Cook's Voyage, ubi supra, p. 38-84.

The season of the year now rendered it necessary for our Commander to return to the South, while he had yet some time to explore any land he might meet with between the New Hebrides and New Zealand; at which last place he intended to touch, that he might refresh his people, and renew his stock of wood and water for another southern course. With this view, he sailed on the first of September, and on the fourth land was discovered; in a harbour belonging to which the Resolution came to an anchor the next day. The design of Captain Cook was not only to visit the country, but to have an op-

[W] And accordingly he bestowed upon them the appellation of the NEW HEBRIDES.] They are situated between the latitude of $14^{\circ} 29'$ and $20^{\circ} 4'$ South, and between $166^{\circ} 41'$ and $170^{\circ} 21'$ East longitude, and extended a hundred and twenty-five leagues, in the direction of North-north-west $\frac{1}{2}$ West, and South-south-east $\frac{1}{2}$ East. The principal Islands of the New

Hebrides, for an account of which the reader is referred to Captain Cook's Voyage, are, the Peak of the Etoile, Tierra del Espiritu Santo, Mallicollo, St. Bartholomew, the Isle of Lepers, Aurora, Whitsuntide Isle, Ambrym, Paoom, Apee, Three Hills, Sandwich, Erromango, Tanna, Immer, and Annatom.

portunity of observing an eclipse of the sun, which was soon to happen. An intercourse immediately commenced with the inhabitants, who, during the whole of the Captain's stay, behaved in a very civil and friendly manner. In return, he was solicitous to render them every service in his power. To Teabooma the Chief, he sent, among other articles, a dog and a bitch, both young, but nearly full grown. It was some time before Teabooma could believe that the two animals were intended for him; but when he was convinced of it, he was lost in an excess of joy. Another, and still more valuable present, was that of a young boar and sow; which, on account of the absence of the Chief when they were brought to land, were received with great hesitation and ceremony. The last time that our Commander went on shore at this place, he ordered an inscription to be cut on a large tree, setting forth the name of the ship, the date of the year, and other circumstances, which testified that the English were the first discoverers of the country. This he had before done, wherever such a ceremony seemed necessary. How the Island was called by the natives, our Voyagers could never learn; and, therefore, Captain Cook gave it the name of NEW CALEDONIA. The inhabitants are strong, robust, active, and well made. With regard to the origin of the nation, the Captain judged them to be a race between the people of Tanna and the Friendly Isles; or between those of Tanna and the New Zealanders; or all three. Their language is in some respects a mixture of them all (c). In their disposition they are courteous and obliging; and they are not in the least addicted to pilfering, which is more than can be asserted concerning any other nation in this sea. The women of New Caledonia, and those likewise of Tanna, were found to be much chaster than the females of the more eastern Islands. Our Commander never heard that the least favour was obtained from them by any one of his company. Sometimes, indeed, the women would exercise a little coquetry, but they went no farther. The Botanists of the ship did not here complain for want of employment. They were diligent in their researches, and their labours were amply rewarded. Every day brought some accession to botanical knowledge, or that of other branches of natural history (d). Every thing being ready to put to sea, Captain Cook weighed anchor on the thirteenth of September, with the purpose of examining the coast of New Caledonia. In pursuing this object, by which he was enabled to add greatly to nautical and geographical knowledge, the Resolution was more than once in danger of being lost; and particularly, in the night of the twenty-eighth of the month, she had a narrow escape. Our Navigators, on this occasion, were much alarmed; and day-light shewed that their fears had not been ill founded. Indeed, breakers had been continually under their lee, and at a small distance from them; so that they were in the most imminent danger. "We owed our safety," says the Captain, "to the interposition of Providence, a good look-out, and the very brisk manner in which the ship was managed." Our Commander now began to be tired of a coast which he could no longer explore but at the risk of losing the vessel, and ruining the whole voyage. He determined, however, not to leave it, till he knew of what kind some groves of trees were, which, by their uncommon appearance, had occasioned much speculation, and had been mistaken, by several of the Gentlemen, for bisaltes. Captain Cook was the more solicitous to ascertain the point, as these trees appeared to be of a sort which might be useful to shipping, and had not been seen any where but in the southern parts of New Caledonia. They proved to be a species of spruce pine, very proper for spars, which were then wanted. The discovery was valuable, as, excepting New Zealand, there was not an Island known, in the South Pacific Ocean, where a ship could supply herself with a mast or yard, to whatever distress she might be reduced. It was the opinion of the Carpenter of the Resolution, who was a mast-maker as well as a shipwright, that very good masts might be made from the trees in question. The wood of them, which is white, close-grained, tough, and light, is well adapted to that purpose. One of the small Islands where the trees were found, was called by the Captain the ISLE OF PINES. To another, on account of its affording sufficient employment to the Botanists, during the little time they stayed upon it, he gave the name of BOTANY ISLE.

(c) Mr. Forster is of opinion that the language of the New Caledonians is totally different from that of any other nation which had yet been seen in the voyage.

(d) Cook, *ubi supra*, p. 85-127.

Captain Cook now took into serious consideration what was farther to be done. He had pretty well determined the extent of the South-west coast of New Caledonia, and would gladly have proceeded to a more accurate survey of the whole, had he not been deterred, not only by the dangers he must encounter, but by the time required for the undertaking, and which he could not possibly spare. Indeed, when he considered the vast ocean he had to explore to the South; the state and condition of the ship; the near approach of Summer; and that any material accident might detain him in this sea even for another year, he did not think it adviseable to make New Caledonia any longer the object of his attention. But though he was thus obliged, by necessity, for the first time, to leave a coast which he had discovered, before it was fully surveyed, he did not quit it till he had ascertained the extent of the country, and proved, that, excepting New Zealand, it is perhaps the largest Island in the South Pacific Ocean [X]. As the Resolution pursued her

[X] *It is perhaps the largest Island in the South Pacific Ocean.* New Caledonia extends from the latitude of $19^{\circ} 37'$ to $22^{\circ} 30'$ South, and from the longitude of $163^{\circ} 37'$ to $167^{\circ} 14'$ East. It lies nearly

North-west $\frac{1}{2}$ West, and South-east $\frac{1}{2}$ East, and is about eighty-seven leagues long in that direction. Its breadth does not any where exceed ten leagues.

course from New Caledonia, land was discovered, which, on a nearer approach, was found to be an Island of good height and five leagues in circuit. Captain Cook named it NORFOLK ISLE, in honour of the noble family of Howard (e). It was uninhabited; and the first persons that ever set foot on it were unquestionably our English Navigators. Various trees and plants were observed that are common at New Zealand; and, in particular, the flax plant, which is rather more luxuriant here than in any part of that country. The chief produce of the Island is a kind of spruce pine, exceedingly straight and tall, which grows in great abundance. Such is the size of many of the trees, that, breast high, they are as thick as two men can fathom. Among the vegetables of the place, the palm-cabbage afforded both a wholesome and palatable refreshment; and, indeed, proved the most agreeable repast that our people had for a considerable time enjoyed. In addition to this gratification, they had the pleasure of procuring some excellent fish.

(e) It is situated in the latitude of $29^{\circ} 2' 30''$ South, and in the longitude of $163^{\circ} 16'$ East.

From Norfolk Isle, our Commander steered for New Zealand, it being his intention to touch at Queen Charlotte's Sound, that he might refresh his crew, and put the ship in a condition to encounter the southern latitudes. On the eighteenth of October, he anchored before Ship Cove in that sound; and the first thing he did, after landing, was to look for the bottle he had left on the shore, in which was a memorandum. It was taken away; and it soon appeared, from indubitable circumstances, that the Adventure had been in the cove after it was quitted by the Resolution. Upon visiting the gardens which had been formed at Motuara, they were found almost in a state of nature, having been wholly neglected by the inhabitants. Many, however, of the articles were in a flourishing condition, and shewed how well they liked the soil in which they were planted. It was several days before any of the natives made their appearance; but when they did so, and recognised Captain Cook and his friends, joy succeeded to fear. They hurried in numbers out of the woods, and embraced the English over and over again, leaping and skipping about like madmen. Amidst all this extravagance of joy, they were careful to preserve the honour of their females; for they would not permit some women, who were seen at a distance, to come near our people. The Captain's whole intercourse with the New Zealanders, during this his third visit to Queen Charlotte's Sound, was peaceable and friendly; and one of them, a man apparently of consequence, whose name was Pedero, presented him with a staff of honour, such as the Chiefs generally carry. In return, our Commander dressed Pedero, who had a fine person, and a good presence, in a suit of old clothes, of which he was not a little proud. Captain Cook still continued his solicitude to stock the Island with useful animals; and accordingly, in addition to what he had formerly done, he ordered two pigs, a boar and sow, to be put on shore. There was reason to believe that some of the cocks and hens which had formerly been left here still existed. None of them, indeed, were seen; but an hen's egg was found, which had not long been laid. Mr. Wales had now an opportunity of completing his observations with regard to Queen Charlotte's Sound, so as to ascertain its latitude and longitude with the utmost accuracy (f). In the Captain's former voyage there had been an error in this respect. Such were Mr. Wales's abilities and assiduity, that the same correctness was maintained by him, in determining the situations of all the other places which were visited by our Navigators (g).

(f) The longitude of Queen Charlotte's Sound, at the bottom of Ship Cove, is $174^{\circ} 25' 7\frac{1}{2}''$ East, and its latitude $41^{\circ} 5' 56''\frac{1}{2}''$ South. (g) Cook, *ubi supra*, p. 128—162.

(h) The ship, on the twenty-seventh, was in longitude $138^{\circ} 56'$ West.

On the tenth of November, Captain Cook took his departure from New Zealand, in farther pursuit of his great object, the determination of the question concerning the existence of a southern continent. Having sailed till the twenty-seventh, in different degrees of latitude, extending from 43° to $55^{\circ} 48'$ South, he gave up all hopes of finding any more land in this ocean (h). He came, therefore, to the resolution of steering directly for the West entrance of the Straits of Magalhaens, with a view of coasting the South side of Terra del Fuego, round Cape Horn, to the Strait Le Maire. As the world had hitherto obtained but a very imperfect knowledge of this shore, the Captain thought that the full survey of it would be more advantageous, both to navigation and geography, than any thing he could expect to find in a higher latitude. In the prosecution of his voyage, our Commander, on the seventeenth of December, reached the West coast of Terra del Fuego; and having continued to range it till the twentieth, he came to an anchor in a place to which he afterwards gave the name of CHRISTMAS SOUND. Through the whole course of his various navigations, he had never seen so desolate a coast. It seems to be entirely composed of rocky mountains, without the least appearance of vegetation. These mountains terminate in horrible precipices, the craggy summits of which spire up to a vast height; so that scarcely any thing in nature can appear with a more barren and savage aspect, than the whole of the country. The run which Captain Cook had made directly across this ocean, in a high southern latitude, was believed by him to be the first of the kind that had ever been carried into execution (i). He was, therefore, somewhat particular in remarking every circumstance which seemed to be in the least material. However, he could not but observe, that he had never made a passage any where, of such length, or even of a much shorter extent, in which so few things occurred that were of an interesting nature. Excepting the variation of the compass, he knew of nothing else that was worthy of notice. The Captain had now done with the Southern Pacific Ocean; and he had explored it in such a manner, that it would be impossible for any one to think that more could be

(i) He could not possibly know, at this time, that the Adventure had made the passage before him.

(k) Cook's Voyage, *ubi supra*, p. 163—176.

performed, in a single voyage, towards obtaining that end, than had actually been accomplished (k). Barren and dreary as the land is about Christmas Sound, it was not wholly destitute of some accommodations, which could not fail of being agreeable to our Navigators. Near every harbour they found fresh water, and wood for fuel. The country abounds likewise with wild fowl, and particularly with geese; which afforded a refreshment to the whole crew, that was the more acceptable on account of the approaching festival. Had not Providence thus happily provided for them, their Christmas cheer must have been salt beef and pork. Some Madeira wine, the only article of provision that was mended by keeping, was still left. This, in conjunction with the geese, which were cooked in every variety of method, enabled our people to celebrate Christmas as cheerfully, as perhaps was done by their friends in England. The inhabitants of Terra del Fuego, Captain Cook found to be of the same nation that he had formerly seen in Success Bay; and the same whom M. de Bougainville has distinguished by the name of Pecharas. They are a little, ugly, half-starved, beardless race, and go almost naked. It is their own fault that they are not better clothed, nature having furnished them with ample materials for that purpose. By lining their seal-skin cloaks with the skins and feathers of aquatic birds; by making the cloaks themselves larger; and by applying the same materials to different parts of clothing, they might render their dress much more warm and comfortable. But while they are doomed to exist in one of the most inhospitable climates in the globe, they have not sagacity enough to avail themselves of those means of adding to the conveniencies of life, which Providence has put into their power. In short, the Captain, after having been a witness to so many varieties of the human race, hath pronounced, that of all the nations he had seen, the Pecharas are the most wretched (l). Notwithstanding the barrenness of the country, it abounds with a variety of unknown plants, and gave sufficient employment to the Botanists of the Resolution. "Almost every plant," says Mr. Forster, "which we gathered" on the rocks, "was new to us, and some species" were remarkable for the beauty of their flowers, or their smell (m). On the twenty-eighth of December, our Commander sailed from Christmas Sound, and proceeded on his voyage, round Cape Horn, through Strait le Maire, to Staten Land. This famous Cape was passed by him on the next day, when he entered the Southern Atlantic Ocean. In some charts, Cape Horn is laid down as belonging to a small Island; but this was neither confirmed, nor could it be contradicted by our Navigators; for several breakers appeared in the coast, both to the East and West of it, and the hazy weather rendered every object indistinct. Though the summits of some of the hills were rocky, the sides and valleys seemed covered with a green turf, and wooded in tufts (n). In ranging Staten Island a good part was found situated three leagues to the westward of St. John, and in a northern direction. Upon account of the day on which the discovery of this port was made, (being the first of January) Captain Cook gave it the name of NEW YEAR'S HARBOUR. The knowledge of it may be of service to future Navigators. Indeed, it would be more convenient for ships bound to the West, or round Cape Horn, if its situation would permit them to put to sea with an easterly and northerly wind. But this inconvenience is not of great consequence, since these winds are seldom known to be of long duration. The Captain, however, has declared, that if he were on a voyage round Cape Horn to the West, and not in want of wood or water, or any other thing which might make it necessary to put into port, he would not approach the land at all. By keeping out at sea the currents would be avoided, which, he was satisfied, would lose their force at ten or twelve leagues from land, and be totally without influence at a greater distance. The extent of Terra del Fuego, and consequently that of the Straits of Magalhaens, our Commander ascertained to be less than has been laid down by the generality of navigators. Nor was the coast, upon the whole, found to be so dangerous as has often been represented. The weather, at the same time, was remarkably temperate. In one of the little Isles near Staten Land, and which had been called by Captain Cook New Year's Isles, there was observed a harmony between the different animals of the place, which is too curious to be omitted. It seemed as if they had entered into a league not to disturb each other's tranquillity. The greater part of the sea-coast is occupied by the sea-lions; the sea-bears take up their abode in the Isle; the shags are posted in the highest cliffs; the penguins fix their quarters where there is the most easy communication to and from the sea; and the rest of the birds chuse more retired places. All these animals were occasionally seen to mix together, like domestic cattle and poultry in a farm-yard, without one attempting to molest the other. Nay, the Captain had often observed the eagles and vultures sitting on the hills among the shags, while none of the latter, whether old or young, appeared to be in the least disturbed at their presence. It may be asked, then, how do these birds of prey live? This question our Commander hath answered, by supposing that they feed on the carcases of seals and birds which die by various causes. It is probable, from the immense quantity of animals with which the Isle abounds, that such carcases exist in great numbers (o).

(l) Cook, *ubi supra*, p. 177—187.

(m) Forster's Voyage round the World, vol. ii. p. 488.

(n) The latitude of Cape Horn is 55° 58' South, and its longitude was now ascertained to be 67° 46' West.

(o) Cook's Voyage, *ubi supra*, p. 187—206.

From Staten Island Captain Cook sailed, on the fourth of January, with a view, in the first place, of discovering that extensive coast, laid down by Mr. Dalrymple in his chart, in

which is the gulph of St. Sebastian. In order to have all other parts before him, the Captain designed to make the western point of that gulph. As he had some doubt of the existence of such a coast, this appeared to him the best route for determining the matter, and for exploring the southern part of this ocean. When he came to the situations assigned to the different points of the gulph of St. Sebastian, neither land nor any unequivocal signs of land were discovered. On the contrary, it was evident that there could not be any extensive tract of country in the direction which had been supposed. Proceeding in his voyage, land was seen on the fourteenth, which was at first mistaken for an Island of ice. It was in a manner wholly covered with snow. From the person by whom it was first discovered, it obtained the name of WILLIS'S ISLAND (p). It is a high rock, of no great extent, near to which are some rocky islets. Another Island, of a larger compass, on account of the vast number of birds which were upon it, was called BIRD ISLE. A more extensive range of country had been seen for some time, which Captain Cook reached on the seventeenth, and where he landed, on the same day, in three different places. The head of the bay, in which he came to shore, was terminated by particular ice-cliffs, of considerable height. Pieces were continually breaking off, and floating out to sea; and while our Navigators were in the bay, a great fall happened, which made a noise like a cannon. No less savage and horrible were the inner parts of the country. "The wild rocks raised their summits, till they were lost in the clouds, and the valleys lay covered with everlasting snow." There was not a tree to be seen, or a shrub found that was even big enough to make a tooth-pick. The only vegetation that was met with, was a coarse strong-bladed grass, growing in tufts, wild burnet, and a plant like moss, which sprang from the rocks. When our Commander landed in the bay, he displayed the English colours; and, under a discharge of small arms, took possession of the country in his Majesty's name. It was not, however, a discovery which was ever likely to be productive of any considerable benefit. In his return to the ship, Captain Cook brought with him a quantity of seals and penguins, which were an acceptable present to the crew; not from the want of provisions, which were plentiful in every kind, but from a change of diet. Any sort of fresh meat was preferred by most on board to salt. The Captain himself was now, for the first time, tired of the salted meats of the ship; and though the flesh of the penguins could scarcely vie with bullock's liver, its freshness was sufficient to render it comparatively agreeable to the palate. To the bay in which he had been, he gave the name of POSSESSION BAY (q). The land in which this bay lies, was at first judged by our Navigators to be part of a great continent. But, upon coasting round the whole country, it was proved to a demonstration that it was only an Island of seventy leagues in circuit. In honour of his Majesty, Captain Cook called it the ISLE OF GEORGIA (r). It could scarcely have been thought that an Island of no greater extent than this, situated between the latitude of fifty-four and fifty-five, should, in a manner, be wholly covered, many fathoms deep, with frozen snow, in the height of summer. The sides and summits of the lofty mountains were cased with snow and ice; and an incredible quantity lay in the valleys. So immense was the quantity, that our Commander did not think that it could be the produce of the Island. Some land, therefore, which he had seen at a distance, induced him to believe that it might belong to an extensive tract; and gave him hopes of discovering a continent. In this respect, however, he was disappointed; but the disappointment did not sit heavy upon him; since to judge of the bulk by the apprehended sample, it would not have been worth the discovery. It was remarkable that our Voyagers did not see a river, or a stream of fresh water, on the whole coast of the Isle of Georgia. Captain Cook judged it to be highly probable that there are no perennial springs in the country; and that the interior parts, in consequence of their being much elevated, never enjoy heat enough to melt the snow in sufficient quantities to produce a river or stream of water. In sailing round the Island, our Navigators were almost continually involved in a thick mist; so that, for any thing they knew to the contrary, they might be surrounded with dangerous rocks.

(p) It is situated in latitude $54^{\circ} 5'$ South, and longitude of $37^{\circ} 18'$ West.

(p) It is situated in the latitude of 54° South, and the longitude of $38^{\circ} 23'$ West.

(r) It is situated between the latitudes of $53^{\circ} 57'$ and $54^{\circ} 57'$ South, and between $38^{\circ} 13'$ and $35^{\circ} 34'$ West longitude.

The Captain, on the twenty-fifth of the month, steered from the Isle of Georgia, and, on the twenty-seventh, computed that he was in latitude sixty, South. Farther than this he did not intend to go, unless some certain signs of soon meeting with land should be discovered. There was now a long hollow swell from the West, which was a strong indication that no land was to be met with in that direction; and hence arose an additional proof of what has already been remarked, that the extensive coast, laid down in Mr. Dalrymple's chart of the ocean between Africa and America, and the Gulph of St. Sebastian, doth not exist. Not to mention the various Islands which were seen in the prosecution of the voyage, and the names that were given to them, I shall only advert to a few of the more material circumstances. On an elevated coast, which appeared in sight upon the thirty-first, our Commander bestowed the appellation of the SOUTHERN THULE. The reason of his giving it this name was, that it is the most southern land that had ever yet been discovered (s). It is every where covered with snow, and displays a surface of vast height. On this day, our Voyagers were in no small danger from a great westerly swell, which set right upon the shore, and threatened to carry them on the most horrible coast in the world. Happily,

(s) Its latitude is $59^{\circ} 13' 30''$ South, and its longitude $27^{\circ} 45'$ West.

the discovery of a point to the North, beyond which no land could be seen, relieved them from their apprehensions. To the more distinguished tracts of country, which were discovered from the thirty-first of January to the sixth of February, Captain Cook gave the names of CAPE BRISTOL, CAPE MONTAGU, SAUNDERS'S ISLE, CANDLEMAS ISLES, and SANDWICH'S LAND. The last is either a group of Islands, or else a point of the continent. For that there is a tract of land near the pole, which is the source of most of the ice that is spread over this vast Southern Ocean, was the Captain's firm opinion: He also thought it probable, that this land must extend farthest to the North where it is opposite to the Southern Atlantic and Indian Oceans. Ice had always been found by him farther to the North in these oceans than any where else, and this he judged could not be the case, if there were not land of considerable extent to the South. However, the greatest part of this southern continent, if it actually exists, must lie within the polar circle, where the sea is so encumbered with ice, that the land is rendered inaccessible. So great is the risque which is run, in examining a coast in these unknown and icy seas, that our Commander, with a modest and well-grounded boldness, could assert, that no man would ever venture farther than he had done; and that the lands which may lie to the South will never be explored. Thick fogs, snow storms, intense cold, and every thing beside that can render navigation dangerous, must be encountered; all which difficulties are greatly heightened by the inexpressibly horrid aspect of the country. It is a country doomed by nature never once to feel the warmth of the sun's rays, but to lie buried in everlasting snow and ice. Whatever ports there may be on the coast, they are almost entirely covered with frozen snow of a vast thickness. If, however, any one of them should be so far open as to invite a ship into it, she would run the risque of being fixed there for ever, or of coming out in an ice island. To this it may be added, that the Islands and floats on the coast, the great falls from the ice cliffs in the port, or a heavy snow storm, attended with a sharp frost, might be equally fatal. Nothing could exceed the inclination of Captain Cook, if it had been practicable, to penetrate farther to the South: but difficulties like these were not to be surmounted. If he had risked all that had been done during the voyage, for the sake of discovering and exploring a coast, which, when discovered and explored, would have answered no end whatever, or have been of the least use either to navigation or geography, or indeed to any other science, he would justly have been charged with inexcusable temerity. He determined, therefore, to alter his course to the east, and to sail in quest of Bouvet's Land, the existence of which was yet to be settled. Accordingly, this was the principal object of his pursuit, from the sixth to the twenty-second of the month. By that day he had run down thirteen degrees of longitude, in the very latitude assigned for Bouvet's Land. No such land, however, was discovered; nor did any proofs occur of the existence of Cape Circumcision. Our Commander was at this time no more than two degrees of longitude from the route he had taken to the South, when he left the Cape of Good Hope. It would, therefore, have been to no purpose to proceed any farther to the East in this parallel. But being desirous of determining the question concerning some land that was supposed to have been seen more to the South, he directed his course for the situation in which the discovery of it might be expected. Two days were spent by him in this pursuit, to no effectual purpose. After having run over the place where the land was imagined to lie, without meeting with the least signs of any, it became certain that the ice islands had deceived our Navigators as well as Mr. Bouvet (*t*). Captain Cook had now made the circuit of the southern ocean in a high latitude, and traversed it in such a manner as to leave not the least room for the possibility of there being a continent, unless near the pole, and out of the reach of navigation. By twice visiting the tropical sea, he had not only settled the situation of some old discoveries, but made many new ones; and, indeed, even in that part, had left little more to be accomplished. The intention of the voyage had, in every respect, been fully answered, and the southern hemisphere sufficiently explored. A final end was hereby put to the searching after a southern continent, which, for nearly two centuries past, had occasionally engrossed the attention of some of the maritime powers, and had been urged with great ardour by philosophers and geographers in different ages.

The great purpose of his navigation round the globe being thus completed, the Captain began to direct his views towards England. He had, indeed, some thoughts of protracting his course a little longer, for the sake of revisiting the place where the French discovery is said to be situated. But, upon mature deliberation, he determined to lay aside his intention. He considered that, if this discovery had really been made, the end would be as fully answered as if it had been done by himself. It could only be an Island; and if a judgment might be formed from the degree of cold which our Voyagers had experienced in that latitude, it could not be a fertile one. Besides, our Commander would hereby have been kept two months longer at sea, and that in a tempestuous latitude, with which the ship was not in a condition to struggle. Her sails and rigging were so much worn, that something was giving way every hour; and there was nothing left, either to repair or to replace them. The provisions of the vessel were in such a state of decay, that they afforded little nourishment, and the company had been long without refreshments. Indeed, the crew

(*t*) Cook, *ubi*
supra, p. 207—
238.

were yet healthy, and would cheerfully have gone wherever the Captain judged it proper to lead them; but he was fearful lest the scurvy should lay hold of them, at a time when none of the remedies were left by which it could be removed. He thought, likewise, that it would have been cruel in him to have continued the fatigues and hardships they were perpetually exposed to, longer than was absolutely necessary. Throughout the whole voyage, they had merited by their behaviour every indulgence which it was in his power to bestow. Animated by the conduct of the officers, they had shewn that no difficulties or dangers which came in their way were incapable of being surmounted; nor had their activity, courage, and cheerfulness been in the least abated by the separation from them of their consort the *Adventure*. From all these considerations, which were evidently the dictates of wisdom and humanity, Captain Cook was induced to spend no longer time in searching for the French discoveries, and to steer for the Cape of Good Hope. He determined, however, to direct his course in such a manner as to look for the Isles of Denia and Marseeven, which are laid down in Dr. Halley's variation chart (u). After sailing in the proper latitudes, from the twenty-fifth of February to the thirteenth of March, no such Islands were discovered. Nothing, indeed, had been seen that could encourage our Voyagers to persevere in a search after them; and much time could not now be spared, either for the purpose of finding them, or of proving their non-existence. Every one on board was for good reasons impatient to get into port. The Captain, therefore, could no longer avoid yielding to the general wishes, and resolving to proceed to the Cape, without farther delay (w). Soon after our Commander had come to this determination, he demanded of the officers and petty officers, in pursuance of his instructions, the log-books and journals they had kept; which were delivered to him accordingly, and sealed up for the inspection of the Admiralty. He enjoined them also, and the whole crew, not to divulge where they had been, till they were permitted to do so by their Lordships; an injunction, a compliance with which might probably be rendered somewhat difficult, from the natural tendency there is in men to relate the extraordinary enterprises and adventures wherein they have been concerned. As the *Resolution* approached towards the Cape of Good Hope, she fell in first with a Dutch East Indiaman from Bengal, commanded by Captain Bosch, and next with an English Indiaman, being the *True Briton*, from China, of which Captain Broadly was the Commander. Mr. Bosch very obligingly offered to our Navigators sugar, arrack, and whatever he had to spare; and Captain Broadly, with the most ready generosity, sent them fresh provisions, tea, and various articles which could not fail of being peculiarly acceptable to people in their situation. Even a parcel of old news-papers furnished no slight gratification to persons who had so long been deprived of obtaining any intelligence concerning their country and the state of Europe. From these vessels Captain Cook received some information with regard to what had happened to the *Adventure*, after her separation from the *Resolution*. On Wednesday the twenty-second of March (x), he anchored in Table Bay; where he found several Dutch ships, some French, and the *Ceres*, an English East Indiaman, bound directly for England, under the command of Captain Newte. By this Gentleman he sent a copy of the preceding part of his journal, some charts, and other drawings, to the Admiralty (y). During the circum-navigation of the globe, from the period of our Commander's leaving the Cape of Good Hope to his return to it again, he had sailed no less than twenty thousand leagues. This was an extent of voyage nearly equal to three times the equatorial circumference of the earth, and which had never been accomplished before, by any ship, in the same compass of duration. In such a case, it could not be a matter of surprise, that the rigging and sails of the *Resolution* should be essentially damaged, and even worn out: and yet, in all this great run, which had been made in every latitude between nine and seventy-one, she did not spring either low-mast, top-mast, lower or top-sail yard; nor did she so much as break a lower or top-mast shroud. These happy circumstances were owing to the good properties of the vessel, and the singular care and abilities of her officers (z).

(w) He was at this time in the latitude of 38° $38'$ South, and longitude of 23° $37'$ East.

(u) They are laid down in the latitude of 41° $\frac{1}{2}$ South, and about 4° of longitude to the East of the meridian of the Cape of Good Hope.

(y) Capt. Cook's Voyage towards the South Pole, and round the World, vol. ii. p. 239-249.

(x) With our Navigators, who had sailed round the world, it was Wednesday the twenty-second of March; but at the Cape of Good Hope it was Tuesday the twenty-first.

(z) *Ibid.* p. 265, 266.

On the remainder of the voyage it is not necessary to enlarge. Though it was conducted with the same attention to navigation and geography, and with the same sagacity in marking whatever was worthy of observation, nevertheless, as it was not employed in traversing unknown seas, or in discovering countries that had not been heard of before, it may be sufficient briefly to mention the places at which Captain Cook touched, before his arrival in England. The repairs of the ship having been completed, and the necessary stores gotten on board, together with a fresh supply of provisions and water, he left the Cape of Good Hope on the twenty-seventh of April, and reached the Island of St. Helena on the fifteenth of May. Here he staid till the twenty-first, when he sailed for the Island of Ascension, where he anchored on the twenty-eighth. From this place he directed his course, on the thirty-first, for the Island of Fernando de Noronha, at which he arrived on the ninth of June. In the progress of the voyage, our Commander made an experiment upon the still for procuring fresh water; and the result of the trial was, that the invention is useful upon the whole, but that to trust entirely to it would by no means be advisable. Indeed, provided there is not a scarcity of fuel, and the coppers are good, as much water may be obtained as will support life; but no efforts will be able to procure a quantity sufficient

sufficient for the preservation of health; especially in hot climates. Captain Cook was convinced, by experience, that nothing contributes more to the health of seamen, than having plenty of water. On the fourteenth of July, the Captain came to an anchor in the Bay of Fayal, one of the Azores Islands. His sole design in stopping here, was to give Mr. Wales an opportunity of finding the rate of the watch, that hereby he might be enabled to fix the longitude of these Islands with the greater degree of certainty. No sooner, therefore, had our Commander anchored, than he sent an officer to wait on the English consul, and to acquaint the Governor with the arrival of our Navigators, requesting his permission for Mr. Wales to make observations on shore, for the purpose now mentioned. Mr. Dent, who then acted as consul, not only obtained this permission, but accommodated Mr. Wales with a convenient place in his garden, to set up his instruments. This object being accomplished, Captain Cook proceeded, on the nineteenth, with all expedition for England. On the thirtieth of the same month, he anchored at Spithead, and landed at Portsmouth, having been absent from Great Britain three years and eighteen days, in which time, and under all changes of climate, he had lost but four men, and only one of them by sickness (a).

(a) Cook, *ubi supra*, p. 268—289.

The able manner in which Captain Cook had conducted the preceding voyage, the discoveries he had made, and his complete determination of the grand point he had been sent to ascertain, justly and powerfully recommended him to the protection and encouragement of all those who had patronized the undertaking. No alteration had occurred, during his absence, in the Presidency of the Admiralty department. The noble Lord, whose extensive views had taken such a lead in the plans of navigation and discovery, still continued at the head of that board; and it could not be otherwise than a high satisfaction to him that so extraordinary a degree of success had attended his designs for the enlargement of science. His Lordship lost no time in representing Captain Cook's merits to the King: nor did his Majesty stand in need of solicitations to shew favour to a man who had so eminently fulfilled his royal and munificent intentions. Accordingly, our Navigator, on the ninth of August, was raised to the rank of a Post Captain. Three days afterwards, he received a more distinguished and substantial mark of the approbation of Government; for he was then appointed a Captain in Greenwich Hospital; a situation which was intended to afford him a pleasing and honourable reward for his illustrious labours and services (b).

(b) From the books of the Admiralty.

It will easily be supposed that the lovers of science would, in general, be peculiarly attentive to the effects resulting from Captain Cook's discoveries. The additions he had made to the knowledge of geography, navigation, and astronomy, and the new views he had opened of the diversified state of human life and manners, could not avoid commanding their esteem, and exciting their admiration. With many persons of philosophic literature he was in the habits of intimacy and friendship; and he was particularly acquainted with Sir John Pringle, at that time President of the Royal Society. It was natural, therefore, that his scientific friends should wish him to become a Member of this learned body; the consequence of which was, that, in the latter end of the year 1775, he was proposed as a candidate for election. On the twenty-ninth of February, 1776, he was unanimously chosen; and he was admitted on the seventh of March (c). That same evening, a paper was read, which he had addressed to Sir John Pringle, containing an account of the method he had taken to preserve the health of the crew of his Majesty's ship the *Resolution*, during her

(c) From the register of the Royal Society, and the information of Mrs. Planta.

(d) Philosophical Transactions, vol. lxvi. p. 402—406.

(e) *Ibid.* p. 447—449.

voyage round the world (d). Another paper, at the request of the President, was communicated by him, on the eighteenth of April, relative to the tides in the South Seas. The tides particularly considered were those in the Endeavour River, on the East coast of New Holland (e). A still greater honour was in reserve for Captain Cook than the election of him to be a common Member of the Royal Society. It was resolved by Sir John Pringle, and the Council of the Society, to bestow upon him the estimable prize of the gold medal, for the best experimental paper of the year; and no determination could be founded in greater wisdom and justice. If Captain Cook had made no important discoveries, if he had not determined the question concerning a southern continent, his name would have been entitled to immortality, on account of his humane attention to, and his unparalleled success in preserving the lives and health of his seamen. He had good reason, upon this head, to assume the pleasurable, but modest language, with which he has concluded his narrative of his second navigation round the globe: "Whatever," says he, "may be the public judgment about other matters, it is with real satisfaction, and without claiming any merit but that of attention to my duty, that I can conclude this account with an observation, which facts enable me to make, that our having discovered the possibility of preserving health among a numerous ship's company, for such a length of time, in such varieties of climate, and amidst such continued hardships and fatigues, will make this voyage remarkable, in the opinion of every benevolent person, when the disputes about the Southern Continent shall have ceased to engage the attention, and to divide the judgment of Philosophers (f)." It was the custom of Sir John Pringle, at the delivery of Sir Godfrey Copley's annual medal, to give an elaborate discourse, containing the history of that part of science for the improvement of which the medal was conferred. Upon

(f) Cook's second Voyage, vol. ii. p. 293.

the present occasion, the President had a subject to enlarge upon, which was perfectly congenial to his disposition and studies. His own life had been much employed in pointing out the means which tended not only to cure, but to prevent, the diseases of mankind; and, therefore, it was with peculiar pleasure and affection that he celebrated the conduct of his friend, who, by precautions equally wise and simple, had rendered the circumnavigation of the globe, so far as health is concerned, quite a harmless undertaking (g). Towards the beginning of his discourse, Sir John justly asks, "What enquiry can be so useful as that, which hath for its object, the saving the lives of men? and when shall we find one more successful than that before us? Here," adds the President, "are no vain boastings of the empiric, nor ingenious and delusive theories of the dogmatist; but a concise and artless, and an incontestable relation of the means, by which, under Divine favour, Captain Cook, with a company of a hundred and eighteen men, performed a voyage of three years and eighteen days, throughout all the climates, from fifty-two degrees North to seventy-one degrees South, with the loss of only one man by sickness [T]. —I would now enquire," proceeds Sir John Pringle, "of the most conversant in the study of bills of mortality, whether, in the most healthful climate, and in the best condition of life, they have ever found so small a number of deaths, within that space of time? How great and agreeable then must our surprize be, after perusing the histories of long navigations in former days, when so many perished by Marine diseases, to find the air of the sea acquitted of all malignity, and, in fine, that a voyage round the world may be undertaken with less danger, perhaps, to health, than a common tour in Europe!" In the progress of his discourse, the President recounted the dreadful calamities and destruction the scurvy had heretofore brought upon Mariners in voyages of great length; after which he pointed out at large, and illustrated with his own observations, the methods pursued by Captain Cook for preserving the health of his men. In conclusion, Sir John remarked, that the Royal Society never more cordially or more meritoriously bestowed the gold medal, that faithful symbol of their esteem and affection. "For if," says he, "Rome decreed the *civic crown* to him who saved the life of a single citizen, what wreaths are due to that man, who having himself saved many, perpetuates in your Transactions the means by which Britain may now, on the most distant voyages, preserve numbers of her intrepid sons, her *mariners*; who, braving every danger, have so liberally contributed to the fame, to the opulence, and to the maritime empire, of their country (h) [Z]!" One circumstance alone was wanting to complete the pleasure and

(g) Life of Sir John Pringle, prefixed to his Six Discourses, p. xlii, xliii.

(h) Sir John Pringle's Six Discourses, p. 145—147, 199.

[T] *With the loss of only one man by sickness.* Mr. Patten, Surgeon to the Resolution, informed Sir John Pringle, that this one man, who died of a consumption terminating in a dropsy, began so early to complain of a cough and other consumptive symptoms, which had never left him, that his lungs must have been affected before he came on board.

[Z] *And to the maritime empire, of their country.* It cannot but be acceptable to insert here, from the conclusion of Captain Cook's second voyage, his enumeration of the several causes, to which, under the care of Providence, the uncommon good state of health, experienced by his people, was owing. "In the Introduction," says he, "mention has been made of the extraordinary attention paid by the Admiralty, in causing such articles to be put on board, as either from experience or suggestion it was judged would tend to preserve the health of the teamen. I shall not trespass upon the reader's time in mentioning them all, but confine myself to such as were found the most useful.

"We were furnished with a quantity of malt, of which was made *Sweet Wort*. To such of the men as shewed the least symptoms of the scurvy; and also to such as were thought to be threatened with that disorder, this was given, from one to two or three pints a day each man; or in such proportion as the Surgeon found necessary, which sometimes amounted to three quarts. This is, without doubt, one of the best antiscorbutic sea-medicines yet discovered; and, if used in time, will, with proper attention to other things, I am persuaded, prevent the scurvy from making any great progress for a considerable while. But I am not altogether of opinion that it will cure it at sea.

"*Sour Krout*, of which we had a large quantity, is not only a wholesome vegetable food, but, in my judgment, highly antiscorbutic; and it spoils not by keeping. A pound of this was served to each man, when at sea, twice a week, or oftener, as was thought necessary.

"*Portable Broth* was another great article, of which we had a large supply. An ounce of this to each man, or such other proportion as circumstances pointed out, was boiled in their pease, three days in the week; and when we were in places where vegetables were to be got, it was boiled with them, and wheat or oatmeal, every morning for breakfast; and also with pease and vegetables for dinner. It enabled us to make several nourishing and wholesome messes, and was the means of making the people eat a greater quantity of vegetables than they would otherwise have done.

"*Rob of Lemon and Orange*, is an antiscorbutic we were not without. The Surgeon made use of it in many cases, with great success.

"Amongst the articles of victualling, we were supplied with *Sugar* in the room of *Oil*, and with *Wheat* for a part of our *Oatmeal*; and were certainly gainers by the exchange. *Sugar*, I apprehend, is a very good antiscorbutic; whereas oil (such as the navy is usually supplied with), I am of opinion has the contrary effect.

"But the introduction of the most salutary articles, either as provisions or medicines, will generally prove unsuccessful, unless supported by certain regulations. On this principle, many years experience, together with some hints I had from Sir Hugh Palliser, Captains Campbell, Wallis, and other intelligent officers, enabled me to lay a plan whereby all was to be governed.

"The crew were at three watches, except upon some extraordinary occasions. By this means they were not so much exposed to the weather as if they had been at watch and watch; and had generally dry cloaths to shift themselves, when they happened to get wet. Care was also taken to expose them as little to wet weather as possible.

"Proper methods were used to keep their persons, hammocks, bedding, cloaths, &c. constantly clean and dry. Equal care was taken to keep the ship clean and dry betwixt decks. Once or twice a week

and celebrity arising from the assignment of Sir Godfrey Copley's medal. Captain Cook was not himself present, to hear the discourse of the President, and to receive the honour conferred upon him. Some months before the anniversary of St. Andrew's day, he had failed on his last expedition. The medal, therefore, was delivered into the hands of Mrs. Cook, whose satisfaction at being entrusted with so valuable a pledge of her husband's reputation cannot be questioned. Neither can it be doubted, but that the Captain, before his departure from England, was fully apprized of the mark of distinction which was intended for him by the Royal Society.

Captain Cook, after the conclusion of his second voyage, was called upon to appear in the world in the character of an author. In the account that was published, by authority, of his former circum-navigation of the globe, as well as of those which had been performed by the Captains Byron, Carteret, and Wallis, it was thought requisite to procure the assistance of a professed literary man, whose business it should be to draw up a narrative from the several journals of these Commanders. Accordingly, Dr. Hawkesworth, as is universally known, was employed for the purpose. In the present case, it was not esteemed necessary to have recourse to such an expedient. Captain Cook was justly regarded as sufficiently qualified to relate his own story. His journal only required to be divided into chapters, and perhaps to be amended by a few verbal corrections. It is not speaking extravagantly to say, that, in point of composition, his history of his voyage reflects upon him no small degree of credit. His style is natural, clear, and manly; being well adapted to the subject and to his own character: and it is possible that a pen of more studied elegance would not have given any additional advantage to the narration. It was not till some time after Captain Cook's leaving England that the work was published; but, in the mean while, the superintendence of it was undertaken by his learned and valuable friend, Dr. Douglas, whose late promotion to the mitre hath afforded pleasure to every literary man, of every denomination. When the Voyage appeared, it came recommended by the accuracy and excellence of its charts, and by a great variety of engravings, from the curious and beautiful drawings of Mr. Hodges. This work was followed by the publication of the original astronomical observations, which had been made by Mr. Wales in the Resolution, and by Mr. Bayley in the Adventure. It was at the expence of the Commissioners of Longitude that these observations were made, and it was by their order that they were printed. The book of Mr. Wales and Mr. Bayley displays, in the strongest light, the scientific use and value of Captain Cook's voyage [AA]. Some of the circumstances which have now been mentioned, have designedly been brought forward more early in point of time than should otherwise have been done, in order to prevent any interruption in the course of the subsequent narrative.

" week she was aired with fires; and when this could not be done, she was smoked with gunpowder, mixed with vinegar or water. I had also, frequently, a fire made in an iron pot, at the bottom of the well, which was of great use in purifying the air in the lower parts of the ship. To this, and to cleanliness, as well in the ship as amongst the people, too great attention cannot be paid: the least neglect occasions a putrid and disagreeable smell below, which nothing but fires will remove. Proper attention was paid to the ship's coppers, so that they were kept constantly clean.

" The fat, which boiled out of the salt beef and pork, I never suffered to be given to the people; being of opinion that it promotes the scurvy.

" I was careful to take in water wherever it was to be got, even though we did not want it. Because I look upon fresh water from the shore, to be more wholesome than that which had been kept some time on board a ship. Of this essential article we were never at an allowance, but had always plenty for every necessary purpose. Navigators in general cannot, indeed, expect, nor would they wish to meet with such advantages in this respect, as fell to my lot. The nature of our voyage carried us into very high latitudes. But the hardships and dangers inseparable from that situation, were in some degree compensated by the singular felicity we enjoyed, of extracting inexhaustible supplies of fresh water from an ocean strewed with ice.

" We came to few places, where either the art of man, or the bounty of nature, had not provided some sort of refreshment or other, either in the animal or vegetable way. It was my first care to procure whatever of any kind could be met with, by every means in my power; and to oblige our people to make use thereof, both by my example and authority; but the benefits arising from re-

" freshments of any kind soon became so obvious, that I had little occasion to recommend the one, or to exert the other (7)."

(7) Vol. ii. p. 289-292.

In a letter which Captain Cook wrote to Sir John Pringle, just before he embarked on his last voyage, dated Plymouth Sound, July 7, 1776, he expressed himself as follows: " I entirely agree with you, that the dearth of the rob of lemons and of oranges will hinder them from being furnished in large quantities. But I do not think this so necessary; for, though they may assist other things, I have no great opinion of them alone. Nor have I a higher opinion of vinegar. My people had it very sparingly during the late voyage, and, towards the latter part, none at all; and yet we experienced no ill effect from the want of it. The custom of washing the inside of the ship with vinegar, I seldom observed; thinking that fire and smoke answered the purpose much better (8)."

(8) Sir John Pringle's Six Discourses, p. 200.

[AA] *The scientific use and value of Captain Cook's Voyage.* Beside the works which came from authority, Mr. George Forster published, in two volumes, quarto, "A Voyage round the World, in his Britannic Majesty's sloop, Resolution." This appeared in 1777. The next year, Dr. John Reinhold Forster communicated to the public, in one volume, quarto, "Observations made during a Voyage round the World, on Physical Geography, Natural History, and Ethic Philosophy." It need not be said, that these works contain much curious and useful information. Mr. George Forster having been thought to be guilty of some misrepresentations with regard to certain facts, Mr. Wales wrote remarks upon his book, to which Mr. Forster replied. As to one or two hasty and premature attempts to gratify the public curiosity, they are not worthy to be noticed.

Though

Though Captain Cook was expected to sit down in repose, after his toils and labours, the design of farther discoveries was not laid aside. The illusion, indeed, of a *terra Australis incognita*, to any purposes of commerce, colonization, and utility, had been dispelled: but there was another grand question which remained to be determined; and that was the practicability of a northern passage to the Pacific Ocean. It had long been a favourite object with navigators, and particularly with the English, to discover a shorter, a more commodious, and a more profitable course of sailing to Japan and China, and, indeed, to the East Indies in general, than by making the tedious circuit of the Cape of Good Hope. To find a western passage round North America, had been attempted by several bold adventurers, from Frobisher's first voyage, in 1576, to those of James and of Fox, in 1631. By these expeditions a large addition was made to the knowledge of the northern extent of America, and Hudson's and Baffin's Bays were discovered. But the wished-for passage, on that side, into the Pacific Ocean, was still unattained. Nor were the various attempts of our countrymen, and of the Dutch, to find such a passage, by sailing round the North of Asia, in an eastern direction, attended with better success. Wood's failure, in 1676, appears to have concluded the long list of unfortunate expeditions in that century. The discovery, if not absolutely despaired of, had been unsuccessful in such a number of instances, that it ceased, for many years, to be an object of pursuit (i). The question was again revived in the present century. Mr. Dobbs, a warm advocate for the probability of a North-west passage through Hudson's Bay, once more recalled the attention of this country to that undertaking. In consequence of the spirit by him excited, Captain Middleton was sent out by Government in 1741, and Captains Smith and Moore in 1746. But, though an act of Parliament had been passed, which secured a reward of twenty thousand pounds to the discovery of a passage, the accomplishment of this favourite object continued at as great a distance as ever (k). To ascertain a matter of such importance and magnitude in navigation, was reserved to be another glory of his present Majesty's reign. The idea was peculiarly suited to the enlightened mind of the noble Lord at the head of the Admiralty, and he adopted it with ardour. Preparatory to the execution of the design, Lord Mulgrave sailed with two ships, to determine how far navigation was practicable towards the North Pole. In this expedition, his Lordship met with the same insuperable difficulties which had been experienced by former voyagers. Nevertheless, the expectation of opening a communication between the Pacific and Atlantic Oceans, by a northerly course, was not abandoned; and it was resolved that a voyage should be undertaken for that purpose (l). For the conduct of an enterprize, the operations of which were intended to be so new, so extensive, and so various, it was evident that great ability, skill, and experience were indispensably necessary (m). That Captain Cook was of all men the best qualified for carrying it into execution, was a matter that could not be called in question. But, however ardently it might be wished that he would take upon him the command of the service, no one (not even his friend and patron, Lord Sandwich himself) presumed to solicit him upon the subject. The benefits he had already conferred on science and navigation, and the labours and dangers he had gone through, were so many and great, that it was not deemed reasonable to ask him to engage in fresh perils. At the same time, nothing could be more natural than to consult him upon every thing relative to the business; and his advice was particularly requested with regard to the properest person for conducting the voyage. To determine this point, the Captain, Sir Hugh Palliser, and Mr. Stephens were invited to Lord Sandwich's to dinner. Here, besides taking into consideration what officer should be recommended to his Majesty for accomplishing the purposes in view, many things were said concerning the nature of the design. Its grandeur and dignity, the consequences of it to navigation and science, and the completion it would give to the whole system of discoveries, were enlarged upon in the course of the conversation. Captain Cook was so fired with the contemplation and representation of the object, that he started up, and declared, that he himself would undertake the direction of the enterprize. It is easy to suppose, with what pleasure the noble Lord, and the other Gentlemen, received a proposal which was so agreeable to their secret wishes, and which they thought of the highest importance towards attaining the ends of the voyage (n). No time was lost by the Earl of Sandwich, in laying the matter before the King; and Captain Cook was appointed to the command of the expedition, on the tenth of February, 1776 (o). At the same time, it was agreed, that, on his return to England, he should be restored to his situation at Greenwich; and, if no vacancy occurred during the interval, the officer who succeeded him was to resign in his favour (p).

(k) *Ibid.* p. xxix, xxx.

(m) *Ibid.*

(n) From the information of the Right Honourable the Earl of Sandwich.

(o) From the books of the Admiralty.

The command and the direction of the enterprize being thus happily settled, it became an object of great importance to determine what might be the best course that could be given to the voyage. All former navigators round the globe had returned to Europe by the Cape of Good Hope. But to Captain Cook the arduous task was now assigned of attempting it by reaching the high northern latitudes between Asia and America; and the adoption of this resolution was, I believe, the result of his own reflections upon the subject. The usual plan, therefore, of discovery was reversed; so that instead of a passage from the Atlantic to the Pacific, one from the latter into the former was to be tried. Whatever openings

openings or inlets there might be on the East side of America, that lie in a direction which could afford any hopes of a passage, it was wisely foreseen that the ultimate success of the expedition would depend upon there being an open sea between the West side of that continent and the extremities of Asia. Accordingly Captain Cook was ordered to proceed into the Pacific Ocean, through the chain of the new Islands which had been visited by him in the southern tropic. After having crossed the equator into the northern parts of that ocean, he was then to hold such a course as might probably fix many interesting points in geography, and produce intermediate discoveries, in his progress northward to the principal scene of his operations (q). With regard to his grand object, it was determined, for the wisest reasons, and after the most mature deliberation and enquiry, that upon his arrival on the coast of New Albion, he should proceed northward as far as the latitude of 65°, and not lose any time in exploring rivers or inlets, or upon any other account, until he had gotten into that latitude [BB]. To give every possible encouragement to the prosecution of the great design in view, the motives of interest were added to the obligations of duty. In the act of Parliament which passed in 1745, the reward of twenty thousand pounds had been only held out to the ships *belonging to any of his Majesty's subjects*, while his Majesty's own ships were excluded. Another, and more capital defect of this act was, that it confined the reward to such ships alone as should discover a passage through Hudson's Bay. By a new law, which passed in 1776, both these deficiencies were effectually remedied. It was now enacted, "That if any ship belonging to any of his Majesty's subjects, or *to his Majesty*, shall find out, and sail through, any passage by sea, between the Atlantic and Pacific Oceans, in *any direction*, or parallel of the northern hemisphere, to the northward of the 52° of northern latitude, the owners of such ships, if belonging to any of his Majesty's subjects, or *the commander, officers, and seamen of such ship belonging to his Majesty*, shall receive, as a reward for such discovery, the sum of twenty thousand pounds (r)." That every thing might be done which could facilitate the success of the grand expedition, Lieutenant Pickersgill was sent out, in 1776, with directions to explore the coasts of Baffin's Bay; and, in the next year, Lieutenant Young was commissioned not only to examine the western parts of that bay, but to endeavour to find a passage, on that side, from the Atlantic to the Pacific Ocean. Nothing was performed by either of these Gentlemen that promoted the purposes of Captain Cook's voyage (s). Two vessels were fixed upon by Government for the intended service; the Resolution, and the Discovery. The command of the former was given to Captain Cook, and of the other to Captain Clerke. To the Resolution was assigned the same complement of officers and men which she had during her preceding voyage; and the only difference in the establishment of the Discovery from that of the Adventure, was in the single instance of her having no marine officer on board.

From the time of the two ships being put into commission, the greatest degree of attention and zeal was exerted by the Earl of Sandwich, and the rest of the Board of Admiralty, to have them equipped in the most complete manner. Both the vessels were supplied with as much of every necessary article as could conveniently be stowed, and with the best of each kind that could be procured. Whatever, likewise, the experience of the former voyages had shewn to be of any utility in preserving the health of seamen, was provided in a large abundance. That some permanent benefit might be conveyed to the inhabitants of Otaheite, and of the other Islands of the Pacific Ocean, whom our Navigators might happen to visit, it was graciously commanded by his Majesty that an assortment of useful animals should be carried out to those countries. Accordingly, a bull, two cows with their calves, and several sheep, with hay and corn for their subsistence, were taken on board; and it was intended to add other serviceable animals to these, when Captain Cook should arrive at the Cape of Good Hope. With the same benevolent purposes, the Captain was furnished with a sufficient quantity of such of our European garden seeds, as could not fail of being a valuable present to the newly-discovered Islands, by adding fresh supplies of food to their own vegetable productions. By order of the Board of Admiralty, many articles besides were delivered to our Commander, which were calculated, in various ways, to improve the condition of the natives of the other hemisphere. Still farther to promote a friendly intercourse with them, and to carry on a traffic that might be profitable on both sides, an ample assortment was provided of iron tools and trinkets. An attention no less humane was extended to the wants of our own people. Some additional clothing, adapted to a cold climate, was ordered for the crews of the two ships; and nothing was denied to our Navigators that could be supposed to be in the least conducive to their health, or even to their convenience. It was not to these things only that the extraordinary care of Lord Sandwich, and of the other Gentlemen at the head of the naval department, was confined. They were equally solicitous to afford every assistance that

[BB] *Until he had gotten into that latitude.*] See published, of the methods which have been taken by these reasons represented at large in the admirable the Hudson's Bay Company, to explore the western Introduction to Captain Cook's last voyage; together parts of North America, extending from that bay, with a curious and interesting account, never before p. xl—li.

Though Captain Cook was expected to sit down in repose, after his toils and labours, the design of farther discoveries was not laid aside. The illusion, indeed, of a *terra Australis incognita*, to any purposes of commerce, colonization, and utility, had been dispelled: but there was another grand question which remained to be determined; and that was the practicability of a northern passage to the Pacific Ocean. It had long been a favourite object with navigators, and particularly with the English, to discover a shorter, a more commodious, and a more profitable course of sailing to Japan and China, and, indeed, to the East Indies in general, than by making the tedious circuit of the Cape of Good Hope. To find a western passage round North America, had been attempted by several bold adventurers, from Frobisher's first voyage, in 1576, to those of James and of Fox, in 1631. By these expeditions a large addition was made to the knowledge of the northern extent of America, and Hudson's and Baffin's Bays were discovered. But the wished-for passage, on that side, into the Pacific Ocean, was still unattained. Nor were the various attempts of our countrymen, and of the Dutch, to find such a passage, by sailing round the North of Asia, in an eastern direction, attended with better success. Wood's failure, in 1676, appears to have concluded the long list of unfortunate expeditions in that century. The discovery, if not absolutely despaired of, had been unsuccessful in such a number of instances, that it ceased, for many years, to be an object of pursuit (i). The question was again revived in the present century. Mr. Dobbs, a warm advocate for the probability of a North-west passage through Hudson's Bay, once more recalled the attention of this country to that undertaking. In consequence of the spirit by him excited, Captain Middleton was sent out by Government in 1741, and Captains Smith and Moore in 1746. But, though an act of Parliament had been passed, which secured a reward of twenty thousand pounds to the discovery of a passage, the accomplishment of this favourite object continued at as great a distance as ever (k). To ascertain a matter of such importance and magnitude in navigation, was reserved to be another glory of his present Majesty's reign. The idea was peculiarly suited to the enlightened mind of the noble Lord at the head of the Admiralty, and he adopted it with ardour. Preparatory to the execution of the design, Lord Mulgrave sailed with two ships, to determine how far navigation was practicable towards the North Pole. In this expedition, his Lordship met with the same insuperable difficulties which had been experienced by former voyagers. Nevertheless, the expectation of opening a communication between the Pacific and Atlantic Oceans, by a northerly course, was not abandoned; and it was resolved that a voyage should be undertaken for that purpose (l). For the conduct of an enterprize, the operations of which were intended to be so new, so extensive, and so various, it was evident that great ability, skill, and experience were indispensably necessary (m). That Captain Cook was of all men the best qualified for carrying it into execution, was a matter that could not be called in question. But, however ardently it might be wished that he would take upon him the command of the service, no one (not even his friend and patron, Lord Sandwich himself) presumed to solicit him upon the subject. The benefits he had already conferred on science and navigation, and the labours and dangers he had gone through, were so many and great, that it was not deemed reasonable to ask him to engage in fresh perils. At the same time, nothing could be more natural than to consult him upon every thing relative to the business; and his advice was particularly requested with regard to the properest person for conducting the voyage. The command and the direction of the enterprize being thus happily settled, it became an object of great importance to determine what might be the best course that could be given to the voyage. All former navigators round the globe had returned to Europe by the Cape of Good Hope. But to Captain Cook the arduous task was now assigned of attempting it by reaching the high northern latitudes between Asia and America; and the adoption of this resolution was, I believe, the result of his own reflections upon the subject. The usual plan, therefore, of discovery was reversed; so that instead of a passage from the Atlantic to the Pacific, one from the latter into the former was to be tried. Whatever openings

openings or inlets there might be on the East side of America, that lie in a direction which could afford any hopes of a passage, it was wisely foreseen that the ultimate success of the expedition would depend upon there being an open sea between the West side of that continent and the extremities of Asia. Accordingly Captain Cook was ordered to proceed into the Pacific Ocean, through the chain of the new Islands which had been visited by him in the southern tropic. After having crossed the equator into the northern parts of that ocean, he was then to hold such a course as might probably fix many interesting points in geography, and produce intermediate discoveries, in his progress northward to the principal scene of his operations (q). With regard to his grand object, it was determined, for the wisest reasons, and after the most mature deliberation and enquiry, that upon his arrival on the coast of New Albion, he should proceed northward as far as the latitude of 65°, and not lose any time in exploring rivers or inlets, or upon any other account, until he had gotten into that latitude [BB]. To give every possible encouragement to the prosecution of the great design in view, the motives of interest were added to the obligations of duty. In the act of Parliament which passed in 1745, the reward of twenty thousand pounds had been only held out to the ships *belonging to any of his Majesty's subjects*, while his Majesty's own ships were excluded. Another, and more capital defect of this act was, that it confined the reward to such ships alone as should discover a passage through Hudson's Bay. By a new law, which passed in 1776, both these deficiencies were effectually remedied. It was now enacted, "That if any ship belonging to any of his Majesty's subjects, or *to his Majesty*, shall find out, and sail through, any passage by sea, between the Atlantic and Pacific Oceans, in *any direction*, or parallel of the northern hemisphere, to the northward of the 52° of northern latitude, the owners of such ships, if belonging to any of his Majesty's subjects, or *the commander, officers, and seamen of such ship belonging to his Majesty*, shall receive, as a reward for such discovery, the sum of twenty thousand pounds (r)." That every thing might be done which could facilitate the success of the grand expedition, Lieutenant Pickersgill was sent out, in 1776, with directions to explore the coasts of Baffin's Bay; and, in the next year, Lieutenant Young was commissioned not only to examine the western parts of that bay, but to endeavour to find a passage, on that side, from the Atlantic to the Pacific Ocean. Nothing was performed by either of these Gentlemen that promoted the purposes of Captain Cook's voyage (s). Two vessels were fixed upon by Government for the intended service; the Resolution, and the Discovery. The command of the former was given to Captain Cook, and of the other to Captain Clerke. To the Resolution was assigned the same complement of officers and men which she had during her preceding voyage; and the only difference in the establishment of the Discovery from that of the Adventure, was in the single instance of her having no marine officer on board.

From the time of the two ships being put into commission, the greatest degree of attention and zeal was exerted by the Earl of Sandwich, and the rest of the Board of Admiralty, to have them equipped in the most complete manner. Both the vessels were supplied with as much of every necessary article as could conveniently be stowed, and with the best of each kind that could be procured. Whatever, likewise, the experience of the former voyages had shewn to be of any utility in preserving the health of seamen, was provided in a large abundance. That some permanent benefit might be conveyed to the inhabitants of Otaheite, and of the other Islands of the Pacific Ocean, whom our Navigators might happen to visit, it was graciously commanded by his Majesty that an assortment of useful animals should be carried out to those countries. Accordingly, a bull, two cows with their calves, and several sheep, with hay and corn for their subsistence, were taken on board; and it was intended to add other serviceable animals to these, when Captain Cook should arrive at the Cape of Good Hope. With the same benevolent purposes, the Captain was furnished with a sufficient quantity of such of our European garden seeds, as could not fail of being a valuable present to the newly-discovered Islands, by adding fresh supplies of food to their own vegetable productions. By order of the Board of Admiralty, many articles besides were delivered to our Commander, which were calculated, in various ways, to improve the condition of the natives of the other hemisphere. Still farther to promote a friendly intercourse with them, and to carry on a traffic that might be profitable on both sides, an ample assortment was provided of iron tools and trinkets. An attention no less humane was extended to the wants of our own people. Some additional clothing, adapted to a cold climate, was ordered for the crews of the two ships; and nothing was denied to our Navigators that could be supposed to be in the least conducive to their health, or even to their convenience. It was not to these things only that the extraordinary care of Lord Sandwich, and of the other Gentlemen at the head of the naval department, was confined. They were equally solicitous to afford every assistance that

[BB] *Until he had gotten into that latitude.* See published, of the methods which have been taken by these reasons represented at large in the admirable the Hudson's Bay Company, to explore the western Introduction to Captain Cook's last voyage; together parts of North America, extending from that bay, with a curious and interesting account, never before p. xl—li.

Though Captain Cook was expected to sit down in repose, after his toils and labours, the design of farther discoveries was not laid aside. The illusion, indeed, of a *terra Australis incognita*, to any purposes of commerce, colonization, and utility, had been dispelled: but there was another grand question which remained to be determined; and that was the practicability of a northern passage to the Pacific Ocean. It had long been a favourite object with navigators, and particularly with the English, to discover a shorter, a more commodious, and a more profitable course of sailing to Japan and China, and, indeed, to the East Indies in general, than by making the tedious circuit of the Cape of Good Hope. To find a western passage round North America, had been attempted by several bold adventurers, from Frobisher's first voyage, in 1576, to those of James and of Fox, in 1631. By these expeditions a large addition was made to the knowledge of the northern extent of America, and Hudson's and Baffin's Bays were discovered. But the wished-for passage, on that side, into the Pacific Ocean, was still unattained. Nor were the various attempts of our countrymen, and of the Dutch, to find such a passage, by sailing round the North of Asia, in an eastern direction, attended with better success. Wood's failure, in 1676, appears to have concluded the long list of unfortunate expeditions in that century. The discovery, if not absolutely despaired of, had been unsuccessful in such a number of instances, that it ceased, for many years, to be an object of pursuit (i). The question was again revived in the present century. Mr. Dobbs, a warm advocate for the probability of a North-west passage through Hudson's Bay, once more recalled the attention of this country to that undertaking. In consequence of the spirit by him excited, Captain Middleton was sent out by Government in 1741, and Captains Smith and Moore in 1746. But, though an act of Parliament had been passed, which secured a reward of twenty thousand pounds to the discovery of a passage, the accomplishment of this favourite object continued at as great a distance as ever (k). To ascertain a matter of such importance and magnitude in navigation, was reserved to be another glory of his present Majesty's reign. The idea was peculiarly suited to the enlightened mind of the noble Lord at the head of the Admiralty, and he adopted it with ardour. Preparatory to the execution of the design, Lord Mulgrave sailed with two ships, to determine how far navigation was practicable towards the North Pole. In this expedition, his Lordship met with the same insuperable difficulties which had been experienced by former voyagers. Nevertheless, the expectation of opening a communication between the Pacific and Atlantic Oceans, by a northerly course, was not abandoned; and it was resolved that a voyage should be undertaken for that purpose (l). For the conduct of an enterprize, the operations of which were intended to be so new, so extensive, and so various, it was evident that great ability, skill, and experience were indispensably necessary (m). That Captain Cook was of all men the best qualified for carrying it into execution, was a matter that could not be called in question. But, however ardently it might be wished that he would take upon him the command of the service, no one (not even his friend and patron, Lord Sandwich himself) presumed to solicit him upon the subject. The benefits he had already conferred on science and navigation, and the labours and dangers he had gone through, were so many and great, that it was not deemed reasonable to ask him to engage in fresh perils. At the same time, nothing could be more natural than to consult him upon every thing relative to the business; and his advice was particularly requested with regard to the properest person for conducting the voyage. To determine this point, the Captain, Sir Hugh Palliser, and Mr. Stephens were invited to Lord Sandwich's to dinner. Here, besides taking into consideration what officer should be recommended to his Majesty for accomplishing the purposes in view, many things were said concerning the nature of the design. Its grandeur and dignity, the consequences of it to navigation and science, and the completion it would give to the whole system of discoveries, were enlarged upon in the course of the conversation. Captain Cook was so fired with the contemplation and representation of the object, that he started up, and declared, that he himself would undertake the direction of the enterprize. It is easy to suppose, with what pleasure the noble Lord, and the other Gentlemen, received a proposal which was so agreeable to their secret wishes, and which they thought of the highest importance towards attaining the ends of the voyage (n). No time was lost by the Earl of Sandwich, in laying the matter before the King; and Captain Cook was appointed to the command of the expedition, on the tenth of February, 1776 (o). At the same time, it was agreed, that, on his return to England, he should be restored to his situation at Greenwich; and, if no vacancy occurred during the interval, the officer who succeeded him was to resign in his favour (p).

The command and the direction of the enterprize being thus happily settled, it became an object of great importance to determine what might be the best course that could be given to the voyage. All former navigators round the globe had returned to Europe by the Cape of Good Hope. But to Captain Cook the arduous task was now assigned of attempting it by reaching the high northern latitudes between Asia and America; and the adoption of this resolution was, I believe, the result of his own reflections upon the subject. The usual plan, therefore, of discovery was reversed; so that instead of a passage from the Atlantic to the Pacific, one from the latter into the former was to be tried. Whatever openings

Accordingly Captain Cook was ordered to proceed into the Pacific Ocean, through the chain of the new Islands which had been visited by him in the southern tropic. After having crossed the equator into the northern parts of that ocean, he was then to hold such a course as might probably fix many interesting points in geography, and produce intermediate discoveries, in his progress northward to the principal scene of his operations (q). With regard to his grand object, it was determined, for the wisest reasons, and after the most mature deliberation and enquiry, that upon his arrival on the coast of New Albion, he should proceed northward as far as the latitude of 65°, and not lose any time in exploring rivers or inlets, or upon any other account, until he had gotten into that latitude [BB]. To give every possible encouragement to the prosecution of the great design in view, the motives of interest were added to the obligations of duty. In the act of Parliament which passed in 1745, the reward of twenty thousand pounds had been only held out to the ships *belonging to any of his Majesty's subjects*, while his Majesty's own ships were excluded. Another, and more capital defect of this act was, that it confined the reward to such ships alone as should discover a passage through Hudson's Bay. By a new law, which passed in 1776, both these deficiencies were effectually remedied. It was now enacted, "That if any ship belonging to any of his Majesty's subjects, or *to his Majesty*, shall find out, and sail through, any passage by sea, between the Atlantic and Pacific Oceans, in *any direction*, or parallel of the northern hemisphere, to the northward of the 52° of northern latitude, the owners of such ships, if belonging to any of his Majesty's subjects, or *the commander, officers, and seamen of such ship belonging to his Majesty*, shall receive, as a reward for such discovery, the sum of twenty thousand pounds (r)." That every thing might be done which could facilitate the success of the grand expedition, Lieutenant Pickersgill was sent out, in 1776, with directions to explore the coasts of Baffin's Bay; and, in the next year, Lieutenant Young was commissioned not only to examine the western parts of that bay, but to endeavour to find a passage, on that side, from the Atlantic to the Pacific Ocean. Nothing was performed by either of these Gentlemen that promoted the purposes of Captain Cook's voyage (s). Two vessels were fixed upon by Government for the intended service; the Resolution, and the Discovery. The command of the former was given to Captain Cook, and of the other to Captain Clerke. To the Resolution was assigned the same complement of officers and men which she had during her preceding voyage; and the only difference in the establishment of the Discovery from that of the Adventure, was in the single instance of her having no marine officer on board.

From the time of the two ships being put into commission, the greatest degree of attention and zeal was exerted by the Earl of Sandwich, and the rest of the Board of Admiralty, to have them equipped in the most complete manner. Both the vessels were supplied with as much of every necessary article as could conveniently be stowed, and with the best of each kind that could be procured. Whatever, likewise, the experience of the former voyages had shewn to be of any utility in preserving the health of seamen, was provided in a large abundance. That some permanent benefit might be conveyed to the inhabitants of Otaheite, and of the other Islands of the Pacific Ocean, whom our Navigators might happen to visit, it was graciously commanded by his Majesty that an assortment of useful animals should be carried out to those countries. Accordingly, a bull, two cows with their calves, and several sheep, with hay and corn for their subsistence, were taken on board; and it was intended to add other serviceable animals to these, when Captain Cook should arrive at the Cape of Good Hope. With the same benevolent purposes, the Captain was furnished with a sufficient quantity of such of our European garden seeds, as could not fail of being a valuable present to the newly-discovered Islands, by adding fresh supplies of food to their own vegetable productions. By order of the Board of Admiralty, many articles besides were delivered to our Commander, which were calculated, in various ways, to improve the condition of the natives of the other hemisphere. Still farther to promote a friendly intercourse with them, and to carry on a traffic that might be profitable on both sides, an ample assortment was provided of iron tools and trinkets. An attention no less humane was extended to the wants of our own people. Some additional clothing, adapted to a cold climate, was ordered for the crews of the two ships; and nothing was denied to our Navigators that could be supposed to be in the least conducive to their health, or even to their convenience. It was not to these things only that the extraordinary care of Lord Sandwich, and of the other Gentlemen at the head of the naval department, was confined. They were equally solicitous to afford every assistance that

[BB] *Until he had gotten into that latitude.* See these reasons represented at large in the admirable Introduction to Captain Cook's last voyage; together with a curious and interesting account, never before published, of the methods which have been taken by the Hudson's Bay Company, to explore the western parts of North America, extending from that bay, p. xl—li.

Though Captain Cook was expected to sit down in repose, after his toils and labours, the design of farther discoveries was not laid aside. The illusion, indeed, of a *terra Australis incognita*, to any purposes of commerce, colonization, and utility, had been dispelled: but there was another grand question which remained to be determined; and that was the practicability of a northern passage to the Pacific Ocean. It had long been a favourite object with navigators, and particularly with the English, to discover a shorter, a more commodious, and a more profitable course of sailing to Japan and China, and, indeed, to the East Indies in general, than by making the tedious circuit of the Cape of Good Hope. To find a western passage round North America, had been attempted by several bold adventurers, from Frobisher's first voyage, in 1576, to those of James and of Fox, in 1631. By these expeditions a large addition was made to the knowledge of the northern extent of America, and Hudson's and Baffin's Bays were discovered. But the wished-for passage, on that side, into the Pacific Ocean, was still unattained. Nor were the various attempts of our countrymen, and of the Dutch, to find such a passage, by sailing round the North of Asia, in an eastern direction, attended with better success. Wood's failure, in 1676, appears to have concluded the long list of unfortunate expeditions in that century. The discovery, if not absolutely despaired of, had been unsuccessful in such a number of instances, that it ceased, for many years, to be an object of pursuit (i). The question was again revived in the present century. Mr. Dobbs, a warm advocate for the probability of a North-west passage through Hudson's Bay, once more recalled the attention of this country to that undertaking. In consequence of the spirit by him excited, Captain Middleton was sent out by Government in 1741, and Captains Smith and Moore in 1746. But, though an act of Parliament had been passed, which secured a reward of twenty thousand pounds to the discovery of a passage, the accomplishment of this favourite object continued at as great a distance as ever (k). To ascertain a matter of such importance and magnitude in navigation, was reserved to be another glory of his present Majesty's reign. The idea was peculiarly suited to the enlightened mind of the noble Lord at the head of the Admiralty, and he adopted it with ardour. Preparatory to the execution of the design, Lord Mulgrave sailed with two ships, to determine how far navigation was practicable towards the North Pole. In this expedition, his Lordship met with the same insuperable difficulties which had been experienced by former voyagers. Nevertheless, the expectation of opening a communication between the Pacific and Atlantic Oceans, by a northerly course, was not abandoned; and it was resolved that a voyage should be undertaken for that purpose (l). For the conduct of an enterprize, the operations of which were intended to be so new, so extensive, and so various, it was evident that great ability, skill, and experience were indispensably necessary (m). That Captain Cook was of all men the best qualified for carrying it into execution, was a matter that could not be called in question. But, however ardently it might be wished that he would take upon him the command of the service, no one (not even his friend and patron, Lord Sandwich himself) presumed to solicit him upon the subject. The benefits he had already conferred on science and navigation, and the labours and dangers he had gone through, were so many and great, that it was not deemed reasonable to ask him to engage in fresh perils. At the same time, nothing could be more natural than to consult him upon every thing relative to the business; and his advice was particularly requested with regard to the properest person for conducting the voyage. To determine this point, the Captain, Sir Hugh Palliser, and Mr. Stephens were invited to Lord Sandwich's to dinner. Here, besides taking into consideration what officer should be recommended to his Majesty for accomplishing the purposes in view, many things were said concerning the nature of the design. Its grandeur and dignity, the consequences of it to navigation and science, and the completion it would give to the whole system of discoveries, were enlarged upon in the course of the conversation. Captain Cook was so fired with the contemplation and representation of the object, that he started up, and declared, that he himself would undertake the direction of the enterprize. It is easy to suppose, with what pleasure the noble Lord, and the other Gentlemen, received a proposal which was so agreeable to their secret wishes, and which they thought of the highest importance towards attaining the ends of the voyage (n). No time was lost by the Earl of Sandwich, in laying the matter before the King; and Captain Cook was appointed to the command of the expedition, on the tenth of February, 1776 (o). At the same time, it was agreed, that, on his return to England, he should be restored to his situation at Greenwich; and, if no vacancy occurred during the interval, the officer who succeeded him was to resign in his favour (p).

The command and the direction of the enterprize being thus happily settled, it became an object of great importance to determine what might be the best course that could be given to the voyage. All former navigators round the globe had returned to Europe by the Cape of Good Hope. But to Captain Cook the arduous task was now assigned of attempting it by reaching the high northern latitudes between Asia and America; and the adoption of this resolution was, I believe, the result of his own reflections upon the subject. The usual plan, therefore, of discovery was reversed; so that instead of a passage from the Atlantic to the Pacific, one from the latter into the former was to be tried. Whatever openings

openings or inlets there might be on the East side of America, that lie in a direction which could afford any hopes of a passage, it was wisely foreseen that the ultimate success of the expedition would depend upon there being an open sea between the West side of that continent and the extremities of Asia. Accordingly Captain Cook was ordered to proceed into the Pacific Ocean, through the chain of the new Islands which had been visited by him in the southern tropic. After having crossed the equator into the northern parts of that ocean, he was then to hold such a course as might probably fix many interesting points in geography, and produce intermediate discoveries, in his progress northward to the principal scene of his operations (q). With regard to his grand object, it was determined, for the wisest reasons, and after the most mature deliberation and enquiry, that upon his arrival on the coast of New Albion, he should proceed northward as far as the latitude of 65°, and not lose any time in exploring rivers or inlets, or upon any other account, until he had gotten into that latitude [BB]. To give every possible encouragement to the prosecution of the great design in view, the motives of interest were added to the obligations of duty. In the act of Parliament which passed in 1745, the reward of twenty thousand pounds had been only held out to the ships *belonging to any of his Majesty's subjects*, while his Majesty's own ships were excluded. Another, and more capital defect of this act was, that it confined the reward to such ships alone as should discover a passage through Hudson's Bay. By a new law, which passed in 1776, both these deficiencies were effectually remedied. It was now enacted, "That if any ship belonging to any of his Majesty's subjects, or *to his Majesty*, shall find out, and sail through, any passage by sea, between the Atlantic and Pacific Oceans, in *any direction*, or parallel of the northern hemisphere, to the northward of the 52° of northern latitude, the owners of such ships, if belonging to any of his Majesty's subjects, or *the commander, officers, and seamen of such ship belonging to his Majesty*, shall receive, as a reward for such discovery, the sum of twenty thousand pounds (r)." That every thing might be done which could facilitate the success of the grand expedition, Lieutenant Pickersgill was sent out, in 1776, with directions to explore the coasts of Baffin's Bay; and, in the next year, Lieutenant Young was commissioned not only to examine the western parts of that bay, but to endeavour to find a passage, on that side, from the Atlantic to the Pacific Ocean. Nothing was performed by either of these Gentlemen that promoted the purposes of Captain Cook's voyage (s). Two vessels were fixed upon by Government for the intended service; the Resolution, and the Discovery. The command of the former was given to Captain Cook, and of the other to Captain Clerke. To the Resolution was assigned the same complement of officers and men which she had during her preceding voyage; and the only difference in the establishment of the Discovery from that of the Adventure, was in the single instance of her having no marine officer on board.

From the time of the two ships being put into commission, the greatest degree of attention and zeal was exerted by the Earl of Sandwich, and the rest of the Board of Admiralty, to have them equipped in the most complete manner. Both the vessels were supplied with as much of every necessary article as could conveniently be stowed, and with the best of each kind that could be procured. Whatever, likewise, the experience of the former voyages had shewn to be of any utility in preserving the health of seamen, was provided in a large abundance. That some permanent benefit might be conveyed to the inhabitants of Otaheite, and of the other Islands of the Pacific Ocean, whom our Navigators might happen to visit, it was graciously commanded by his Majesty that an assortment of useful animals should be carried out to those countries. Accordingly, a bull, two cows with their calves, and several sheep, with hay and corn for their subsistence, were taken on board; and it was intended to add other serviceable animals to these, when Captain Cook should arrive at the Cape of Good Hope. With the same benevolent purposes, the Captain was furnished with a sufficient quantity of such of our European garden seeds, as could not fail of being a valuable present to the newly-discovered Islands, by adding fresh supplies of food to their own vegetable productions. By order of the Board of Admiralty, many articles besides were delivered to our Commander, which were calculated, in various ways, to improve the condition of the natives of the other hemisphere. Still farther to promote a friendly intercourse with them, and to carry on a traffic that might be profitable on both sides, an ample assortment was provided of iron tools and trinkets. An attention no less humane was extended to the wants of our own people. Some additional clothing, adapted to a cold climate, was ordered for the crews of the two ships; and nothing was denied to our Navigators that could be supposed to be in the least conducive to their health, or even to their convenience. It was not to these things only that the extraordinary care of Lord Sandwich, and of the other Gentlemen at the head of the naval department, was confined. They were equally solicitous to afford every assistance that

was calculated to render the expedition of public utility. Several astronomical and nautical instruments were intrusted, by the Board of Longitude, to Captain Cook, and Mr. King his second Lieutenant; who had undertaken to make the necessary observations, during the voyage, for the improvement of astronomy and navigation. It was originally intended that a professed observator should be sent out in the *Resolution*; but the scientific abilities of the Captain and his Lieutenant rendered the appointment of such a person absolutely unnecessary. The case was somewhat different with regard to the *Discovery*. Mr. W. Bayley, who had already given satisfactory proofs of his skill and diligence as an Observator, while he was employed in Captain Furneaux's ship, during the late voyage, was engaged a second time, in that capacity, and appointed to sail on board Captain Clerke's vessel. The department of natural history was assigned to Mr. Anderson, the Surgeon of the *Resolution*, who was as willing as he was well qualified, to describe every thing in that branch of science which should occur worthy of notice. From the remarks of this Gentleman, Captain Cook had derived considerable assistance in his last navigation; especially with regard to the very copious vocabulary of the language of Otaheite, and the comparative specimen of the languages of the other Islands which had then been visited. There were several young men among our Commander's sea officers, who, under his direction could be usefully employed in constructing charts, in taking views of the coasts and headlands near which our Voyagers might pass, and in drawing plans of the bays and harbours in which they should anchor. Without a constant attention to this object, the Captain was sensible that his discoveries could not be rendered profitable to future navigators. That he might go out with every help which could serve to make the result of the voyage entertaining to the generality of readers, as well as instructive to the sailor and the scholar, Mr. Webber was fixed upon, and engaged to embark in the *Resolution*, for the express purpose of supplying the unavoidable imperfections of written accounts, by enabling our people to preserve, and to bring home, such drawings of the most memorable scenes of their transactions, as could only be executed by a professed and skilful artist. As the last mark of the extraordinary attention which the Earl of Sandwich, Sir Hugh Palliser, and others of the Board of Admiralty had uniformly shewn to the preparations for the expedition, they went down to Long Reach, and paid a visit to the ships, on the eighth of June, to examine whether every thing was completed conformably to their intentions and orders, and to the satisfaction of all who were to embark in the voyage. His Lordship and the rest of the Admiralty Board, together with several Noblemen and Gentlemen of their acquaintance, honoured Captain Cook, on that day, with their company at dinner. Both upon their coming on board and their going ashore, they were saluted with seventeen guns, and with three cheers. As the ships were to touch at Otaheite and the Society Islands, it had been determined not to omit the only opportunity which might ever offer of carrying Omai back to his native country. Accordingly, he left London, on the twenty-fourth of June, in company with Captain Cook; and it was with a mixture of regret and satisfaction that he took his departure. When England, and those who, during his stay, had honoured him with their protection or friendship were spoken of, his spirits were sensibly affected, and it was with difficulty that he could refrain from tears. But his eyes began to sparkle with joy, as soon as ever the conversation was turned to his own Islands. The good treatment he received in England had made a deep impression upon his mind; and he entertained the highest ideas of the country and of the people. Nevertheless, the pleasing prospect he now had before him of returning home, loaded with what, he well knew, would there be esteemed invaluable treasures, and the flattering hope which the possession of these afforded him of attaining to a distinguished superiority among his countrymen, were considerations which operated, by degrees, to suppress every uneasy sensation. By the time he had gotten on board the ship, he appeared to be quite happy. His Majesty had furnished Omai with an ample provision of every article which our English Navigators, during their former intercourse with Otaheite and the Society Islands, had observed to be in any estimation there, either as useful or ornamental. Many presents, likewise, of the same nature, had been made him by Lord Sandwich, Sir Joseph Banks, and several other Gentlemen and Ladies of his acquaintance. In short, both during his residence in England, and at his departure from it, no method had been neglected, which could be calculated to render him the instrument of conveying to the inhabitants of the Islands of the Pacific Ocean, the most exalted ideas of the greatness and generosity of the British nation (1).

(1) Cook's Voyage to the Pacific Ocean, vol. i. p. 2—7.

Every preparation for the voyage being completed, Captain Cook received an order to proceed to Plymouth, and to take the *Discovery* under his command. Having, accordingly, given the proper directions to Captain Clerke, he sailed from the Nore to the Downs, on the twenty-fifth of June. On the thirtieth of the same month, he anchored in Plymouth Sound, where the *Discovery* was already arrived. It was the eighth of July before our Commander received his instructions for the voyage; and, at the same time, he was ordered to proceed, with the *Resolution*, to the Cape of Good Hope. Captain Clerke, who was detained in London by some unavoidable circumstances, was to follow, as soon as he should join his ship. In the evening of the twelfth, Captain Cook stood out of Plymouth Sound,

Sound, and pursued his course down the channel. It was very early that he began his judicious operations for preserving the health of his crew; for, on the seventeenth, the ship was smoked between the decks with gunpowder, and the spare sails were well aired. On the thirtieth, the moon being totally eclipsed, the Captain observed it with a night telescope. He had not, on this occasion, an opportunity of making many observations. The reason was, that the moon was hidden behind the clouds the greater part of the time; and this was particularly the case, when the beginning and the end of total darkness, and the end of the eclipse, happened. It being found that there was not hay and corn sufficient for the subsistence of the stock of animals on board, till the arrival of our people at the Cape of Good Hope, Captain Cook determined to touch at Teneriffe. This Island he thought better adapted to the purposes of procuring these articles, and other refreshments, than Madeira. On the first of August, he anchored in the road of Santa Cruz, and immediately dispatched an officer to the Governor, who, with the utmost politeness, granted every thing which our Commander requested. Were a judgment to be formed from the appearance of the country in the neighbourhood of Santa Cruz, it might be concluded that Teneriffe is so barren a spot, as to be insufficient for the maintenance even of its own inhabitants. It was proved, however, by the ample supplies which our Navigators received, that the Islanders had enough to spare for visitors. The necessary articles of refreshment were procured at such moderate prices, as to confirm Captain Cook in his opinion, that Teneriffe is a more eligible place than Madeira, for ships to touch at which are bound on long voyages. Indeed, the wine of the latter Island is far superior to that of the former; but then it can only be purchased by a sum of money proportionally larger. During the short stay which the Captain made at Teneriffe, he continued with great assiduity his astronomical observations; and Mr. Anderson has not a little contributed to the farther knowledge of the country, by his remarks on its general state, its natural appearances, its productions, and its inhabitants. He learned from a sensible and well-informed Gentleman, who resided in the Island, that a shrub is common there, which agrees exactly with the description given by Tournefort and Linnæus, of the *tea-shrub*, as growing in China and Japan. It is reckoned a weed, and every year is rooted out in large quantities from the vineyards. The Spaniards, however, sometimes use it as tea, and ascribe to it all the qualities of that which is imported from China. They give it also the name of tea, and say that it was found in the country when the Islands were first discovered. Another botanical curiosity is called the *impregnated lemon*; which is a perfect and distinct lemon, enclosed within another, and differing from the outer one only in being a little more globular. The air and climate of Teneriffe are, in general, remarkably healthful, and particularly adapted to give relief in pulmonary complaints. This the Gentleman before-mentioned endeavoured to account for from its being always in a person's power to procure a different temperature of the air, by residing at different heights in the Island. He expressed, therefore, his surprize that the physicians of England should never have thought of sending their consumptive patients to Teneriffe, instead of Nice or Lisbon. Although it is not understood that there is any great similarity between the manners of the English and those of the Spaniards, it was observable, that the difference between them was very little perceived by Omai. He only said, that the Spaniards did not appear to be so friendly as the English; and that, in their persons, they approached to some resemblance of his own countrymen (u). On the fourth, Captain Cook sailed from Teneriffe, and proceeded on his voyage. Such was his attention, both to the discipline and the health of his company, that twice in the space of five days, he exercised them at great guns and small arms, and cleared and smoked the ship below decks. On the evening of the tenth, when the Resolution was at a small distance from the Island of Bonavista, she ran so close upon a number of sunken rocks, that she did but just weather the breakers. The situation of our Voyagers, for a few minutes, was very alarming. In this situation the Captain, with the intrepid coolness which distinguished his character, did not choose to sound, as that, without any possibility of lessening, might have heightened the danger. While our Commander was near the Cape de Verde Islands, he had an opportunity of correcting an assertion of Mr. Nicholson's, with regard to the manner of sailing by those Islands, which, if implicitly trusted to, might prove of dangerous consequence. On the thirteenth, our Navigators arrived before Port Praya, in the Island of St. Jago; but as the Discovery was not there, and little water had been expended in the passage from Teneriffe, Captain Cook did not think proper to go in; but stood to the southward. In the course of the voyage, between the latitudes of 12° and 7° North, the weather was generally dark and gloomy. The rains were frequent, and accompanied with that close and sultry weather which too often brings on sickness, in this passage. At such a time the worst consequences are to be apprehended; and commanders of ships cannot be too much upon their guard. It is necessary for them to purify the air between decks with fires and smoke, and to oblige their people to dry their clothes at every opportunity. The constant observance of these precautions on board the Resolution, was attended with such success, that the Captain had now fewer sick men than on either of his former voyages. This was the more remarkable, as, in consequence of the seams of the vessel having opened so wide as to admit the rain

(u) Cook, *ubi supra*, p. 8—28.

when it fell, there was scarcely a man who could lie dry in his bed; and the officers in the gun-room were all driven out of their cabbins by the water that came through the sides. When settled weather returned, the caulkers were employed in repairing these defects, by caulking the decks and inside weather-works of the ship; for the humanity of our Commander would not trust the workmen over the sides, while the Resolution was at sea. On the first of September, our Navigators crossed the equator (*w*). While, on the eighth, Captain Cook was near the eastern coast of Brazil, he was at considerable pains to settle its longitude, which, till some better astronomical observations are made on shore in that country, he concluded to be thirty-five degrees and a half, or thirty-six degrees West, at most. As our people proceeded on their voyage, they frequently saw, in the night, those luminous marine animals which have formerly been mentioned and described. Some of them appeared to be considerably larger than any which the Captain had met with before; and sometimes they were so numerous, that hundreds of them were visible at the same moment.

(*w*) This was in the longitude of 27° 38' West.

On the eighteenth of October, the Resolution came to an anchor in Table Bay, at the Cape of Good Hope; and the usual compliments having been paid to Baron Plettenberg the Governor, Captain Cook immediately applied himself to his customary operations. Nothing remarkable occurred till the evening of the thirty-first, when a tempest arose from the South-east, which lasted three days, and which was so violent, that the Resolution was the only ship in the bay that rode out the gale without dragging her anchors. The effects of the storm were sensibly felt by our people on shore; for their tents and observatory were torn to pieces, and their astronomical quadrant narrowly escaped irreparable damage. On the third of November, the tempest ceased, and the next day the English were enabled to resume their different employments. It was not till the tenth of the month that Captain Cook had the satisfaction of seeing the Discovery arrive in the bay, and effect her junction with the Resolution. She had sailed from England on the first of August, and would have reached the Cape of Good Hope a week sooner, if she had not been driven from the coast by the late storm. Every assistance was immediately given to put her into a proper condition for proceeding on the voyage. While the necessary preparations for the future navigation were completing, a disaster happened with regard to the cattle which had been carried out in the Resolution. They had been conveyed on shore for the purpose of grazing. The bull, and two cows, with their calves, had been sent to graze along with some other cattle; but Captain Cook was advised to keep the sheep, which were sixteen in number, close to the tents, where they were penned up every evening. During the night preceding the fourteenth, some dogs having gotten in among them, forced them out of the pen, killed four, and dispersed the rest. Six of them were recovered the next day; but the two rams, and two of the finest ewes in the whole flock, were amongst those which were missing. Baron Plettenberg being at this time in the country, our Commander applied to Mr. Hemmy, the Lieutenant Governor, and to the fiscal, for redress; and both these Gentlemen promised to use their endeavours for the recovery of the lost sheep. It is the boast of the Dutch, that the Police at the Cape is so carefully executed, that it is scarcely possible for a slave, with all his cunning and knowledge of the country, to effectuate his escape. Nevertheless, Captain Cook's sheep evaded all the vigilance of the fiscal's officers and people. At length, after much trouble and expence, by employing some of the meanest and lowest scoundrels in the place, he recovered all but the two ewes, of which he never could hear the least tidings. The character given of the fellows to whom the Captain was obliged to have recourse, by the person who recommended their being applied to, was, that for a ducatoon they would cut their Master's throat, burn the house over his head, and bury him and the whole family in the ashes. During the stay of our Voyagers at the Cape, some of the officers, accompanied by Mr. Anderson, made a short excursion into the neighbouring country. This Gentleman, as usual, was very diligent in recording every thing which appeared to him worthy of observation. His remarks, however, in the present case, will be deemed of little consequence, compared with the full, accurate, and curious account of the Cape of Good Hope, with which Dr. Sparrman hath lately favoured the literary world. With respect to Captain Cook, besides the unavoidable care which lay upon him, in providing his ships with whatever was requisite for the commodious and successful prosecution of the voyage, his attention was eminently directed to scientific objects. He was anxious to ascertain the currents, the variations of the compass, and the latitude and longitude of the places to which he came. The observations which he collected, and recorded in his journal, while he was at the Cape of Good Hope, will be esteemed of the greatest importance by judicious navigators (*x*). After the disaster which had happened to the sheep, it may well be supposed that our Commander did not long trust on shore those which remained. Accordingly, he gave orders to have them, and the other cattle, conveyed on board as fast as possible. He made an addition, also, to the original stock, by the purchase of two young bulls, two heifers, two young stone-horses, two mares, two rams, several ewes and goats, and some rabbits and poultry. All these animals were intended for New Zealand, Otaheite, and the neighbouring Islands; and, indeed, for any other places, in the course of the voyage, where the leaving of any of them might be of service

(*x*) Cook's Voyage, *ubi supra*, p. 29—30.

service to posterity. In the supplies which were provided at the Cape, Captain Cook paid a particular regard to the nature and extent of his undertaking. As it was impossible to tell when, or where, he might meet with a place which could so amply contribute to his necessities, he thought proper to lay in such a store of provisions for both ships, as would be sufficient to last them for two years and upwards.

Our Commander having given a copy of his instructions to Captain Clerke, and an order directing him how to proceed in case of a separation, weighed from Table Bay on the thirtieth of November, though it was not till the third of December that he got clear of the land. On the sixth, the ships passed through several spots of water, nearly of a red colour. When some of this was taken up, it was found to contain a large quantity of small animals, of a reddish hue, and which the microscope discovered to resemble a cray-fish. As our Navigators pursued their course to the South-east, a very strong gale, which they had from the westward, was followed by a mountainous sea, in consequence of which the Resolution rolled and tumbled so much, that the cattle on board were preserved with the utmost difficulty. Soon after, several of the goats, especially the males, together with some sheep, died, notwithstanding all the care to prevent it that was exercised by our people. This misfortune was chiefly owing to the coldness of the weather, which now began to be felt in the most sensible manner. On the twelfth, land was seen, which, upon a nearer approach, was found to consist of two Islands. That which lies most to the South, and is the largest, was judged by Captain Cook to be about fifteen leagues in circuit. The northerly one is about nine leagues in circuit; and the two Islands are at the distance of five leagues from each other (y). As the ships passed through the channel between them, our Voyagers could not discover, with the assistance of their best glasses, either tree or shrub on either of them. They seemed to have a rocky and bold shore, and their surface is for the most part composed of barren mountains, the summits and sides of which were covered with snow. These two Islands, together with four others, which lie from nine to twelve degrees of longitude more to the East, and nearly in the same latitude, had been discovered by Captains Marion du Fresne, and Crozet, French navigators, in January 1772, on their passage, in two ships, from the Cape of Good Hope to the Philippine Islands. As no names had been assigned to them in a chart of the Southern Ocean, which Captain Crozet communicated to Captain Cook in 1775, our Commander distinguished the two larger ones by calling them PRINCE EDWARD'S ISLANDS, after his Majesty's fourth son. To the other four, with a view of commemorating the discoverers, he gave name of MARION'S and CROZET'S ISLANDS. Though it was now the middle of summer in this hemisphere, the weather was not less severe than what is generally met with in England in the very depth of winter. Instead, however, of being discouraged by this circumstance, the Captain shaped his course in such a manner as to pass to the southward of Marion's and Crozet's Islands, that he might get into the latitude of land which had been discovered by Monsieur de Kerguelen, another French navigator. It was part of our Commander's instructions to examine whether a good harbour might not here be found. As our Voyagers, on the twenty-fourth, were steering to the eastward, a fog clearing up a little, which had involved them for some time, and which had rendered their navigation both tedious and dangerous, land was seen, bearing South-south-east. Upon a nearer approach, it was found to be an Island of considerable height, and about three leagues in circuit. Another Island, of the same magnitude, was soon after discovered, and in a short space a third, besides some smaller ones. At times, as the fog broke away, there was the appearance of land over the small Islands, and Captain Cook entertained thoughts of steering for it, by running in between them. But, on drawing nearer, he found that, so long as the weather continued foggy, this would be a perilous attempt. For if there should be no passage, or if our people should meet with any sudden danger, there was such a prodigious sea, breaking on all the shores in a frightful surf, that it would have been impossible for the vessels to be gotten off. At the same time, the Captain saw another Island; and, as he did not know how many more might succeed, he judged it prudent, in order to avoid getting entangled among unknown lands in a thick fog, to wait for clearer weather. The Island last mentioned is a high round rock, which was named BLIGH'S CAP (z). Our Commander had received some very slight information concerning it at Teneriffe, and his sagacity in tracing it was such as immediately led him to determine that it was the same that Monsieur de Kerguelen had called the Isle of Rendezvous. His reason for giving it that name is not very apparent; for nothing can rendezvous upon it but fowls of the air, it being certainly inaccessible to every other animal. The weather beginning to clear up, Captain Cook steered in for the land, of which a faint view had been obtained in the morning. This was Kerguelen's Land. No sooner had our Navigators gotten off Cape François, than they observed the coast, to the southward, to be much indented by projecting points and bays; from which circumstance they were sure of finding a good harbour. Accordingly, such a harbour was speedily discovered, in which the ships came to an anchor on the twenty-fifth, being Christmas Day. Upon landing, our Commander found the shore almost entirely covered with penguins and other birds, and with seals. The latter, which were not numerous, having been unaccustomed to visitors, were so insensible of

(y) The largest Island lies in latitude $46^{\circ} 53'$ South, and in longitude $37^{\circ} 46'$ East; and the smaller one in latitude $46^{\circ} 4'$ South, and in $38^{\circ} 8'$ East longitude.

(z) The latitude of Bligh's Cap is $48^{\circ} 29'$ South, and its longitude $68^{\circ} 40'$ East.

fear, that as many as were wanted, for the purpose of making use of their fat or blubber, were killed without difficulty. Fresh water was so plentiful, that every gully afforded a large stream; but not a single tree or shrub, or the least sign of it, could be met with, and but very little herbage of any sort. Before Captain Cook returned to his ship, he ascended the first ridge of rocks, that rise in a kind of amphitheatre, above one another, in hopes of obtaining a view of the country; in which, however, he was disappointed; for, previously to his reaching the top, there came on so thick a fog, that he could scarcely find his way down again. In the evening, the seine was hauled at the head of the harbour, but only half a dozen small fish were caught. As no better success attended a trial which was made the next day with hook and line, the only resource for fresh provision was in birds, the store of which was inexhaustible. The people having wrought hard for two days, and nearly completed their water, the Captain allowed them the twenty-seventh, as a day of rest, to celebrate Christmas. Many of them, in consequence of this indulgence, went on shore, and made excursions, in different directions, into the country, which they found barren and desolate in the highest degree. One of them, in his ramble, discovered, and brought to our Commander, in the evening, a quart bottle, fastened with some wire to a projecting rock on the North side of the harbour. This bottle contained a piece of parchment, on which was written the following inscription:

*Ludovico XV. Galliarum
rege et d. (a) de Boynes
regi a Secretis ad Res
maritimas annis 1772 et
1773.*

(a) The (d.) is doubtless a contraction for the word *Domino*. Monsieur de Boynes was then the Secretary of the French Marine.

It was clear, from this inscription, that our English Navigators were not the first who had been in the place. As a memorial of our people's having touched at the same harbour, Captain Cook wrote, as follows, on the other side of the parchment:

*Naves Resolution
et Discovery
de Rege Magnæ Britanniae,
Decembris 1776.*

He then put it again into a bottle, together with a silver two-penny piece of 1772. Having covered the mouth of the bottle with a leaden cap, he placed it, the next morning, in a pile of stones erected for the purpose, upon a little eminence on the North shore of the harbour, and near to the place where it was first found. In this position it cannot escape the notice of any European, whom accident or design may bring into the port. Here the Captain displayed the British flag, and named the place CHRISTMAS HARBOUR, from our Voyagers having arrived in it on that festival. After our Commander had finished the business of the inscription, he went in his boat round the harbour, to examine what the shore afforded. His more particular object was to look for drift-wood; but he did not find a single piece throughout the whole extent of the place. On the same day, accompanied by Mr. King, his second Lieutenant, he went upon Cape François, with the hope, that, from this elevation, he might obtain a view of the sea-coast, and of the adjoining Islands. But when he had gotten up, he found that every distant object below him was obscured in a thick fog. The land on the same plain, or of a greater height, was sufficiently visible, and appeared naked and desolate in the highest degree; some hills to the southward excepted, which were covered with snow. On the twenty-ninth, Captain Cook departed from Christmas Harbour, and proceeded to range along the coast, with a view of discovering its position and extent. In pursuing his course, he met with several promontories and bays, together with a peninsula, all of which he has described and named, chiefly in honour of his various friends. Such was the danger of the navigation, that the ships had more than once a very narrow escape. On the same day, another harbour was discovered, in which the vessels came to an anchor for one night. Here the Captain, Mr. Gore, and Mr. Bayley went on shore, to examine the country, which they found, if possible, more barren and desolate than the land that lies about Christmas harbour: and yet, if the least fertility were any where to be expected, it ought to have existed in this place, which is completely sheltered from the bleak and predominating southerly and westerly winds. Our Commander observed, with regret, that there was neither food nor covering for cattle of any sort; and that, if he left any, they must inevitably perish. Finding no encouragement to continue his researches, he weighed anchor and put to sea on the thirtieth, having given to the harbour the name of PORT PALLISER (b). On the same day he came to a point, which proved to be the very eastern extremity of Kerguelen's Land (c). In a large bay, near this point, there was a prodigious quantity of sea-weed, some of which is of a most extraordinary length. It seemed to be same kind of vegetable production that Sir Joseph Banks had formerly distinguished by the appellation of *Fucus Giganteus*. Although the stem

(b) It is situated in the latitude of 49° 3' South, and the longitude of 69° 37' East.

(c) This point, which Captain Cook called Cape Digby, is situated in the latitude of 49° 23' South, and the longitude is of 70° 34' East.

is not much thicker than a man's hand, Capt. Cook thought himself well warranted to say, that the length of part of it grows to sixty fathoms and upward. The result of the examination of Kerguelen's Land was, that the quantity of latitude which it occupies doth not much exceed one degree and a quarter. Its extent, from East to West, still remains undecided. At its first discovery, it was probably supposed to belong to a southern continent; but, in fact, it is an Island, and that of no great extent (*d*). If our Commander had not been unwilling to deprive Monsieur Kerguelen of the honour of its bearing his name, he would have been disposed, from its sterility, to call it the Island of Desolation. It should here be mentioned, that Monsieur de Kerguelen made two visits to the coast of this country; one in 1772, and another in 1773. With the first of these voyages Captain Cook had only a very slight acquaintance, and to the second he was totally a stranger; so that he scarcely had any opportunity of comparing his own discoveries with those of the French Navigator. Monsieur de Kerguelen was peculiarly unfortunate, in having done but little to complete what he had begun; for though he discovered a new land, he could not, in two expeditions to it, once bring his ships to an anchor upon any part of its coasts. Captain Cook had either fewer difficulties to struggle with, or was more successful in surmounting them. During the short time in which our Voyagers lay in Christmas Harbour, Mr. Anderson lost no opportunity of searching the country in every direction. Perhaps no place, hitherto discovered, under the same parallel of latitude, affords so scanty a field for a natural historian. All that could be known in the space of time allotted him, and probably all that will ever be worthy to be known, was collected by this Gentleman. A verdure, which had been seen at a little distance from the shore, gave our people the flattering expectation of meeting with a variety of herbage: but in this they were greatly deceived. On landing, it was perceived that the lively colour which had imposed upon them, was occasioned only by one small plant, not unlike some sorts of *Saxifrage*. It grows in large spreading tufts, a considerable way up the hills. The whole catalogue of plants does not exceed sixteen or eighteen, including several kinds of moss, and a beautiful species of lichen, which rises higher up from the rocks than the rest of the vegetable productions. There is not the appearance of a shrub in the whole country. Nature has been somewhat more bountiful in furnishing it with animals; though, strictly speaking, they are not inhabitants of the place, being all of the marine kind. In general, the land is only used by them for breeding, and as a resting-place. Of these animals the most considerable are seals; being of that sort which is called the Urine Seal. The birds, which have already been mentioned as very numerous, chiefly consist of penguins, ducks, petrels, albatrosses, shags, gulls and sea swallows. Penguins, which are far superior in number to the rest, are of three kinds, one of which had never been seen by any of our Voyagers before. The rocks, or foundations of the hills, are principally composed of that dark blue, and very hard stone, which seems to be one of the most universal productions of nature. Nothing was discovered that had the least appearance of ore or metal (*e*).

(*d*) Kerguelen, who was acquainted with nearly fourscore leagues of its coast, says, that he has reason to believe that it is about two hundred leagues in circuit.

From this desolate coast Captain Cook took his departure on the thirty-first, intending, agreeably to his instructions, to touch next at New Zealand; that he might obtain a recruit of water, take in wood, and make hay for the cattle. Their number was now considerably diminished; for two young bulls, one of the heifers, two rams, and several of the goats, had died while our Navigators were employed in exploring Kerguelen's Land. For some time they had fresh gales, and tolerably clear weather. But on the third of January, 1777, the wind veered to the North, where it continued eight days, and was attended with so thick a fog, that the ships ran above three hundred leagues in the dark. Occasionally the weather would clear up, and give our people a sight of the sun; but this happened very seldom, and was always of short continuance. However, amidst all the darkness produced by the fog, the vessels, though they seldom saw each other, were so fortunate, in consequence of frequently firing guns as signals, that they did not lose company. On the twelfth, the northerly winds ended in a calm (*f*). This was succeeded, in a little time, by a wind from the southward, which brought on a rain, that continued for twenty-four hours. At the end of the rain, the wind freshened, and veering to the West and North-west, was followed by fair and clear weather. Nothing very remarkable occurred to our Voyagers till the twenty-fourth, when they discovered the coast of Van Diemen's Land; and, on the twenty-sixth, the ships came to an anchor in Adventure Bay. Captain Cook, as soon as he had anchored, ordered the boats to be hoisted out; in one of which he went himself, to look for the most commodious place for obtaining the necessary supplies. Wood and water were found in abundance, and in places sufficiently convenient; but grass, which was most wanted, was scarce, and, at the same time, very coarse. Necessity, however, obliged our people to take up with such as could be procured. On the twenty-eighth, the English who were employed in cutting wood were agreeably surprized with a visit from some of the natives. They consisted of eight men and a boy, who approached our Voyagers not only without fear, but with the most perfect confidence and freedom. There was only a single person among them who had any thing which bore the least appearance of a weapon, and that was no more than a stick about two feet long, and pointed at one end. These people were quite naked, and wore no kind of ornaments; unless

(*e*) Cook, *ubi supra*, p. 52-53.

(*f*) The ships were then in latitude 48° 40' South, and in longitude 110° 26' East.

unless some large punctures or ridges raised in different parts of their bodies, either in strait or curved lines, may be considered in that light. Most of them had their hair and beards smeared with a red ointment; and the faces of some of them were painted with the same composition. Every present which Captain Cook made them they received without the least appearance of satisfaction. Of bread and elephant fish, which were offered them, they refused to taste, but shewed that they were fond of birds as an article of food. Two pigs, which the Captain had brought on shore, having come within their reach, they seized them by the ears, as a dog would have done, and would have carried them off immediately, apparently with no other intention than to kill them. Our Commander being desirous of knowing the use of the stick which one of the Indians had in his hands, he signified, by signs, his wishes to that purpose. His intimations so far succeeded, that one of them set up a piece of wood as a mark, and threw at it, at the distance of about twenty yards. There was but little reason to commend his dexterity; for, after repeated trials, he was still very wide from his object. Omai, to convince the natives how much our weapons were superior to theirs, then fired his musquet at the mark, by which they were so greatly terrified, that, notwithstanding all the endeavours of the English to quiet their minds, they ran instantly into the woods. After the retreat of the Indians, Captain Cook, judging that their fears would prevent their remaining near enough to observe what passed, ordered the two pigs, being a boar and a sow, to be carried about a mile within the head of the bay, and saw them left there, by the side of a fresh-water brook. It was, at first, his benevolent intention to make an additional present to Van Diemen's Land, of a young bull and cow, together with some sheep and goats. But, upon reflection, he laid aside this design; being persuaded that the natives would destroy them, from their incapacity of entering into his views with regard to the improvement of their country. As pigs are animals which soon become wild, and are fond of the thickest cover of the woods, there was the greater probability of their being preserved. For the accommodation of the other cattle an open place must have been chosen; in which situation they could not possibly have been concealed many days. On the twenty-ninth, about twenty of the inhabitants, men and boys, joined Captain Cook and such of his people as had landed with him, without manifesting the least sign of fear or distrust. It was remarkable, that one of the Indians was conspicuously deformed; nor was he more distinguished by the hump upon his back, than by the drollery of his gestures, and the humour of his speeches, which had the appearance of being intended for the entertainment of our Voyagers. Unfortunately, the language in which he spake to them was wholly unintelligible. To each of the present group the Captain gave a string of beads and a medal, which they seemed to receive with some satisfaction. On iron, and on iron tools, they appeared to set no value. There was reason to believe that they were even ignorant of fish-hooks; and yet it is difficult to suppose that a people who inhabit a sea-coast, and who were not observed to derive any part of their sustenance from the productions of the ground, should be unacquainted with some mode of catching fish. However, they were never seen to be thus employed; nor was any canoe or vessel discovered by which they could go upon the water. Though they had rejected the kind of fish which had been offered them, it was evident that shell-fish made a part of their food. After Captain Cook had left the shore, several women and children made their appearance, and were introduced to Lieutenant King by some of the men that attended them. These females (a *Kangaroo* skin excepted, which was tied over their shoulders, and seemed to be intended to support their infants) were as naked and as black as the men, and had their bodies marked with scars in the same manner. Many of the children had fine features, and were thought to be pretty; but a less favourable report was made of the women, and especially of those who were advanced in years. Some of the Gentlemen, however, belonging to the Discovery, as our Commander was informed, paid their addresses, and made liberal offers of presents, which were rejected with great disdain. It is certain that this gallantry was not very agreeable to the men: for an elderly man, as soon as he observed it, ordered the women to retire. The order was obeyed; but, on the part of some of the females, with the appearance of a little reluctance. On the present occasion, Captain Cook made some proper and pertinent reflections, which I shall deliver in his own words. "This conduct," says he, "of Europeans among Savages, to their women, is highly blameable; as it creates a jealousy in their men, that may be attended with consequences fatal to the success of the common enterprize, and to the whole body of adventurers, without advancing the private purpose of the individual, or enabling him to gain the object of his wishes. I believe it has generally been found, amongst uncivilized people, that where the women are easy of access, the men are the first to offer them to strangers; and that, where this is not the case, neither the allurements of presents, nor the opportunity of privacy, will be likely to have the desired effect. This observation, I am sure, will hold good throughout all the parts of the South Sea where I have been. Why then should men act so absurd a part, as to risk their own safety, and that of all their companions, in pursuit of a gratification which they have no probability of obtaining?" While our Navigators were at Van Diemen's Land, they were successful in obtaining a plentiful crop of grass for their cattle, and such as was far more excellent

(g) Adventure Bay is in the latitude of $43^{\circ} 21' 20''$ South, and in the longitude of $147^{\circ} 29'$ East.

excellent than what they had met with at their first going on shore. The quantity collected was judged by the Captain to be sufficient to last till his arrival in New Zealand. Van Diemen's Land had been visited twice before. That name had been given it by Tasman, who discovered it in 1642; from which time it had escaped all notice of European Navigators, till Captain Furneaux touched at it in 1773. It is well known, that it is the southern point of New Holland, which is by far the largest Island in the world; indeed, so large an Island as almost to deserve the appellation of a continent. While Captain Cook was at this country, he neglected nothing which could promote the knowledge of science and navigation. Here, as every where else, he settled the latitude and longitude of places (g); marked the variations of the compass, and recorded the nature of the tides. He corrected, likewise, an error of Captain Furneaux, with respect to the situation of Maria's Islands; on which subject he hath candidly remarked, that his own idea is not the result of a more faithful, but merely of a second examination. Mr. Anderson, during the few days in which the ships remained in Adventure Bay, exerted his usual diligence in collecting as full an account as could be obtained, in so short a period of time, of the natural productions and the inhabitants of the country. Little can be said concerning either the personal activity or genius of the natives. The first they do not seem to possess in any remarkable degree; and, to all appearance, they have less of the last than even the half-animated inhabitants of Terra del Fuego. Their not expressing that surprize which might have been expected, from their seeing men so much unlike themselves, and things to which they had hitherto been utter strangers; their indifference for the presents of our people; and their general inattention; were sufficient testimonies that they were not endued with any acuteness of understanding. What the ancient poets tell us of *Fauns* and *Satyrs* living in hollow trees, is realized at Van Diemen's Land. Some wretched constructions of sticks covered with bark, and which did not deserve the name of huts, were indeed found near the shore; but these seemed only to have been erected for temporary purposes. The most comfortable habitations of the natives were afforded by the largest trees. These had their trunks hollowed out by fire, to the height of six or seven feet; and there was room enough in them for three or four persons to sit round a hearth, made of clay. At the same time, these places of shelter are durable; for the people take care to leave one side of the tree sound, which is sufficient to keep it in luxuriant growth. The inhabitants of Van Diemen's Land are undoubtedly from the same stock with those of the northern parts of New Holland. Their language, indeed, appeared to be different; but how far the difference extended, our Voyagers could not have an opportunity of determining. With regard to the New Hollanders in general, there is reason to suppose, that they originally came from the same place with all the Indians of the South Sea (h).

On the thirtieth of January, 1777, Captain Cook sailed from Adventure Bay, and on the twelfth of February came to an anchor at his old station of Queen Charlotte's Sound, in New Zealand. Being unwilling to lose any time, he commenced his operations that very afternoon. By his order, several of the empty water casks were immediately landed, and a place was begun to be cleared for setting up the two observatories, and the erection of tents to accommodate a guard, and the rest of the company, whose business might require them to remain on shore. Our Navigators had not long been at anchor, before a number of canoes, filled with natives, came alongside of the ships. However, very few of them would venture on board; which appeared the more extraordinary, as the Captain was well known to them all, and they could not be insensible how liberally he had behaved to them on former occasions. There was one man in particular, whom he had treated with remarkable kindness, during the whole of his last stay in this place; and yet, neither professions of friendship, nor presents, could prevail upon him to enter the Resolution. There was a real cause for this shyness on the part of the New Zealanders. A dreadful event had happened to some of Captain Furneaux's crew, while he lay in Queen Charlotte's Sound, after he had finally separated from Captain Cook, in the former voyage. Ten men, who had been sent out in the large cutter to gather wild greens for the ship's company, were killed in a skirmish with the natives. What was the cause of the quarrel could not be ascertained, as not one of the company survived to relate the story. Lieutenant Burney, who was ordered to go in search of them, found only some fragments of their bodies, from which it appeared, that they had been converted into the food of the inhabitants. It was the remembrance of this event, and the fear of its being revenged, which now rendered the New Zealanders so fearful of entering the English vessels. From the conversation of Omai, who was on board the Adventure when the melancholy affair happened, they knew that it could not be unknown to Captain Cook. The Captain, therefore, judged it necessary, to use every endeavour to assure them of the continuance of his friendship, and that he should not disturb them on account of the catastrophe. It was most probably in consequence of this assurance, that they soon laid aside all manner of restraint and distrust. In the mean while, the operations for refitting the ships, and for obtaining provisions, were carried on with great vigour. For the protection of the party on shore, our Commander appointed a guard of ten marines, and ordered arms for all the workmen; with whom Mr. King, and two or three petty officers, constantly remained. A boat was never sent

(h) Cook, *ubi supra*, p. 91—116.

to a considerable distance without being armed, or without being under the direction of such officers as might be depended upon, and who were well acquainted with the natives. In Captain Cook's former visits to this country, he had never made use of such precautions; nor was he now convinced of their absolute necessity. But, after the tragical fate of the crew of the Adventure's boat in this sound, and of Captain Marion du Fresne, and some of his people, in the Bay of Islands (in 1772), it was impossible to free our Navigators from all apprehensions of experiencing a similar calamity. Whatever suspicions the inhabitants might at first entertain, that their acts of barbarity would be revenged, they very speedily became so perfectly easy upon the subject, as to take up their residence close to our Voyagers; and the advantage of their coming to live with the English was not inconsiderable. Every day, when the weather would permit, some of them went out to catch fish, and our people generally obtained, by exchanges, a good share of the produce of their labours, in addition to the supply which was afforded by our own nets and lines. Nor was there a deficiency of vegetable refreshments; to which was united spruce-beer for drink; so that if the seeds of the scurvy had been contracted by any of the crew, they would speedily have been removed by such a regimen. The fact, however, was, that there were only two invalids upon the sick lists in both ships. Curiosities, fish, and women were the articles of commerce supplied by the New Zealanders. The two first always came to a good market; but the latter did not happen, at this time, to be an acceptable commodity. Our seamen had conceived a dislike to these people, and were either unwilling or afraid to associate with them; the good effect of which was, that our Commander knew no instance of a man's quitting his station, to go to the habitations of the Indians. A connection with women it was out of Captain Cook's power to prevent; but he never encouraged it, and always was fearful of its consequences. Many, indeed, are of opinion, that such an intercourse is a great security among savages. But if this should ever be the case with those who remain and settle among them, it is generally otherwise with respect to travellers and transient visitors. In such a situation as was that of our Navigators, a connection with the women of the natives betrays more men than it saves. "What else," says the Captain, "can reasonably be expected, since all their views are selfish, without the least mixture of regard or attachment? My own experience, at least, which hath been pretty extensive, hath not pointed out to me one instance to the contrary." Amongst the persons who occasionally visited the English, was a Chief of the name of Kahoora, who, as Captain Cook was informed, had headed the party that cut off Captain Furneaux's people, and had himself killed Mr. Rowe, the officer who commanded. This man our Commander was strongly solicited to put to death, even by some of the natives; and Omai was particularly eager and violent upon the subject. To these solicitations the Captain paid not the least degree of attention. He even admired Kahoora's courage, and was not a little pleased with the confidence with which he had put himself into his power. Kahoora had placed his whole safety in the declarations that Captain Cook had uniformly made to the New Zealanders; which were, that he had always been a friend to them all, and would continue to be so, unless they gave him cause to act otherwise; that as to their inhuman treatment of our people, he should think no more of it, the transaction having happened long ago, and when he was not present; but that, if ever they made a second attempt of the same kind, they might rest assured of feeling the weight of his resentment. While our Commander, on the sixteenth, was making an excursion for the purpose of collecting food for his cattle, he embraced the opportunity to enquire, as accurately as possible, into the circumstances which had attended the melancholy fate of our countrymen. Omai was his interpreter on this occasion. The result of the enquiry was, that the quarrel first took its rise from some thefts, in the commission of which the natives were detected; that there was no premeditated plan of bloodshed; and that if these thefts had not, unfortunately, been too hastily resented, no mischief would have happened. Kahoora's greatest enemies, and even the very men that had most earnestly solicited his destruction, confessed, at the same time, that he had no intention of quarrelling with Captain Furneaux's people, and much less of killing any of them, till the fray had actually commenced. Captain Cook continued, in this his last visit to New Zealand, the solicitude he had formerly shewn to be of some essential future service to the country. To one Chief he gave two goats, a male and female, with a kid; and to another two pigs, a boar and a sow. Although he obtained a promise from both these Chiefs, that they would not kill the animals which had been presented to them, he could not venture to place any great reliance upon their assurances. It was his full intention, on his present arrival in Queen Charlotte's Sound, to have left not only goats and hogs, but sheep, together with a young bull and two heifers. The accomplishment, however, of this resolution depended either upon his finding a Chief who was powerful enough to protect and keep the cattle, or upon his meeting with a place where there might be a probability of their being concealed from those who would ignorantly attempt to destroy them. Neither of these circumstances happened to be conformable to his wishes. At different times he had left in New Zealand ten or a dozen hogs, besides those which had been put on shore by Captain Furneaux. It will, therefore, be a little extraordinary, if this race of animals should not increase and be preserved either in a wild

or a domestic state, or in both. Our Commander was informed, that Tiratou, a popular Chief among the natives, had a number of cocks and hens, and one sow, in his separate possession. With regard to the gardens which had formerly been planted, though they had almost entirely been neglected, and some of them destroyed, they were not wholly unproductive. They were found to contain cabbages, onions, leeks, purslain, radishes, mustard, and a few potatoes. The potatoes, which had first been brought from the Cape of Good Hope, were greatly meliorated by change of soil; and, with proper cultivation, would be superior to those produced in most other countries. A great addition of knowledge was obtained, during this voyage, with respect to the productions of New Zealand, and the manners and customs of its inhabitants. The zeal of Captain Cook upon the subject was admirably seconded by the sedulous diligence of Mr. Anderson, who omitted no opportunity of collecting every kind and degree of information. I shall only so far trespass on the patience of my readers, as to mention a few circumstances tending to delineate the character of the natives. They seem to be a people perfectly satisfied with the little they already possess; nor are they remarkably curious either in their observations or their enquiries. New objects are so far from striking them with such a degree of surprise as might naturally be expected, that they scarcely fix their attention even for a moment. In the arts with which they are acquainted, they shew as much ingenuity, both in invention and execution, as any uncivilized nations under similar circumstances. Without the least use of those tools which are formed of metal, they make every thing that is necessary to procure their subsistence, clothing, and military weapons; and all this is done by them with a neatness, a strength, and a convenience that are well adapted to the accomplishment of the several purposes they have in view. No people can have a quicker sense of an injury done to them than the New Zealanders, or be more ready to resent it: and yet they want one characteristic of true bravery; for they will take an opportunity of being insolent when they think that there is no danger of their being punished. From the number of their weapons, and their dexterity in using them, it appears that war is their principal profession. Indeed, their public contentions are so frequent, or rather so perpetual, that they must live under continual apprehensions of being destroyed by each other. From their horrid custom of eating the flesh of their enemies, not only without reluctance, but with peculiar satisfaction, it would be natural to suppose that they must be destitute of every humane feeling, even with regard to their own party. This, however, is not the case: for they lament the loss of their friends with a violence of expression which argues the most tender remembrance of them. At a very early age, the children are initiated into all the practices, whether good or bad, of their fathers; so that a boy or girl, when only nine or ten years old, can perform the motions, and imitate the frightful gestures, by which the more aged are accustomed to inspire their enemies with terror. They can keep, likewise, the strictest time in their song; and it is with some degree of melody that they sing the traditions of their forefathers, their actions in war, and other subjects. The military achievements of their ancestors the New Zealanders celebrate with the highest pleasure, and spend much of their time in diversions of this sort, and in playing upon a musical instrument, which partakes of the nature of a flute. With respect to their language, it is far from being harsh or disagreeable, though the pronunciation of it is frequently guttural; nor, if we may judge from the melody of some kinds of their songs, is it destitute of those qualities which fit it to be associated with music. Of its identity with the languages of the other Islands throughout the South Sea fresh proofs were exhibited during the present voyage. At the request of Omai, Captain Cook consented to take with him two youths from New Zealand. That they might not quit their native country under any deluding ideas of visiting it again, the Captain took care to inform their parents, in the strongest terms, that they would never return. This declaration seemed, however, to make no kind of impression. The father of the youngest lad resigned him with an indifference which he would scarcely have shewn at parting with his dog, and even stripped the boy of the little clothing he possessed, delivering him quite naked into the hands of our voyagers. This was not the case with the mother of the other youth. She took her leave of him with all the marks of tender affection that might be expected between a parent and a child on such an occasion; but she soon resumed her cheerfulness, and went away wholly unconcerned (*i*).

(i) Cook's Voy.
age, *ubi supra*,
p. 118—163.

On the twenty-fifth of the month, Captain Cook stood out of Queen Charlotte's Sound, and by the twenty-seventh got clear of New Zealand. No sooner had the ships lost sight of the land, than the two young adventurers from that country, one of whom was nearly eighteen years of age, and the other about ten, began deeply to repent of the step they had taken. It was the experience of the sea-sickness which gave this turn to their reflections; and all the soothing encouragement the English could think of, was but of little avail. They wept, both in public and in private, and made their lamentation in a kind of song, that seemed to be expressive of the praises of their country and people, from which they were to be separated for ever. In this disposition they continued for many days: but as their sea-sickness wore off, and the tumult of their minds subsided, the fits of lamentation became less and less frequent, and at length entirely ceased. By degrees, their native country

(k) Mangeea lies
in the latitude of
21° 57' South,
and in the lon-
gitude of 201°
53' East.

country and their friends were forgotten, and they appeared to be as firmly attached to our Navigators as if they had been born in England. In the prosecution of the voyage, Captain Cook met with unfavourable winds; and it was not till the twenty-ninth of March that land was discovered. It was found to be an inhabited Island, the name of which, as was learned from two of the natives, who came off in a canoe, is Mangeea. Our Commander examined the coast with his boats, and had a short intercourse with some of the inhabitants. Not being able to find a proper harbour for bringing the ships to an anchorage, he was obliged to leave the country unvisited, though it seemed capable of supplying all the wants of our Voyagers. The Island of Mangeea is full five leagues in circuit, and of a moderate and pretty equal height (k). It has, upon the whole, a pleasing aspect, and might be made a beautiful spot by cultivation. The inhabitants, who appeared to be both numerous and well fed, seemed to resemble those of Otaheite and the Marquesas in the beauty of their persons; and the resemblance, as far as could be judged in so short a compass of time, takes place with respect to their general disposition and character. From the coast of Mangeea our Commander sailed in the afternoon of the thirtieth, and on the next day land was again seen, within four leagues of which the ships arrived on the first of April. Our people could then pronounce it to be an Island, nearly of the same appearance and extent with that which had so lately been left. Some of the natives speedily put off in their canoes, and three of them were persuaded to come on board the Resolution; on which occasion, their whole behaviour marked that they were quite at their ease, and felt no kind of apprehension that they should be detained, or ill used. In a visit from several others of the inhabitants, they manifested a dread of approaching near the cows and horses; nor could they form the least conception of their nature. But the sheep and goats did not, in their opinion, surpass the limits of their ideas; for they gave our Navigators to understand that they knew them to be birds. As there is not the most distant resemblance between a sheep or goat, and any winged animal, this may be thought to be almost an incredible example of human ignorance. But it should be remembered, that, excepting hogs, dogs, and birds, these people were strangers to the existence of any other land animals. In a farther intercourse with the natives, who had brought a hog, together with some plantains and cocoa-nuts, they demanded a dog from our Voyagers, and refused every thing besides which was offered in exchange. One of the Gentlemen on board happened to have a dog and a bitch, which were great nuisances in the ship; and these he might now have disposed of in a manner that would have been of real future utility to the Island. But he had no such views in making them the companions of his voyage. Omai, however, with a good-nature that reflects honour upon him, parted with a favourite dog which he had brought from England; and with this acquisition the people departed highly satisfied. On the third of April, Captain Cook dispatched Mr. Gore, with three boats, to endeavour to get upon the Island. Mr. Gore himself, Omai, Mr. Anderson, and Mr. Burney, were the only persons that landed. The transactions of the day, of which Mr. Anderson drew up an ingenious and entertaining account, added to the stock of knowledge gained by our Navigators, but did not accomplish Captain Cook's principal object. Nothing was procured by the Gentlemen, from the Island, that supplied the wants of the ships. In this expedition, Omai displayed that turn for exaggeration, with which travellers have so frequently been charged. Being asked by the natives concerning the English, their ships, their country, and the arms they made use of, his answers were not a little marvellous. He told these people that our country had ships as large as their Island; on board of which were instruments of war (describing our guns) of such dimensions, that several persons might sit within them. At the same time, he assured the inhabitants that one of these guns was sufficient to crush their whole Island at a single shot. Though he was obliged to acknowledge that the guns on board the vessels upon their coast were but small, he contrived, by an explosion of gunpowder, to inspire them with a formidable idea of their nature and effect. It is probable that this representation of things contributed to the preservation of the Gentlemen, in their enterprize on shore; for a strong disposition to retain them had been shewn by the natives. It seemed destined that this day should give Omai more occasions than one of bearing a principal part in its transactions. The Island, though never visited by Europeans before, happened to have other strangers residing in it; and it was entirely owing to Omai's having attended on the expedition, that a circumstance so curious came to the knowledge of the English. Scarcely had he been landed upon the beach, when he found, among the crowd which had assembled there, three of his own countrymen, natives of the Society Islands. That at the distance of about two hundred leagues from those Islands, an immense, unknown ocean intervening, with the wretched boats their inhabitants are known to make use of, and fit only for a passage where sight of land is scarcely ever lost, such a meeting, at such a place, so accidentally visited, should occur, may well be regarded as one of those unexpected situations, with which the writers of feigned adventures love to surprize their readers. When events of this kind really happen in common life, they deserve to be recorded for their singularity. It may easily be supposed with what mutual surprize and satisfaction this interview of Omai with his countrymen was attended. Twelve years before, about twenty persons in number, of both sexes, had

had embarked on board a canoe at Otaheite, to cross over to the neighbouring Island of Ulitea. A violent storm having arisen, which drove them out of their course, and their provisions being very scanty, they suffered incredible hardships, and the greatest part of them perished by famine and fatigue. Four men only survived, when the boat overfet, and then the destruction of this small remnant appeared to be inevitable. However, they kept hanging by the side of the vessel, which they continued to do for some days, when they were providentially brought within sight of the people of this Island, who immediately sent out canoes, and brought them on shore. The three men who now survived, expressed a strong sense of the kind treatment they had received; and so well satisfied were they with their present situation, that they refused an offer which was made them of being conveyed to their native country. A very important instruction may be derived from the preceding narrative. It will serve to explain, better than a thousand conjectures of speculative reasoners, how the detached parts of the earth, and, in particular, how the Islands of the South Sea though lying remote from any inhabited continent, or from each other, may have originally been peopled. Similar adventures have occurred in the history of navigation and shipwrecks. The Island on which Messieurs Gore, Anderson, Burney, and Omai, had landed, is called Wateoo by the natives, and is a beautiful spot, having a surface composed of hills and plains, which are covered with a verdure rendered extremely pleasant by the diversity of its hues (l). Its inhabitants are very numerous; and many of the young men were perfect models in shape; besides which, they had complexions as delicate as those of the women, and appeared to be equally amiable in their dispositions. In their manners, their general habits of life, and their religious ceremonies and opinions, these Islanders have a near resemblance to the people of Otaheite and its neighbouring isles; and their language was well understood, both by Omai and the two New Zealanders. The next place visited by Captain Cook was a small Island, called Wennooa ette, or Otakootaia (m), to which Mr. Gore was sent, at the head of a party, who procured about a hundred cocoa-nuts for each ship, and some grass, together with a quantity of the leaves and branches of young trees, for the cattle. Though, at this time, no inhabitants were found in Wennooa-ette, yet, as there remained indubitable marks of its being, at least, occasionally frequented, Mr. Gore left a hatchet, and several nails, to the full value of what had been taken away. On the fifth, our Commander directed his course for Harvey's Island, which was only at the distance of fifteen leagues, and where he hoped to procure some refreshments. This Island had been discovered by him, in 1773, during his last voyage, when no traces were discerned of its having any inhabitants. It was now experienced to be well peopled, and by a race of men who appeared to differ much, both in person and disposition, from the natives of Wateoo. Their behaviour was disorderly and clamorous; their colour was of a deeper cast; and several of them had a fierce and rugged aspect. It was remarkable, that not one of them had adopted the practice, so generally prevalent among the people of the Southern Ocean, of puncturing or *tattooing* their bodies. But, notwithstanding this singularity, the most unequivocal proofs were exhibited of their having the same common origin; and their language, in particular, approached still nearer to the dialect of Otaheite, than that of Wateoo, or Mangeea. No anchorage for the ships being found in Harvey's Island, Captain Cook quitted it without delay.

The Captain being thus disappointed at all the Islands he had met with, since his leaving New Zealand, and his progress having unavoidably been retarded by unfavourable winds, and other unforeseen circumstances, it became impossible to think of doing any thing this year in the high latitudes of the northern hemisphere, from which he was still at so great a distance, though the season for his operations there was already begun. In this situation, it was absolutely necessary, in the first place, to pursue such measures as were most likely to preserve the cattle that were on board. A still more capital object was to save the stores and provisions of the ships, that he might the better be enabled to prosecute his discoveries to the North, which could not now be commenced till a year later than was originally intended. If he had been so fortunate as to have procured a supply of water, and of grass, at any of the Islands he had lately visited, it was his purpose to have stood back to the South, till he had met with a westerly wind. But the certain consequence of doing this, without such a supply, would have been the loss of all the cattle; while, at the same time, not a single advantage would have been gained with regard to the grand ends of the voyage. He determined, therefore, to bear away for the Friendly Islands, where he was sure of being abundantly provided. In pursuing his course, agreeably to this resolution, our Commander, on the fourteenth, reached Palmerston Island, where, and at a neighbouring Islet, both of which were uninhabited, some little relief was obtained. The boats soon procured a load of scurvy-grass and young cocoa-nut trees, which was a feast for the cattle; and the same feast, with the addition of palm-cabbage, and the tender branches of the *Wharra* tree, was continued for several days. On the sixteenth, Omai, being on shore with the Captain, caught, with a scoop-net, in a very short time, as much fish as served the whole party for dinner, besides sending a quantity to both the ships. Birds, too, and particularly men-of-war and tropic birds, were plenti-

(l) Wateoo lies in the latitude of 20° 1' South, and in the longitude of 201° 45' East, and is about six leagues in circumference.

(m) It lies in the latitude of 19° 15' South, and in the longitude of 201° 37' East.

fully obtained; so that our Navigators had sumptuous entertainment. Omai acted as cook upon the occasion. The fish and the birds he dressed with heated stones, after the manner of his country; and performed the operation with a dexterity and good humour which were greatly to his credit. From the Islet before mentioned, twelve hundred cocoa-nuts were procured, which, being equally divided among the crew, were of great use to them, both on account of the juice and the kernel. There is no water in the Islets which are comprehended under the name of Palmerston Island. If that article could be obtained, and good anchorage could be accomplished within the reef, Captain Cook would prefer this Island to any of the uninhabited ones, for the mere purpose of refreshment. The quantity of fish that might be caught, would be sufficient; and a ship's company could roam about, unmolested by the petulance of the inhabitants. Different opinions have been entertained concerning the formation of the low Islands in the great ocean. From the observations which our Commander now made, he was convinced that such Islands are formed from shoals, or coral banks, and, consequently, that they are always increasing. His reasons for embracing this hypothesis, are related by him, in his Voyage, with his usual good sense and sagacity.

(n) Cook, *ubi supra*, p. 167—
224.

After leaving Palmerston's Island, Captain Cook steered to the West, with a view of making the best of his way to Annamooka. During his course, the showers were so copious, that our Navigators saved a considerable quantity of water. Finding that a greater supply could be obtained by the rain, in one hour, than could be gotten by distillation in a month, the Captain laid aside the still, as a thing which was attended with more trouble than profit. At this time, the united heat and moisture of the weather, in addition to the impossibility of keeping the ships dry, threatened to be noxious to the health of our people. It was, however, remarkable, that neither the constant use of salt food, nor the vicissitudes of climate, were productive of any evil effects. Though the only material refreshment our Voyagers had received, since their leaving the Cape of Good Hope, was that which they had procured at New Zealand, there was not, as yet, a single sick person on board. This happy situation of things was undoubtedly owing to the unremitting attention of our Commander, in seeing that no circumstance was neglected which could contribute to the preservation of the health of his company (n). On the twenty-eighth of April, Captain Cook touched at the Island of Komango; and, on the first of May, he arrived at Annamooka. The station he took was the very same which he had occupied when he visited the country three years before; and it was probably, almost in the same place where Tasman, the first discoverer of this and some of the neighbouring Islands, anchored in 1643. A friendly intercourse was immediately opened with the natives, and every thing was settled to the Captain's satisfaction. He received the greatest civilities from Toobou, the Chief of Annamooka; and Taipa, a Chief from the Island of Komango, attached himself to the English in so extraordinary a manner, that, in order to be near them in the night, as well as in the day, he had a house brought on men's shoulders, a full quarter of a mile, and placed close to the shed which was occupied by our party on shore. On the sixth, our Commander was visited by a great Chief from Tongataboo, whose name was Feenou, and who was falsely represented, by Tapia, to be the King of all the Friendly Isles. The only interruption to the harmony which subsisted between our people and the natives of Annamooka, arose from the thievish disposition of many of the inhabitants. They afforded frequent opportunities of remarking how expert they were in the business of stealing. Even some of the Chiefs did not think the profession unbecoming their dignity. One of them was detected in carrying a bolt out of the ship, concealed under his clothes; for which Captain Cook sentenced him to receive a dozen lashes, and kept him confined till he had paid a hog for his liberty. After this act of justice, our Navigators were no longer troubled with thieves of rank: but their servants, or slaves, were still employed in the dirty work; and upon them a flogging seemed to make no greater impression than it would have done upon the main-mast. When any of them happened to be caught in the act, so far were their masters from interceding in their favour, that they often advised our Gentlemen to kill them. This, however, being a punishment too severe to be inflicted, they generally escaped without being punished at all; for of the shame, as well as of the pain of corporal chastisement, they appeared to be equally insensible. At length, Captain Clerke invented a mode of treatment, which was thought to be productive of some good effect. He put the thieves into the hands of the barber, and completely shaved their heads. In consequence of this operation, they became objects of ridicule to their own countrymen; and our people, by keeping them at a distance, were enabled to deprive them of future opportunities for a repetition of their rogueries.

The Island of Annamooka being exhausted of its articles of food, Captain Cook proposed, on the eleventh, to proceed directly for Tongataboo. From this resolution, however, he was diverted, at the instance of Feenou, who warmly recommended, in preference to it, an Island, or rather a group of Islands, called Hapae, lying to the North-east. There, he assured our Voyagers, they could be plentifully supplied with every refreshment, in the easiest manner; and he enforced his advice by engaging to attend them thither in person. Accordingly, Hapae was made choice of for the next station; and the examination of it

became an object with the Captain, as it had never been visited by any European ships. On the seventeenth, our Commander arrived at Hapae, where he met with a most friendly reception from the inhabitants, and from Earoupa, the Chief of the Island. During the whole stay of our Navigators, the time was spent in a reciprocation of presents, civilities, and solemnities. On the part of the natives were displayed single combats with clubs, wrestling and boxing matches, female combatants, dances performed by men, and night entertainments of singing and dancing. The English, on the other hand, gave pleasure to the Indians by exercising the Marines, and excited their astonishment by the exhibition of fire works. After curiosity had, on both sides, been sufficiently gratified, Captain Cook applied himself to the examination of Hapae, Lefooga, and other neighbouring Islands. As the ships were returning, on the thirty-first, from these Islands to Annamooka, the Resolution was very near running full upon a low sandy Isle, called Pootoo Pootooa, surrounded with breakers. It fortunately happened, that the men had just been ordered upon deck to put the vessel about, and were most of them at their stations; so that the necessary movements were executed not only with judgment, but also with alertness. This alone saved the ship and her company from destruction. "Such hazardous situations," says the Captain, "are the unavoidable companions of the man who goes upon a voyage of discovery." During our Commander's expedition to Hapae, he was introduced to Poulaho, the real King of the Friendly Isles; in whose presence it instantly appeared how groundless had been Feenou's pretensions to that character. Feenou, however, was a Chief of great note and influence. By Poulaho Captain Cook was invited to pass over to Tongataboo, which request he complied with, after he had touched, for two or three days, at Annamooka. In the passage, the Resolution was insensibly drawn upon a large flat, on which lay innumerable coral rocks, of different depths, below the surface of the water. Notwithstanding all the care and attention of our people to keep her clear of them, they could not prevent her from striking on one of these rocks. The same event happened to the Discovery; but fortunately, neither of the ships stuck fast, or received any damage. On the tenth of June, Captain Cook arrived at Tongataboo, where the King was waiting for him upon the beach, and immediately conducted him to a small, but neat house, which, he was told, was at his service, during his stay in the Island. The house was situated a little within the skirts of the woods, and had a fine large area before it; so that a more agreeable spot could not have been provided. Our Commander's arrival at Tongataboo was followed by a succession of entertainments, similar to those which had occurred at Hapae, though somewhat diversified in circumstances, and exhibited with additional splendour. The pleasure, however, of the visit was occasionally interrupted by the thieveries of many of the inhabitants. Nothing could prevent their plundering our Voyagers, in every quarter; and they did it in the most daring and insolent manner. There was scarcely any thing which they did not attempt to steal; and yet, as the crowd was always great, the Captain would not permit the centinels to fire, lest the innocent should suffer with the guilty. Captain Cook, on the nineteenth, made a distribution of the animals which he had selected as presents for the principal men of the Island. To Poulaho, the King, he gave a young English bull and cow, together with three goats; to Mareewagee, a Chief of consequence, a Cape ram and two ewes [CC]; and to Feenou a horse and a mare. Omai, at the same time, was instructed to represent the importance of these animals, and to explain, as far as he was capable of doing it, the manner in which they should be preserved and treated. Even the generosity of the Captain was not without its inconveniences. It soon appeared that some were dissatisfied with the allotment of the animals; for, next morning, two kids and two turkey-cocks were missing. As our Commander could not suppose that this was an accidental loss, he determined to have them again. The first step he took was to seize on three canoes that happened to be alongside the ships; after which, he went on shore, and having found the King, his brother, Feenou, and some other Chiefs, he immediately put a guard over them, and gave them to understand, that they must remain under restraint till not only the kid and the turkeys, but the rest of the things which, at different times, had been stolen from our Voyagers, should be restored. This bold step of Captain Cook was attended with a very good effect. Some of the articles which had been lost were instantly brought back, and such good assurances were given with regard to the remainder, that, in the afternoon, the Chiefs were released. It was a happy circumstance, with respect to this transaction, that it did not abate the future confidence of Poulaho and his friends in the Captain's kind and generous treatment. On the fifth of July was an eclipse of the sun, which, however, in consequence of unfavourable weather, was very imperfectly observed. Happily, the disappointment was of little consequence, as the longitude was more than sufficiently determined by lunar observations^(o). Captain Cook sailed from Tongataboo on the tenth, and, two days after, came to an anchor at the Island of Middleburgh, or Eooa, as it is called by the inhabitants. Here he was immediately visited by Taooa, the Chief,

[CC] *A Cape ram and two ewes.* As none of the natives took the least notice or care of the three sheep allotted to Mareewagee, Captain Cook afterwards ordered them to be carried back to the ships. Besides

the animals above-mentioned, he left in the Island a young boar, and three young sows, of the English breed; and two rabbits, a buck and a doe.

with

^(o) Cook, *ubi supra*, p. 225—328.

with whom he had formerly been acquainted. The intercourse now renewed was friendly in the highest degree, both with Taoofa and the rest of the natives; and our Commander endeavoured to meliorate their condition by planting a pine-apple, and sowing the seeds of melons, and other vegetables, in the Chief's plantation. To this he was encouraged by a proof that his past endeavours had not been wholly unsuccessful. He had, one day, served up to him at his dinner, a dish of turnips, being the produce of the seeds which he had left at Eooa in his last voyage.

The stay which Captain Cook made at the Friendly Islands was between two and three months; during which time, some accidental differences excepted, there subsisted the utmost cordiality between the English and the natives. These differences were never attended with any fatal consequences; which happy circumstance was principally owing to the unremitting attention of the Captain, who directed all his measures with a view to the prevention of such quarrels as would be injurious either to the inhabitants or to his own people. So long as our Navigators stayed at the Islands, they expended very little of their sea provisions, subsisting, in general, upon the produce of the country, and carrying away with them a quantity of refreshments sufficient to last till their arrival at another station, where they could depend upon a fresh supply. It was a singular pleasure to our Commander, that he possessed an opportunity of adding to the happiness of these good Indians, by the useful animals which he left among them. Upon the whole, the advantages of having touched at the Friendly Islands were very great; and Captain Cook reflected upon it with peculiar satisfaction, that these advantages were obtained without retarding, for a single moment, the prosecution of the great object of his voyage; the season for proceeding to the North having been previously lost. Besides the immediate benefits which both the natives and the English derived from their mutual intercourse on the present occasion, such a large addition was now made to the geographical knowledge of this part of the Pacific Ocean, as may render no small service to future navigators. Under the denomination of the Friendly Islands, must be included not only the group at Hapae, but all those Islands that have been discovered nearly under the same meridian, to the North, as well as some others, which, though they have never hitherto been seen by any European voyagers, are under the dominion of Tongataboo. From the information which our Commander received, it appears that this Archipelago is very extensive. Above one hundred and fifty Islands were reckoned up by the natives, who made use of bits of leaves to ascertain their number; and Mr. Anderson, with his usual diligence, procured all their names. Fifteen of them are said to be high or hilly, and thirty-five of them large. Concerning the size of the thirty-two which were unexplored, it can only be mentioned, that they must be larger than Annamooka, which was ranked amongst the smaller Isles. Several, indeed, of those which belong to this latter denomination, are mere spots, without inhabitants. Sixty-one of these Isles have their proper places and names marked upon the chart of the Friendly Islands, and the sketch of the harbour of Tongataboo, which are given in the Voyage. Captain Cook had not the least doubt but that Prince William's Islands, discovered and so named by Tasman, were comprehended in the list furnished by the natives. He had also good authority for believing, that Keppel's and Boscawen's Islands, two of Captain Wallis's discoveries in 1765, were included in the same list; and that they were under the sovereignty of Tongataboo, which is the grand seat of government. It must be left to future navigators to extend the geography of this part of the South Pacific Ocean, by ascertaining the exact situation and size of nearly a hundred Islands, in the neighbourhood, which our Commander had no opportunity of exploring. During the present visit to the Friendly Islands, large additions were made to the knowledge which was obtained, in the last voyage, of the natural history and productions of the country, and the manners and customs of its inhabitants. Though it does not fall within the plan of this narrative to enter into a detail of the particulars recorded, I cannot help taking notice of the explanation which Captain Cook has given of the thievish disposition of the natives. It is an explanation which reflects honour upon his sagacity, humanity, and candour; and therefore I shall relate it in his own words: "The only defect," says he, "fullying their character, that we know of, is a propensity to thieving; to which we found those of all ages, and both sexes, addicted; and to an uncommon degree. It should, however, be considered, that this exceptionable part of their conduct seemed to exist merely with respect to us; for, in their general intercourse with one another, I had reason to be of opinion, that thefts do not happen more frequently (perhaps less so) than in other countries, the dishonest practices of whose worthless individuals are not supposed to authorize any indiscriminate censure on the whole body of the people. Great allowances should be made for the foibles of these poor natives of the Pacific Ocean, whose minds we overpowered with the glare of objects, equally new to them as they were captivating. Stealing, among the civilized nations of the world, may well be considered as denoting a character deeply stained with moral turpitude, with avarice unrestrained by the known rules of right, and with profligacy producing extreme indigence, and neglecting the means of relieving it. But at the Friendly and other Islands which we visited, the thefts, so frequently committed by the natives, of what we had brought along with us, may be

“ be fairly traced to less culpable motives. They seemed to arise solely from an intense
 “ curiosity or desire to possess something which they had not been accustomed to before;
 “ and belonging to a sort of people so different from themselves. And, perhaps, if it were
 “ possible, that a set of beings, seemingly as superior in our judgment, as we are in theirs,
 “ should appear amongst us, it might be doubted, whether our natural regard to justice
 “ would be able to restrain many from falling into the same error. That I have assigned
 “ the true motive for their propensity to this practice, appears from their stealing every
 “ thing indiscriminately at first sight, before they could have the least conception of
 “ converting their prize to any one useful purpose. But, I believe, with us, no person
 “ would forfeit his reputation, or expose himself to punishment, without knowing, before
 “ hand, how to employ the stolen goods. Upon the whole, the pilfering disposition of
 “ these Islanders, though certainly disagreeable and troublesome to strangers, was the
 “ means of affording us some information as to the quickness of their intellects.” With
 respect to the religion of these Indians, Mr. Anderson maintains, that they have very proper
 sentiments concerning the immateriality and immortality of the soul; and thinks himself
 sufficiently authorized to assert, that they do not worship any thing which is the work of
 their own hands, or any visible part of the creation. The language of the Friendly
 Islands has the greatest imaginable conformity with that of New Zealand, of Wateoo,
 and Mangeea. Several hundreds of the words of it were collected by Mr. Anderson; and,
 amongst these, are terms that express numbers reaching to a hundred thousand. Beyond
 this limit they never went, and probably were not able to go farther; for it was observed,
 that when they had gotten thus far, they commonly used a word which expresses an inde-
 finite number. It is scarcely necessary to add, that Captain Cook, during his whole stay at
 the Friendly Islands, neglected nothing which could be the subject of astronomical and
 nautical observation. Hence the latitude and longitude of the different places he touched
 at, the variations of the needle, and the state of the tides, are recorded for the improvement
 of science, and the benefit of future navigators (p).

On the seventeenth of July, our Commander took his final leave of the Friendly Islands,
 and resumed his voyage. An eclipse was observed in the night between the twentieth and
 the twenty-first; and on the eighth of August, land was discovered. Some of the inhabi-
 tants, who came off in canoes, seemed earnestly to invite our people to go on shore; but
 Captain Cook did not think proper to run the risk of losing the advantage of a fair wind,
 for the sake of examining an Island which appeared to be of little consequence. Its name,
 as was learned from the natives, who spake the Otaheite language, is Toobouai (q). Pursuing
 his course, the Captain reached Otaheite on the twelfth, and steered for Oheitepeha Bay,
 with an intention to anchor there, in order to draw what refreshments he could from the
 South-east part of the Island, before he went down to Matavai. Omai's first reception
 amongst his countrymen was not entirely of a flattering nature. Though several persons
 came on board who knew him, and one of them was his brother-in-law, there was
 nothing remarkably tender or striking in their meeting. An interview which Omai had,
 on the thirteenth, with his sister, was agreeable to the feelings of nature; for their meeting
 was marked with expressions of tender affection, more easy to be conceived than described.
 In a visit, likewise, which he received from an aunt, the old Lady threw herself at his feet,
 and plentifully bedewed them with tears of joy. Captain Cook was informed by the
 natives, that, since he was last at the Island, in 1774, two ships had been twice in Oheitepeha
 Bay, and had left animals in the country. These, on farther enquiry, were found to be
 hogs, dogs, goats, one bull, and a ram. That the vessels which had visited Otaheite were
 Spanish, was plain from an inscription that was cut upon a wooden cross, standing at some
 distance from the front of a house which had been occupied by the strangers. On the
 transverse part of the cross was inscribed,

Christus vincit.

And on the perpendicular part,

Carolus III. imperat. 1774.

Our Commander took this occasion to preserve the memory of the prior visits of the
 English, by inscribing, on the other side of the post,

*Georgius tertius Rex,
 Annis 1767,
 1769, 1773, 1774, & 1777.*

Whatever might be the intentions of the Spaniards in their visits to the Island, it ought to
 be remembered to their honour, that they had behaved so well to the inhabitants, as
 always to be spoken of in the strongest expressions of esteem and veneration.

VOL. IV.

3 H

Captain

(p) Cook, *ubi*
supra, p. 355.
 359. 367—370.
 385, 386. 404,
 405. 414—421.

(q) Toobouai is
 situated in the
 latitude of 23°
 25' South, and in
 the longitude of
 210° 37' East.
 Its greatest ex-
 tent is not above
 five or six miles.

Captain Cook had at this time an important affair to settle. As he knew that he could now be furnished with a plentiful supply of cocoa-nuts, the liquor of which is an excellent and wholesome beverage, he was desirous of prevailing upon his people to consent to their being abridged, during their stay at Otaheite and the neighbouring Islands, of their stated allowance of spirits to mix with water. But as this stoppage of a favourite article, without assigning some reason for it, might occasion a general murmur, he thought it most prudent to assemble the ship's company, and to make known to them the design of the voyage, and the extent of the future operations. To animate them in undertaking with cheerfulness and perseverance what lay before them, he took notice of the rewards offered by Parliament, to such of his Majesty's subjects as should first discover a communication between the Atlantic and Pacific Oceans, in any direction whatever, in the northern hemisphere; and also to such as should first penetrate beyond the eighty-ninth degree of northern latitude. The Captain made no doubt, he told them, that he should find them willing to co-operate with him in attempting, as far as might be possible, to become entitled to one or both of these rewards; but that to give the best chance of success, it would be necessary to observe the utmost œconomy in the expenditure of the stores and provisions, particularly the latter, as there was no probability of getting a supply, any where, after leaving these Islands. He strengthened his argument by reminding them, that, in consequence of the opportunity's having been lost of getting to the North this summer, the voyage must last at least a year longer than had originally been supposed. He entreated them to consider the various obstructions and difficulties they might still meet with, and the aggravated hardships they would endure, if it should be found necessary to put them to short allowance, of any species of provisions, in a cold climate. For these very substantial reasons, he submitted to them, whether it would not be better to be prudent in time, and, rather than to incur the hazard of having no spirits left, when such a cordial would most be wanted, to consent to give up their grog now, when so excellent a liquor as that of cocoa-nuts could be substituted in its place. In conclusion, our Commander left the determination of the matter entirely to their own choice. This speech, which certainly partook much of the nature of true eloquence, if a discourse admirably calculated for persuasion be entitled to that character, produced its full effect on the generous minds of English seamen. Captain Cook had the satisfaction of finding, that his proposal did not remain a single moment under consideration; being unanimously and immediately approved of, without the least objection. By our Commander's order, Captain Clerke made the same proposal to his people; to which they, likewise, agreed. Accordingly, grog was no longer served, excepting on Saturday nights; when the companies of both ships had a full allowance of it, that they might drink the healths of their friends in England.

On the twenty-fourth, Captain Cook quitted the South-east part of Otaheite, and resumed his old station in Matavai Bay. Immediately upon his arrival, he was visited by Otoo, the King of the whole Island, and their former friendship was renewed; a friendship which was continued without interruption, and cemented by a perpetual succession of civilities, good offices, and entertainments. One of our Commander's first objects was to dispose of all the European animals which were in the ships. Accordingly, he conveyed to Oparre, Otoo's place of residence, a peacock and hen; a turkey cock and hen; one gander, and three geese; a drake, and four ducks. The geese and ducks began to breed before our Navigators left their present station. There were already at Otoo's, several goats, and the Spanish bull; which was one of the finest animals of the kind that was ever seen. To the bull Captain Cook sent the three cows he had on board, together with a bull of his own; to all which were added the horse and mare, and the sheep that had still remained in the vessels. The Captain found himself lightened of a very heavy burthen, in having disposed of these passengers. It is not easy to conceive the trouble and vexation which had attended the conveyance of this living cargo, through such various hazards, and to so immense a distance. But the satisfaction which our Commander felt, in having been so fortunate as to fulfil his Majesty's humane designs, in sending such valuable animals, to supply the wants of two worthy nations, afforded him an ample recompence for the many anxious hours he had passed, before this subordinate object of his voyage could be carried into execution. At this time a war was on the point of breaking out, between the inhabitants of Eimeo and those of Otaheite; and by the latter Captain Cook was requested to take a part in their favour. With this request, however, though enforced by frequent and urgent solicitations, the Captain, according to his usual wisdom, refused to comply. He alledged, that, as he was not thoroughly acquainted with the dispute, and the people of Eimeo had never offended him, he could not think himself at liberty to engage in hostilities against them. With these reasons Otoo and most of the Chiefs appeared to be satisfied; but one of them, Towha, was so highly displeased, that our Commander never afterward recovered his friendship. Upon the present occasion Captain Cook had full and undeniable proof that the offering of human sacrifices forms a part of the religious institutions of Otaheite. Indeed, he was a witness to a solemnity of this kind; the process of which he has particularly described, and has related it with the just sentiments of indignation and abhorrence. The unhappy victim, who was now offered to the object of worship,

seemed to be a middle-aged man, and was said to be one of the lowest class of the people. But the Captain could not learn, after all his enquiries, whether the wretch had been fixed upon, on account of his having committed any crime which was supposed to be deserving of death. It is certain that a choice is generally made either of such guilty persons for the sacrifices, or of common, low fellows, who stroll about, from place to place, without any visible methods of obtaining an honest subsistence. Those who are devoted to suffer, are never apprized of their fate till the blow is given that puts an end to their being. Whenever, upon any particular emergency, one of the great Chiefs considers a human sacrifice to be necessary, he pitches upon the victim, and then orders him to be suddenly fallen upon and killed, either with clubs or stones. Although it should be supposed, that no more than one person is ever devoted to destruction on any single occasion, at Otaheite, it will still be found that these occurrences are so frequent, as to cause a shocking waste of the human race; for our Commander counted no less than forty-nine skulls of former victims, lying before the *Morai* where he had seen another added to the number. It was apparent, from the freshness of these skulls, that no great length of time had elapsed, since the wretches to whom they belonged had been offered upon the altar of blood. There is reason to fear, that this custom is as extensive as it is horrid. It is highly probable that it prevails throughout the widely-diffused Islands of the Pacific Ocean; and Captain Cook had particular evidence of its subsisting at the Friendly Islands. To what an extent the practice of human sacrifices was carried in the ancient world, is not unknown to the learned. Scarcely any nation was free from it in a certain state of society; and, as religious reformation is one of the last efforts of the human mind, the practice may be continued, even when the manners are otherwise far removed from savage life. It may have been a long time before civilization has made such a progress as to deprive superstition of its cruelty, and to divert it from barbarous rites to ceremonies, which, though foolish enough, are comparatively mild, gentle, and innocent. On the fifth of September, an accident happened, which, though slight in itself, was of some consequence from the situation of things. A young ram of the Cape breed, which had been lambed and brought up with great care on board the ship, was killed by a dog. Desirous as Captain Cook was of propagating so useful a race, among the Society Islands, the loss of a ram was a serious misfortune. It was the only one he had of that breed; and of the English breed a single ram was all that remained. Captain Cook and Captain Clerke, on the fourteenth, mounted on horseback, and took a ride round the plain of Matavai, to the great surprise of a large number of the natives, who attended upon the occasion, and gazed upon the Gentlemen with as much astonishment as if they had been Centaurs. What the two Captains had begun, was afterwards repeated every day, by one and another of our people; notwithstanding which, the curiosity of the Otaheitans still continued unabated. They were exceedingly delighted with these animals, after they had seen the use which was made of them. Not all the novelties, put together, which European visitors had carried amongst the inhabitants, inspired them with so high an idea of the greatness of distant nations. Though Captain Cook would not take a part in the quarrels between the Islands, he was ready to protect his particular friends, when in danger of being injured. Towha, who commanded the expedition against Eimeo, had been obliged to submit to a disgraceful accommodation. Being full of resentment on account of his not having been properly supported, he was said to have threatened, that, as soon as the Captain should leave the Island, he would join his forces to those of Tiaraboo, and attack Otoo at Matavai or Oparre. This induced our Commander to declare, in the most public manner, that he was determined to espouse the interest of his friend, against any such combination; and that whoever presumed to assault him, should feel the weight of his heavy displeasure, when he returned again to Otaheite. Captain Cook's declaration had probably the desired effect; for, if Towha had formed hostile intentions, no more was heard of the matter.

The manner in which our Commander was freed from a rheumatic complaint, that consisted of a pain extending from the hip to the foot, deserves to be recorded. Otoo's mother, his three sisters, and eight other women, went on board for the express purpose of undertaking the cure of his disorder. He accepted of their friendly offer, had a bed spread for them on the cabin floor, and submitted himself to their directions. Being desired to lay himself down amongst them, then, as many of them as could get round him began to squeeze him with both hands, from head to foot, but more particularly in the part where the pain was lodged, till they made his bones crack, and his flesh became a perfect mummy. After undergoing this discipline about a quarter of an hour, he was glad to be released from the women. The operation, however, gave him immediate relief; so that he was encouraged to submit to another rubbing-down before he went to bed; the consequence of which was, that he was tolerably easy all the succeeding night. His female physicians repeated their prescription the next morning, and again in the evening; after which his pains were entirely removed, and the cure was perfected. This operation, which is called *Romee*, is universally practised among these Islanders; being sometimes performed by the men, but more generally by the women. Captain Cook, who now had come to the resolution of departing soon from Otaheite, accompanied, on the twenty-seventh,

seventh, Otoo to Oparre, and examined the cattle and poultry, which he had consigned to his friend's care at that place. Every thing was in a promising way, and properly attended. The Captain procured from Otoo four goats; two of which he designed to leave at Ulietea, where none had yet been introduced; and the other two he proposed to reserve for the use of any Islands he might chance to meet with in his passage to the North. On the next day, Otoo came on board, and informed our Commander, that he had gotten a canoe, which he desired him to carry home, as a present to the *Earee rabie no Pretane*. This, he said, was the only thing he could send which was worthy of his Majesty's acceptance. Captain Cook was not a little pleased with Otoo, for this mark of his gratitude; and the more, as the thought was entirely his own. Not one of our people had given him the least hint concerning it; and it shewed that he was fully sensible to whom he stood indebted for the most valuable presents that he had received. As the canoe was too large to be taken on board, the Captain could only thank him for his good intentions; but it would have given him a much greater satisfaction if his present could have been accepted. During this visit of our Voyagers to Otaheite, such a cordial friendship and confidence subsisted between them and the natives, as never once to be interrupted by any untoward accident. Our Commander had made the Chiefs fully sensible, that it was their interest to treat with him on fair and equitable terms, and to keep their people from plundering or stealing. So great was Otoo's attachment to the English, that he seemed pleased with the idea of their having a permanent settlement at Matavai; not considering that from that time he would be deprived of his kingdom, and the inhabitants of their liberties. Captain Cook had too much gratitude and regard for these Islanders, to wish that such an event should ever take place. Though our occasional visits may, in some respects, have been of advantage to the natives, he was afraid that a durable establishment among them, conducted as most European establishments amongst Indian nations have unfortunately been, would give them just cause to lament that they had been discovered by our Navigators. It is not, indeed, likely that a measure of this kind should at any time seriously be adopted, because it cannot serve either the purposes of public ambition, or private avarice; and, without such inducements, the Captain has ventured to pronounce that it will never be undertaken.

From Otaheite our Voyagers sailed, on the thirtieth, to Eimeo, where they came to an anchor, on the same day. At this Island, the transactions which happened were, for the most part, very unpleasant. A goat, which was stolen, was recovered without any extraordinary difficulty, and one of the thieves was, at the same time, surrendered; being the first instance of the kind that our Commander had met with in his connections with the Society Islands. The stealing of another goat was attended with an uncommon degree of perplexity and trouble. As the recovery of it was a matter of no small importance, Captain Cook was determined to effect this at any rate; and accordingly he made an expedition cross the Island, in the course of which he set fire to six or eight houses, and burnt a number of war canoes. At last, in consequence of a peremptory message to Maheine, the Chief of Eimeo, that not a single canoe should be left in the country, or an end be put to the contest, unless the animal in his possession should be restored, the goat was brought back. This quarrel was as much regretted on the part of the Captain, as it could be on that of the natives. It grieved him to reflect, that, after refusing the pressing solicitations of his friends at Otaheite to favour their invasion of this Island, he should find himself so speedily reduced to the necessity of engaging in hostilities against its inhabitants; and in such hostilities as, perhaps, had been more injurious to them than Towha's expedition. On the eleventh of October, the ships departed from Eimeo, and the next day arrived at Owharre harbour, on the West side of Huaheine. The grand business of our Commander at this Island was the settlement of Omai. In order to obtain the consent of the Chiefs of the Island, the affair was conducted with great solemnity. Omai dressed himself very properly on the occasion; brought with him a suitable assortment of presents; went through a variety of religious ceremonies; and made a speech, the topics of which had been dictated to him by our Commander. The result of the negociation was, that a spot of ground was assigned him, the extent of which, along the shore of the harbour, was about two hundred yards; and its depth, to the foot of the hill, somewhat more. A proportionable part of the hill was included in the grant. This business having been adjusted in a satisfactory manner, the Carpenters of both ships were employed in building a small house for Omai, in which he might secure his European commodities. At the same time, some of the English made a garden for his use, in which they planted shaddocks, vines, pine-apples, melons, and the seeds of several other vegetable articles. All of these Captain Cook had the satisfaction of seeing in a flourishing state before he left the Island. At Huaheine Omai found a brother, a sister, and a brother-in law, by whom he was received with great regard and tenderness. But though these people were faithful and affectionate in their attachment to him, the Captain discovered, with concern, that they were of too little consequence in the Island to be capable of rendering him any positive service. They had not either authority or influence to protect his person or property; and, in such a situation, there was reason to apprehend, that he might be in danger of being stripped of all his possessions, as soon as he should cease to be supported by the power of the English. To prevent

prevent this evil, if possible, our Commander advised him to conciliate the favour and engage the patronage and protection of two or three of the principal Chiefs, by a proper distribution of some of his moveables; with which advice he prudently complied. Captain Cook, however, did not entirely trust to the operations of gratitude, but had recourse to the more forcible motive of intimidation. With this view, he took every opportunity of signifying to the inhabitants, that it was his intention to return to the Island again, after being absent the usual time; and that, if he did not find Omai in the same state of security in which he left him, all those whom he should then discover to have been his enemies should feel the weight of his resentment. As the natives had now formed an opinion that their country would be visited by the ships of England at stated periods, there was ground to hope that this threatening declaration would produce no inconsiderable effect. When Omai's house was nearly finished, and many of his moveables were carried ashore, a box of toys excited the admiration of the multitude in a much higher degree than articles of a more useful nature. With regard to his pots, kettles, dishes, plates, drinking-mugs, glasses, and the whole train of domestic accommodations, which in our estimation are so necessary and important, scarcely any one of his countrymen would condescend to look upon them. Omai himself, being sensible that these pieces of English furniture would be of no great consequence in his present situation, wisely sold a number of them, among the people of the ships, for hatchets, and other iron tools, which had a more intrinsic value in this part of the world, and would give him a more distinguished superiority over those with whom he was to pass the remainder of his days. Omai's family, when he settled at Huaheine, consisted of eight or ten persons; if that can be called a family, to which a single female did not as yet belong, nor was likely to belong, unless its master should become less volatile. There was nothing in his present temper which seemed likely to dispose him to look out for a wife; and, perhaps, it is to be apprehended, that his residence in England had not contributed to improve his taste for the sober felicity of a domestic union with some woman of his own country. The European weapons of Omai consisted of a musket, bayonet, and cartouch-box; a fowling-piece; two pair of pistols; and two or three swords or cutlasses. With the possession of these warlike implements, he was highly delighted; and it was only to gratify his eager desire for them, that Captain Cook was induced to make him such presents. The Captain would otherwise have thought it happier for him to be without fire-arms, or any European weapons, lest an imprudent use of them (and prudence was not his most distinguished talent) should rather encrease his dangers than establish his superiority. Though it was no small satisfaction to our Commander to reflect, that he had brought Omai safe back to the very spot from which he had been taken, this satisfaction was, nevertheless, somewhat diminished by the consideration, that his situation might now be less desirable than it was before his connection with the English. It was to be feared, that the advantages which he had derived from his visit to England would place him in a more hazardous state with respect to his personal safety. Whatever faults belonged to Omai's character, they were overbalanced by his good-nature and his gratitude. He had a tolerable share of understanding, but it was not accompanied with application and perseverance; so that his knowledge of things was very general, and in most instances imperfect; nor was he a man of much observation. He would not, therefore, be able to introduce many of the arts and customs of England among his countrymen, or greatly to improve those to which they have long been habituated. Captain Cook, however, was confident that he would endeavour to bring to perfection the fruits and vegetables which had been planted in the garden. This of itself would be no small acquisition to the natives. But the greatest benefit which these Islands are likely to receive from Omai's travels, will be in the animals that are left upon them; and which, had it not been for his coming to England, they might probably never have obtained. When these multiply, of which Captain Cook thought there was little reason to doubt, Otaheite, and the Society Islands, will equal, if not exceed, any country in the known world, for plenty of provisions. Before our Commander sailed from Huaheine, he had the following inscription cut on the outside of Omai's house:

Georgius Tertius, Rex, 2 Novembris, 1777.

*Naves { Resolution, Jac. Cook, Pr.
 { Discovery, Car. Clerke, Pr.*

On the same day, Omai took his final leave of our Navigators, in doing which he bade farewell to all the officers in a very affectionate manner. He sustained himself with a manly resolution till he came to Captain Cook, when his utmost efforts to conceal his tears failed; and he continued to weep all the time that the boat was conveying him to shore. Not again to resume the subject, I shall here mention, that when the Captain was at Ulietea, a fortnight after this event, Omai sent two men with the satisfactory intelligence, that he remained undisturbed by the people of Huaheine, and that every thing succeeded well with him, excepting in the loss of his goat, which had died in kidding. This intelligence was accompanied with a request that another goat might be given him, together with two axes.

Our Commander esteeming himself happy in having an additional opportunity of serving him, dispatched the messengers back with the axes, and a couple of kids, male and female, which were spared for him out of the Discovery. The fate of the two youths who had been brought from New Zealand must not be forgotten. As they were extremely desirous of continuing with our people, Captain Cook would have carried them to England with him, if there had appeared the most distant probability of their ever being restored to their own country. Tiarooa, the eldest of them, was a very well-disposed young man, with strong natural sense, and a capacity of receiving any instruction. He seemed to be fully convinced of the inferiority of New Zealand to these Islands, and resigned himself, though not without some degree of reluctance, to end his days, in ease and plenty, in Huaheine. The other had formed so strong an attachment to our Navigators, that it was necessary to take him out of the ship, and carry him ashore by force. This necessity was the more painful, as he was a witty, smart boy; and, on that account, a great favourite on board. Both these youths became a part of Omai's family.

Whilst our Voyagers were at Huaheine, the atrocious conduct of one particular thief occasioned so much trouble, that the Captain punished him more severely than he had ever done any culprit before. Besides having his head and beard shaved, he ordered both his ears to be cut off, and then dismissed him. It can scarcely be reflected upon without regret, that our Commander should have been compelled to such an act of severity. On the third of November, the ships came to an anchor in the harbour of Ohamaneno, in the Island of Ulietea. The observatories being set up on the sixth, and the necessary instruments having been carried on shore, the two following days were employed in making astronomical observations. In the night between the twelfth and thirteenth, John Harrison, a Marine, who was sentinel at the observatory, deserted, taking with him his arms and accoutrements. Captain Cook exerted himself, on this occasion, with his usual vigour. He went himself in pursuit of the deserter, who, after some evasion on the part of the inhabitants, was surrendered. He was found sitting between two women, with the musquet lying before him; and all the defence he was able to make was, that he had been enticed away by the natives. As this account was probably the truth, and as it appeared besides, that he had remained upon his post till within ten minutes of the time when he was to have been relieved, the punishment which the Captain inflicted upon him was not very severe. Some days after, a still more troublesome affair happened, of the same nature. On the morning of the twenty-fourth, the Captain was informed that a midshipman, and a seaman, both belonging to the Discovery, were missing; and it soon appeared that they had gone away in a canoe, in the preceding evening, and had now reached the other end of the Island. As the midshipman was known to have expressed a desire of remaining at these Islands, it was evident that he and his companion had gone off with that intention. Though Captain Clerke immediately set out in quest of them, with two armed boats, and a party of marines, his expedition proved fruitless, the natives having amused him the whole day with false intelligence. The next morning an account was brought that the deserters were at Otaha. As they were not the only persons in the ships who wished to spend their days at these favourite Islands, it became necessary, for the purpose of preventing any farther desertion, to recover them at all events. Captain Cook, therefore, in order to convince the inhabitants that he was in earnest, resolved to go after the fugitives himself; to which measure he was determined, from having observed, in repeated instances, that the natives had seldom offered to deceive him with false information. Agreeably to this resolution, the Captain set out, the next morning, with two armed boats, being accompanied by Oreo, the Chief of Ulietea, and proceeded immediately to Otaha. But when he had gotten to the place where the deserters were expected to be found, he was acquainted that they were gone over to Bolabola. Thither our Commander did not think proper to follow them, having determined to pursue another measure, which he judged would more effectually answer his purpose. This measure was, to put the Chief's son, daughter, and son-in-law, into confinement, and to detain them till the fugitives should be restored. As to Oreo, he was informed, that he was at liberty to leave the ship whenever he pleased, and to take such methods as he esteemed best calculated to get our two men back; that, if he succeeded, his friends should be released; if not, that Captain Cook was resolved to carry them away with him. The Captain added, that the Chief's own conduct, as well as that of many of his people, in assisting the runaways to escape, and in enticing others to follow them, would justify any step that could be taken to put a stop to such proceedings. In consequence of this explanation of our Commander's views and intentions, Oreo zealously exerted himself to recover the deserters; for which purpose he dispatched a canoe to Bolabola, with a message to Opoony, the Sovereign of that Island, acquainting him with what had happened, and requesting him to seize the two fugitives, and send them back. The messenger, who was no less a person than the father of Pootoe, Oreo's son-in-law, came, before he set out, to Captain Cook, to receive his commands; which were, not to return without the runaways, and to inform Opoony, that, if they had left Bolabola, he must dispatch canoes in pursuit of them, till they should finally be restored. These vigorous measures were, at length, successful. On the twenty-eighth, the deserters were brought

brought back; and, as soon as they were on board, the three prisoners were released. Our Commander would not have acted so resolutely on the present occasion, had he not been peculiarly solicitous to save the son of a brother officer from being lost to his country. While this affair was in suspense, some of the natives, from their anxiety on account of the confinement of the Chief's relations, had formed a design of a very serious nature; which was no less than to seize upon the persons of Captain Clerke and Captain Cook. With regard to Captain Clerke, they made no secret of speaking of their scheme, the day after it was discovered. But their first and grand plan of operations was to lay hold of Captain Cook. It was his custom to bathe, every evening, in fresh water; in doing which he frequently went alone, and always without arms. As the inhabitants expected him to go, as usual, on the evening of the twenty-sixth, they had determined at that time to make him a prisoner. But he had thought it prudent, after confining Oreo's family, to avoid putting himself in their power; and had cautioned Captain Clerke, and the officers, not to venture themselves far from the ships. In the course of the afternoon, the Chief asked Captain Cook, three several times, if he would not go to the bathing-place; and when he found, at last, that the Captain could not be prevailed upon, he went off, with all his people. He was apprehensive, without doubt, that the design was discovered; though no suspicion of it was then entertained by our Commander, who imagined that the natives were seized with some sudden fright, from which, as usual, they would quickly recover. On one occasion, Captain Clerke and Mr. Gore were in particular danger. A party of the inhabitants, armed with clubs, advanced against them; and their safety was principally owing to Captain Clerke's walking with a pistol in his hand, which he once fired. The discovery of the conspiracy, especially so far as respected Captain Clerke and Mr. Gore, was made by a girl, whom one of the officers had brought from Huaheine. On this account, those who were charged with the execution of the design were so greatly offended with her, that they threatened to take away her life, as soon as our Navigators should leave the Island: but proper methods were pursued for her security. It was a happy circumstance that the affair was brought to light; since such a scheme could not have been carried into effect, without being, in its consequences, productive of much distress and calamity to the natives. Whilst Captain Cook was at Ulietea, he was visited by his old friend Oree, who, in the former voyages, was Chief, or rather Regent, of Huaheine. Notwithstanding his now being, in some degree, reduced to the rank of a private person, he still preserved his consequence; never appeared without a numerous body of attendants; and was always provided with such presents as indicated his wealth, and were highly acceptable.

The last of the Society Islands to which our Commander sailed, was Bolabola, where he arrived on the eighth of December. His chief view in passing over to this Island was to procure from its Monarch, Opoony, an anchor which Mons. de Bougainville had lost at Otaheite, and which had been conveyed to Bolabola. It was not from a want of anchors that Captain Cook was desirous of making the purchase, but to convert the iron of which it consisted into a fresh assortment of trading articles, these being now very much exhausted. The Captain succeeded in his negotiation, and amply rewarded Opoony for giving up the anchor. Whilst our Commander was at Bolabola, he received an account of those military expeditions of the people of this country, which he had heard much of in each of his three voyages, and which had ended in the complete conquest of Ulietea and Otaha. The Bolabola men, in consequence of these enterprizes, were in the highest reputation for their valour; and, indeed, were deemed so invincible as to be objects of terror to all the neighbouring Islands. It was an addition to their fame that their country was of such small extent; being not more than eight leagues in compass, and not half so large as Ulietea. Captain Cook continued to the last his zeal for furnishing the natives of the South Sea with useful animals. At Bolabola, where there was already a ram, which had originally been left by the Spaniards at Otaheite, he carried ashore an ewe, that had been brought from the Cape of Good Hope; and he rejoiced in the prospect of laying a foundation, by this present, for a breed of sheep in the Island. He left also at Ulietea, under the care of Oreo, an English boar and sow, and two goats. It may, therefore, be regarded as certain, that not only Otaheite, but all the neighbouring Islands, will, in a few years, have their race of hogs considerably improved; and it is probable, that they will be stocked with all the valuable animals, which have been transported thither by their European visitors. When this shall be accomplished, no part of the world will equal these Islands, in the variety and abundance of the refreshments which they will be able to afford to Navigators; nor did the Captain know any place that excelled them, even in their present state.

It is an observation of great importance, that the future felicity of the inhabitants of Otaheite, and the Society Islands, will not a little depend on their continuing to be visited from Europe. Our Commander could not avoid expressing it as his real opinion, that it would have been far better for these poor people, never to have known our superiority in the accommodations and arts which render life comfortable, than, after once knowing it, to be again left and abandoned to their original incapacity of improvement. If the intercourse between them and us should wholly be discontinued, they cannot be restored to that happy mediocrity in which they lived before they were first discovered. It seemed to Cap-
tain

tain Cook that it was become, in a manner, incumbent upon the Europeans to visit these Islands once in three or four years, in order to supply the natives with those conveniences which we have introduced among them, and for which we have given them a predilection. Perhaps they may heavily feel the want of such occasional supplies, when it may be too late to go back to their old and less perfect contrivances; contrivances which they now despise, and which they have discontinued since the introduction of ours. It is, indeed, to be apprehended, that by the time that the iron tools, of which they had become possessed, are worn out, they will have almost lost the knowledge of their own. In this last voyage of our Commander, a stone hatchet was as rare a thing among the inhabitants as an iron one was eight years before; and a chissel of bone or stone was not to be seen. Spike-nails had succeeded in their place; and of spike-nails the natives were weak enough to imagine that they had gotten an inexhaustible store. Of all our commodities, axes and hatchets remained the most unrivalled; and they must ever be held in the highest estimation through the whole of the Islands. Iron tools are so strikingly useful, and are now become so necessary to the comfortable existence of the inhabitants, that, should they cease to receive supplies of them, their situation, in consequence of their neither possessing the materials, nor being trained up to the art of fabricating them, would be rendered completely miserable. It is impossible to reflect upon this representation of things without strong feelings of sympathy and concern. Sincerely is it to be wished, that such may be the order of events, and such the intercourse carried on with the southern Islanders, that, instead of finally suffering by their acquaintance with us, they may rise to a higher state of civilization, and permanently enjoy blessings far superior to what they had heretofore known.

Amidst the various subordinate employments which engaged the attention of Captain Cook and his associates, the great objects of their duty were never forgotten. No opportunity was lost of making astronomical and nautical observations; the consequence of which was, that the latitude and longitude of the places where the ships anchored, the variations of the compass, the dips of the needle, and the state of the tides, were ascertained with an accuracy that forms a valuable addition to philosophical science, and will be of eminent service to future navigators. Our Commander was now going to take his final departure from Otaheite and the Society Islands. Frequently as they had been visited, it might have been imagined that their religious, political, and domestic regulations, manners, and customs, must, by this time, be thoroughly understood. A great accession of knowledge was undoubtedly gained in the present voyage; and yet it was confessed, both by Captain Cook and Mr. Anderson, that their accounts of things were still imperfect in various respects; and that they continued strangers to many of the most important institutions which prevail among the natives. There was one part of the character of several of these people, on which the well-regulated mind of the Captain would not permit him to enlarge.

"Too much," says he, "seems to have been already known, and published in our former relations, about some of the modes of life, that made Otaheite so agreeable an abode to many on board our ships; and if I could now add any finishing strokes to a picture, the outlines of which have been already drawn with sufficient accuracy, I should still have hesitated to make this journal the place for exhibiting a view of licentious manners, which could only serve to disgust those for whose information I write (r)." From Mr. Anderson's account of the Otaheitans, it appears, that their religious system is extensive, and, in various instances, singular. They do not seem to pay respect to one God as possessing pre-eminence, but believe in a plurality of divinities, all of whom are supposed to be very powerful. In different parts of the Island, and in the neighbouring Islands, the inhabitants choose those deities for the objects of their worship, who, they think, are most likely to protect them, and to supply all their wants. If, however, they are disappointed in their expectations, they esteem it no impiety to change their divinity, by having recourse to another, whom they hope to find more propitious and successful. In general, their notions concerning Deity are extravagantly absurd. With regard to the soul, they believe it, according to Mr. Anderson, to be both immaterial and immortal; but he acknowledges, that they are far from entertaining those sublime expectations of future happiness which the Christian Revelation affords, and which even reason alone, duly exercised, might teach us to expect (s).

—165.

(r) Cook's Voyage to the Pacific Ocean, vol. ii. p. 1—14c.

Although seventeen months had elapsed since Captain Cook's departure from England, during which time he had not, upon the whole, been unprofitably employed, he was sensible that, with respect to the principal object of his instructions, it was now only the commencement of his voyage; and that, therefore, his attention was to be called anew, to every circumstance which might contribute towards the safety of his people, and the ultimate success of the expedition. Accordingly, he had examined into the state of the provisions, whilst he was at the Society Islands; and, as soon as he had left them, and had gotten beyond the extent of his former discoveries, he ordered a survey to be taken of all the Boatswain's and Carpenter's stores which were in the ships, that he might be fully informed of their quantity and condition; and, by that means, know how to use them to the greatest advantage. It was on the eighth of December, the very day on which he had touched there, that our Commander sailed from Bolabola. In the night between the twenty-second and twenty-third, he crossed the line, in the longitude of 203° 15' East; and

and on the twenty-fourth, land was discovered, which was found to be one of those low uninhabited Islands that are so frequent in this ocean. Here our Voyagers were successful in catching a large quantity of turtle, which supplied them with an agreeable refreshment; and here, on the twenty-eighth, an eclipse of the sun was observed by Mr. Bayly, Mr. King, and Captain Cook. On account of the season of the year, the Captain called the land where he now was, and which he judged to be about fifteen or twenty leagues in circumference, CHRISTMAS ISLAND (*t*). By his order, several cocoa-nuts and yams were planted, and some melon-seeds sown, in proper places; and a bottle was left, containing this inscription:

(*t*) The West side of it, on which the eclipse was observed, lies in the latitude of $1^{\circ} 59'$ North, and in the longitude of $202^{\circ} 30'$ East.

Georgius Tertius, Rex, 31 Decembris, 1777.

Naves { *Resolution, Jac. Cook, Pr.*
 { *Discovery, Car. Clerke, Pr. (u)*

(*u*) Cook, *ubi supra*, p. 179^{2d} 189.

On the Second of January, 1778, the ships resumed their course to the northward, and though several evidences occurred of the vicinity of land, none was discovered till the eighteenth, when an Island made its appearance, bearing North-east by East. Soon after, more land was seen, lying towards the North, and entirely detached from the former. The succeeding day was distinguished by the discovery of a third Island, in the direction of West-north-west, and as far distant as the eye could reach. In steering towards the second Island, our Voyagers had some doubt whether the land before them was inhabited; but this matter was speedily cleared up, by the putting off of some canoes from the shore, containing from three to six men each. Upon their approach, the English were agreeably surprised to find, that they spoke the language of Otaheite, and of the other countries which had lately been visited. These people were at first fearful of going on board; but when, on the twentieth, some of them took courage, and ventured to do it, they expressed an astonishment, on entering the ship, which Captain Cook had never experienced in the natives of any place, during the whole course of his several voyages. Their eyes continually flew from object to object; and, by the wildness of their looks and gestures, they fully manifested their entire ignorance with relation to every thing they saw, and strongly marked to our Navigators, that, till this time, they had never been visited by Europeans, or been acquainted with any of our commodities, excepting iron. Even with respect to iron, it was evident that they had only heard of it, or, at most, had known it in some small quantity, brought to them at a distant period; for all they understood concerning it was, that it was a substance much better adapted to the purposes of cutting, or the boring of holes, than any thing their own country produced. Their ceremonies on entering the ship, their gestures and motions, and their manner of singing, were similar to those which our Voyagers had been accustomed to see in the places lately visited. There was, likewise, a farther circumstance in which these people perfectly resembled the other Islanders; and that was, in their endeavouring to steal whatever came within their reach; or rather to take it openly, as what would either not be repented, or not hindered. The English soon convinced them of their mistake, by keeping such a watchful eye over them, that they afterwards were obliged to be less active in appropriating to themselves every object that struck upon their fancy, and excited the desire of possession. One order given by Captain Cook at this Island was, that none of the boats crews should be permitted to go on shore; the reason of which was, that he might do every thing in his power to prevent the importation of a fatal disease, which, unhappily, had already been communicated in other places. With the same view, he directed that all female visitors should be excluded from the ships. Another necessary precaution, taken by the Captain, was a strict injunction, that no person, known to be capable of propagating disorder, should be sent upon duty out of the vessels. Thus zealous was the humanity of our Commander, to prevent an irreparable injury from being done to the natives. There are men who glory in their shame, and who do not care how much evil they communicate. Of this there was an instance at Tongataboo, in the Gunner of the Discovery, who had been stationed on shore to manage the trade for that ship; and who, though he was well acquainted with his own situation, continued to have connections with different women. His companions expostulated with him without effect, till Captain Clerke, hearing of the dangerous irregularity of his conduct, ordered him on board. If I knew the rascal's name, I would hang it up, as far as lies in my power, to everlasting infamy.

Mr. Williamson being sent with the boats to search for water, and attempting to land, the inhabitants came down in such numbers, and were so violent in their endeavours to seize upon the oars, muskets, and, in short, every thing they could lay hold of, that he was obliged to fire, by which one man was killed. This unhappy circumstance was not known to Captain Cook till after he had left the Island; so that all his measures were directed as if nothing of the kind had happened. When the ships were brought to an anchor, our Commander went on shore; and at the very instant of his doing it, the collected body of the natives all fell flat upon their faces, and continued in that humble posture, till, by expressive signs, he prevailed upon them to rise. Other ceremonies followed; and the next day a trade was set on foot for hogs and potatoes, which the people of the Island gave

in exchange for nails and pieces of iron, formed into something like chissels. So far was any obstruction from being met with in watering, that, on the contrary, the inhabitants assisted our men in rolling the casks to and from the pool; and readily performed whatever was required. Affairs thus going on to the Captain's satisfaction, he made an excursion into the country, accompanied by Mr. Anderson and Mr. Webber, the former of whom was as well qualified to describe with the pen, as the latter was to represent with his pencil, whatever might occur worthy of observation. In this excursion, the Gentlemen, among other objects that called for their attention, found a *Morai*, a particular description of which, together with drawings of it, are given in the Voyage. On the return of our Commander, he had the pleasure of finding that a brisk trade for pigs, fowls, and roots was carrying on with the greatest good order, and without any attempt to cheat, or steal, on the part of the natives. The rapacious disposition they at first displayed, was entirely corrected by their conviction that it could not be exercised with impunity. Among the articles which they brought to barter, the most remarkable was a particular sort of cloak and cap, that might be reckoned elegant, even in countries where dress is eminently the object of attention. The cloak was richly adorned with red and yellow feathers, which in themselves were highly beautiful, and the newness and freshness of which added not a little to their beauty. On the twenty-second, a circumstance occurred, which gave the English room to suspect that the people of the Island are eaters of human flesh. Not, however, to rest the belief of the existence of so horrid a practice on the foundation of suspicion only, Captain Cook was anxious to enquire into the truth of the fact, the result of which was its being fully confirmed. An old man, in particular, who was asked upon the subject, answered in the affirmative, and seemed to laugh at the simplicity of such a question. His answer was equally affirmative on a repetition of the enquiry; and he added that the flesh of men was excellent food, or, as he expressed it, "favoury eating." It is understood that enemies slain in battle are the sole objects of this abominable custom. The Island at which our Voyagers had now touched, was called Atooi by the natives. Near it was another Island, named Oneecheow, where our Commander came to an anchor on the twenty-ninth of the month. The inhabitants were found to resemble those of Atooi in their dispositions, manners, and customs; and proofs, too convincing, appeared that the horrid banquet of human flesh is here as much relished, amidst plenty, as it is at New Zealand. From a desire of benefiting these people, by furnishing them with additional articles of food, the Captain left with them a ram-goat and two ewes, a boar and sow pig of the English breed, and the seeds of melons, pumpkins, and onions. These benevolent presents would have been made to Atooi, the larger Island, had not our Navigators been unexpectedly driven from it by stress of weather. Though the soil of Oneecheow seemed, in general, poor, it was observable, that the ground was covered with shrubs and plants, some of which perfumed the air with a more delicious fragrantcy than what Captain Cook had met with at any other of the countries that had been visited by him in this part of the world.

It is a curious circumstance, with regard to the Islands in the Pacific Ocean which the late European voyages have added to the geography of the globe, that they have generally been found to lie in groups, or clusters. The single intermediate Islands, which have as yet been discovered, are few in proportion to the others; though there are probably many more of them that are still unknown, and may serve as steps, by which the several clusters are, in some degree, connected together. Of the Archipelago now first visited, there were five only with which our Commander became at this time acquainted. The names of these, as given by the natives, were Woahoo, Atooi, Oneecheow, Oreehoua, and Tahoora. To the whole group Captain Cook gave the appellation of SANDWICH ISLANDS, in honour of his great friend and patron, the Earl of Sandwich [DD]. Concerning the Island of Atooi, which is the largest of the five, and which was the principal scene of the Captain's operations, he collected, in conjunction with Mr. Anderson, a considerable degree of information. The land, as to its general appearance, does not in the least resemble any of the Islands that our Voyagers had hitherto visited within the tropic, on the South side of the equator; excepting so far as regards its hills near the centre, which slope gently towards the sea. Hogs, dogs, and fowls, were the only tame or domestic animals that were here found; and these were of the same kind with those which exist in the countries of the South Pacific Ocean. Among the inhabitants (who are of a middle stature, and firmly made), there is a more remarkable equality in the size, colour, and figure of both sexes, than our Commander had observed in most other places. They appeared to be blest with a frank and chearful disposition; and, in Captain Cook's opinion, they are equally free from the fickle levity which distinguishes the natives of Otaheite, and the sedate cast discernible amongst many of those of Tongataboo. It is a very pleasing circumstance in their character, that they pay a particular attention to their women, and readily lend assistance to their wives, in the tender offices of maternal duty. On all occasions, they seemed to be

[DD] *The Earl of Sandwich.*] The Islands that were seen by Captain Cook, are situated in the latitude of $21^{\circ} 30'$ and $22^{\circ} 15'$ North, and between the longitude of $199^{\circ} 20'$ and $201^{\circ} 30'$ East. It was in consequence of seventy-two sets of lunar observations that the longitude was determined.

deeply impressed with a consciousness of their own inferiority; being alike strangers to the preposterous pride of the more polished Japanese, and of the ruder Greenlander. Contrary to the general practice of the countries that had hitherto been discovered in the Pacific Ocean, the people of the Sandwich Islands have not their ears perforated; nor have they the least idea of wearing ornaments in them, though, in other respects, they are sufficiently fond of adorning their persons. In every thing manufactured by them there is an uncommon degree of neatness and ingenuity; and the elegant form and polish of some of their fishing-hooks could not be exceeded by any European artist, even if he should add all his knowledge in design to the number and convenience of his tools. From what was seen of their agriculture, sufficient proofs were afforded that they are not novices in that art; and that the quantity and goodness of their vegetable productions may as much be attributed to skilful culture, as to natural fertility of soil. Amidst all the resemblances between the natives of Atooi, and those of Otaheite, the coincidence of their languages was the most striking; being, almost word for word, the same. Had the Sandwich Islands been discovered by the Spaniards, at an early period, they would undoubtedly have taken advantage of so excellent a situation, and have made use of them as refreshing places to their ships, which sail annually from Acapulco for Manilla. Happy, too, would it have been for Lord Anson, if he had known that there existed a group of Islands, half way between America and Tinian, where all his wants could effectually have been supplied, and the different hardships to which he was exposed have been avoided (zv).

(zv) Cook, *ubi supra*, p. 179-252.

On the second of February, our Navigators pursued their course to the northward, in doing which the incidents they met with were almost entirely of a nautical kind. The long-looked for coast of New Albion was seen on the seventh of March, the ships being then in the latitude of $44^{\circ} 33'$ North, and in the longitude of $235^{\circ} 20'$ East. As the vessels ranged along the West side of America, Captain Cook gave names to several capes and head-lands which appeared in sight. At length, on the twenty-ninth, the Captain came to an anchor at an inlet where the appearance of the country differed much from what had been seen before; being full of mountains, the summits of which were covered with snow; while the valleys between them, and the grounds on the sea-coast, high as well as low, were covered, to a considerable breadth, with high, straight trees, which formed a beautiful prospect, as of one vast forest (x). It was immediately found that the coast was inhabited; and there soon came off to the Resolution three canoes, containing eighteen of the natives; who could not, however, be prevailed upon to venture themselves on board. Notwithstanding this, they displayed a peaceable disposition; shewed great readiness to part with any thing they had, in exchange for what was offered them; and expressed a stronger desire for iron than for any other of our commercial articles, appearing to be perfectly acquainted with the use of that metal. From these favourable circumstances, our Voyagers had reason to hope that they should find this a comfortable station to supply all their wants, and to make them forget the hardships and delays which they had experienced during a constant succession of adverse winds, and boisterous weather, almost ever since their arrival upon the coast of America (y). The ships having happily found an excellent inlet, the coasts of which appeared to be inhabited by a race of people who were disposed to maintain a friendly intercourse with strangers, Captain Cook's first object was to search for a commodious harbour; and he had little trouble in discovering what he wanted. A trade having immediately commenced, the articles which the inhabitants offered to sale were the skins of various animals, such as bears, wolves, foxes, deer, raccoons, polecats, martins; and, in particular, of the sea-otters. To these were added, besides the skins in their native shape, garments made of them; another sort of clothing, formed from the bark of a tree; and various different pieces of workmanship. But of all the articles brought to market, the most extraordinary were human skulls, and hands not yet quite stripped of their flesh; some of which had evident marks of their having been upon the fire. The things which the natives took in exchange for their commodities, were knives, chisels, pieces of iron and tin, nails, looking-glasses, buttons, or any kind of metal. Glass beads did not strike their imaginations; and cloth of every sort they rejected. Though commerce, in general, was carried on with mutual honesty, there were some among these people who were as much inclined to thievery as the Islanders in the Southern Ocean. They were, at the same time, far more dangerous thieves; for, possessing sharp iron instruments, they could cut a hook from a tackle, or any other piece of iron from a rope, the moment that the backs of the English were turned. The dexterity with which they conducted their operations of this nature, frequently eluded the most cautious vigilance. Some slighter instances of deception, in the way of traffic, Captain Cook thought it better to bear with than to make them the foundation of a quarrel; and to this he was the rather determined, as the English articles were now reduced to objects of a trifling nature. In the progress of the commerce, the natives would deal for nothing but metal; and, at length, brass was so eagerly sought for, in preference to iron, that, before our Navigators quitted the place, scarcely a bit of it was left in the ships, excepting what belonged to the necessary instruments. Whole suits of clothes were stripped of every button; bureaus were deprived of their furniture; copper kettles, tin cannisters, candlesticks, and whatever of the

(x) When this land was seen, the ships were in the latitude $49^{\circ} 29'$ North, and the longitude of $232^{\circ} 29'$ East.

(y) Cook's Voyage, *ubi supra*, p. 253. 258. 264-267.

the like kind could be found, all went to wreck; so that these Americans became possessors of a greater medley and variety of things from our people, than any other nation that had been visited in the course of the voyage. Of all the uncivilized tribes which our Commander had met with in his several navigations, he never found any who had such strict notions of their having a right to the exclusive property of every thing which their country produces, as the inhabitants of the Sound where he was now stationed. At first, they wanted to be paid for the wood and water that were carried on board; and had the Captain been upon the spot, when these demands were made, he would certainly have complied with them: but the workmen, in his absence, maintained a different opinion, and refused to submit to any such claims. When some grass, which appeared to be of no use to the natives, was wanted to be cut, as food for the few goats and sheep which still remained on board, they insisted that it should be purchased, and were very unreasonable in their terms; notwithstanding which, Captain Cook consented to gratify them, as far as he was able. It was always a sacred rule with him never to take any of the property of the people whom he visited, without making them an ample compensation.

The grand operation of our Navigators, in their present station, was to put the ships into a complete repair for the prosecution of the expedition. While this business was carrying on, our Commander took the opportunity of examining every part of the Sound; in the course of which he gained a farther knowledge of the inhabitants, who, in general, received him with great civility. In one instance he met with a surly Chief, who could not be softened with presents, though he condescended to accept of them. The females of the place over which he presided, shewed a more agreeable disposition; for some of the young women expeditiously dressed themselves in their best apparel, and, assembling in a body, welcomed the English to their village, by joining in a song, which was far from being harsh or disagreeable. On another occasion, the Captain was entertained with singing. Being visited by a number of strangers, on the twenty-second of April, as they advanced towards the ships, they all stood up in their canoes, and began to sing. Some of their songs, in which the whole body joined, were in a slow, and others in a quicker time; and their notes were accompanied with the most regular motions of their hands; or with beating in concert, with their paddles, on the sides of the canoes; to which were added other very expressive gestures. At the end of each song, they continued silent for a few moments, and then began again, sometimes pronouncing the word *Hooee!* forcibly as a chorus. Among the natives of the country, there was one Chief who attached himself to our Commander in a particular manner. Captain Cook having, at parting, bestowed upon him a small present, received, in return, a beaver skin, of much greater value. This called upon the Captain to make some addition to his present, with which the Chief was so much pleased, that he insisted on our Commander's acceptance of the beaver-skin cloak which he then wore; and of which he was particularly fond. Admiring this instance of generosity, and desirous that he should not suffer by his friendship, the Captain gave him a new broad sword, with a brass hilt; the possession of which rendered him completely happy (z).

On Captain Cook's first arrival in this inlet, he had honoured it with the name of KING GEORGE'S SOUND; but he afterwards found that it is called NOOTKA by the natives (a). During his stay in the place, he displayed his usual sagacity and diligence, in conjunction with Mr. Anderson, in collecting every thing that could be learned concerning the neighbouring country and its inhabitants; and the account is interesting, as it exhibits a picture of productions, people, and manners very different from what had occurred in the Southern Ocean. I can only, as on former occasions, slightly advert to a few of the more leading circumstances. The climate, so far as our Navigators had experience of it, was found to be in an eminent degree milder than that on the East coast of America, in the same parallel of latitude; and it was remarkable that the thermometer, even in the night, never fell lower than 42°; while in the day it frequently rose to 60°. With regard to trees, those of which the woods are chiefly composed, are the Canadian pine, the white cypress, and the wild pine, with two or three different sorts of pine that are less common. In the other vegetable productions there appeared but little variety: but it is to be considered that, at so early a season, several might not yet have sprung up; and that many more might be concealed from our Voyagers, in consequence of the narrow sphere of their researches. Of the land animals, the most common were bears, deer, foxes, and wolves. The sea animals which were seen off the coast, were whales, porpoises, and seals. Birds, in general, are not only rare as to the different species, but very scarce as to numbers; and the few which are to be met with are so shy, that, in all probability, they are continually harrassed by the natives; either to eat them as food, or to get possession of their feathers, which are used as ornaments. Fish are more plentiful in quantity than birds, but were not found in any great variety; and yet, from several circumstances, there was reason to believe, that the variety is considerably increased at certain seasons. The only animals that were observed of the reptile kind were snakes and water-lizards; but the insect tribe seemed to be more numerous. With respect to the inhabitants of the country, their persons are generally under the common stature; but not slender in proportion, being usually pretty full or plump, though without being muscular. From their bringing to sale human skulls and bones,

(z) Cook, *supra*, p. 269—286.

(a) The entrance of the Sound is situated in the East corner of Hope Bay, in the latitude of 49° 33' North, and in the longitude of 233° 12' East.

bones, it may justly be inferred that they treat their enemies with a degree of brutal cruelty; notwithstanding which, it does not follow that they are to be reproached with any charge of peculiar inhumanity: for the circumstance now mentioned only marks a general agreement of character with that of almost every tribe of uncivilized men, in every age, and in every part of the globe. Our Navigators had no reason to complain of the disposition of the natives, who appeared to be a docile, courteous, good-natured people; rather phlegmatic in the usual cast of their tempers, but quick in resenting what they apprehend to be an injury, and easily permitting their anger to subside. Their other passions, and especially their curiosity, seemed to lie in some measure dormant; one cause of which may be found in the indolence that, for the most part, is prevalent amongst them. The chief employments of the men are those of fishing, and of killing land or sea-animals, for the sustenance of their families; while the women are occupied in manufacturing their flaxen or woollen garments, or in other domestic offices. It must be mentioned to their honour, that they were always properly clothed, and behaved with the utmost decorum; justly deserving all commendation, for a bashfulness and modesty becoming their sex: and this was the more meritorious in them, as the male inhabitants discovered no sense of shame. In their manufactures and mechanic arts, these people have arrived to a greater degree of extent and ingenuity, both with regard to the design and the execution, than could have been expected from their natural disposition, and the little progress to which they have arrived in general civilization. Their dexterity, in particular, with respect to works of wood, must principally be ascribed to the assistance they receive from iron tools, which are in universal use amongst them, and in the application of which they are very dexterous. Whence they have derived their knowledge of iron, was a matter of speculation with Captain Cook. The most probable opinion is, that this and other metals may have been introduced by way of Hudson's Bay and Canada, and thus successively have been conveyed across the continent, from tribe to tribe. Nor is it unreasonable to suppose that these metals may sometimes be brought, in the same manner, from the North-western parts of Mexico [EE]. The language of Nootka is by no means harsh or disagreeable; for it abounds, upon the whole, rather with what may be called labial and dental, than with guttural sounds. A large vocabulary of it was collected by Mr. Anderson. Whilst Captain Cook was at Nootka Sound, great attention was paid by him, as usual, to astronomical and nautical subjects. The observations which he had an opportunity of making were, indeed, so numerous, as to form a very considerable addition to geographical and philosophical science (b).

On the twenty-sixth, the repairs of the ships having been completed, every thing was ready for the Captain's departure. When, in the afternoon of that day, the vessels were upon the point of sailing, the mercury in the barometer fell unusually low; and there was every other presage of an approaching storm, which might reasonably be expected to come from the southward. This circumstance induced our Commander in some degree to hesitate, and especially as night was at hand, whether he should venture to sail, or wait till the next morning. But his anxious impatience to proceed upon the voyage, and the fear of losing the present opportunity of getting out of the Sound, made a greater impression upon his mind than any apprehension of immediate danger. He determined, therefore, to put to sea at all events; and accordingly carried his design into execution that evening. He was not deceived in his expectations of a storm. Scarcely were the vessels out of the Sound before the wind increased to a strong gale, with squalls and rain, accompanied by so dark a sky, that the length of the ships could not be seen. Happily the wind took a direction that blew our Navigators from the coast; and though, on the twenty-seventh, the tempest rose to a perfect hurricane, and the Resolution sprang a leak, no material damage ensued. In the prosecution of the Voyage to the North, and back again to the Sandwich Islands, the facts that occurred were chiefly of a nautical kind. Minutely to record these, is not the purpose of the present work, and indeed, would extend it to an unreasonable length. Recourse must be had to the Voyage at large, for a detail of every circumstance in which Captain Cook, as a Navigator, was concerned. In that Voyage will be found a full and exact account of the coasts which he passed, the capes and promontories to which he gave names, the bays which he entered, the islands he discovered, the traverses he made, the latitudes and longitudes that were settled by him, and the variations that happened in the wind and the weather. From this long and important navigation, I can only select some few incidents, that may be accommodated to the taste and expectations of the generality of readers. One thing it is not improper here to observe; which is, that the Captain, in his passage along the coast of America, kept at a distance from that coast, whenever the wind blew strongly upon it, and sailed on till he could approach it again with safety. Hence several great gaps were left unexplored, and particularly between the latitudes of 50° and 55°. The exact situation, for instance, of the

[EE] From the North-western parts of Mexico.] Two silver spoons, of a construction similar to what may sometimes be seen in Flemish pictures of still life, were procured here by Mr. Gore, who bought them

from a native, who wore them, tied together with a leathern thong, as an ornament round his neck. Mr. Gore gave the spoons to Sir Joseph Banks.

supposed Straits of Anian was not ascertained. Every one who is acquainted with the character of our Commander will be sensible, that if he had lived to return again to the North in 1779, he would have endeavoured to explore the parts which had been left unexamined. The first place at which Captain Cook landed, after his departure from Nootka Sound, was at an Island, of eleven or twelve leagues in length, the South-west point of which lies in the latitude of $59^{\circ} 49'$ North, and the longitude of $216^{\circ} 58'$ East. Here, on the eleventh of May, at the foot of a tree, on a little eminence not far from the shore, he left a bottle, with a paper in it, on which were inscribed the names of the ships, and the date of the discovery. Together with the bottle, he enclosed two silver two-penny pieces of his Majesty's coin, which had been struck in 1772. These, with many others, had been given him by the Reverend Dr. Kaye, the present Dean of Lincoln; and our Commander, as a mark of his esteem and regard for that learned and respectable Gentleman, named the Island, after him, KAYE'S ISLAND. At an inlet, where the ships came to an anchor, on the twelfth, and to which Captain Cook gave the appellation of PRINCE WILLIAM'S SOUND, he had an opportunity not only of stopping the leak which the Resolution had sprung in the late storm, and of prosecuting his nautical and geographical discoveries, but of making considerable additions to his knowledge of the inhabitants of the American coast. From every observation which was made concerning the persons of the natives of this part of the coast, it appeared that they had a striking resemblance to those of the Esquimaux and Greenlanders. Their canoes, their weapons, and their instruments for fishing and hunting, are likewise exactly the same, in point of materials and construction, that are used in Greenland. The animals in the neighbourhood of Prince William's Sound are, in general, similar to those which are found at Nootka. One of the most beautiful skins here offered to sale, was, however, that of a small animal, which seemed to be peculiar to the place. Mr. Anderson was inclined to think that it is the animal which is described by Mr. Pennant, under the name of the *Casan* Marmot. Among the birds seen in this country, were the white-headed eagle; the shag; and the *Alcedo*, or great king-fisher, the colours of which were very fine and bright. The humming-bird, also, came frequently and flew about the ship, while at anchor; but it can scarcely be supposed that it can be able to subsist here during the severity of winter. Water-fowl, upon the whole, are in considerable plenty; and there is a species of diver, about the size of a partridge, which seems peculiar to the place. Torsk and halibut were almost the only kinds of fish that were obtained by our Voyagers. Vegetables, of any sort, were few in number; and the trees were chiefly the Canadian and spruce pine, some of which were of a considerable height and thickness. The beads and iron that were found among the people of the coast, must undoubtedly have been derived from some civilized nation: and yet there was ample reason to believe, that our English navigators were the first Europeans with whom the natives had ever held a direct communication. From what quarter, then, had they gotten our manufactures? Most probably, through the intervention of the more inland tribes, from Hudson's Bay, or the settlements on the Canadian lakes. This, indeed, must certainly have been the case, if iron was known amongst the inhabitants of this part of the American coast, prior to the discovery of it by the Russians, and before there was any traffic with them carried on from Kamtschatka. From what was seen of Prince William's Sound, Captain Cook judged that it occupied, at least, a degree and a half of latitude, and two of longitude, exclusively of the arms or branches, the extent of which is not known (c).

(c) Cook's Voyage, *ubi supra*, p. 286. 341. 349, 350. 354. 362, 366. 371. 376, 377. 378. 380.

Some days after leaving this Sound, our Navigators came to an inlet, from which great things were expected. Hopes were strongly entertained, that it would be found to communicate either with the sea to the North, or with Baffin's or Hudson's Bay to the East; and accordingly, it became the object of very accurate and serious examination. The Captain was soon persuaded that the expectations formed from it were groundless; notwithstanding which, he persisted in the search of a passage, more, indeed, to satisfy other people, than to confirm his own opinion. In consequence of a complete investigation of the inlet, indubitable marks occurred of its being a river. This river, without seeing the least appearance of its source, was traced by our Voyagers, as high as the latitude of $61^{\circ} 30'$, and the longitude of 210° , being seventy leagues from its entrance. During the course of the navigation, on the first of June, Lieutenant King was ordered on shore, to display the royal flag, and to take possession of the country in his Majesty's name. The Lieutenant, at the same time, buried in the ground a bottle, containing some pieces of English coin, of the year 1772, and a paper, on which the names of the ships were inscribed, and the date of the present discovery. The great river now discovered, promises to vie with the most considerable ones already known; and, by itself and its branches, lies open to a very extensive inland communication. If, therefore, the knowledge of it should be of future service, the time which was spent in exploring it ought the less to be regretted. But to Captain Cook, who had a much greater object in view, the delay that was hence occasioned was a real loss, because the season was advancing apace. It was, however, a satisfaction to him to reflect, that if he had not examined this very considerable inlet, it would have been assumed, by speculative fabricators of geography, as a fact, that there was a passage through it to the North

North Sea, or to Baffin's or Hudson's Bay. Perhaps, too, it would have been marked, on future maps of the world, with greater precision, and more certain signs of reality, than the invisible, because imaginary, Straits of de Fuca, and de Fonte. In describing the inlet, our Commander had left a blank which was not filled up with any particular name; and, therefore, the Earl of Sandwich directed, with the greatest propriety, that it should be called COOK'S RIVER. All the natives who were met with, during the examination of this river, appeared, from every mark of resemblance, to be of the same nation with the inhabitants of Prince William's Sound; but from the people of Nootka, or King George's Sound, they essentially differed, both in their persons and their language. The only things which were seen among them, that were not of their own manufacture, were a few glass beads, the iron points of their spears, and knives of the same metal. Whencesoever these articles might be derived, it was evident that they had never had any immediate intercourse with the Russians; since, if that had been the case, our Voyagers would scarcely have found them clothed in such valuable skins as those of the sea-otter. A very beneficial fur-trade might undoubtedly be carried on with the inhabitants of this vast coast. But, without a practicable northern passage, the situation is too remote to render it probable that Great Britain should hence ever derive any material advantage; though it is impossible to say, with certainty, how far the spirit of commerce, for which the English nation is so eminently distinguished, may extend [FF]. The most valuable, or rather the only valuable skins, which Captain Cook saw on the West side of America, were those of the sea-otter; for as to the skins of all the other animals of the country, and especially of the foxes and martins, they seemed to be of an inferior quality (d). (d) Cook, *ubi supra*, p. 384. 386. 396-401.

It was on the sixth of June that our Navigators got clear of Cook's river. Proceeding in the course of their discoveries, when they were sailing, on the nineteenth, amidst the group of Islands which were called by Beering, Schumagin's Islands, Captain Clerke fired three guns, and brought to, expressing, by the proper signals, that he wished to speak with Captain Cook. At this our Commander was not a little alarmed; and, as no apparent danger had been remarked in the passage through the channel where the vessels now were, it was apprehended that some accident, such as springing a leak, must have happened. On Captain Clerke's coming on board the Resolution, he related that several of the natives had followed his ship; that one of them had made many signs, taking off his cap, and bowing after the manner of Europeans; and that, at length, he had fastened to a rope, which was handed down to him, a small thin wooden case or box. Having delivered his parcel safe, and spoken something, accompanied with more signs, the canoes dropped astern, and left the Discovery. On opening the box, a piece of paper was found, folded up carefully, upon which something was written, that was reasonably supposed to be in the Russian language. To the paper was prefixed the date 1778, and in the body of the note there was a reference to the year 1776. Although no person on board was learned enough to decypher the alphabet of the writer, his numerals sufficiently marked that others had preceded our Voyagers in visiting this dreary part of the globe; and the prospect of soon meeting with men who were united to them in ties somewhat closer than those of our common nature, and who were not strangers to the arts and commerce of civilized life, could not but afford a sensible satisfaction to people who, for such a length of time, had been conversant with the savages of the Pacific Ocean, and of the North American continent. Captain Clerke was, at first, of opinion that some Russians had been shipwrecked; but no such idea occurred to Captain Cook. He rather thought that the paper contained a note of information, left by some Russian traders, to be delivered to the next of their countrymen who should arrive; and that the natives, seeing the English pass, and supposing them to be Russians, had resolved to bring off the note. Accordingly, our Commander pursued his voyage, without enquiring farther into the matter. On the twenty-first, amongst some hills, on the main land, that towered above the clouds to a most amazing height, one was discovered to have a *volcano*, which continually threw up vast columns of black smoke. It doth not stand far from the coast; and it lies in the latitude of $54^{\circ} 48'$, and the longitude of $195^{\circ} 45'$. This mountain was rendered remarkable by its figure, which is a complete cone; and the volcano is at the very summit. While, in the afternoon of the same day, during a calm of three hours, the English were fishing with great success for halibuts, a small canoe, conducted by one man, came to them from an Island in the neighbourhood. On approaching the ship, he took off his cap, and bowed, as the native had done, who had visited the Discovery a day or two before. From the acquired politeness of these people, as well as from the note already mentioned, it was evident that the Russians must have a communication and traffic with them; and of this a fresh proof occurred in the present visiter; for he wore a pair of green cloth breeches, and a jacket of black cloth, or stuff, under the gut-shirt or frock of his own country. In the prosecution of the voyage, on the twenty-sixth, there was so thick a fog, that our Navigators could not

[FF] *May extend.*] Several ships have been fitted out from our settlements in India, as well as in England, on the speculation of this fur-trade. However, little benefit hath hitherto accrued from it, excepting

to the proprietors of the first vessel; the cargo which it carried having lowered the price of furs extremely in the China market.

see a hundred yards before them; notwithstanding which, as the weather was moderate, the Captain did not intermit his course. At length, however, being alarmed at the sound of breakers on one side of the ship, he immediately brought her to, and came to an anchor; and the Discovery, by his order, did the same. A few hours after, the fog having in some degree cleared away, it appeared that both the vessels had escaped a very imminent danger. Providence, in the dark, had conducted them between rocks which our Commander would not have ventured to pass through in a clear day, and had conveyed them to an anchoring-place, as good as he could possibly have fixed upon, had the choice been entirely at his option. On the twenty-seventh, our Voyagers reached an Island, that is known by the name of *Oonalashka* [GG]; the inhabitants of which behaved with a degree of politeness uncommon to savage tribes. A young man, who had overset his canoe, being obliged by this accident to come on board the ship, went down into Captain Cook's cabin, upon the first invitation, without expressing the least reluctance or uneasiness. His own clothes being wet, the Captain gave him others, in which he dressed himself with as much ease as any Englishman could have done. From the behaviour of this youth, and that of some of the rest of the natives, it was evident that these people were no strangers to Europeans, and to several of their customs. There was something, however, in the English ships that greatly excited their attention; for such as could not come off in canoes, assembled on the neighbouring hills to look at them. In one instance it was apparent that the inhabitants were so far from having made any progress in politeness, that they were still immersed in the most savage manners. For as our Commander was walking along the shore, on the twenty-ninth, he met with a group of them, of both sexes, who were seated on the grass, at a repast, consisting of raw fish, which they seemed to eat with as much relish as persons in civilized life would experience from a turbot, served up in the richest sauce. Soon after the vessels had come to an anchor at Oonalashka, a native of the Island brought on board such another note as had been given to Captain Clerke. He presented it to Captain Cook; but, as it was written in the Russian language, and could be of no use to the English, though it might be of consequence to others, the Captain returned it to the bearer, and dismissed him with a few presents; for which he expressed his thanks by making several

Voyage, ubi
supra, p. 403.
423—424.

low bows as he retired (e). On the second of July, our Voyagers put to sea from Oonalashka; and, pursuing their course of navigation and discovery, came, on the sixteenth, within sight of a promontory, near which our Commander ordered Lieutenant Williamson to land, that he might see what direction the coast took beyond it, and what the country produced. Accordingly, Mr. Williamson went on shore, and reported, on his return, that having landed on the point, and climbed the highest hill, he found that the farthest part of the coast in sight bore nearly North. At the same time, he took possession of the country in his Majesty's name, and left a bottle, in which was enclosed a piece of paper, containing an inscription of the names of the ships, together with the date of the discovery. To the promontory he gave the name of Cape NEWENHAM (f). The land, as far as Mr. Williamson could see, produces neither tree nor shrub; but the lower grounds were not destitute of grass, and of some other plants, very few of which were in flower.

(f) It is a rocky point, of tolerable height, situated in the latitude of $58^{\circ} 42'$, and in the longitude of $197^{\circ} 36'$.

When our Navigators, on the third of August, had advanced to the latitude of $62^{\circ} 34'$, a great loss was sustained by them in the death of Mr. Anderson, the Surgeon of the Resolution, who had been lingering under a consumption for more than twelve months. He was a young man of a cultivated understanding and agreeable manners, and was well skilled in his own profession; besides which, he had acquired a considerable degree of knowledge in other branches of science. How useful an assistant he was to Captain Cook, hath often appeared in the present narrative, and is fully displayed in the Voyage at large. Had his life been spared, the public would undoubtedly have received from him such communications, on various parts of the natural history of the several places that had been visited, as would justly have entitled him to very high commendation. The proofs of his abilities that now remain, will hand down the name of *Anderson*, in conjunction with that of *Cook*, to posterity [HH]. Soon after he had breathed his last, land having been seen at a distance, which was supposed to be an Island, our Commander honoured it with the appellation of ANDERSON'S ISLAND. The next day he removed Mr. Law, the Surgeon of the Discovery, into the Resolution, and appointed Mr. Samwell, the Surgeon's first Mate of the Resolution, to be Surgeon of the Discovery. On the ninth, Captain Cook came to an anchor under a point of land, to which he gave the name of CAPE PRINCE OF WALES, and which is remarkable by being the most western extremity of America hitherto explored (g). This extremity is distant from the eastern Cape of Siberia only thirteen

tude of $191^{\circ} 45'$.

[GG] That is known by the name of *Oonalashka*. The harbour of *Samgamooda*, on the North side of Oonalashka, in which Captain Cook came to an anchor, is situated in the latitude of $53^{\circ} 55'$ North, and in the longitude of $193^{\circ} 30'$ East.

[HH] In conjunction with that of *Cook*, to posterity. Mr. Anderson left his papers to Sir Joseph Banks; but the Admiralty took possession of the larger part of

them, and there they are still retained. Such parts as related solely to natural history were delivered by Captain King to Sir Joseph; who wishes to add his testimony to the excellence of Mr. Anderson's character, to the utility of his observations, and to the great probability that, if he had survived, he would have given to the world something which would have done him credit.

leagues;

leagues: and thus our Commander had the glory of ascertaining the vicinity of the two continents, which had only been conjectured from the reports of the neighbouring Asiatic inhabitants, and the imperfect observations of the Russian navigators (b). Resuming his course on the tenth, Captain Cook anchored in a bay, the land of which was at first supposed to be a part of the Island of Alaschka, which is laid down in Mr. Stæhlin's map. But, from the figure of the coast; from the situation of the opposite shore of America; and from the longitude, the Captain soon began to think that it was more probably the country of the Tschutski, on the eastern extremity of Asia, which had been explored by Beering in 1728. In the result it appeared that this was in fact the case. Our Commander became fully satisfied, in the farther progress of his voyage, that Mr. Stæhlin's map must be erroneous; and he had the honour of restoring the American continent to that space which the geographer now mentioned had occupied with his imaginary Island of Alaschka. From the Bay of St. Lawrence, belonging to the country of the Tschutski, our Navigators steered, on the eleventh, to the East, in order to get nearer to the coast of America. After that, proceeding to the North, they reached, on the seventeenth, the latitude of $70^{\circ} 33'$ (i). On this day, a brightness was perceived in the northern horizon, like that which is reflected from ice, and is commonly called the *blink*. This was at first but little noticed, from a supposition that there was no probability of meeting with ice so soon: and yet, the sharpness of the air, and the gloominess of the weather, had, for two or three days past, seemed to indicate a sudden change. In about an hour's time, the sight of a large field of ice left Captain Cook no longer in doubt with regard to the cause of the brightness of the horizon. The ships, in the same afternoon, being then in the latitude of $70^{\circ} 41'$, were close to the edge of the ice, and not able to stand on any farther. On the eighteenth, when the vessels were in the latitude of $70^{\circ} 44'$, the ice on the side of them was as compact as a wall, and was judged to be at least ten or twelve feet in height. Farther to the North, it appeared to be much higher. Its surface was extremely rugged, and in different places there were seen upon it pools of water. A prodigious number of sea-horses lay upon the ice; and some of them, on the nineteenth, were procured for food, there being at this time a want of fresh provisions. When the animals were brought to the vessels, it was no small disappointment to many of the seamen, who had feasted their eyes for several days with the prospect of eating them, to find that they were not sea-cows, as they had supposed, but sea-horses. This disappointment would not have been occasioned, or the difference known, had there not happened to be one or two sailors on board who had been in Greenland, and who declared what these animals were, and that it never was customary to eat of them. Such, however, was the anxiety for a change of diet, as to overcome this prejudice. Our Voyagers lived upon the sea-horses as long as they lasted; and there were few who did not prefer them to the salt meat. Captain Cook continued, to the twenty-ninth, to traverse the Icy Sea beyond Beering's Strait, in various directions, and through numberless obstructions and difficulties. Every day the ice increased, so as to preclude all hopes of attaining, at least during the present year, the grand object of the voyage. Indeed, the season was now so far advanced, and the time in which the frost was expected to set in was so near at hand, that it would have been totally inconsistent with prudence, to have made any farther attempts, till the next summer, at finding a passage into the Atlantic. The attention, therefore, of our Commander was now directed to other important and necessary concerns. It was of great consequence to meet with a place where our Navigators might be supplied with wood and water. But the point which principally occupied the Captain's thoughts was, how he should spend the winter, so as to make some improvements in geography and navigation, and, at the same time, to be in a condition to return to the North, in farther search of a passage, in the ensuing summer (k). Before Captain Cook proceeded far to the South, he employed a considerable time in examining the sea and coasts in the neighbourhood of Beering's Strait, both on the side of Asia and America. In this examination, he ascertained the accuracy of Beering, so far as he went; demonstrated the errors with which Stæhlin's map of the New Northern Archipelago abounds; and made large additions to the geographical knowledge of this part of the world. "It reflects," as Mr. Coxe justly observes, "the highest honour even on the British name, that our great Navigator extended his discoveries much farther in one expedition, and at so great a distance from the point of his departure, than the Russians accomplished in a long series of years, and in parts belonging or contiguous to their own empire (l)."

(i) The longitude was $197^{\circ} 41'$.

(l) Coxe's Comparative View of the Russian Discoveries, p. 16.

(b) Coxe's Comparative View of the Russian Discoveries, with those made by Captains Cook and Clerke, p. 15, 16.

On the second of October, our Voyagers came within sight of the Island of Oonalashka, and anchored the next day in Samganoodah harbour. Here the first concern was to put the ships under the necessary repair; and, while the Carpenters were employed in this business, one third of the people had permission, by turns, to go and collect the berries with which the Island abounds, and which, though now beginning to be in a state of decay, did not a little contribute, in conjunction with spruce-beer, effectually to eradicate every seed of the scurvy that might exist in either of the vessels. Such a supply of fish was likewise procured, as not only served for present consumption, but afforded a quantity to be carried out to sea; so that hence a considerable saving was made of the provisions of

the ships, which was at this time an object of no small importance. Captain Cook, on the eighth, received, by the hands of an Oonalashka man, named Derramoushk, a very singular present, which was that of a rye loaf, or rather a pye in the form of a loaf, for it enclosed some salmon, highly seasoned with pepper. This man had the like present for Captain Clerke, and a note for each of the two Captains, written in a character which none on board could understand. It was natural to suppose, that the presents came from some Russians in the neighbourhood; and therefore a few bottles of rum, wine, and porter, were sent to these unknown friends in return; it being rightly judged that such articles would be more acceptable than any thing besides which it was in the power of our Navigators to bestow. Corporal Lediard of the Marines [II], an intelligent man, was, at the same time, directed to accompany Derramoushk, for the purpose of gaining farther information; and with orders, if he met with any Russians, that he should endeavour to make them understand that our Voyagers were Englishmen, and the friends and allies of their nation. On the tenth, the Corporal returned with three Russian seamen, or furriers, who, with several others, resided at Egoochshac, where they had a dwelling-house, some store-houses, and a sloop of about thirty tons burthen. One of these men was either Master or mate of this vessel; another of them wrote a very good hand, and was acquainted with figures; and all of them were sensible and well-behaved persons, who were ready to give Captain Cook every possible degree of information. The great difficulty in the reception and communication of intelligence, arose from the want of an interpreter. On the fourteenth, a Russian landed at Oonalashka, whose name was Erasim Gregorioff Sin Ismyloff, and who was the principal person among his countrymen in this and the neighbouring Islands. Besides the intelligence which our Commander derived from his conversations with Ismyloff, and which were carried on by signs, assisted by figures and other characters, he obtained from him the sight of two charts, and was permitted to copy them. Both of them were manuscripts, and bore every mark of authenticity. The first included the *Penshinskian* Sea; the coast of Tartary, down to the latitude of 41° ; the Kuril Islands; and the peninsula of Kamtschatka. But it was the second chart that was the most interesting to Captain Cook; for it comprehended all the discoveries made by the Russians to the eastward of Kamtschatka, towards America; which, however, exclusively of the Voyages of Beering and Tschirikoff, amounted to little or nothing. Indeed, all the people with whom the Captain conversed at Oonalashka, agreed in assuring him, over and over again, that they knew of no other Islands, besides those which were laid down upon this chart; and that no Russians had ever seen any part of the continent of America to the northward, excepting that which lies opposite to the country of the Tschutkis. When, on the twenty-first, Mr. Ismyloff took his final leave of the English Navigators, our Commander entrusted to his care a letter to the Lords Commissioners of the Admiralty, in which was enclosed a chart of all the northern coasts the Captain had visited. It was expected that there would be an opportunity of sending this letter, in the ensuing spring, to Kamtschatka or Okotsk, and that it would reach Petersburg during the following winter. Mr. Ismyloff, who faithfully and successfully discharged the trust our Commander had reposed in him, seemed to possess abilities that might entitle him to a higher station in life than that which he

[II] *Corporal Lediard of the marines.*] This Corporal Lediard is an extraordinary man, something of whose history cannot fail of being entertaining to my readers. In the winter of 1786, he set out on the singular undertaking of walking across the continent of America; for the accomplishment of which purpose, he determined to travel by the way of Siberia, and to procure a passage from that country to the opposite American coast. Being an American by birth, and having no means of raising the money necessary for his expences, a subscription was raised for him by Sir Joseph Banks, and some other Gentlemen, amounting, in the whole, to a little more than fifty pounds. With this sum he proceeded to Hamburgh, from which place he went to Copenhagen, and thence to Petersburg, where he arrived in the beginning of March, 1787. In his journey from Copenhagen to Petersburg, finding that the gulph of Bothnia was not frozen over, he was obliged to walk round the whole of it, by Tornæo. At Petersburg he stayed till the twenty-first of May, when he obtained leave to accompany a convoy of military stores, which at that time was proceeding to Mr. Billings, who had been his ship-mate in Captain Cook's Voyage, and who was then employed by the Empress of Russia, for the purpose of making discoveries in Siberia, and on the North-west coast of America. With this convoy Mr. Lediard set out, and in August reached the city of Irkutsk in Siberia. After that, he proceeded to the town of Yakutsk, where he met with Captain Billings. From this place he went back to Irkutsk, to spend a part of the winter; pro-

posing, in the spring, to return to Yakutsk, in order to proceed in the summer to Okotsk.

Hitherto Mr. Lediard had gone on prosperously, and flattered himself with the hopes of succeeding in his undertaking. But, in January last (1788) in consequence of an express from the Empress, he was arrested, and, in half an hour's time, carried away, under the guard of two soldiers and an officer, in a post sledge, for Moscow, without his clothes, money, and papers. From Moscow he was conveyed to the city of Moialoff in White Russia, and thence to the town of Tolochin in Poland. There he was informed, that her Majesty's orders were, that he was never to enter her dominions again without her express permission. During all this time, he suffered the greatest hardships, from sickness, fatigue, and want of rest; so that he was almost reduced to a skeleton. From Tolochin he made his way to Konigsberg, having had, as he says, a miserable journey, in a miserable country, in a miserable season, in miserable health, and a miserable purse; and disappointed of his darling enterprize. Mr. Lediard informs Sir Joseph Banks, to whom he sent, from time to time, a full account of his transactions, that, though he had been retarded in his pursuits by malice, he had not travelled totally in vain; his observations in Asia being, perhaps, as complete as a longer visit would have rendered them. From his last letter it appears, that he proposed to return, as speedily as possible, from Konigsberg to England.

For the preceding intelligence I am wholly indebted to the obliging information of Sir Joseph Banks.

occupied.

occupied. He had a considerable knowledge of astronomy, and was acquainted with the most useful branches of the mathematics. Captain Cook made him a present of an Hadley's octant; and, though it was probably the first he had ever seen, he understood, in a very short time, the various uses to which that instrument can be applied. While the ships lay at Oonalashka, our Voyagers did not neglect to make a diligent enquiry into the productions of the Island, and the general manners of the inhabitants. On these, as being in a great measure similar to objects which have already been noticed, it is not necessary to enlarge. There is one circumstance, however, so honourable to the natives, that it must not be omitted. They are, to all appearance, the most peaceable and inoffensive people our Commander had ever met with; and, with respect to honesty, they might serve as a pattern to countries that are in the highest state of civilization. A doubt is suggested, whether this disposition may not have been the consequence of their present subjection to the Russians. From the affinity which was found to subsist between the dialects of the Greenlanders and Esquimaux, and those of the inhabitants of Norton's Sound [KK] and Oonalashka, there is strong reason to believe, that all these nations are of the same extraction; and, if that be the case, the existence of a northern communication of some kind, by sea, between the West side of America and the East side, through Baffin's Bay, can scarcely be doubted; which communication, nevertheless, may effectually be shut up against ships, by ice and other impediments. While the vessels lay in Samganoodha harbour, Captain Cook exerted his usual diligence in making nautical and astronomical observations. All things, on the twenty-sixth, having been gotten ready for his departure, he put to sea on that day, and sailed for the Sandwich Islands; it being his intention to spend a few months there, and then to direct his course to Kamtschatka, so as to endeavour to reach that country by the middle of May, in the ensuing summer (m).

On the twenty-sixth of November, when the ships had proceeded southward till they came to the latitude of $20^{\circ} 55'$, land was discovered, which proved to be an Island of the name of *Mowee*, that had not hitherto been visited. It is one of the group of the Sandwich Islands. As it was of the last importance to procure a supply of provisions at these Islands, and experience had taught our Commander, that he could have no chance of succeeding in this object, if it were left to every man's discretion to traffic for what he pleased, and in what manner he pleased; the Captain published an order, prohibiting all persons from trading, excepting such as should be appointed by himself and Captain Clerke. Even these persons were enjoined to trade only for provisions and refreshments. While our Navigators lay off *Mowee*, which was for some days, a friendly intercourse was maintained with the inhabitants. Another Island was discovered on the thirtieth, which is called by the natives *Owhyhee*. As it appeared to be of greater extent and importance than any of the Islands which had yet been visited in this part of the world, Captain Cook spent nearly seven weeks in sailing round, and examining its coast. Whilst he was thus employed, the inhabitants came off, from time to time, in their canoes, and readily engaged in traffic with our Voyagers. In the conduct of this business, the behaviour of the Islanders was more entirely free from suspicion and reserve than our Commander had ever yet experienced. Not even the people of Otaheite itself, with whom he had been so intimately and repeatedly connected, had displayed such a full confidence in the integrity and good treatment of the English. Among the articles procured from the natives, was a quantity of sugar-cane. Upon a trial, Captain Cook found that a strong decoction of it produced a very palatable beer; on which account, he ordered some more to be brewed, for general use. When, however, the barrel was broached, not one of the crew would taste of the liquor. As the Captain had no motive in preparing this beverage, but that of sparing the rum and other spirits for a colder climate, he did not exert either authority or persuasion to prevail upon the men to change their resolution; for he knew that there was no danger of the scurvy, so long as a plentiful supply could be obtained of different vegetables. Nevertheless, that he might not be disappointed in his views, he gave orders that no grog should be served in the ships; and he himself, together with the officers, continued to make use of the sugar-cane beer, which was much improved by the addition of a few hops, that chanced to be still on board. There could be no reasonable doubt of its being a very wholesome liquor; and yet the inconsiderate crew alledged that it would be injurious to their health. No people are more averse to every kind of innovation than seamen, and their prejudices are extremely difficult to be conquered. It was, however, by acting contrary to these prejudices, and by various deviations from established practice, that Captain Cook had been enabled to preserve his men from that dreadful distemper, the scurvy, which, perhaps, has destroyed more of our sailors, in their peaceful voyages, than have fallen by the enemy in military expeditions. As the Captain was pursuing his examination of the coast of *Owhyhee*, it having fallen calm at one o'clock in the morning of the nineteenth of December, the *Resolution* was left to the mercy of a North-easterly swell,

(m) Cook's Voyage to the Pacific Ocean, vol. ii. p. 486. 493—498. 501, 502. 506, 507. 509. 522—524, 525, 526.

[KK] And those of the inhabitants of Norton's Sound. Norton's Sound is a large inlet that extends to the northward as far as the latitude of $64^{\circ} 55'$, upon the

coast of which Lieutenant King had landed, by Captain Cook's order.

which

which impelled her fast towards the land; so that, long before day-break, lights were seen from the land, which was not more than a league distant. The night, at the same time, was dark, with thunder, lightning, and rain. As soon as it was light, a dreadful surf, within half a league of the vessel, appeared breaking from the shore; and it was evident that our Navigators had been in the most perilous situation: nor was the danger yet over; for, in consequence of the veering of the wind, they were but just able to keep their distance from the coast. What rendered their situation more alarming was, that a rope of the main-top sail having given way, this occasioned the sail to be rent in two. In the same manner, the two top gallant sails gave way, though they were not half worn out. However, a favourable opportunity was seized of getting others to the yards; and the *Resolution* again proceeded in safety. On the sixteenth of January, 1779, canoes arrived in such numbers from all parts, that there were not fewer than a thousand about the two ships, most of them crowded with people, and well laden with hogs, and other productions of the Island. It was a satisfactory proof of their friendly intentions, that there was not a single person amongst them who had with him a weapon of any kind; trade and curiosity alone appearing to be the motives which actuated their conduct. Among such multitudes, however, as, at times, were on board, it will not be deemed surprizing, that some should betray a thievish disposition. One of them took out of the *Resolution* a boat's rudder; and made off with it so speedily, that it could not be recovered. Captain Cook judged this to be a favourable opportunity of shewing to these people the use of fire-arms; and accordingly he ordered two or three musquets, and as many four-pounders, to be fired over the canoe which carried off the rudder. It not being intended that any of the shot should take effect, the surrounding multitude of the natives seemed to be more surprized than terrified. Mr. Bligh having been sent to examine a neighbouring bay, reported, on his return, that it had good anchorage and fresh water, and that it was in an accessible situation. Into this bay, therefore, the Captain resolved to carry the ships, in order to refit, and to obtain every refreshment which the place could afford. As night approached, the greater part of the Indians retired on shore; but numbers of them requested permission to sleep on board; in which request, curiosity (at least with regard to several of them) was not their sole motive; for it was found, the next morning, that various things were missing; on which account our Commander determined not to entertain so many persons another night. On the seventeenth, the ships came to an anchor in the bay which had been examined by Mr. Bligh, and which is called *Karakakooa* by the inhabitants. At this time, the vessels continued to be much crowded with natives, and were surrounded with a multitude of canoes. Captain Cook, in the whole course of his voyages, had never seen so numerous a body of people assembled in one place. For, besides those who had come off to the English in their canoes, all the shore of the bay was covered with spectators, and many hundreds were swimming round the ships like shoals of fish. Our Navigators could not avoid being greatly impressed with the singularity of this scene; and perhaps there were few on board that now lamented the want of success which had attended the endeavours of getting homeward, the last summer, by a northern passage. "To this disappointment," says the Captain, "we owed our having it in our power to revisit the *Sandwich Islands*, and to enrich our Voyage with a discovery which, though the last, seemed, in many respects, to be the most important that had hitherto been made by Europeans, throughout the extent of the Pacific Ocean (n)." Such is the sentence that concludes our Commander's journal: and the satisfaction with which this sentence appears to have been written, cannot fail of striking the mind of every reader. Little did Captain Cook then imagine, that a discovery which promised to add no small honour to his name, and to be productive of very agreeable consequences, should be so fatal in the result. Little did he think, that the Island of Owhyhee was destined to be the last scene of his exploits, and the cause of his destruction.

(n) Cook's Voyage, ubi supra, p. 532, 535, 536, 537, 538, 540—548, 549.

The reception which the Captain met with from the natives, on his proceeding to anchor in *Karakakooa Bay*, was flattering in the highest degree. They came off from the shore in astonishing numbers, and expressed their joy by singing and shouting, and by exhibiting a variety of wild and extravagant gestures. Pareea, a young man of great authority, and Kaneena, another Chief, had already attached themselves to our Commander, and were very useful in keeping their countrymen from being troublesome. During the long cruize of our Navigators off the Island of Owhyhee, the inhabitants had almost universally behaved with great fairness and honesty in their dealings, and had not shewn the slightest propensity to theft: and this was a fact the more extraordinary, as those with whom our people had hitherto maintained any intercourse, were of the lowest rank, being either servants or fishermen. But, after the arrival of the *Resolution* and *Discovery* in *Karakakooa Bay*, the case was greatly altered. The immense crowd of Islanders that blocked up every part of the ships, not only afforded frequent opportunities of pilfering without risk of detection; but held out, even if they should be detected, a prospect of escaping with impunity, from the superiority of their numbers to that of the English. Another circumstance, to which the alteration in the conduct of the natives might be ascribed, arose from the presence and encouragement of their Chiefs, into whose possession the booty might be traced, and whom

there was reason to suspect of being the instigators of the depredations that were committed. Soon after the *Resolution* had gotten into her station, Pareea and Kaneena brought on board a third Chief, named Koah, who was represented as being a Priest, and as having, in his early youth, been a distinguished warrior. In the evening, Captain Cook, attended by Mr. Bayley and Mr. King, accompanied Koah on shore. Upon this occasion, the Captain was received with very peculiar and extraordinary ceremonies; with ceremonies that indicated the highest respect on the part of the natives, and which, indeed, seemed to fall little short of adoration. One of the principal objects that engaged our Commander's attention at Owhyhee, was the salting of hogs for sea-store; in which his success was far more compleat than had been attained in any former attempt of the same kind. It doth not appear that experiments relative to this subject had been made by the navigators of any nation before Captain Cook. His first trials were in 1774, during his second voyage round the world; when his success, though very imperfect, was, nevertheless, sufficient to encourage his farther efforts, in a matter of so much importance. As the present voyage was likely to be protracted a year beyond the time for which the ships were victualled, he was under a necessity of providing, by some such method, for the subsistence of the crews, or of relinquishing the prosecution of his discoveries. Accordingly, he lost no opportunity of renewing his attempts; and the event answered his most sanguine expectations. Captain King brought home with him some of the pork which was pickled at Owhyhee in January, 1779; and, upon its being tasted by several persons in England about Christmas 1780, it was found to be perfectly sound and wholesome (o). It seemed to be destined, that in every instance Captain Cook should excel all who had gone before him, in promoting the purposes of navigation. On the twenty-sixth, the Captain had his first interview with Terreeoboo, the King of the Island. The meeting was conducted with a variety of ceremonies, among which, the custom of making an exchange of names, which, amongst all the Islanders of the Pacific Ocean is the strongest pledge of friendship, was observed. When the formalities of the interview were over, our Commander carried Terreeoboo, and as many Chiefs as the pinnace could hold, on board the *Resolution*. They were received, on this occasion, with every mark of respect that could be shewn them; and, in return for a beautiful and splendid feathered cloak which the King had bestowed on Captain Cook, the Captain put a linen shirt on his Majesty, and girt his own hanger round him. In the progress of the intercourse which was maintained between our Voyagers and the natives, the quiet and inoffensive behaviour of the latter took away every apprehension of danger; so that the English trusted themselves among them at all times, and in all situations. The instances of kindness and civility which our people experienced from them were so numerous, that they could not easily be recounted. A society of Priests, in particular, displayed a generosity and munificence, of which no equal example had hitherto been given: for they furnished a constant supply of hogs and vegetables to our Navigators, without ever demanding a return, or even hinting at it in the most distant manner. All this was said to be done at the expence of a great man among them, who was at the head of their body, whose name was Kaoo, and who on other occasions manifested his attachment to the English. There was not always so much reason to be satisfied with the conduct of the warrior Chiefs, or *Earees*, as with that of the Priests. Indeed, the satisfaction that was derived from the usual gentleness and hospitality of the inhabitants, was frequently interrupted by the propensity of many of them to stealing; and this circumstance was the more distressing, as it sometimes obliged our Commander and the other officers to have recourse to acts of severity, which they would willingly have avoided, if the necessity of the case had not absolutely called for them.

(o) An account of the process may be seen in Captain King's Voyage, p. 12.

Though the kind and liberal behaviour of the natives continued without remission, Terreeoboo, and his Chiefs, began, at length, to be very inquisitive about the time in which our Voyagers were to take their departure. Nor will this be deemed surprizing, when it is considered that, during sixteen days in which the English had been in the bay of Karakakooa, they had made an enormous consumption of hogs and vegetables. It did not appear, however, that Terreeoboo had any other view in his enquiries, than a desire of making sufficient preparation for dismissing our Navigators with presents, suitable to the respect and kindness towards them which he had always displayed. For, on his being informed that they were to leave the Island in a day or two, it was observed that a kind of proclamation was immediately made, through the villages, requiring the people to bring in their hogs and vegetables, for the King to present to the *Orono* (p), on his quitting the country. Accordingly, on the third of February, being the day preceding the time which had been fixed for the sailing of the ships, Terreeoboo invited Captain Cook and Mr. King to attend him to the place where Kaoo resided. On their arrival, they found the ground covered with parcels of cloth, at a small distance from which lay an immense quantity of vegetables; and near them was a large herd of hogs. At the close of the visit, the greater part of the cloth, and the whole of the hogs and vegetables, were given by Terreeoboo to the Captain and Mr. King; who were astonished at the value and magnificence of the present; for it far exceeded every thing of the kind which they had seen either at the

(p) *Orono* was a title of high honour, which had been bestowed on Captain Cook.

Friendly or Society Islands [LL]. Mr. King had in so high a degree conciliated the affections, and gained the esteem, of the inhabitants of Owhyhee, that, with offers of the most flattering nature, he was strongly solicited to remain in the country. Terreeoboo and Kaoo waited upon Captain Cook, whose son they supposed Mr. King to be, with a formal request that he might be left behind. To avoid giving a positive refusal to an offer which was so kindly intended, the Captain told them, that he could not part with Mr. King at that time, but that, on his return to the Island in the next year, he would endeavour to settle the matter to their satisfaction. Early, on the fourth, the ships sailed out of Karakakooa Bay, being followed by a large number of canoes. It was our Commander's design, before he visited the other Islands, to finish the survey of Owhyhee, in hopes of meeting with a road better sheltered than the bay he had just left. In case of not succeeding in this respect, he purposed to take a view of the South-east part of Mowee, where he was informed that he should find an excellent harbour (q).

The circumstances which brought Captain Cook back to Karakakooa Bay, and the unhappy consequences that followed, I shall give from Mr. Samwell's narrative of his death. This narrative was, in the most obliging manner, communicated to me in manuscript, by Mr. Samwell, with entire liberty to make such use of it as I should judge proper. Upon a perusal of it, its importance struck me in so strong a light, that I wished to have it separately laid before the world. Accordingly, with Mr. Samwell's concurrence, I procured its publication, that, if any objections should be made to it, I might be able to notice them in my own work. As the narrative hath continued for more than two years unimpeached and uncontradicted, I esteem myself fully authorized to insert it in this place, as containing the most complete and authentic account of the melancholy catastrophe, which, at Owhyhee, befel our illustrious Navigator and Commander. It shall be inserted below [MM].

(q) Voyage to the Pacific Ocean, vol. iii. written by Mr. King, p. 1—31.

In

[LL] For it far exceeded every thing of the kind which they had seen at the Friendly or Society Islands. When the Resolution had sailed from Karakakooa Bay, Terreeoboo gave a fresh proof his friendship for Captain Cook, by sending after him a large present of hogs and vegetables.

[MM] It shall be inserted below.] "On the sixth, we were overtaken by a gale of wind; and the next night, the Resolution had the misfortune of springing the head of her foremast, in such a dangerous manner, that Captain Cook was obliged to return to Keragegooah (8), in order to have it repaired; for we could find no other convenient harbour on the Island. The same gale had occasioned much distress among some canoes, that had paid us a visit from the shore. One of them, with two men and a child on board, was picked up by the Resolution, and rescued from destruction: the men, having toiled hard all night, in attempting to reach the land, were so much exhausted, that they could hardly mount the ship's side. When they got upon the quarter-deck, they burst into tears, and seemed much affected with the dangerous situation from which they had escaped; but the little child appeared lively and cheerful. One of the Resolution's boats was also so fortunate as to save a man and two women, whose canoe had been upset by the violence of the waves. They were brought on board, and, with the others, partook of the kindness and humanity of Captain Cook.

"On the morning of Wednesday, the tenth, we were within a few miles of the harbour; and were soon joined by several canoes, in which appeared many of our old acquaintance, who seemed to have come to welcome us back. Among them was Coo, aha, a Priest: he had brought a small pig, and some cocoa nuts in his hand, which, after having chaunted a few sentences, he presented to Captain Clerke. He then left us, and hastened on board the Resolution, to perform the same friendly ceremony before Captain Cook. Having but light winds all that day, we could not gain the harbour. In the afternoon, a Chief of the first rank, and nearly related to Kariopoo, paid us a visit on board the Discovery. His name was Ka, mea: he was dressed in a very rich feathered cloak, which he seemed to have brought for sale, but would part with it for nothing except iron daggers. These, the Chiefs, some time before our departure, had preferred to every other article; for, having received a plentiful supply of hatchets and other tools, they began to collect a store of warlike instruments. Kameamea procured nine daggers

for his cloak; and, being pleased with his reception, he and his attendants slept on board that night. "In the morning of the eleventh of February, the ships anchored again in Keragegooah Bay, and preparation was immediately made for landing the Resolution's foremast. We were visited but by few of the Indians, because there were but few in the bay. On our departure, those belonging to other parts, had repaired to their several habitations, and were again to collect from various quarters, before we could expect to be surrounded by such multitudes as we had once seen in that harbour. In the afternoon, I walked about a mile into the country, to visit an Indian friend, who had, a few days before, come near twenty miles, in a small canoe, to see me, while the ship lay becalmed. As the canoe had not left us long before a gale of wind came on, I was alarmed for the consequence: however, I had the pleasure to find that my friend had escaped unhurt, though not without some difficulties. I take notice of this short excursion, merely because it afforded me an opportunity of observing, that there appeared no change in the disposition or behaviour of the inhabitants. I saw nothing that could induce me to think, that they were displeased with our return, or jealous of the intention of our second visit. On the contrary, that abundant good-nature which had always characterised them, seemed still to glow in every bosom, and to animate every countenance (9). The next day, February the twelfth, the ships were put under a taboo, by the Chiefs, a solemnity, it seems, that was requisite to be observed before Kariopoo, the King, paid his first visit to Captain Cook, after his return. He waited upon him the same day, on board the Resolution, attended by a large train, some of which bore the presents designed for Captain Cook; who received him in his usual friendly manner, and gave him several articles in return. This amicable ceremony being settled, the taboo was dissolved; matters went on in the usual train; and the next day, February the thirteenth, we were visited by the natives in great numbers: the Resolution's mast was landed, and the astronomical observatories erected on their former situation. I landed, with another Gentleman, at the town of Kavarooah, where we found a great number of canoes, just arrived from different parts of the Island, and the Indians busy in constructing temporary huts on the beach, for their residence during the stay of the ships. On our return on board the Discovery very, we learned, that an Indian had been detected

(9) Mr. King relates, that our Voyagers, upon coming to anchor, were surprised to find their reception very different from what it had been on their first arrival. He acknowledges, however, that the unsuspicious conduct of Terreeoboo, who, the next morning, came immediately to visit Captain Cook, and the consequent return of the natives to their former friendly intercourse with the English, are strong proofs that they neither meant nor apprehended any change of conduct. "Things," says Mr. King, "went on in their usual quiet course, till the afternoon of the thirteenth." Voyage, ubi supra, p. 36, 37, 38.

(8) It is proper to take notice, that Mr. Samwell spells the names of several persons and places differently from what is done in the history of the voyage. For instance,

Karakakooa
he calls
Keragegooah
Terreeoboo,
Kariopoo;
Kowrowa,
Kavarooah;
Kameecabareea,
Kameekapo here;
Maiha maiha,
Ka, mea, mea.

In consequence of the barbarous disposition of the natives, the whole remains of Captain Cook could not be recovered. For, though every exertion was made for that purpose; though

“ in stealing the armourer’s tongs from the forge,
 “ for which he received a pretty severe flogging, and
 “ was sent out of the ship. Notwithstanding the
 “ example made of this man, in the afternoon another
 “ had the audacity to snatch the tongs and a
 “ chissel from the same place, with which he jumped
 “ overboard, and swam for the shore. The Master
 “ and a midshipman were instantly dispatched after
 “ him, in the small cutter. The Indian seeing
 “ himself pursued, made for a canoe; his country-
 “ men took him on board, and paddled as swift as
 “ they could towards the shore; we fired several
 “ muskets at them, but to no effect, for they soon
 “ got out of the reach of our shot. Pareah, one of
 “ the Chiefs, who was at that time on board the Discovery, understanding what had happened, immediately went ashore, promising to bring back the stolen goods. Our boat was so far distanced, in chasing the canoe which had taken the thief on board, that he had time to make his escape into the country. Captain Cook, who was then ashore, endeavoured to intercept his landing; but, it seems, that he was led out of the way by some of the natives, who had officiously intruded themselves as guides. As the Master was approaching near the landing-place, he was met by some of the Indians in a canoe: they had brought back the tongs and chissel, together with another article, that we had not missed, which happened to be the lid of the water-cask. Having recovered these things, he was returning on board, when he was met by the Resolution’s pinnace, with five men in her, who, without any orders, had come from the observatories to his assistance. Being thus unexpectedly reinforced, he thought himself strong enough to insist upon having the thief, or the canoe which took him in; delivered up as reprisals. With that view he turned back; and having found the canoe on the beach, he was preparing to launch it into the water, when Pareah made his appearance, and insisted upon his not taking it away, as it was his property. The officer not regarding him, the Chief seized upon him, pinioned his arms behind, and held him by the hair of his head; on which, one of the sailors struck him with an oar: Pareah instantly quitted the officer, snatched the oar out of the man’s hand, and snapped it in two across his knee. At length the multitude began to attack our people with stones. They made some resistance, but were soon overpowered, and obliged to swim for safety to the small cutter, which lay farther out than the pinnace. The officers, not being expert swimmers, retreated to a small rock in the water, where they were closely pursued by the Indians. One man darted a broken oar at the Master; but his foot slipping at the time, he missed him, which fortunately saved that officer’s life. At last, Pareah interfered, and put an end to their violence. The Gentlemen, knowing that his presence was their only defence against the fury of the natives, entreated him to stay with them, till they could get off in the boats; but that he refused, and left them. The Master went to seek assistance from the party at the observatories; but the midshipman chose to remain in the pinnace. He was very rudely treated by the mob, who plundered the boat of every thing that was loose on board, and then began to knock her to pieces, for the sake of the iron-work; but Pareah fortunately returned in time to prevent her destruction. He had met the other Gentleman on his way to the observatories, and, suspecting his errand, had forced him to return. He dispersed the crowd again, and desired the Gentlemen to return on board: they represented, that all the oars had been taken out of the boat; on which he brought some of them back, and the Gentlemen were glad to get off, without farther molestation. They had not proceeded far, before they were overtaken by Pareah, in a canoe: he delivered the Midshipman’s

“ cap, which had been taken from him in the scuffle, joined noses with them, in token of reconciliation, and was anxious to know, if Captain Cook would kill him for what had happened. They assured him of the contrary, and made signs of friendship to him in return. He then left them, and paddled over to the town of Kavarooah, and that was the last time we ever saw him. Captain Cook returned on board soon after, much displeased with the whole of this disagreeable business; and the same night sent a Lieutenant on board the Discovery to learn the particulars of it, as it had originated in that ship. It was remarkable, that in the midst of the hurry and confusion attending this affair, Kanynah (a Chief who had always been on terms particularly friendly with us) came from the spot where it happened, with a hog to sell on board the Discovery: it was of an extraordinary large size, and he demanded for it a pahowa, or dagger, of an unusual length. He pointed to us, that it must be as long as his arm. Captain Clerke not having one of that length, told him, he would get one made for him by the morning; with which being satisfied, he left the hog, and went ashore without making any stay with us. It will not be altogether foreign to the subject, to mention a circumstance, that happened to-day on board the Resolution. An Indian Chief asked Captain Cook at his table, if he was a *Tata Toa*; which means a fighting man, or a soldier. Being answered in the affirmative, he desired to see his wounds: Captain Cook held out his right-hand, which had a scar upon it, dividing the thumb from the finger, the whole length of the metacarpal bones. The Indian, being thus convinced of his being a *Toa*, put the same question to another Gentleman present, but he happened to have none of those distinguishing marks: the Chief then said, that he himself was a *Toa*, and shewed the scars of some wounds he had received in battle. Those who were on duty at the observatories, were disturbed, during the night, with shrill and melancholy sounds, issuing from the adjacent villages, which they took to be the lamentations of the women. Perhaps the quarrel between us, might have filled their minds with apprehensions for the safety of their husbands: but, be that as it may, their mournful cries struck the sentinels with unusual awe and terror.

“ To widen the breach between us, some of the Indians, in the night, took away the Discovery’s large cutter, which lay swamped at the buoy of one of her anchors: they had carried her off so quietly, that we did not miss her till the morning, Sunday, February the fourteenth. Captain Clerke lost no time in waiting upon Captain Cook, to acquaint him with the accident: he returned on board, with orders for the launch and small cutter to go, under the command of the second Lieutenant, and lie off the East point of the bay, in order to intercept all canoes that might attempt to get out; and, if he found it necessary, to fire upon them. At the same time, the third Lieutenant of the Resolution, with the launch and small cutter, was sent on the same service, to the opposite point of the bay; and the Master was dispatched in the large cutter, in pursuit of a double canoe, already under sail, making the best of her way out of the harbour. He soon came up with her, and by firing a few musquets, drove her on shore, and the Indians left her: this happened to be the canoe of Omea, a man who bore the title of Orono. He was on board himself, and it would have been fortunate, if our people had secured him, for his person was held as sacred as that of the King. During this time, Captain Cook was preparing to go ashore himself, at the town of Kavarooah, in order to secure the person of Kario-poo, before he should have time to withdraw himself to another part of the Island, out of our reach.

This

though negotiations and threatenings were alternately employed, little more than the principal part of his bones (and that with great difficulty) could be procured. By the possession of

(10) Mr. King acknowledges, that he was always fearful, that the degree of confidence which Captain Cook had acquired from his long and uninterrupted course of success, in his transactions with the natives of these seas, might, at some unlucky moment, put him too much off his guard. *Voyage, ubi supra, p. 55.*

" This appeared the most effectual step that could be
" taken on the present occasion, for the recovery of
" the boat.—It was the measure he had invariably
" pursued, in similar cases, at other Islands in these
" seas, and it had always been attended with the
" desired success: in fact, it would be difficult to
" point out any other mode of proceeding on these
" emergencies, likely to attain the object in view
" (10). We had reason to suppose, that the King
" and his attendants had fled when the alarm was
" first given: in that case, it was Captain Cook's in-
" tention to secure the large canoes which were
" hauled up on the beach. He left the ship about
" seven o'clock, attended by the Lieutenant of Ma-
" rines, a Serjeant, Corporal, and seven private
" men: the pinnace's crew were also armed, and
" under the command of Mr. Roberts. As they
" rowed towards the shore, Captain Cook ordered
" the launch to leave her station at the West point
" of the bay, in order to assist his own boat. This
" is a circumstance worthy of notice; for it clearly
" shews, that he was not unapprehensive of meeting
" with resistance from the natives, or unmindful of
" the necessary preparation for the safety of himself
" and his people. I will venture to say, that from
" the appearance of things just at that time, there
" was not one, beside himself, who judged that such
" precaution was absolutely requisite: so little did
" his conduct on the occasion, bear the marks of
" rashness, or a precipitate self-confidence! He
" landed, with the Marines, at the upper end of the
" town of Kavarooah: the Indians immediately
" flocked round, as usual, and shewed him the cus-
" tomary marks of respect, by prostrating themselves
" before him. There were no signs of hostilities, or
" much alarm among them. Captain Cook, how-
" ever, did not seem willing to trust to appearances;
" but was particularly attentive to the disposition of
" the Marines, and to have them kept clear of the
" crowd. He first enquired for the King's sons, two
" youths who were much attached to him, and ge-
" nerally his companions on board. Messengers
" being sent for them, they soon came to him, and
" informing him that their father was asleep, at a
" house not far from them, he accompanied them
" thither, and took the Marines along with them.
" As he passed along, the natives every where pro-
" strated themselves before him, and seemed to have
" lost no part of that respect they had always shewn
" to his person. He was joined by several Chiefs,
" among whom was Kanynah, and his brother
" Koohowroah. They kept the crowd in order,
" according to their usual custom; and, being igno-
" rant of his intention in coming on shore, frequently
" asked him, if he wanted any hogs, or other pro-
" visions: he told them that he did not, and that his
" business was to see the King. When he arrived at
" the house, he ordered some of the Indians to go in,
" and inform Kariopoo, that he waited without to
" speak with him. They came out two or three
" times, and instead of returning any answer from
" the King, presented some pieces of red cloth to
" him, which made Captain Cook suspect that he
" was not in the house: he therefore desired the
" Lieutenant of Marines to go in. The Lieutenant
" found the old man just awaked from sleep, and
" seemingly alarmed at the message; but he came
" out without hesitation. Captain Cook took him
" by the hand, and in a friendly manner asked him
" to go on board, to which he very readily consented.
" Thus far matters appeared in a favourable train,
" and the natives did not seem much alarmed or
" apprehensive of hostility on our side; at which
" Captain Cook expressed himself a little surprized,
" saying, that as the inhabitants of that town appeared
" innocent of stealing the cutter, he should not molest
" them, but that he must get the King on board.
" Kariopoo sat down before his door, and was sur-
" rounded by a great crowd: Kanynah and his bro-
" ther were both very active in keeping order among

" them. In a little time, however, the Indians were
" observed arming themselves with long spears, clubs,
" and daggers, and putting on thick mats, which
" they use as armour. This hostile appearance in-
" creased, and became more alarming, on the arrival
" of two men in a canoe from the opposite side of the
" bay, with the news of a Chief, called Kareemoo,
" having been killed by one of the Discovery's
" boats. In their passage across, they had also deli-
" vered this account to each of the ships. Upon that
" information, the women, who were sitting upon
" the beach at their breakfasts, and conversing fami-
" liarly with our people in the boats, retired, and a
" confused murmur spread through the crowd. An
" old Priest came to Captain Cook, with a cocoa-nut
" in his hand, which he held out to him as a present,
" at the same time singing very loud. He was often
" desired to be silent, but in vain: he continued im-
" portunate and troublesome, and there was no such
" thing as getting rid of him or his noise: it seemed
" as if he meant to divert their attention from his
" countrymen, who were growing more tumultuous,
" and arming themselves in every quarter. Captain
" Cook, being at the same time surrounded by a
" great crowd, thought his situation rather hazard-
" ous: he therefore ordered the Lieutenant of Ma-
" rines to march his small party to the water-side,
" where the boats lay within a few yards of the
" shore: the Indians readily made a lane for them to
" pass, and did not offer to interrupt them. The
" distance they had to go might be about fifty or
" sixty yards; Captain Cook followed, having hold
" of Kariopoo's hand, who accompanied him very
" willingly: he was attended by his wife, two sons,
" and several Chiefs. The troublesome old Priest
" followed, making the same savage noise. Keowa,
" the younger son, went directly into the pinnace,
" expecting his father to follow; but just as he arrived
" at the water-side, his wife threw her arms about
" his neck, and, with the assistance of two Chiefs,
" forced him to sit down by the side of a double
" canoe. Captain Cook expostulated with them,
" but to no purpose: they would not suffer the King
" to proceed, telling him, that he would be put to
" death if he went on board the ship. Kariopoo,
" whose conduct seemed entirely resigned to the will
" of others, hung down his head, and appeared much
" distressed.

" While the King was in this situation, a Chief,
" well known to us, of the name of Coho, was ob-
" served lurking near, with an iron dagger, partly
" concealed under his cloak, seemingly, with the
" intention of stabbing Captain Cook, or the Lieu-
" tenant of Marines. The latter proposed to fire at
" him, but Captain Cook would not permit it.
" Coho closing upon them, obliged the officer to
" strike him with his piece, which made him retire.
" Another Indian laid hold of the Serjeant's musquet,
" and endeavoured to wrench it from him, but was
" prevented by the Lieutenant's making a blow at
" him. Captain Cook, seeing the tumult increase,
" and the Indians growing more daring and resolute,
" observed, that if he were to take the King off by
" force, he could not do it without sacrificing the
" lives of many of his people. He then paused a
" little, and was on the point of giving his orders to
" reembark, when a man threw a stone at him;
" which he returned with a discharge of small shot
" (with which one barrel of his double piece was
" loaded). The man, having a thick mat before
" him, received little or no hurt: he brandished his
" spear, and threatened to dart it at Captain Cook,
" who being still unwilling to take away his life,
" instead of firing with ball, knocked him down with
" his musquet. He expostulated strongly with the
" most forward of the crowd, upon their turbulent
" behaviour. He had given up all thoughts of get-
" ting the King on board, as it appeared impracti-
" cable; and his care was then only to act on the
" defensive, and to secure a safe embarkation for his
" small

of them, our Navigators were enabled to perform the last offices to their eminent and unfortunate Commander. The bones, having been put into a coffin, and the service being read

(11) I have been informed, on the best authority, that, in the opinion of Captain Philips, who commanded the Marines, and whose judgment must be of the greatest weight, it is extremely doubtful whether any thing could successfully have been done to preserve the life of Captain Cook, even if no mistake had been committed on the part of the launch.

(12) "I have heard one of the Gentlemen who were present say, that the first injury he received was from a dagger, as it is represented in the Voyage; but, from the account of many others, who were also eyewitnesses, I am confident, in saying, that that he was first struck with a club. I was afterwards confirmed in this, by Kaireekoa, the Priest, who particularly mentioned the name of the man who gave him the blow, as well as that of the Chief who afterwards struck him with the dagger. This is a point not worth disputing about: I mention it, as being solicitous to be accurate in this account, even in circumstances, of themselves, not very material."

"small party, which was closely pressed by a body of several thousand people. Keowa, the King's son, who was in the pinnace, being alarmed on hearing the first firing, was, at his own entreaty, put on shore again; for even at that time, Mr. Roberts, who commanded her, did not apprehend that Captain Cook's person was in any danger: otherwise he would have detained the Prince, which, no doubt, would have been a great check on the Indians. One man was observed, behind a double canoe, in the action of darting his spear at Captain Cook, who was forced to fire at him in his own defence, but happened to kill another close to him, equally forward in the tumult: the Serjeant observing that he had missed the man he aimed at, received orders to fire at him, which he did, and killed him. By this time, the impetuosity of the Indians was somewhat repressed; they fell back in a body, and seemed staggered: but being pushed on by those behind, they returned to the charge, and poured a volley of stones among the Marines, who, without waiting for orders, returned it with a general discharge of musquetry, which was instantly followed by a fire from the boats. At this Captain Cook was heard to express his astonishment: he waved his hand to the boats, called to them to cease firing, and to come nearer in to receive the Marines. Mr. Roberts immediately brought the pinnace as close to the shore as he could, without grounding, notwithstanding the showers of stones that fell among the people: but —, the Lieutenant, who commanded in the launch, instead of pulling in to the assistance of Captain Cook, withdrew his boat farther off, at the moment that every thing seems to have depended upon the timely exertions of those in the boats. By his own account, he mistook the signal: but be that as it may, this circumstance appears to me, to have decided the fatal turn of the affair, and to have removed every chance which remained with Captain Cook, of escaping with his life. The business of saving the Marines out of the water, in consequence of that, fell altogether upon the pinnace; which thereby became so much crowded, that the crew were, in a great measure, prevented from using their fire-arms, or giving what assistance they otherwise might have done, to Captain Cook; so that he seems, at the most critical point of time, to have wanted the assistance of both boats, owing to the removal of the launch. For, notwithstanding that they kept up a fire on the crowd, from the situation to which they removed in that boat, the fatal confusion which ensued on her being withdrawn, to say the least of it, must have prevented the full effect, that the prompt co-operation of the two boats, according to Captain Cook's orders, must have had, towards the preservation of himself and his people (11). At that time, it was to the boats alone, that Captain Cook had to look for his safety; for, when the Marines had fired, the Indians rushed among them, and forced them into the water, where four of them were killed: their Lieutenant was wounded, but fortunately escaped, and was taken up by the pinnace. Captain Cook was then the only one remaining on the rock: he was observed making for the pinnace, holding his left hand against the back of his head, to guard it from the stones, and carrying his musquet under the other arm. An Indian was seen following him, but with caution and timidity; for he stopped once or twice, as if undetermined to proceed. At last he advanced upon him unawares, and with a large club (12), or common stake, gave him a blow on the back of the head, and then precipitately retreated. The stroke seemed to have stunned Captain Cook: he staggered a few paces, then fell on his hand and one knee, and dropped his musquet. As he was rising, and before he could recover his feet, another Indian stabbed him in the back of the neck with an iron

VOL. IV.

dagger. He then fell into a bite of water about knee deep, where others crowded upon him, and endeavoured to keep him under: but struggling very strongly with them, he got his head up, and casting his look towards the pinnace, seemed to solicit assistance. Though the boat was not above five or six yards distant from him, yet from the crowded and confused state of the crew, it seems, it was not in their power to save him. The Indians got him under again, but in deeper water: he was, however, able to get his head up once more, and being almost spent in the struggle, he naturally turned to the rock, and was endeavouring to support himself by it, when a savage gave him a blow with a club, and he was seen alive no more. They hauled him up lifeless on the rocks, where they seemed to take a savage pleasure in using every barbarity to his dead body, snatching the daggers out of each other's hands, to have the horrid satisfaction of piercing the fallen victim of their barbarous rage.

"I need make no reflection on the great loss we suffered on this occasion, or attempt to describe what we felt. It is enough to say, that no man was ever more beloved or admired: and it is truly painful to reflect, that he seems to have fallen a sacrifice merely for want of being properly supported; a fate, singularly to be lamented, as having fallen to his lot, who had ever been conspicuous for his care of those under his command, and who seemed, to the last, to pay as much attention to their preservation, as to that of his own life. If any thing could have added to the shame and indignation universally felt on this occasion, it was to find, that his remains had been deserted, and left exposed on the beach, although they might have been brought off. It appears, from the information of four or five Midshipmen, who arrived on the spot at the conclusion of the fatal business, that the beach was then almost entirely deserted by the Indians, who at length had given way to the fire of the boats, and dispersed through the town: so that there seemed no great obstacle to prevent the recovery of Captain Cook's body; but the Lieutenant returned on board without making the attempt. It is unnecessary to dwell longer on this painful subject, and to relate the complaints and censures that fell on the conduct of the Lieutenant. It will be sufficient to observe, that they were so loud as to oblige Captain Clerke publicly to notice them, and to take the depositions of his accusers down in writing. The Captain's bad state of health and approaching dissolution, it is supposed, induced him to destroy these papers a short time before his death. It is a painful task, to be obliged to notice circumstances, which seem to reflect upon the character of any man. A strict regard to truth, however, compelled me to the insertion of these facts, which I have offered merely as facts, without presuming to connect with them any comment of my own: esteeming it the part of a faithful historian, "to extenuate nothing, nor set down aught in malice." The fatal accident happened at eight o'clock in the morning, about an hour after Captain Cook landed. It did not seem, that the King, or his sons, were witnesses to it; but it is supposed that they withdrew in the midst of the tumult. The principal actors were the other Chiefs, many of them the King's relations and attendants: the man who stabbed him with the dagger was called Nooah. I happened to be the only one who collected his person, from having on a former occasion mentioned his name in the journal I kept. I was induced to take particular notice of him, more from his personal appearance than any other consideration, though he was of high rank, and a near relation of the King: he was stout and tall, with a fierce look and demeanour, and one who united in his figure the two qualities of strength

3 O

"and

read over to them, were committed to the deep, on the twenty-first, with the usual military honours. What were the feelings of the companies of both the ships, on this occasion, must be left to the world to conceive; for those who were present know, that it is not in the power of any pen to express them. A promotion of officers followed the decease of Captain Cook. Captain Clerke having succeeded of course to the command of the expedition, removed on board the Resolution. By him Mr. Gore was appointed Captain of the Discovery, and the rest of the Lieutenants obtained an addition of rank, in their proper order. Mr. Harvey, a Midshipman, who had been in the last as well as the present voyage, was promoted to the vacant Lieutenantcy (r).

(r) King's Voyage, *ubi supra*, p. 59—64. 68, 76, 77. 8c, 81.

Not long after Captain Cook's death, an event occurred in Europe, which had a particular relation to the voyage of our Navigator, and which was so honourable to himself, and to the great nation from whom it proceeded, that it is no small pleasure to me to be able to lay the transaction somewhat at large before my readers. What I refer to is, the letter which was issued, on the nineteenth of March, 1779, by Monsieur Sartine, Secretary of the Marine Department at Paris, and sent to all the Commanders of French ships. The rescript was as follows: "Captain Cook, who sailed from Plymouth in July, 1776, on board the Resolution, in company with the Discovery, Captain Clerke, in order to make some discoveries on the coasts, islands, and seas of Japan and California, being on the point of returning to Europe; and such discoveries being of general utility to all nations, it is the King's pleasure, that Captain Cook shall be treated as a Commander of a neutral and allied power, and that all Captains of armed vessels, &c. who may meet that famous Navigator, shall make him acquainted with the King's orders on this behalf, but, at the same time, let him know, that on his part he must refrain from all hostilities (s)." By the Marquis of Condorcet we are informed, that this measure originated in the liberal and enlightened mind of that excellent Citizen and Statesman, Monsieur Turgot. "When war," says the Marquis, "was declared between France and England, M. Turgot saw how honourable it would be to the French nation, that the vessel of Captain Cook should be treated with respect at sea. He composed a memorial, in which he proved, that honour, reason, and even interest, dictated this act of respect for humanity; and it was in consequence of this memorial, the author of which was unknown during his life, that an order was given not to treat as an enemy, the common benefactor of every European nation (t)." Whilst great praise is due to Monsieur Turgot, for having suggested the adoption of a measure which hath contributed so much to the reputation of the French Government, it must not be forgotten, that the first thought of such a plan of conduct was probably owing to Dr. Benjamin Franklin. Thus much, at least, is certain, that this eminent Philosopher, when Ambassador at Paris from the United States of America, preceded the Court of France in issuing a similar requisition; a copy of which cannot fail of being acceptable to the reader.

(t) Condorcet's Life of M. Turgot, p. 263, English translation.

"and agility, in a greater degree, than ever I remembered to have seen before in any other man. His age might be about thirty, and by the white scurf on his skin, and his sore eyes, he appeared to be a hard drinker of Kava. He was a constant companion of the King, with whom I first saw him, when he paid a visit to Captain Clerke. The Chief who first struck Captain Cook with the club, was called Karimano, craha, but I did not know him by his name. These circumstances I learnt of honest Kaireekoa, the Priest; who added, that they were both held in great esteem on account of that action: neither of them came near us afterwards. When the boats left the shore, the Indians carried away the dead body of Captain Cook and those of the Marines, to the rising ground, at the back of the town, where we could plainly see them with our glasses from the ships. This most melancholy accident appears to have been altogether unexpected and unforeseen, as well on the part of the natives as ourselves. I never saw sufficient reason to induce me to believe, that there was any thing of design, or a pre-concerted plan on their side, or that they purposely fought to quarrel with us: thieving, which gave rise to the whole, they were equally guilty of, in our first and second visits. It was the cause of every misunderstanding that happened between us: their petty thefts were generally overlooked, but sometimes slightly punished: the boat, which they at last ventured to take away, was an object of no small magnitude to people in our situation, who could not possibly replace her, and therefore not slightly to be given up. We had no other chance of recovering her, but by getting the person of the King into our possession: on our attempting to do that, the natives became

"alarmed for his safety, and naturally opposed those whom they deemed his enemies. In the sudden conflict that ensued, we had the unspeakable misfortune of losing our excellent Commander, in the manner already related. It is in this light the affair has always appeared to me, as entirely accidental, and not in the least owing to any previous offence received, or jealousy of our second visit entertained by the natives. Pareah seems to have been the principal instrument in bringing about this fatal disaster. We learnt afterwards, that it was he who had employed some people to steal the boat: the King did not seem to be privy to it, or even apprized of what had happened, till Captain Cook landed. It was generally remarked, that at first, the Indians shewed great resolution in facing our fire-arms; but it was entirely owing to ignorance of their effect. They thought that their thick mats would defend them from a ball, as well as from a stone; but being soon convinced of their error, yet still at a loss to account how such execution was done among them, they had recourse to a stratagem, which, though it answered no other purpose, served to shew their ingenuity and quickness of invention. Observing the flashes of the muskets, they naturally concluded, that water would counteract their effect, and therefore, very sagaciously, dipped their mats, or armour, in the sea, just as they came on to face our people: but finding this last resource to fail them, they soon dispersed, and left the beach entirely clear. It was an object they never neglected, even at the greatest hazard, to carry off their slain; a custom, probably owing to the barbarity with which they treat the dead body of an enemy, and the trophies they make of his bones (13)."

(13) Samwell's Narrative of the Death of Capt. James Cook, p. 2—20.

"To

" To all Captains and Commanders of armed Ships, acting by Commission from the
 " Congress of the United States of America, now in war with Great Britain.

" Gentlemen,

" A ship having been fitted out from England before the commencement of this war;
 " to make discoveries of new countries in unknown seas, under the conduct of that most
 " celebrated Navigator and Discoverer, Captain Cook; an undertaking truly laudable in
 " itself, as the increase of geographical knowledge facilitates the communication between
 " distant nations, in the exchange of useful products and manufactures, and the extension
 " of arts, whereby the common enjoyments of human life are multiplied and augmented,
 " and science of other kinds encreased, to the benefit of mankind in general—This is
 " therefore most earnestly to recommend to every one of you, that in case the said ship,
 " which is now expected to be soon in the European seas on her return, should happen to
 " fall into your hands, you would not consider her as an enemy, nor suffer any plunder to
 " be made of the effects contained in her, nor obstruct her immediate return to England,
 " by detaining her, or sending her into any other part of Europe, or to America; but that
 " you would treat the said Captain Cook and his people with all civility and kindness,
 " affording them, as common friends to mankind, all the assistance in your power, which
 " they may happen to stand in need of. In so doing, you will not only gratify the gene-
 " rosity of your own dispositions, but there is no doubt of your obtaining the approbation
 " of the Congress, and your other American owners.

" I have the honour to be,

" Gentlemen,

" Your most obedient,

" humble servant;

" B. FRANKLIN,

" At Passy, near Paris,
 " this 10th day of
 " March, 1779.

" Minister Plenipotentiary from the Congress
 " of the United States, at the Court of
 " France."

It is observable, that as Dr. Franklin acted on his own authority, he could only *earnestly recommend* to the Commanders of American armed vessels not to consider Captain Cook as an enemy; and it is somewhat remarkable, that he mentions no more than one ship; Captain Clerke not being noticed in the requisition. In the confidence which the Doctor expressed, with respect to the approbation of Congress, he happened to be mistaken. As the Members of that Assembly, at least with regard to the greater part of them, were not possessed of minds equally enlightened with that of their Ambassador, he was not supported by his Masters in this noble act of humanity, of love to science, and of liberal policy. The orders he had given were instantly reversed; and it was directed by Congress, that especial care should be taken to seize Captain Cook, if an opportunity of doing it occurred. All this proceeded from a false notion that it would be injurious to the United States for the English to obtain a knowledge of the opposite coast of America. The conduct of the Court of Spain was regulated by similar principles of jealousy. It was apprehended by that Court, that there was reason to be cautious of granting, too easily, an indulgence to Captain Cook; since it was not certain what mischiefs might ensue to the Spaniards from a northern passage to their American dominions. M. de Belluga, a Spanish Gentleman and officer, of a liberal and a philosophical turn of mind, and who was a Member of the Royal Society of London, endeavoured to prevail upon the Count of Florida Blanca, and M. d'Almodovar, to grant an order of protection to the Resolution and Discovery; and he flattered himself, that the Ministers of the King of Spain would be prevailed upon to prefer the cause of science to the partial views of interest: but the Spanish Government was not capable of rising to so enlarged and magnanimous a plan of policy. To the French nation alone, therefore, was reserved the honour of setting an example of wisdom and humanity, which, I trust, will not, hereafter, be so uncommon in the history of mankind [NN].

The progress of the voyage, after the decease of Captain Cook, doth not fall within the design of the present narrative. It must be sufficient, therefore, barely to mention, that the Sandwich Islands were farther explored, and a large addition of whatever relates to the knowledge of their productions and inhabitants obtained; that Kamtschatka was visited, and a very friendly intercourse maintained with the Russian officers of that country; that our Navigators experienced the most generous and hospitable treatment from Major Behm in particular, the Commander of the Garrison at Bolcharetsk; that they proceeded to the

[NN] *Be so uncommon in the history of mankind.*
 For the materials from which the preceding account is drawn up, I am indebted to Sir Joseph Banks. Sir Joseph and Mr. Stephens have been at considerable pains to obtain, by application to the Duke of Dorset, an authentic copy of the protection granted by the Court of France to Captain Cook's ships. If it should arrive in time, it will be inserted at the end of the article.

I shall here add, that as soon as Captain Gore was informed of the order of the French Government (an account of which he received at Canton) he thought himself bound, in return for the liberal exceptions made in favour of our Navigators, to refrain from laying hold of any opportunities of capture that might chance to occur, and to preserve, throughout his voyage, the strictest neutrality (14).

(14) *King's Voyage*
 age, p. 448.

North,

North, in pursuit of the grand object of the expedition; that, having passed through Beer-
ing's Strait, and attained to something more than sixty-nine degrees and a half of northern
latitude, they found it absolutely impossible to penetrate through the ice, either on the side
of America or on the side of Asia; that every hope being excluded of accomplishing this
way a passage into the Atlantic Ocean, Captain Clerke was obliged to come to the determi-
nation of failing back to the southward; that on the twenty-second of August, (1779)
being less than a month after this determination, the Captain died of a consumption [OO];
that Captain Gore succeeded to the command of the Resolution, and Lieutenant King to
that of the Discovery; that a second visit was paid to Kamtschatka, by which a farther
acquaintance was gained with that part of the world; that no small accession of information
was acquired with respect to geographical science in general; that our Voyagers pursued
their course by the coasts of Japan and China; that they made some stay at Canton; that
thence they proceeded to the Cape of Good Hope; that they came to an anchor at Strom-
ness, on the twenty-second of May, 1780; that both ships arrived safe at the Nore, on the
fourth of October, after an absence of four years, two months, and twenty-two days; that,
during the whole of the undertaking, the Resolution lost only five men by sickness, three
of whom were in a precarious state of health at their departure from England, while the
Discovery did not lose a single man; and that the history of the voyage, from the time in
which Captain Cook's journal ends, was written with great ability by Mr. King. With
concern I add, that, by the decease of Captain King, who died at Nice, in Italy, in the
year 1784, this country sustained another loss of an able and scientific Commander and
Navigator, who hath left a memorial of his talents and services, which has honourably
united his name with that of the immortal Cook.

From the relation that has been given of Captain Cook's course of life, and of the im-
portant events in which he was engaged, my readers cannot be strangers to his general
character. This, therefore, might be left to be collected from his actions, which are the
best exhibitions of the great qualities of his mind. But, perhaps, were I not to endeavour
to afford a summary view of him in these respects, I might be thought to fail in that duty
which I owe to the public on the present occasion. It cannot, I think, be denied, that
genius belonged to Captain Cook in an eminent degree. By genius I do not here under-
stand imagination merely, or that power of culling the flowers of fancy which poetry de-
lights in; but an inventive mind; a mind full of resources; and which, by its own native
vigour, can suggest noble objects of pursuit, and the most effectual methods of attaining
them. This faculty was possessed by our Navigator in its full energy, as is evident from the
uncommon sagacity and penetration which he discovered in a vast variety of critical and
difficult situations. To genius Captain Cook added application, without which nothing
very valuable or permanent can be accomplished, even by the brightest capacity. For an
unremitting attention to whatever related to his profession, he was distinguished in early
life. In every affair that was undertaken by him, his assiduity was without interruption,
and without abatement. Wherever he came, he suffered nothing which was fit for a sea-
man to know or to practise, to pass unnoticed, or to escape his diligence. The genius and
application of Captain Cook were followed by a large extent of knowledge; a knowledge
which, beside a consummate acquaintance with navigation, comprehended a number of other
sciences. In this respect, the ardour of his mind rose above the disadvantages of a very
confined education. His progress in the different branches of the mathematics, and parti-
cularly in astronomy, became so eminent, that, at length, he was able to take the lead in
making the necessary observations of this kind, in the course of his voyages. He attained,
likewise, to such a degree of proficiency in general learning, and the art of composition, as
to be able to express himself with a manly clearness and propriety, and to become respect-
able as the narrator, as well as the performer, of great actions. Another thing, strikingly
conspicuous in Captain Cook, was the perseverance with which he pursued the noble ob-

[OO] *The Captain died of a consumption.* Captain
Clerke departed this life in the thirty-eighth year of
his age. He was brought up to the Navy from his
earliest youth, and had been in several actions during
the war which began in 1756. In the action between
the Bellona and the Courageux, being stationed in
the mizen-top, he was carried overboard with the mast;
but was taken up without having received any hurt.
He was a Midshipman in the Dolphin, commanded
by Captain Byron, in her voyage round the world;
after which he served on the American station. In
1768, he made his second voyage round the world, in
the Endeavour, as Master's Mate; and, in consequence
of the death of Mr. Hicks, which happened on the
twenty-third of May, 1771, he returned home a Lieu-
tenant. His third circum-navigation of the globe
was in the Resolution, of which he was appointed the
Second Lieutenant; and he continued in that situation
till his return in 1775; soon after which he was pro-

moted to the rank of Master and Commander. In
what capacity he sailed with Captain Cook in this
last expedition, need not be added. The consump-
tion of which Captain Clerke died, had evidently
commenced before he left England, and he lingered
under it during the whole voyage. Though his very
gradual decay had long made him a melancholy
object to his friends, nevertheless, they derive some
consolation from the equanimity with which he bore
his disorder, from the constant flow of good spirits
maintained by him to his latest hour, and from his
submitting to his fate with cheerful resignation. It
was, however, impossible, says Mr. King, "not to
" feel a more than common degree of compassion for
" a person, whose life had been a continued scene of
" those difficulties and hardships, to which a seaman's
" occupation is subject, and under which he at last
" sunk (15)."

(15) King's Voy-
age, p. 280, 281.

jects to which his life was devoted. This, indeed, was a most distinguished feature in his character: in this he scarcely ever had an equal, and never a superior. Nothing could divert him from the points he aimed at; and he persisted in the prosecution of them, through difficulties and obstructions which would have deterred minds of very considerable strength and firmness. What enabled him to persevere in all his mighty undertakings, was the invincible fortitude of his spirit. Of this, instances without number occur in the accounts of his expeditions; two of which I shall take the liberty of recalling to the attention of my readers. The first is, the undaunted magnanimity with which he prosecuted his discoveries along the whole South-east coast of New Holland. Surrounded as he was with the greatest possible dangers, arising from the perpetual succession of rocks, shoals, and breakers, and having a ship that was almost shaken to pieces by repeated perils, his vigorous mind had a regard to nothing but what he thought was required of him by his duty to the public. It will not be easy to find, in the history of navigation, a parallel example of courageous exertion. The other circumstance I would refer to is the boldness with which, in his second voyage, after he left the Cape of Good Hope, he pushed forwards into unknown seas, and penetrated through innumerable mountains and Islands of ice, in the search of a southern continent. It was like launching into chaos: all was obscurity, all was darkness before him; and no event can be compared with it, excepting the sailing of Magelhaen's, from the straits which bear his name, into the pacific Ocean (*u*). The fortitude of Captain Cook, being founded upon reason, and not upon instinct, was not an impetuous valour, but accompanied with compleat self-possession. He was master of himself on every trying occasion, and seemed to be the more calm and collected, the greater was the exigence of the case. In the most perilous situations, when our Commander had given the proper directions concerning what was to be done while he went to rest, he could sleep, during the hours he had allotted to himself, with perfect composure and soundness (*w*). Nothing could be a surer indication of an elevated mind; of a mind that was entirely satisfied with itself, and with the measures it had taken. To all these great qualities, Captain Cook added the most amiable virtues. That it was impossible for any one to excel him in humanity, is apparent from his treatment of his men through all his voyages, and from his behaviour to the natives of the countries which were discovered by him. The health, the convenience, and, as far as it could be admitted, the enjoyment of the seamen, were the constant objects of his attention; and he was anxiously solicitous to meliorate the condition of the inhabitants of the several Islands and places which he visited. With regard to their thieveries, he candidly apologized for, and overlooked, many offences which others would have sharply punished; and when he was laid under an indispensable necessity of proceeding to any acts of severity, he never exerted them without feeling much reluctance and concern. In the private relations of life, Captain Cook was entitled to high commendation. He was excellent as a husband and a father, and sincere and steady in his friendships: and to this it may be added, that he possessed that general sobriety and virtue of character, which will always be found to constitute the best security and ornament of every other moral qualification. With the greatest benevolence and humanity of disposition, Captain Cook was occasionally subject to a hastiness of temper. This, which has been exaggerated by the few (and they are indeed few) who are unfavourable to his memory, is acknowledged by his friends. It is mentioned both by Captain King and Mr. Samwell, in their delineations of his character. Mr. Hayley, in one of his poems, calls him the *mild Cook*; but, perhaps, that is not the happiest epithet which could have been applied to him. Mere mildness can scarcely be considered as the most prominent and distinctive feature in the mind of a man, whose powers of understanding and of action were so strong and elevated, who had such immense difficulties to struggle with, and who must frequently have been called to the firmest exertions of authority and command. Lastly, Captain Cook was distinguished by a property which is almost universally the concomitant of truly great men, and that is, a simplicity of manners. In conversation he was unaffected and unassuming; rather backward in pushing discourse; but obliging and communicative in his answers to those who addressed him for the purposes of information. It was not possible that, in a mind constituted like his, such a paltry quality as vanity could find an existence.

In this imperfect delineation of Captain Cook's character, I have spoken of him in a manner which is fully justified by the whole course of his life and actions, and which is perfectly agreeable to the sentiments of those who were the most nearly connected with him in the habits of intimacy and friendship. The pictures which some of them have drawn of him, though they have already been presented to the public, cannot here with propriety be omitted, and, therefore, shall be given in note [PP].

From

[PP] *And, therefore, shall be given in note.* Captain King has expressed himself concerning him in the following terms. "The constitution of his body was robust, inured to labour, and capable of undergoing the severest hardships. His stomach bore, without difficulty, the coarsest and most un-

VOL. IV.

"grateful food:—Great was the indifference with which he submitted to every kind of self-denial. "The qualities of his mind were of the same hardy, vigorous kind with those of his body. His understanding was strong and perspicacious. His judgment, in whatever related to the services he was engaged

3 P

(*u*) For the two remarks above mentioned, I am indebted to Mr. Hodges.

(*w*) From the information of Capt. Dudenst.

From a survey of Captain Cook's character, it is natural to extend our reflections to the effects of the several expeditions in which he was engaged. These, indeed, must have largely

"engaged in, quick and sure. His designs were bold and manly; and both in the conception, and in the mode of execution, bore evident marks of a great original genius. His courage was cool and determined, and accompanied with an admirable presence of mind in the moment of danger. His temper might perhaps have been justly blamed, as subject to hastiness and passion, had not these been disarmed by a disposition the most benevolent and humane. Such were the outlines of Captain Cook's character; but its most distinguishing feature was that unremitting perseverance in the pursuit of his object, which was not only superior to the opposition of dangers, and the pressure of hardships, but even exempt from the want of ordinary relaxation. During the long and tedious voyages in which he was engaged, his eagerness and activity were never in the least abated. No incidental temptation could detain him for a moment: even those intervals of recreation, which sometimes unavoidably occurred, and were looked for by us with a longing, that persons, who have experienced the fatigues of service, will readily excuse, were submitted to by him with a certain impatience, whenever they could not be employed in making a farther provision for the more effectual prosecution of his designs (16)."

(16) King's Voyage, p. 48, 49.

"The character of Captain Cook," says Mr. Samwell, "will be best exemplified by the services he has performed, which are universally known, and have ranked his name above that of any navigator of ancient or of modern times. Nature had endowed him with a mind vigorous and comprehensive, which in his riper years he had cultivated with care and industry. His general knowledge was extensive and various: in that of his own profession he was unequalled. With a clear judgment, strong masculine sense, and the most determined resolution; with a genius peculiarly turned for enterprise, he pursued his object with unshaken perseverance:—vigilant and active in an eminent degree:—cool and intrepid among dangers; patient and firm under difficulties and distress; fertile in expedients; great and original in all his designs; active and resolved in carrying them into execution. These qualities rendered him the animating spirit of the expedition: in every situation, he stood unrivalled and alone; on him all eyes were turned; he was our leading-star, which at its setting, left us involved in darkness and despair. His constitution was strong, his mode of living temperate.—He was a modest man, and rather bashful; of an agreeable lively conversation, sensible and intelligent. In his temper he was somewhat hasty, but of a disposition the most friendly, benevolent, and humane. His person was above six feet high, and though a good-looking man, he was plain both in address and appearance. His head was small; his hair, which was a dark brown, he wore tied behind. His face was full of expression; his nose exceedingly well shaped; his eyes, which were small and of a brown cast, were quick and piercing; his eye-brows prominent, which gave his countenance altogether an air of austerity. He was beloved by his people, who looked up to him as to a father, and obeyed his commands with alacrity. The confidence we placed in him was unremitting; our admiration of his great talents unbounded; our esteem for his good qualities affectionate and sincere.—He was remarkably distinguished for the activity of his mind: it was that which enabled him to pay an unwearied attention to every object of the service. The strict economy he observed in the expenditure of the ship's stores, and the unremitting care he employed for the preservation of the health of his people, were the causes that enabled him to prosecute discoveries in remote parts of the globe, for such a length of time as had been deemed impracticable by former navigators. The method he discovered for preserving

"the health of seamen in long voyages, will transmit his name to posterity as the friend and benefactor of mankind: the success which attended it, afforded this truly great man more satisfaction, than the distinguished fame that attended his discoveries. England has been unanimous in her tribute of applause to his virtues, and all Europe has borne testimony to his merit. There is hardly a corner of the earth, however remote and savage, that will not long remember his benevolence and humanity. The grateful Indian, in time to come, pointing to the herds grazing his fertile plains, will relate to his children how the first stock of them was introduced into the country; and the name of Cook will be remembered among those benign spirits, whom they worship as the source of every good, and the fountain of every blessing (17)."

At the conclusion of the Introduction to the Voyage to the Pacific Ocean, is an eulogium on Captain Cook, drawn up by one of his own profession, of whom it is said, that he is not more distinguished by the elevation of rank, than by the dignity of private virtues (18). Though this excellent eulogium must be known to many, and perhaps to most, of my readers, they will not be displeased at having the greater part of it brought to their recollection. Captain James Cook "possessed," says the writer, "in an eminent degree, all the qualifications requisite for his profession and great undertakings; together with the amiable and worthy qualities of the best men. Cool and deliberate in judging: sagacious in determining: active in executing: steady and persevering in enterprising from vigilance and unremitting caution: unsubdued by labour, difficulties, and disappointments: fertile in expedients: never wanting presence of mind: always possessing himself, and the full use of a sound understanding. Mild, just, but exact in discipline: he was a father to his people, who were attached to him from affection, and obedient from confidence. His knowledge, his experience, his sagacity, rendered him so entirely master of his subject, that the greatest obstacles were surmounted, and the most dangerous navigations became easy, and almost safe under his direction. By his benevolent and unabating attention to the welfare of his ship's company, he discovered and introduced a system for the preservation of the health of seamen in long voyages, which has proved wonderfully efficacious. The death of this eminent and valuable man was a loss to mankind in general; and particularly to be deplored by every nation that respects useful accomplishments, that honours science, and loves the benevolent and amiable affections of the heart. It is still more to be deplored by this country, which may justly boast of having produced a man hitherto unequalled for nautical talents; and that sorrow is farther aggravated by the reflection, that his country was deprived of this ornament by the enmity of a people, from whom, indeed, it might have been dreaded, but from whom it was not deserved. For, actuated always by the most attentive care and tender compassion for the savages in general, this excellent man was ever assiduously endeavouring, by kind treatment, to dissipate their fears, and court their friendship; overlooking their thefts and treacheries, and frequently interposing, at the hazard of his life, to protect them from the sudden resentment of his own injured people.—Travel!er! contemplate, admire, revere, and emulate this great master in his profession; whose skill and labours have enlarged natural philosophy; have extended nautical science; and have disclosed the long concealed and admirable arrangements of the Almighty in the formation of this globe, and, at the same time, the arrogance of mortals, in presuming to account, by their speculations, for the laws by which he was pleased to create it. It is now discovered, beyond all doubt, that the same great

(17) Some particulars concerning the life and character of Captain Cook, annexed to the narrative of his death, p. 25—27.
(18) Introduction, p. lxxxv.

largely appeared in the general History of his Life; and they have finely been displayed by Dr. Douglas (now Bishop of Carlisle) in his admirable Introduction to the Voyage to the Pacific Ocean. Under the conduct of so able a guide, I shall subjoin below a short view of the subject [22].

Consider-

"great Being who created the universe by his fiat, by the same ordained our earth to keep a just poise, without a corresponding southern continent, and it does so. *He stretches out the North over the empty place, and hangeth the earth upon nothing.* Job xxvi. 7. If the arduous but exact researches of this extraordinary man have not discovered a new world, they have discovered seas un navigated and unknown before. They have made us acquainted with Islands, people, and productions of which we had no conception. And if he has not been so fortunate as Americus, to give his name to a continent, his pretensions to such a distinction remain unrivalled; and he will be revered while there remains a page of his own modest account of his voyages, and as long as mariners and geographers shall be instructed, by his new map of the southern hemisphere, to trace the various courses and discoveries he has made. If public services merit public acknowledgments; if the man who adorned and raised the fame of his country is deserving of honours, then CAPTAIN COOK deserves to have a monument raised to his memory, by a generous and grateful nation.

"Virtutis uberrimum alimentum est honos.

"Val. Maximus, lib. ii. cap. 6 (19)."

"The last character I shall here insert of Captain Cook, comes from a learned writer, who, in consequence of some disagreements which are understood to have subsisted between him and our great Navigator, cannot be suspected of intending to celebrate him in the language of flattery. Dr. Reinhold Forster, having given a short account of the Captain's death, adds as follows: "Thus fell this truly glorious and justly admired Navigator.—If we consider his extreme abilities, both natural and acquired, the firmness and constancy of his mind, his truly paternal care for the crew entrusted to him, the amiable manner with which he knew how to gain the friendship of all the savage and uncultivated nations, and even his conduct towards his friends and acquaintance, we must acknowledge him to have been one of the greatest men of his age, and that reason justifies the tear which friendship pays to his memory (20)." After such an encomium on Captain Cook, less regard may justly be paid to the deductions from it, which are added by Dr. Forster. What he hath said concerning the Captain's temper, seems to have received a tincture of exaggeration, from prejudice and personal animosity; and the Doctor's insinuation, that our Navigator obstructed Lieutenant Pickersgill's promotion, is, I have good reason to believe, wholly groundless. There is another error which must not pass unnoticed. Dr. Forster puts in his caveat against giving the name of Cook's Straits to the Straits between Asia and America, discovered by Beering. But if the Doctor had read the Voyage to the Pacific Ocean, published by authority, he would have seen, that there was no design of robbing Beering of the honour to which he was entitled."

[22] I shall subjoin below a short view of the subject.]

"It must, however, be observed, that, with regard to the three principal consequences of our great Navigator's transactions, I have nothing farther to offer. These are, his having dispelled the illusion of a *Terra Australis Incognita*; his demonstration of the impracticability of a northern passage from the Pacific to the Atlantic Ocean; and his having established a sure method of preserving the health of seamen in the longest voyages, and through every variety of latitude and climate. Concerning each of these capital objects, I have already so fully spoken, that it is not in my power to add to the impression of their importance, and of Captain Cook's merits in relation to them, which, I trust, is firmly fixed on the mind of every reader.

It is justly remarked, by the Bishop of Carlisle, that one great advantage accruing to the world from

our late surveys of the globe, is, that they have confuted fanciful theories, too likely to give birth to impracticable undertakings. The ingenious reveries of speculative philosophers, which have so long amused the learned, and raised the most sanguine expectations, are now obliged to submit, perhaps with reluctance, to the sober dictates of truth and experience. Nor will it be only by discouraging future unprofitable searches, that the late voyages will be of service to mankind, but also by lessening the dangers and distresses formerly experienced in those seas which are within the actual line of commerce and navigation. From the British discoveries, many commercial improvements may be expected to arise in our own times: but, in future ages, such improvements may be extended to a degree, of which, at present, we have no conception. In the long chain of causes and effects, no one can tell how widely and beneficially the mutual intercourse of the various inhabitants of the earth may hereafter be carried on, in consequence of the means of facilitating it, which have been explored and pointed out by Captain Cook.

The interests of science, as well as of commerce, stand highly indebted to this illustrious Navigator. That a knowledge of the globe on which we live is a very desirable object, no one can call in question. This is an object which, while it is ardently pursued by the most enlightened philosophers, is sought for with avidity, even by those whose studies do not carry them beyond the lowest rudiments of learning. It need not be said what gratification Captain Cook hath provided for the world in this respect. Before the voyages of the present reign took place, nearly half the surface of the earth was hidden in obscurity and confusion. From the discoveries of our Navigator, geography has assumed a new face, and become, in a great measure, a new science; having attained to such a completion, as to leave only some less important parts of the globe to be explored by future voyagers (21).

Happily for the advancement of knowledge, acquisitions cannot be obtained in any one branch, without leading to acquisitions in other branches, of equal, and perhaps of superior consequence. New oceans cannot be traversed, or new countries visited, without presenting fresh objects of speculation and enquiry, and carrying the practice, as well as the theory, of philosophy, to a higher degree of perfection. *Nautical astronomy*, in particular, was in its infancy, when the late voyages were first undertaken; but, during the prosecution of them, and especially in Captain Cook's last expedition, even many of the petty officers could observe the distance of the moon from the sun, or a star, the most delicate of all observations, with sufficient accuracy. As for the officers of superior rank, they would have felt themselves ashamed to have it thought that they did not know how to observe for, and compute the time at sea; though such a thing had, a little before, scarcely been heard of among seamen. Nay, first-rate philosophers had doubted the possibility of doing it with the exactness that could be wished. It must, however, be remembered, that a large share of praise is due to the Board of Longitude, for the proficiency of the Gentlemen of the Navy in taking observations at sea. In consequence of the attention of that Board to this important object, liberal rewards have been given to Mathematicians for perfecting the lunar tables, and facilitating calculations; and artists have been amply encouraged in the construction of instruments and watches, much more accurately and completely adapted to the purposes of navigation than formerly existed.

It is needless to mention what a quantity of additional information has been gained with respect to the rise and times of the flowing of the tides; the direction and force of currents at sea; and the cause and nature of the polarity of the needle, and the theory

(21) Lieutenant Roberts's admirable chart will set this matter in the strongest light.

(19) Introduction to the Voyage to the Pacific Ocean, p. lxxxvi —lxxxix.

(20) Forster's History of the Voyages and Discoveries made in the North, p. 404.

Considering the eminent abilities displayed by Captain Cook, and the mighty actions performed by him, it is not surprizing that his memory should be held in the highest estimation,

of its variations. Natural knowledge has been increased by experiments on the effects of gravity in different and very distant places: and, from Captain Cook's having penetrated so far into the Southern Ocean, it is now ascertained, that the phenomenon, usually called the *Aurora Borealis*, is not peculiar to high northern latitudes, but belongs equally to all cold climates, whether they be North or South.

Amidst the different branches of science that have been promoted by the late expeditions, there is none, perhaps, that stands so highly indebted to them as the science of botany. At least twelve hundred new plants have been added to the known system; and large accessions of intelligence have accrued with regard to every other part of natural history. This point has already been evinced by the writings of Dr. Sparrman, of the two Forsters, father and son, and of Mr. Pennant; and this point will illustriously be manifested, when the great work of Sir Joseph Banks shall be accomplished, and given to the world.

It is not to the enlargement of natural knowledge only, that the effects arising from Captain Cook's voyages are to be confined. Another important object of study has been opened by them; and that is, the study of human nature, in situations various, interesting, and uncommon. The Islands visited in the centre of the South Pacific Ocean, and the principal scenes of the operations of our discoverers, were untrodden ground. As the inhabitants, so far as could be observed, had continued, from their original settlement, unmixed with any different tribe; as they had been left entirely to their own powers for every art of life, and to their own remote traditions for every political or religious custom or institution; as they were uninformed by science, and unimproved by education, they could not but afford many subjects of speculation to an inquisitive and philosophical mind. Hence may be collected a variety of important facts with respect to the state of man; with respect to his attainments and deficiencies, his virtues and vices, his employments and diversions, his feelings, manners, and customs, in a certain period of society. Even the curiosities which have been brought from the discovered Islands, and which enrich the British Museum, and the late Sir Ashton Lever's (now Mr. Parkinson's) repository, may be considered as a valuable acquisition to this country; as supplying no small fund of information and entertainment.

Few enquiries are more interesting than those which relate to the migrations of the various families or tribes that have peopled the earth. It was known in general, that the Asiatic nation, called Malaysians, possessed, in former times, much the greatest trade in the Indies; and that they frequented, with their merchants ships, not only all the coasts of Asia, but ventured over even to the coasts of Africa, and particularly to the great Island of Madagascar. But that, from Madagascar to the Marquesas and Easter Island, that is, nearly from the East side of Africa, till we approach towards the West side of America, a space including above half the circumference of the globe, the same nation of the Oriental world should have made their settlements, and founded colonies throughout almost every intermediate stage of this immense tract, in Islands at amazing distances from the mother continent, and the natives of which were ignorant of each other's existence; is an historical fact, that, before Captain Cook's voyages, could be but very imperfectly known. He it is who hath discovered a vast number of new spots of land, lurking in the bosom of the South Pacific Ocean, all the inhabitants of which display striking evidences of their having derived their descent from one common Asiatic original. Nor is this apparent solely from a similarity of customs and institutions, but is established by a proof which conveys irresistible conviction to the mind, and that is, the affinity of language. The collections that have been made of the words which are used in the widely-diffused Islands and countries that have lately been visited, cannot fail, in the hands of such men as

a Bryant and a Marsden, to throw much light on the origin of nations, and the peopling of the globe. From Mr. Marsden, in particular, who has devoted his attention, time, and study to this curious subject, the literary world may hereafter expect to be highly instructed and entertained.

There is another family of the earth, concerning which new information has been derived from the voyages of our British Navigators. That the Esquimaux, who had hitherto only been found seated on the coasts of Labradore and Hudson's Bay, agreed with the Greenlanders in every circumstance of customs, manners, and language, which could demonstrate an original identity of nation, had already been ascertained. But that the same tribe now actually inhabit the islands and coasts on the West side of North America, opposite Kamtscharka, was a discovery, the completion of which was reserved for Captain Cook. In his narrative it will be seen that these people have extended their migrations to Norton Sound, Oonalashka, and Prince William's Sound; that is, to nearly the distance of fifteen hundred leagues from their stations in Greenland, and the coast of Labradore. Nor does this curious fact rest merely on the evidence arising from similitude of manners: for it stands confirmed by a table of words, exhibiting such an affinity of language as will remove every doubt from the mind of the most scrupulous enquirer.

Other questions there are, of a very important nature, the solution of which will now be rendered more easy than hath heretofore been apprehended. From the full confirmation of the vicinity of the two continents of Asia and America, it can no longer be represented as ridiculous to believe, that the former furnished inhabitants to the latter. By the facts recently discovered, a credibility is added to the Mosaic account of the peopling of the earth (22). That account will, I doubt not, stand the test of the most learned and rigorous investigation. Indeed, I have long been convinced, after the closest meditation of which I am capable, that sound philosophy and genuine revelation never militate against each other. The rational friends of religion are so far from dreading the spirit of enquiry, that they wish for nothing more than a candid, calm, and impartial examination of the subject, according to all the lights which the improved reason and the enlarged science of man can afford.

One great effect of the voyages made under the conduct of Captain Cook, is their having excited a zeal for similar undertakings. Other Princes and other nations are engaged in expeditions of navigation and discovery. By order of the French Government, Mess. de la Peyrouse and de Langle sailed from Brest, in August, 1785, in the frigates *Boussole* and *Astroloobe*, on an enterprize, the express purpose of which was the improvement of geography, astronomy, natural history, and philosophy, and to collect accounts of customs and manners. For the more effectual prosecution of the design, several Gentlemen were appointed to go out upon the voyage, who were known to excel in different departments of science and literature. M. Dagelet went as Astronomer; M. de la Martiniere, P. Recevoir, and M. de la Fresne, as Naturalists; and the Chevalier de Lamanon, and M. Monges, Junior, as Natural Philosophers. The officers of the *Boussole* were men of the best information, and the firmest resolution; and the crew contained a number of artificers, in various kinds of mechanic employments. Marine watches, and other instruments, were provided; and M. Dagelet was particularly directed to make observations with M. Condamine's invariable pendulum, to determine the differences in gravity, and to ascertain the true proportion of the equatorial to the polar diameter of the earth. From some accounts which have already been received of these voyagers, it appears, that they have explored the coast of California; have adjusted the situation of more than fifty places, almost wholly unknown; and have visited Owhyhee, and the rest of the

(22) Introduction to the Voyage to the Pacific Ocean, p. lvi-lxxv.

estimation, both at home and abroad. Perhaps, indeed, greater honour is paid to his name abroad than at home. Foreigners, I am informed, look up to him with an admiration which is not equalled in this country. A remarkable proof of it occurs, in the eulogy of our Navigator, by Michael Angelo Gianetti, which was read at the Royal Florentine Academy, on the ninth of June, 1785, and published at Florence, in the same year^(x). Not having seen it, I am deprived of the power of doing justice to its merit. If I am not mistaken in my recollection, one of the French Literary Academies has proposed a prize for the best eulogium on Captain Cook; and there can be no doubt but that several candidates will appear upon the occasion, and exert the whole force of their eloquence on so interesting a subject. To the applauses of our Navigator, which have already been inserted, I cannot avoid adding, in a note, some poetical testimonies concerning him. The first I shall produce is from a foreign Poet, M. l'Abbé Lisle. This Gentleman has concluded his "Les Jardins" with an encomium on Captain Cook, of which the following lines are a translation [RR].

It

(23) Critical Review, for April, 1788, p. 299, 300.

the Sandwich Islands (23). When the expedition shall be completed, the whole result of it will doubtless be laid before the public.

Although Captain Cook has made such vast discoveries in the Northern Ocean, on and between the East of Asia and the West coast of America, Mr. Coxe has well shewn that there is still room for a farther investigation of that part of the world. Accordingly, the object has been taken up by the Empress of Russia, who has committed the conduct of the enterprize to Captain Billings, an Englishman in her Majesty's service. As Captain Billings was with Captain Cook in his last voyage, he may reasonably be supposed to be properly qualified for the business he has undertaken. The design, with the execution of which he is entrusted, appears to be very extensive and important; and, if it should be crowned with success, cannot fail of making considerable additions to the knowledge of geography and navigation (24).

(24) Coxe's Comparative View of the Russian Discoveries, p. 27-30.

There is one event at home, which has evidently resulted from Captain Cook's discoveries, and which, therefore, must not be omitted. What I refer to, is the settlement at Botany Bay. With the general policy of this measure the present narrative has not any concern. The plan, I doubt not, has been adopted with the best intentions, after the maturest deliberation, and perhaps with consummate wisdom. One evident advantage arising from it is, that it will effectually prevent a number of unhappy wretches from returning to their former scenes of temptation and guilt, and may open to them the means of industrious subsistence and moral reformation. If it be wisely and prudently begun and conducted, who can tell what beneficial consequences may spring from it, in future ages? Immortal Rome is said to have risen from the refuse of mankind.

While we are considering the advantages the discoverers have derived from the late navigations, a question naturally occurs, which is, What benefits have hence accrued to the discovered? It would be a source of the highest pleasure to be able to answer this question to complete satisfaction. But it must be acknowledged, that the subject is not wholly free from doubts and difficulties; and these doubts and difficulties might be enlarged upon, and exaggerated, by an imagination which is rather disposed to contemplate and represent the dark than the luminous aspect of human affairs. In one respect, Mr. Samwell has endeavoured to shew, that the natives of the lately-explored parts of the world, and especially so far as relates to the Sandwich Islands, were not injured by our people; and it was the constant solicitude and care of Captain Cook, that evil might not be communicated in any place to which he came. If he was universally successful, the good which, in various cases, he was instrumental in producing, will be reflected upon with the more peculiar satisfaction.

There is an essential difference between the voyages that have lately been undertaken, and many which have been carried on in former times. None of my readers can be ignorant of the horrid cruelties that were exercised by the conquerors of Mexico and Peru; cruelties which can never be remembered, without blushing for religion and human nature. But to undertake expeditions with a design of civilizing the

Vol. IV.

world, and meliorating its condition, is a noble object. The recesses of the globe were investigated by Captain Cook, not to enlarge private dominion, but to promote general knowledge; the new tribes of the earth were visited as friends; and an acquaintance with their existence was sought for, in order to bring them within the pale of the offices of humanity, and to relieve the wants of their imperfect state of society. Such were the benevolent views which our Navigator was commissioned by his Majesty to carry into execution; and there is reason to hope that they will not be wholly unsuccessful. From the long-continued intercourse with the natives of the Friendly, Society, and Sandwich Islands, some rays of light must have darted on their infant minds. The uncommon objects which have been presented to their observation, and excited their surprise, will naturally tend to enlarge their stock of ideas, and to furnish new materials for the exercise of their reasonable faculties. It is no small addition to their comforts of life, and their immediate enjoyments, that will be derived from the introduction of our useful animals and vegetables; and if the only benefit they should ever receive from the visits of the English, should be the having obtained fresh means of subsistence, that must be considered as a great acquisition (25).

But may not our hopes be extended to still nobler objects? The connection which has been opened with these remote inhabitants of the world, is the first step toward their improvement; and consequences may flow from it, which are far beyond our present conceptions. Perhaps, our late voyages may be the means appointed by Providence, of spreading, in due time, the blessings of civilization among the numerous tribes of the South Pacific Ocean, and preparing them for holding an honourable rank among the nations of the earth. There cannot be a more laudable attempt, than that of endeavouring to rescue millions of our fellow-creatures from that state of humiliation in which they now exist (26). Nothing can more essentially contribute to the attainment of this great end, than a wise and rational introduction of the Christian Religion; an introduction of it in its genuine simplicity; as holding out the worship of one God, inculcating the purest morality, and promising eternal life as the reward of obedience. These are views of things which are adapted to general comprehension, and calculated to produce the noblest effects.

[RR] Of which the following lines are a translation.]

" Give, give me flowers: with garlands of renown
 " Those glorious exiles brows my hands shall crown,
 " Who nobly sought on distant coasts to find,
 " Or thither bore those arts that bless mankind:
 " Thee chief, brave Cook, o'er whom, to nature
 " dear,
 " With Britain Gallia drops the pitying tear.
 " To foreign climes and rude, where nought before
 " Announc'd our vessels but their cannons' roar,
 " Far other gifts thy better mind decreed,
 " The sheep, the heifer, and the stately steed;
 " The plough, and all thy country's arts; the crimes
 " Atoning thus of earlier savage times.
 " With peace each land thy bark was wont to hail,
 " And tears and blessings fill'd thy parting sail.

3 Q

" Receive

(x) Monthly Review, vol. lxxiii. p. 458.

(25) Introduction, *ubi supra*, p. lxxv, lxxvi.

(26) *Ibid.* p. lxxvii.

The Royal Society of London could not lose such a Member of their body as Captain Cook, without being anxious to honour his name and memory by a particular mark of respect.

"Receive a stranger's praise; nor, Britain, thou
 "Forbid these wreaths to grace thy Hero's brow,
 "Nor scorn the tribute of a foreign song,
 "For Virtue's sons to every land belong:
 "And shall the Gallic Muse disdain to pay
 "The meed of worth, when Lewis leads the way?
 "But what avail'd, that twice thou dar'dst to try
 "The frost-bound sea, and twice the burning sky,
 "That by winds, waves, and every realm rever'd,
 "Safe, only safe, thy sacred vessel steer'd;
 "That war for thee forgot its dire commands?
 "The world's great friend, ah! bleeds by savage
 "hands (27)."

(27) Gentleman's Magazine, vol. liii. p. 1044, 1045. The above translation was made by Mr. William Jackson of Canterbury. In the same Magazine, p. 1034, 1035, is the original French.

There have not been wanting elegant writers of our own country, who have embraced with pleasure the opportunities that have offered of paying a tribute of praise to Captain Cook. The ingenious and amiable Miss Hannah More has lately seized an occasion of celebrating the humane intentions of the Captain's discoveries.

"Had those advent'rous spirits who explore
 "Thro' ocean's trackless wastes, the far-sought
 "shore,
 "Whether of wealth insatiate, or of power,
 "Conquerors who waste, or ruffians who devour:
 "Had these possess'd, O Cook! thy gentle mind,
 "Thy love of arts, thy love of human-kind;
 "Had these pursu'd thy mild and lib'ral plan,
 "DISCOVERERS had not been a curse to man!
 "Then, blest'd Philanthropy! thy social hands
 "Had link'd dis sever'd worlds in brothers bands;
 "Careless, if colour, or if clime divide;
 "Then lov'd, and loving, man had liv'd, and
 "died (28)."

(29) SLAVERY, a Poem.

Soon after the account arrived in England of Captain Cook's decease, two poems were published in celebration of his memory; one of which was an Ode, by a Mr. Fitzgerald, of Gray's-Inn. But the first, both in order of time and of merit, was an Elegy, by Miss Seward, whose poetical talents have been displayed in many beautiful instances to the public. This Lady, in the beginning of her Poem, has admirably represented the principle of humanity by which the Captain was actuated in his undertakings.

"Ye, who ere while for Cook's illustrious brow
 "Pluck'd the green laurel, and the oaken bough,
 "Hung the gay garlands on the trophied oars,
 "And pour'd his fame along a thousand shores,
 "Strike the slow death-bell!—weave the sacred
 "verse,
 "And strew the cypress o'er his honor'd hearse;
 "In sad procession wander round the shrine,
 "And weep him mortal, whom ye sung divine!
 "Say first, what Pow'r inspir'd his dauntless
 "breast
 "With scorn of danger, and inglorious rest,
 "To quit imperial London's gorgeous plains,
 "Where, rob'd in thousand tints, bright Pleasure
 "reigns?—
 "What Pow'r inspir'd his dauntless breast to brave
 "The scorch'd Equator, and th' Antarctic wave?
 "Climes, where fierce suns in cloudless ardors
 "shine,
 "And pour the dazzling deluge round the Line;
 "The realms of frost, where icy mountains rise,
 "'Mid the pale summer of the polar skies?—
 "IT WAS HUMANITY!—on coasts unknown,
 "The shiv'ring natives of the frozen zone,
 "And the swart Indian, as he faintly strays
 "'Where Cancer reddens in the solar blaze,'
 "She bade him seek;—on each inclement shore
 "Plant the rich seeds of her exhaustless store;
 "Unite the savage hearts, and hostile hands,
 "In the firm compact of her gentle bands;
 "Strew her soft comforts o'er the barren plain,
 "Sing her sweet lays, and consecrate her fane.

"IT WAS HUMANITY!—O Nymph divine!
 "I see thy light step print the burning Line!
 "There thy bright eye the dubious pilot guides,
 "The faint oar struggling with the scalding tides.—
 "On as thou lead'st the bold, the glorious prow,
 "Mild, and more mild, the sloping sun-beams
 "glow;
 "Now weak and pale the lessen'd lustres play,
 "As round th' horizon rolls the timid day;
 "Barb'd with the fleeted snow, the driving hail,
 "Rush the fierce arrows of the polar gale;
 "And thro' the dim, unvaried, ling'ring hours,
 "Wide o'er the waves incumbent horror low'rs."

Captain Cook's endeavours to serve the inhabitants of New Zealand, by the vegetables and animals he left among them, are thus described.

"To these the Hero leads his living store,
 "And pours new wonders on th' uncultur'd shore;
 "The silky fleece, fair fruit, and golden grain;
 "And future herds and harvests bless the plain.
 "O'er the green foil his Kids exulting play,
 "And sounds his clarion loud the Bird of day;
 "The downy Goose her ruffled bosom laves,
 "Trims her white wing, and wantons in the
 "waves;
 "Stern moves the Bull along th' affrighted shores,
 "And countless nations tremble as he roars."

I shall only add the pathetic and animated conclusion of this fine Poem.

"But ah!—aloft on Albion's rocky steep,
 "That frowns incumbent o'er the boiling deep,
 "Solicitous, and sad, a softer form
 "Eyes the lone flood, and deprecates the storm.—
 "Ill-fated matron!—for, alas! in vain
 "Thy eager glances wander o'er the main!—
 "'Tis the vex'd billows, that insurgent rave,
 "Their white foam silvers yonder distant wave,
 "'Tis not his sails!—thy husband comes no more!
 "His bones now whiten an accursed shore!—
 "Retire,—for hark! the sea-gull shrieking soars,
 "The lurid atmosphere portentous low'rs;
 "Night's fullen spirit groans in ev'ry gale,
 "And o'er the waters draws the darkling veil,
 "Sighs in thy hair, and chills thy throbbing
 "breast—
 "Go, wretched mourner!—weep thy griefs to rest!
 "Yet, tho' through life is lost each fond delight,
 "Tho' set thy earthly sun in dreary night,
 "Oh! raise thy thoughts to yonder starry plain,
 "And own thy sorrow selfish, weak, and vain:
 "Since, while Britannia, to his virtues just,
 "Twines the bright wreath, and rears th' immortal
 "bust;
 "While on each wind of heav'n his fame shall rise,
 "In endless incense to the smiling skies;
 "THE ATTENDANT POWER, that bade his sails
 "expand,
 "And waft her blessings to each barren land,
 "Now raptur'd bears him to th' immortal plains,
 "Where Mercy hails him with congenial strains;
 "Where soars, on Joy's white plume, his spirit free,
 "And angels choir him, while he waits for THEE.

Captain Cook's discoveries, among other effects, have opened new scenes for a poetical fancy to range in, and presented new images to the selection of genius and taste. The Morais, in particular, of the inhabitants of the South Sea Islands, afford a fine subject for the exercise of a plaintive muse. Such a muse hath seized upon the subject; and, at the same time, has added another wreath to the memory of our Navigator. I refer to a Lady, who hath already, in many passages of her "Peru," in her "Ode on the Peace," and, above all, in her "Irregular Fragment," amply proved to the world, that she possesses not only the talent of elegant and harmonious versification,

respect. Accordingly, it was resolved to do this by a medal; and a voluntary subscription was opened for the purpose. To such of the Fellows of the Society as subscribed twenty guineas, a gold medal was appropriated: silver medals were assigned to those who contributed a smaller sum; and to each of the other Members one in bronze was given. The Subscribers of twenty guineas were Sir Joseph Banks, President; the Prince of Anspach, the Duke of Montagu, Lord Mulgrave, and Messieurs Cavendish, Peachey, Perrin, Poli, and Shuttleworth. Many designs, as might be expected, were proposed upon the occasion. The medal which was actually struck, contains, on one side, the head of Captain Cook in profile, and round it, *JAC. COOK OCEANI INVESTIGATOR ACERRIMUS*; and on the exergue, *REG. SOC. LOND. SOCIO SUO*. On the reverse is a representation of Britannia, holding a globe. Round her is inscribed, *NIL INTENTATUM NOSTRI LIQUERE*; and on the exergue, *AUSPICIIS GEORGII III.* Of the gold medals which were struck on this occasion, one was presented to his Majesty, another to the Queen, and a third to the Prince of Wales. Two were sent abroad: the first to the French King, on account of the protection he had granted to the ships under the command of Captain Cook; and a second to the Empress of Russia, in whose dominions the same ships had been received and treated with every degree of friendship and kindness. Both these presents were highly acceptable to the great personages to whom they were transmitted. The French King expressed his satisfaction in a very handsome letter to the Royal Society, signed by himself, and underwritten by the Marquis de Vergennes; and the Empress of Russia commissioned Count Osterman to signify to Mr. Fitzherbert the sense she entertained of the value of the present, and that she had caused it to be forthwith deposited in the Museum of the Imperial Academy of Sciences. As a farther testimony of the pleasure she derived from it, the Empress presented to the Royal Society a large and beautiful gold medal, containing on one side the effigies of herself, and on the reverse a representation of the statue of Peter the Great. After the general assignment of the medals, (which took place in the spring of the year 1784) there being a surplus of money still remaining, the President and Council resolved that an additional number should be struck off in gold, to be disposed of as presents to Mrs. Cook, the Earl of Sandwich, Dr. Benjamin Franklin, Dr. Cooke, Provost of King's College, Cambridge, and Mr. Planta. About the same time, it was agreed, that Mr. Aubert should be allowed to have a gold medal of Captain Cook, on his paying for the gold, and the expence of striking it; in consideration of his intention to present it to the King of Poland (y).

(y) From the books of the Royal Society, and papers in the possession of Sir Joseph Banks.

During the two visits of the Resolution and Discovery at Kamtschatka, it was from Colonel Behm, the Commandant of that Province, that the ships, and the officers and men belonging to them, had received every kind of assistance which it was in his power to bestow. His liberal and hospitable behaviour to the English navigators, is related at large in Captain King's Voyage. Such was the sense entertained of it by the Lords of the Admiralty, that they determined to make a present to the Colonel of a magnificent piece of plate, with an inscription expressive of his humane and generous disposition and conduct. The elegant pen of Dr. Cooke was employed in drawing up the inscription, which, after it had been subjected to the opinion and correction of some Gentlemen of the first eminence in classical taste, was as follows:

cation, but the spirit of true poetry. The conclusion of the Poem I refer to is as follows.

" Great Cook! Ambition's lofty flame
So oft directed to destroy,
Led *Thee* to circle with thy name,
The Smile of love, and hope, and joy!
Those fires that lend the dang'rous blaze
The devious comet trails afar,
Might form the pure, benignant rays
That gild the morning's gentle star—
Sure, where the Hero's ashes rest,
The nations late emerg'd from night
Still haste—with love's unwearied care:
That spot in lavish flowers is drest,
And fancy's dear, inventive rite
Still paid with fond observance there!

" Ah no!—around his fatal grave
No lavish flowers were ever strew'd,
No votive gifts were ever laid—
His blood a savage shore bedew'd!
His mangled limbs, one hasty prayer,
One pious tear by friendship paid,
Were cast upon the raging wave!
Deep in the wild abyss he lies,
Far from the cherish'd scene of home;
Far, far from Her whose faithful sighs

A husband's trackless course pursue;
Whose tender fancy loves to roam
With *Him* o'er lands and oceans new;
And gilds with Hope's deluding form
The gloomy path-way of the storm.

" Yet, Cook! immortal wreaths are thine!—
While Albion's grateful toil shall raise
The marble tomb, the trophied bust,
For ages faithful to its trust;
While, eager to record thy praise,
She bids the Muse of History twine
The chaplet of undying fame,
And tell each polish'd land thy worth;
The ruder natives of the earth
Shall oft repeat thy honour'd name;
While infants catch the frequent sound,
And learn to lisp the oral tale;
Whose fond remembrance shall prevail
Till Time has reach'd his destin'd bound."

It is somewhat remarkable, that female poets have hitherto been the chief celebrators of Captain Cook in this country. Perhaps a subject which would furnish materials for as rich a production as Camoen's *Lusiad*, and which would adorn the pen of a Hayley or a Cowper, may hereafter call forth the genius of some poet of the stronger sex.

(z) From papers
 in the possession
 of Sir Joseph
 Banks.

(a) From the in-
 formation of Sir
 Hugh Palliser.

Sir Hugh Palliser, who, through life, manifested an invariable regard and friendship for Captain Cook, has displayed a signal instance, since the Captain's decease, of the affection and esteem in which he holds his memory. At his estate in Buckinghamshire, Sir Hugh hath constructed a small building, on which he has erected a pillar, containing the fine character of our great Navigator that is given at the end of the Introduction to the last Voyage, and the principal part of which has been inserted in the present work. This character was drawn up by a most respectable Gentleman, who has long been at the head of the naval profession; the honourable Admiral Forbes, Admiral of the Fleet, and General of Marines; to whom Captain Cook was only known by his eminent merit and his extraordinary actions (a).

Amidst the numerous testimonies of regard that have been paid to Captain Cook's merits and memory, the important object of providing for his family hath not been forgotten. Soon after the intelligence arrived of his unfortunate decease, this matter was taken up by the Lords of the Admiralty, with a zeal and an effect, which the following authentic document will fully display.

“ At the Court at St. James's, the
 “ (L. S.) 2d of February, 1780;

“ Present,

“ The KING's Most Excellent Majesty in Council.

“ Whereas there was this day read, at the Board, a memorial from the Right Honourable
 “ the Lords Commissioners of the Admiralty, dated the 27th of last month, in the words
 “ following; viz.

“ Having received an authentic account of the death of that great Navigator, Captain
 “ James Cook, who has had the honour of being employed by Your Majesty in three
 “ different voyages, for the discovery of unknown countries, in the most distant parts
 “ of the globe; we think it our duty humbly to represent to Your Majesty, that this
 “ meritorious officer, after having received from Your Majesty's gracious benevolence,
 “ as a reward for his public services in two successful circumnavigations, a comfortable
 “ and honourable retreat, where he might have lived many years to benefit his family,
 “ he voluntarily relinquished that ease and emolument to undertake another of these
 “ voyages of discovery, in which the life of a Commander, who does his duty, must
 “ always be particularly exposed, and in which, in the execution of that duty, he fell,
 “ leaving his family, whom his public spirit had led him to abandon, as a legacy to his
 “ country. We do therefore humbly propose, that Your Majesty will be graciously
 “ pleased to order a pension of two hundred pounds a year to be settled on the widow,
 “ and twenty-five pounds a year upon each of the three sons of the said Captain James
 “ Cook, and that the same be placed on the ordinary estimate of the navy.

“ His Majesty, taking the said memorial into His Royal consideration, was pleased,
 “ with the advice of His Privy Council, to order, as it is hereby ordered, that a pension
 “ of two hundred pounds a year be settled on the widow, and twenty-five pounds a year
 “ upon each of the three sons of the said Captain James Cook, and that the same be placed
 “ on the ordinary estimate of His Majesty's navy; and the Lords Commissioners of the
 “ Admiralty are to give the necessary directions herein accordingly.

“ W. FAWKENER.”

(b) From the in-
 formation of Sir
 Joseph Banks.

The preceding memorial to the King was signed by the Earl of Sandwich, Mr. Buller, the Earl of Lisburne, Mr. Penton, Lord Mulgrave, and Mr. Mann; and the several officers of the Board of Admiralty seconded the ardour of their superiors, by the speed and generosity with which his Majesty's royal grant to Captain Cook's widow and children passed through the usual forms (b). Another occasion was afterwards seized of conferring a substantial benefit on the Captain's family. The charts and plates, belonging to the Voyage to the Pacific Ocean, were provided at the expence of Government; the consequence of which was, that a large profit accrued from the sale of the publication. Of this profit, half was consigned, in trust, to Sir Hugh Palliser and Mr. Stephens, to be applied to the use of Mrs. Cook,

Cook, during her natural life, and afterwards to be divided between her children [SS]. Honour, as well as emolument, hath graciously been conferred by his Majesty upon the descendants of Captain Cook. On the third of September, 1785, a coat of arms was granted to the family, of which a description will be given below [TT]. Our Navigator had six children; James, Nathaniel, Elizabeth, Joseph, George, and Hugh. Of these, Joseph and George died soon after their birth, and Elizabeth in the fifth year of her age. James, the eldest son, who was born at St. Paul's, Shadwell, on the thirteenth of October, 1763, is now a Lieutenant in Majesty's navy. In a letter, written by Admiral Sir Richard Hughes, in 1785, from Granada, to Mrs. Cook, he is spoken of in terms of high approbation. Nathaniel, who was born on the fourteenth of December, 1764, at Mile-end Old Town, was brought up, likewise, in the naval service, and was unfortunately lost on board his Majesty's ship Thunderer, Commodore Walsingham, in the hurricane which happened at Jamaica on the third of October, 1780. He is said to have been a most promising youth. Hugh, the youngest, was born on the twenty-second of May, 1776; and was so called after the name of his father's great friend, Sir Hugh Palliser (c).

(c) From the information of Mrs. Cook.

It hath often been mentioned, in terms of no small regret, that a monument hath not yet been erected to the memory of Captain Cook, in Westminster Abbey. The wish and the hope of such a monument are hinted at in the close of the Bishop of Carlisle's Introduction, so often referred to; and the same sentiment is expressed by the author of the Eulogium, at the end of that Introduction. Sir Hugh Palliser has also spoken to the like purpose, in a communication I received from him. It would certainly redound to the honour of the nation, to order a magnificent memorial of the abilities and services of our illustrious Navigator; on which account, a tribute of that kind may be regarded as a desirable thing. But a monument in Westminster Abbey would be of little consequence to the reputation of Captain Cook. His fame stands upon a wider base, and will survive the comparatively perishing materials of brass, or stone, or marble. The name of Cook will be held in honour, and recited with applause, so long as the records of human events shall continue in the earth: nor is it possible to say, what may be the influence and rewards, which, in other worlds, shall be found to attend upon eminent examples of wisdom and of virtue.] K.

[SS] And afterwards to be divided between her children.] A fourth was allotted to Captain King, and the remaining fourth to Mr. Bligh, and to the representatives of Captain Clerke. Mr. Anderson's representatives had previously been gratified.

[TT] Of which a description will be given below.] Azure, between the two polar stars Or, a sphere on the plane of the meridian, north pole elevated, circles of latitude for every ten degrees, and of longitude for every fifteen, shewing the Pacific Ocean between sixty

and two hundred and forty West, bounded on one side by America, on the other by Asia and New Holland, in memory of the discoveries made by him in that ocean, so very far beyond all former navigators. His track thereon is marked with red lines. And for crest, on a wreath of the colours, is an arm imbowed, vested in the uniform of a Captain of the Royal Navy. In the hand is the union jack, on a staff Proper. The arm is encircled by a wreath of palm and laurel.

COOPER, or COUPER (THOMAS), a learned Bishop in the XVIth Century, was born in the city of Oxford, about the year 1517, but not of such mean parentage as is insinuated by Anthony Wood [A]. He was educated in grammar-learning in the school joining to St. Mary Magdalen-College, of which he was a Chorister (a). Making great proficiency there beyond his years, he was elected first Demi, and then in 1539 Probationer, and, the year following, perpetual Fellow of that College (b). On the 7th of July 1539, he took the degree of Bachelor of Arts (c), and that of Master, June 6, 1543 (d). About which time, he became Master of the School wherein he had received his education (e). In 1546, he left his Fellowship, being then probably married, and applied himself to the studies of polite Literature and Physic (f). When Queen Mary came to the Crown, he being inclined to the Protestant Religion, took the degree of Bachelor of Physic, in 1556 (g), and practised in that faculty at Oxford (h). But, after that Queen's death, he returned to his former study of Divinity, and became a frequent and celebrated Preacher (i). March 18, 1566-7, he accumulated the degrees of Bachelor, and Doctor in Divinity (k); and, about that time, was made Dean of Christ-Church in Oxford (l); and for several years after, was Vice-Chancellor of the University (m). In 1569, he was made Dean of Gloucester (n); and February 24, 1570, consecrated Bishop of Lincoln (o). The 27th of July 1572, he preached a sermon at St. Paul's-Cross, in vindication of the Church of England, and its Liturgy; to which an answer was sent him by a dissatisfied person (p); which answer the industrious Mr. Strype hath printed at length, in his Annals of the Reformation (q). A few years after, he was desired to visit King's College in Cambridge [B], but refused to do it, unless he had a special commission for that

[A] But not of such mean parentage as is insinuated by A. Wood.] He was the son of John Couper, fourth son of Thomas Couper of the city of Chester, Esq; by Isabel daughter and sole heiress to Richard Goodman, Esq; Mayor of that city, A. D. 1497: which John was sent to Oxford, and entered a Commoner of St. Mary-

VOL. IV.

Magdalen-Hall; but, before he took a degree, unhappily married so much to the displeasure of his parents, that they never took notice of him afterwards, and he lived in Oxford very obscurely all the rest of his days (1).

[B] He was desired to visit King's College in Cambridge.] Of which, by Statute, he was the legal Visitor;

(1) From the information of William Cowper, Esq.

(*) Strype's Annals of the Reformation, vol. ii. p. 419.

that purpose (*r*). Upon occasion of the public exercises (known by the name of *Prophefings*) being continued in several parts of his diocese, particularly in Hertfordshire [*C*], the Queen sent him a letter, in 1577, to put a stop to those exercises (*s*). There was a design, in 1579, to remove him to Norwich, on the intended translation of Bishop Scambler to Ely; but, for certain reasons [*D*], Dr. Cooper declined this offer (*t*). He did a good service to his diocese in 1582, by getting a commission superseded, that had been obtained under pretence of discovering concealed lands and estates granted by the Crown; but which, in reality, was very perplexing and oppressive both to the Clergy and Laity (*u*). His distinguished merit and abilities having recommended him to his Sovereign's favour and esteem, he was translated in 1584, to the rich Bishopric of Winchester (*w*); where, as he had done before in every other station, he became much noted for his learning and sanctity of life (*x*). Soon after his consecration, he went and resided in his new diocese; and because it abounded with great numbers of Recusants, he thought it necessary to take an Ecclesiastical Commission along with him (*y*). Moreover, being apprehensive of great danger from them, and of an invasion that way, he petitioned the Privy-Council, to suppress the boldness of the Papists in the county of Southampton [*E*]. Not long after, he was accused of Covetousness (*z*), of which he cleared himself [*F*]. Upon the discovery of William Parry's treason, he put out 'an order of Prayer and Thanksgiving for the preservation of the Queen's life and safety; to be used in the Diocese of Winchester (*a*).' In the year 1588, he preached at St. Paul's-Cross, on the 17th of November, being a day of public thanksgiving, as well for the Queen's accession to the throne, as for the signal victory obtained over the Spanish Armada (*b*). This reverend and holy Bishop, as Mr. Wood styles him (*c*), died at Winchester, April 29, 1594, and was buried in the cathedral there, on the south-side of the choir, a little above the Bishop's seat. Over his grave was soon after laid a flat marble, with a Latin inscription in prose and verse [*G*]. The

Visitors; but as his visitations there were but from three years to three years, and it was not yet three years since his last visitation, he thought he could not take upon himself to visit them, without an extraordinary commission (2).

(2) Strype's Annals, ubi supra, p. 419.

[*C*] *The Queen sent him a Letter in 1577, to put a stop to the Prophefings, that were continued in his Diocese.* These Prophefings, otherwise named Exercises, were grounded upon 1 Corinth. XIV. 31. *Ye may all prophesy one by one, that all may learn, and all may be comforted.* They were set on foot in several parts of the kingdom about the year 1571 (3); and consisted of conferences among the Clergy, for the better improving of themselves, and one another, in the knowledge of Scripture and Divinity. For that purpose, certain Ministers within a convenient compass in each Diocese, assembled together in a parish church, commonly in some market-town; and there, one after another, gave their judgments briefly of the sense of some place or places of Scripture, propounded before to be discussed, either by the Bishop, or the Archdeacon's order, or some other grave person: and then it was determined by a Moderator (4). The chief members of the assemblies were Moderators, Writers, and Speakers. The Moderators, who were generally four in number, pitched upon the parts of Scripture that were to be handled. The Writers collected several observations upon every verse of those parts of Scripture, and so proceeded upon the whole. The Speakers discoursed, or enlarged, upon such portions as were severally assigned to them. Their method of proceeding was thus: They began and ended with prayer: then the first Moderator proposed and read the first verse of the text, or chapter that was to be handled. Upon which verse the Writers read in order the observations they had gathered. Then the Speaker assigned to that part of the text, enlarged upon the same. After him the rest of the Speakers had liberty to give any brief notes upon that verse. In the mean time, the Moderator's care, was to take notice of any error, negligence, or ignorance in any of the Writers and Speakers, and to correct and reform them. After which he farther added such observations as he had gathered upon that verse. And after him the rest of the Moderators, in due order, did the like, till as much was said upon that verse, as was thought convenient. All the time, both the Speakers and Writers, took notice in writing, of the observations given by any of the Speakers or Moderators. And so all the Moderators proceeded with the whole text, or chapter, verse by verse (5). These Prophefings, or Exercises, were put

(3) Strype's Annals, vol. ii. p. 90, &c.

(4) *Ibid.* p. 219.

(5) *Ibid.* vol. ii. p. 90, &c. 318, 319, &c. vol. iii. p. 328, 329.

down in the Diocese of Norwich in 1574 (6), but continued in others, particularly in the North, for above ten years after (7). However, they were almost generally suppressed in 1577 (8), on account of their being thought to be Seminaries of Puritanism.

(6) Strype's Life of Archbishop Parker, p. 460.

(7) *Idem*. Annals, vol. iii. p. 328.

(8) See Neal's Hist. of the Puritans, 2d edit. 1732, vol. i. p. 352, &c.

[*D*] *For certain reasons Dr. Cooper declined the offer of the See of Norwich.* His reasons were; that the greatness of the charge, and number of churches, would be either little or nothing diminished: the troublesomeness, and danger, of the Diocese far greater, than where he was: the credit of the place nothing more: the benefit of the living no whit amended: and the charges of the alteration very great (9).

(9) Strype's Annals, vol. ii. p. 590, 591.

[*E*] *He petitioned the Council to suppress the boldness of the Papists, &c.* Among other methods for it, he proposed, 'That an hundred, or two, of obstinate recusants, lusty men, well able to labour, might by some convenient commission be taken up and sent into Flanders as pioneers and labourers. Whereby the country should be disburthened of a company of dangerous people. And the rest that remained be put in some fear (10).'

(10) *Idem*, vol. iii. p. 240.

[*F*] *He was accused of Covetousness.* Of which he cleared himself, by producing a schedule of the value of his bishoprick, and the charges payable out of it. By that it appeared, that the clear value, or rent of assize, of that bishoprick amounted then to two thousand seven hundred pounds ten shillings and sixpence, yearly; and the charges issuing out of it, to two thousand three hundred and seventy-seven pounds: so remained clear to him, only three hundred and ninety eight pounds nine shillings. From the same schedule it moreover appears, that some of the Courtiers were quartered upon this bishopric. For there is one article in it thus, 'My Lord of Leicester's fee 100l.' And another, 'Paid yearly in annuities, granted by Bishop Gardiner and Bishop White; wherein Sir Fr. Walsingham's fee is contained—218l. 6s. 8d (11).'

[*G*] *With a Latin inscription in prose and verse.* Which is as follows. Round the stone. *Hic jacet Thomas Cooper olim Lincolnensis, nuper Wintoniensis Episcopus munificentissimus, doctissimus, vigilantissimus Præsul; qui religiosissime in domino obiit Aprilis 29. an. dom. 1594.* In the middle of the stone are these verses.

Thesaurus, Chronicorum, Cooperi cætera scripta
Dum remanent, celebri Cooperi fama manebit.
Oxonienfis erat, Glocestrensisque Decanus,
Continuus primæ Vicecancellarius Urbis,*

(*) It is so printed in Wood, but it should be *Chronicon*, in order to make up both the sense and the Tum verse.

several books he published, were these: I. 'The Epitome of Chronicles from the seventeenth year after Christ, to 1540, and thence afterwards to the year 1560.' Lond. 1560, 4to. The two first parts of this Chronicle, and the beginning of the third as far as the seventeenth year after Christ, were composed by Thomas Lanquet, a young man of twenty-four years of age. But he being cut off by untimely death, Mr. Cooper finished the work; and his part, which is the third, contains almost thrice as much as Lanquet's two parts, being chiefly taken from Achilles Pyrrinius. When it was finished, a third person published it surreptitiously, and in a very faulty manner, in 1559, under the title of *Lanquet's Chronicle*: whereupon, our author revised, corrected, and published it again in 1560, under the general title of *Cooper's Chronicle*, &c. The running title to the first and second part, is *Lanquet's Chronicle*; and to the third, *The Epitome of Chronicles*. II. *Thesaurus Linguae Romanae & Brittanicae*, &c. and *Dictionary Historicum & Poeticum*. Lond. 1565, fol. This Dictionary was so much esteemed by Queen Elizabeth, that she endeavoured to promote the author as high in the church as she could (d). It is an improvement of *Bibliotheca Eliotæ*; Elyot's Library or Dictionary; printed at Lond. 1541, fol. to which Mr. Cooper added thirty-three thousand words and phrases, besides a fuller account of the true signification of words (e): Or rather, it is taken out of Robert Stephens's *Thesaurus Linguae Latinae*, and out of *Frisii Lexicon Latino-Teutonicum* (f). III. 'A brief Exposition of such Chapters of the Old Testament, as usually are read in the Church at Common-Prayer, on the Sundays throughout the Year.' Lond. 1573, 4to. IV. 'Sermon at Lincoln 1575, on Matth. xvi. 26, 27.' Lond. 8vo. V. 'Twelve Sermons on Rom. i. 16. Matth. vii. 15, 16. 1 Cor. x. 1. 3. 5. Matth. xiii. 3. 5. and John viii. 46.' Lond. 1580, 4to. VI. 'An Admonition to the People of England. Wherein are answered not only the slanderous Untruths, reproachfully uttered by *Martin*, the Libeller, but also many other Crimes by some of his brood, objected generally against all Bishops, and the chief of the Clergy; purposely to deface and discredit the present state of the Church.' Lond. 1589, 4to. This was a solid and judicious answer to John ap Henry's scurrilous and abusive libels against the Established Church, published under the name of *Martin Mar-Prelate* (g). Ap Henry, or his Club of Puritans, replied to the Bishop's book, in two ludicrous pamphlets, intitled, 'Ha'ye any work for a Cooper?' and 'More Work for a Cooper (h).'
Bishop Cooper's character is represented by several writers in a very advantageous light. One styles him (i), a very learned man, eloquent, and well acquainted with the English and Latin languages. Another (k) says of him, that he was a man of great gravity, learning, and holiness of life. He was, says A. Wood (l), furnished with all kind of learning almost beyond all his contemporaries, and not only adorned the pulpit with his sermons, but also the Commonwealth of Learning with his writings. 'Of him, says Sir John Harrington (m), I can say much, and I should do him great wrong if I should say nothing: For he was indeed a reverent man, very well learned, exceeding industrious; and, which was in those dayes counted a great praise to him, and a chief cause of his preferment, he wrote that great Dictionary that yet bears his name. His life in Oxford was very commendable, and in some sort saint-like; for, if it be saint-like to live unreprouable, to bear a cross patiently, to forgive great injuries freely, this man's example is sampleless in this age.' He married a wife at Oxford [H], with whom he happened to be very unhappy, she proving unfaithful to his bed. 'The whole University, in reverence of the man, and indignity of the matter, offered to separate her from him by public authority, and so to set him free, being the innocent party. But he would by no means agree thereto, alledging he knew his own infirmity, that he might not live unmarried; and to divorce and marry again, he would not charge his conscience with so great a scandal.'

i. e. 'Here lies Thomas Cooper, formerly Bishop of Lincoln, and late of Winchester, a very bountiful, learned and vigilant prelate, who died piously in the Lord, April 29, in the year 1594. While Cooper's Dictionary, Chronicle, and other writings

are in being, Cooper's great fame will last. He was of Oxford, Dean of Gloucester, for several years Vice-Chancellor of the former; then he became Bishop of Lincoln, and thence was translated to Winchester, where he sat Bishop ten years. He was very learned, extremely bountiful to the poor, and with great diligence explained the divine oracles. The earth covers his body, but his soul is above the firmament: heavenly souls shall enjoy heavenly peace.' These ten verses on the death of Dr. Thomas Cooper, S. T. P. were made by W. S.'

[H] He married a wife at Oxford, &c.] By her he had two daughters, Elizabeth, wife of Dr. John Bellaw, some time Provost of Oriel-College, and Chancellor of the Diocese of Lincoln; and Mary, who was married to John Gouldwell, Gent (13).

(13) From the same information as above.

COOPER (ANTHONY ASHLEY), Earl of Shaftesbury, one of the ablest persons, greatest Politicians, and most distinguished Ministers in the last century. He derived from his birth, all the advantages that could spring from an honourable descent joined to a large fortune. His father was Sir John Cooper of Rockborn in the county of Southampton, Bart.

Bart. by Anne, daughter and sole heiress of Sir Anthony Ashley, of Winborne St. Giles in the county of Dorset, Knight and Baronet (a); from whom he inherited an estate of eight thousand pounds a year, and all the influence that arose from such a fortune, and the credit of his ancestors in the West of England, which was very considerable (b) [A]. He was born at Winborne St. Giles, July 22, 1621 (c), and educated with great care under the eye of his parents during his infancy, in which he discovered such extraordinary parts, as not only gave hopes of his becoming one day a person of excellent abilities, but rendered him even at that time the subject of general admiration; so that while a very boy he was considered as a prodigy, and, if we may credit his Historian, very extraordinary things were predicted of him (d) [B]. He had the misfortune to lose his father, March 23, 1631, before he was ten years of age, and thereby, as his only child, became entitled to his large estate (e). At the age of fifteen he was sent to the University of Oxford, and became a Fellow-Commoner of Exeter college, under the tuition of the famous Dr. Prideaux who was then Rector of it, and is said to have studied hard there for about two years (f), and very well maintained the character with which he came thither, of being a singular and most surprizing genius. He removed from thence to Lincoln's-Inn (g), where he applied himself with great vigour and diligence to the study of the Law, but more especially turned his thoughts to the gaining a perfect skill in the constitution of this kingdom, in which, as in every thing else that claimed his attention, he became a wonderful proficient, and on various occasions in the future course of life, clearly discovered, that no man more thoroughly understood it than himself (h). He was thus employed, when, in the nineteenth year of his age, he was chosen one of the Burgesses to represent the town of Tewkesbury in Gloucestershire, in that Parliament which met at Westminster April 13, 1640 (i), and of which very great hopes were entertained, but, to the great sorrow of the nation, were all frustrated by its sudden, unexpected, and fatal dissolution (k). We have no account of his distinguishing himself in that assembly, and indeed there was but very little time for it. It is however highly probable that he was very well affected to the King's service, of which he gave sufficient proofs at the beginning of the Civil Wars, by repairing to Oxford, and offering his service there to his Majesty, not for subduing or conquering his country, but for reducing such, as had either deserted or mistaken their duty, to his Majesty's obedience. This was a very extraordinary scheme for a person of two or three and twenty years of age to propose, and therefore it is not at all strange that it should surprize his Majesty, when, in an audience obtained for that purpose, he proposed

[A] Which was very considerable.] As to this Gentleman's descent, by the father's side, we find, that in the 22d of Henry VIII. Richard Cooper, Esq; purchased from Sir Amyas Pawlet the Manor of Pawlet (1), in Somersetshire, still in the possession of this family, and erected into a Barony in their favour by King Charles II. This Richard Cooper, by Jane his wife, daughter of Sir John Kingsmill, of Sydmonton, in the county of Southampton, Knight, had issue John Cooper, of Rockborn, in the same county, who was afterwards knighted, and was the father of Sir John Cooper, Knt. mentioned in the text, and who was also created Baronet, July 4, 1622. As for his mother's family, she was descended by the females from the ancient houses of Hamlynnes (2), Plesheys, and Malmaines, possessors of Winborne St. Giles, from whom it descended to Anthony Ashley, Esq; who, for his great services in the Cadiz expedition, where he acted as Secretary at War, had the honour of Knighthood conferred upon him (3). He was afterwards promoted to be one of the Clerks of the Privy-Council in the reign of King James I (4); but falling under the displeasure of that Prince, and being removed from his office, his large fortune, which consisted of two thousand marks a year in real estate, and as much in money and effects, tempted one Sir James Creighton (5) to enter into a wicked conspiracy with Henry Smith and Mary Rice, servants to Sir Anthony, in the year 1610, to deprive him of his life and fortune; in order to which, Mary Rice presented a petition to the King, setting forth, that her husband, William Rice, dead eighteen years before, was poisoned by Henry Smith, at the instance of Sir Anthony Ashley, and Henry Smith confessed the same: but upon referring this petition to the Chief Justice of the King's Bench, the whole iniquity was found out, and the conspirators punished in the Star-Chamber. This Sir Anthony Ashley, July 3, 1622, was created a Baronet (6), who by his wife, daughter of Philip Okeover, of Okeover, in the county of Stafford, had only one daughter, Anne, who married Sir John Cooper, by whom she had this only son, to whom his

grandfather was also godfather, and gave him both his names, so that he was christened Anthony Ashley, as being the presumptive heir of both families (7).

[B] Were predicted of him.] As the ancients were given to believe in omens and prodigies, so it was the foible of the last, as well as some preceding ages, to yield but too much faith to pretended prophecies and idle prognostications. Of this nature we may reckon what a certain writer tells us of a Protestant Gentleman, that flying out of Germany for his religion, was charitably received and entertained by Sir John Cooper, who being extremely taken with the wonderful parts of his son, who could not then be above nine years old, addressed him, in the presence of his father, in these words (8), 'Child, if thou wilt be religious, and keep close to God, and take care to avoid the vain and destructive allurements of prophaneness and debauchery, and entertain a fixed resolution to improve all thy parts and abilities for the advancing the Protestant Religion, you shall be a man of the largest parts in Christendom, and shall be an instrument of doing an extraordinary piece of service to your King, which shall be very acceptable to him, whereupon you shall stand high in his favour, and be promoted to very great honour, yet shall afterwards lose your Prince's favour, and be as much disrespected as before honoured and admired; yet, at the same time, you shall be one of the most popular men under Heaven: and that you may know that this will fall out according to my prediction, pray remember this that I am now going to tell you, and write it down in your pocket-book that you may not forget it. Not long after your coming from the University, you shall be in extream danger of drowning, telling him the very day when it should happen.' The author afterwards proceeds to shew, that this accident did happen, and was followed by all the other events hinted at in the prediction, which was not published till after the Earl of Shaftesbury's death, and it is very probable was invented not long before it.

(8) Life of the Earl of Shaftesbury, p. 9.

putting

putting an end to the war by acting upon such principles (*l*). We have this fact from a person who had the best opportunities of knowing the truth of it, whose candour in any other instance was never doubted, and whose account however has been neglected because it is without date, and does not seem to agree with other relations. But for all this it might very well have happened in the spring of the year 1643, and seems equally to deserve the reader's notice and belief [*C*]. It is very certain that Weymouth submitted on the ninth of August the same year (*m*), and we have a very long account in the work of the noble Historian, of the dispute that happened between Prince Maurice and the Marquis of Hertford, as to the appointing Sir Anthony Ashley Cooper Governor of that place, which was at first positively refused by the King, and at last, though not without great difficulty, granted (*n*). Whoever will take the pains to compare and consider these two seemingly inconsistent accounts, will find them very reconcileable, and clearly perceive, that the truth is to be collected from adverting to this circumstance, that as the former is given us by the friend of this Gentleman; so the latter, which for this purpose was also inserted in the notes [*D*], was penned when the noble author had no good opinion of the person

(*m*) Britain's Remembrancer, p. 23.

(*n*) Clarendon's History of the Rebellion, p. 348. Warwick's Memoirs, p. 260.

(*g*) Locke's Works, vol. iii. p. 471.

[*C*] *To deserve the reader's notice and belief.*] As no body was better acquainted with this noble Peer than Mr. Locke, so it is highly probable, that what he has left us concerning him was taken from his own mouth, or, if received from any other authority, at least confirmed by himself. What is said in the text is sufficient to shew, that it might possibly be true, and the authorities just mentioned, may induce us to believe it really was so (*g*). Mr. Locke's account runs thus: 'Being at Oxford in the beginning of the civil war, for he was on that side as long as he had any hopes to serve his country there, he was brought to King Charles I. by the Lord Falkland, his friend, then Secretary of State, and presented to him, as having something to offer to his Majesty worth his consideration. At this audience he told the King, that he thought he could put an end to the war if his Majesty pleased, and would assist him in it. The King answered, that he was a very young man for so great an undertaking. Sir, replied he, that will not be the worse for your affairs, provided I do the business. Whereupon the King shewing a willingness to hear him, he discoursed to him to this purpose. The Gentlemen and men of estates, who first engaged in that war, seeing now, after a year or two, that it seems to be no nearer the end than it was at first, and beginning to be weary of it, I am very well satisfied would be glad to be in quiet at home again, if they could be assured of a redress of their grievances, and have their rights and liberties secured to them. This I am satisfied is the present temper generally through all England, and particularly in those parts where my estate and concerns lie. If therefore your Majesty will empower me to treat with the Parliament garrisons, to grant them a full and general pardon, with an assurance that a general amnesty (arms being laid down on both sides) should reinstate all things in the same posture they were before the war, and then a free Parliament should do what more remained to be done for the settlement of the nation.' He added farther,

'That he would begin and try the experiment first in his own country, and doubted not but the good success he should have there, would open him the gates of other adjoining garrisons, bringing them the news of peace, and security in laying down their arms. Being furnished with full power, according to his desire, away he goes to Dorsetshire, where he managed a treaty with the garrisons of Pool, Weymouth, Dorchester, and others, and was so successful in it, that one of them was actually put into his hands, as the others were to have been some few days after. But Prince Maurice, who commanded some of the King's forces, being with his army then in those parts, no sooner heard that the town was surrendered, but he presently marched into it, and gave the pillage of it to his soldiers. This Sir Anthony saw with the utmost displeasure, and could not forbear to express his resentments to the Prince, so that there passed some pretty hot words between them; but the violence was committed, and thereby his design broken. All that he could do was, that he sent to the other garrisons he was in treaty

VOL. IV.

with to stand upon their guard, for that he could not secure his articles to them, and so this design proved abortive, and died in silence.'

[*D*] *Is also inserted in the notes.*] It is only by this method of carefully comparing, and candidly considering, the same passages, as they are variously related by persons of different sentiments and opposite opinions, that the real matter of fact ever comes to be known. The Earl of Clarendon was so much concerned in this affair, that he must have known it to the bottom: but whether he has related all he knew, or shewn how or why Sir Anthony-Ashley Cooper came to be suspected at Oxford, the reader must judge for himself. The story, as he tells it, runs thus (*o*). 'There was, says he, an accident fell out a little before this time, that gave new argument of trouble to the King, upon a difference between Prince Maurice and the Marquis. It hath been said, that the Earl of Carnarvon, who was General of the horse of the western army, had marched from Bristol the day before the Prince, and had taken Dorchester and Weymouth before his Highness came up to the army, both considerable places, and the seats of great malignity. The former was not thought necessary to be made a garrison, but the latter was the best port town of that county, and to be kept with great care. The Marquis had made some promise of the government thereof when it should be taken, of which they made no doubt, to Sir Anthony-Ashley Cooper, a young Gentleman of that county, of a fair and plentiful fortune, and one who, in the opinion of most men, was like to advance the place by being governor of it, and to raise men for the defence of it, without lessening the army, and had, in expectation of it, made some provision of officers and soldiers, when it should be time to call them together. Prince Maurice, on the other side, had some other person in his view, upon whom he intended to confer that charge when it should fall. In the moment that the town was taken, and before the Prince came thither, Sir Anthony hearing that the Marquis came not with the army, but remained some time at Bristol, made all the haste he could to him, and came thither the same day the King left it, and applied himself to the Marquis, who remembered his promise, and thought himself obliged to make it good, and that it was in his power so to do, since it appeared that the town was taken, before the King had declared to him, that he should not go to the army till when he ought to be looked upon as General of it. He conferred with the Chancellor of the Exchequer upon it, as a matter in which his honour was concerned, and on which his heart was set. "Sir Anthony came likewise to him, who was of his acquaintance, and desired his assistance; that after so much charge he had been put to in the expectation of it, and to prepare for it, he might not be exposed to the mirth and contempt of the country." It was evident, that if he returned with the commission from the Marquis (which he was most inclined to give him) both he and the commission would be affronted, and the town would not be suffered to submit to him: therefore

(*o*) Clarendon's Hist. of the Rebellion, p. 348.

person of whom he was speaking. Sir Anthony Ashley Cooper was also at that time High-Sheriff of the county of Dorset, and chose therefore in that quality, rather than by virtue of any military commission, to raise, as he had power to do, the whole strength of the county, and to embark them at once in the cause of the King and the Constitution (o). To this intent he issued his summons for assembling the *Posse Comitatus*, on a day certain at Dorchester, which is the county town, but, before that day came, he was invited to Oxford by a letter from his Majesty; Col. Goring was sent into his neighbourhood with some forces (p); and Col. William Ashburnham came to him at Dorchester, and produced a commission of such a nature, as plainly enough demonstrated that there was no intention to confide in him, or to allow him to proceed in that way which he thought could alone determine this contest, without involving the nation in a long and bloody war (q). He conferred notwithstanding with Col. Ashburnham, told him what he had done, and with what view; but perceiving plainly that his behaviour was disliked, and his person in danger, he retired, first to his own house, and from thence went into the Parliament quarters (r). Neither was it long after that he went up to London, where he was very well received by the leading men on that side, who knew well his weight and interest in his county, and had a very high opinion of his parts and capacity to serve them, in case they could attach him thoroughly to their interests. This however was not very easily done, for though the Noble Historian is pleased to say, (and though it be his it is but a coarse saying) *That he gave himself up body and soul to the Parliament* (s), yet this does not very clearly appear, since it is very certain that he betrayed none of the counsels with which he was trusted at Oxford, nor took any other step, by which he might render his former connections any way useful to those whom he had now joined (t). But it is indeed evident that he accepted a commission from the Parliament (u), and raised forces in Dorsetshire for the recovery of some places out of the hands of those, who he thought had nothing else in view but carrying on a war for the entire reduction of the kingdom, the merit of which might entitle them to great rewards, from the new government that might be then established upon the ruins of the antient and legal constitution (w); and it is no wonder at all that he should oppose this, if we consider how large an estate he had, and consequently, exclusive of principles, how much it was his private interest to look unto the safety of his country (x). In October 1644 he took Wareham by storm, and very soon after reduced all the adjacent parts of Dorsetshire. This, and some other actions of the same nature, might possibly induce the Earl of Clarendon to add to the harsh character beforementioned, that he became *an implacable enemy to the Royal family* (y). One may reasonably suppose they had other sentiments of him at Oxford, since he was trusted with some private negotiations between his Majesty and Denzil Lord Hollis, at the treaty of Uxbridge, for which the latter was afterwards questioned in Parliament, and had lost

the Chancellor was of opinion, that there was no other way but to appeal to the King, and desire his favour, as well as his justice, in giving his commission to the person designed by the Marquis, which would remove that part of the exception which would most trouble the Prince; and he offered to write himself very earnestly to the King. Besides his desire to gratify the Marquis, he did, in truth, believe it of great importance to his Majesty's service, to engage a person of such a fortune and interest so thoroughly in his quarrel, as he then believed such an obligation must needs do, the flexibility and instability of that Gentleman's nature not being then understood or suspected.

He did write with all the skill and importunity he could use to the King, and writ to the Lord Faulkland, "To take Sir John Colepepper with him, if he found any aversion in the King, that they might together discourse and prevail with him." But his Majesty positively and obstinately refused to grant it, and said, "He would not, to please the Marquis in an unjust pretence, put a public disobligation and affront upon his nephew." So the express returned without effect, and the Marquis was as sensibly touched as could be imagined, and said, "That he was fallen from all credit with the King, and was made incapable of doing him further service; that his fidelity should never be lessened towards him, (as in truth he was incapable of a disloyal thought), but since he was become so totally useless to the King and to his friends, he hoped his Majesty would give him leave to retire to his own house, where he doubted not he should be suffered to live privately, and quietly to pray for the King." The Chancellor knew well the nature of the Marquis, that would never give him leave to pursue any resolution which he found might prove inconvenient to his Majesty, for

whom he had all possible duty; yet he knew too, that the mischief was not small, from the observation that the Marquis thought himself ill used, and that there were too many who would take the opportunity to foment those jealousies and discontents, and therefore resolved (having dispatched all things which were incumbent on him at Bristol, and used all freedom with the Marquis for the dispelling all troublesome imaginations) to go himself to the King, and to represent that affair to him, and the probable consequences of it, with new instances. And, at last, with very great difficulty, he did so far prevail with his Majesty, that he gave a commission to Sir Anthony-Ashley Cooper, to be Governor of Weymouth, which he was the more easily persuaded to, out of some prejudice he had to the person who he understood was designed to that government. The words *a little before this time*, at the beginning of this account, refer to the plundering of Weymouth and Melcombe, by Prince Maurice, which this writer acknowledges, at the same time he excuses it all he can. He adds however, that upon this, Lyme and Poole, the only two garrisons the Parliament had in those parts, instead of submitting, sent the Prince so peremptory an answer, that though he wanted not either troops or cannon, he did not think fit to approach them (11). This agrees exactly with the former relation, and we may easily discern why those who had broken their words with Sir Anthony were afraid to trust him; neither are the words the noble Historian puts into his mouth common sense, if he had not been deeper engaged than from this relation appears. This severe censure upon his mutability therefore might have been spared: if any reflections were to be made, they ought to have fallen upon that great soldier of fortune, who made so free with his own word, the liberties of the English nation, and the King his uncle's interests (12).

his life, if Sir Anthony Ashley Cooper could have found his memory of what passed in that business (z) [E]. Neither was this the only service he did the Royal cause: for when it began every where to decline, and consequently when there could be no motives of interest to induce him, he thought of a surprizing expedient for giving a check to the power of the Parliament, by raising the CLUB-MEN (a), who put Sir Thomas Fairfax, after the fatal battle of Naseby, to a stand, and which design had probably given a new turn to affairs, if it had been as vigorously executed, as it was wisely and warily concerted (b) [F]. Thus was Sir Anthony employed in propping the Royal Cause, when the Princes, Rupert and Maurice, abandoned the King, and accepted passes from the Parliament to retire beyond the seas (c). Towards the end of 1645 he was chosen Sheriff of Norfolk (d), and approved by Parliament. The next year he was Sheriff of Wiltshire, and had an ordinance of Parliament to enable him to reside out of the county (e). In 1651 he was of the Committee of Twenty, appointed to consider of ways and means for reforming the Law (f). He was also one of the Members of that Convention that met after General Cromwell turned out the Long Parliament, and was very active in opposing his ambitious designs, which occasioned the dissolution of that assembly (g). He was again a Member of the Parliament of 1654, and was one of the principal persons who signed that famous Protestation, charging the Protector with tyranny and arbitrary government: neither was it in Cromwell's power, when it was at the highest, to prevent his being elected, which forced him to turn him, and other honest Gentlemen, out of the House, which was done more than once, but particularly in 1656, when he shewed as much courage and firmness in exposing and thwarting the illegal measures of that arbitrary Usurper, as any man in the kingdom (h). It is indeed true, that the Protector endeavoured to gain him, as he did other persons of eminent parts and extensive influence, by appointing him one of his Privy-Council: but as to what has been suggested, of his aiming to become his son-in-law, and coming by that means into the chief management of affairs, may be well considered as a calumny (i), since it can be hardly doubted, that had it been true, Cromwell would not have missed that opportunity, of fixing him in the support of his government and of his family. When the Protector Richard was deposed, and the Rump came again into power, they nominated Sir Anthony one of their Council of State (k), and a Commissioner for managing the army. He was at that very time engaged in a secret correspondence with the friends of his Majesty King Charles II. laid the scheme of Sir George Booth's insurrection in 1659, and, if he had not been defeated, would have joined him with all the strength of Dorsetshire (l). This could not be so secretly carried, but that the Parliament had notice of it, and upon a complaint, that though Sir George Booth was the hand, yet another Knight was the head of that business, he was not only questioned but imprisoned. He defended himself with great art and skill, notwithstanding which, it was with infinite difficulty that he was acquitted and discharged (m) [G].

The

[E] Could have found his memory of what passed in that business.] In the treaty at Uxbridge the King had some separate and private communication with Lord Hollis, then Mr. Hollis, and the Lord Commissioner Whitlocke. Lord Saville, who, about that time, was created Earl of Essex, going over afterwards to the Parliament (13), gave information of this, and the warm and violent party, who hated Hollis for adhering steadily to his principles, were very desirous of having this imputation fixed upon him, which they apprehended it was in the power of Sir Anthony to do. There had been an old enmity between them, and Mr. Hollis had prevented Sir Anthony from coming into the House of Commons, though he had been fairly elected. When the latter came to be examined, he said, that though what he knew of that matter might possibly tend to acquit Hollis of the charge, yet he could not suffer himself to say any thing about it, because it would look as if he would have taken this occasion to revenge himself, in case it had been in his power (14). This did not satisfy the House by any means, so that they ordered him to withdraw, and threatened him with a commitment to the Tower. That had no effect, and though several of his friends came out to him in the Lobby, and persuaded him to satisfy the House; yet he would not depart from his first resolution, but answered, he neither could nor would remember any thing about it. After a long debate, the main question was put, and, for want of evidence, Mr. Hollis, though with difficulty, was acquitted (15). He went some time after to make his acknowledgments to Sir Anthony, who told him, he was not at all obliged to him, that he would have done the same thing for any other man in the like circumstances; but added, that he knew the value of his

friendship, and should be glad to merit it, by having the greatest regard for him for the future, which offer was very readily accepted, and a friendship commenced from thence, which lasted as long as their lives (16).

[F] As it was wisely and warily concerted.] The true state of the business there hinted at, was briefly this: Sir Anthony met with Serjeant Fountaine, by accident, at an inn, and in discoursing about public affairs, they quickly agreed in their sentiments, that the nation would be equally undone, which ever side prevailed, and that therefore it ought to be the aim of all well-disposed persons to compel the violent of both parties to sacrifice their animosities and private views to the interest of the public, that absolutely required a peace (17). In order to bring this about, the Commons in several counties were encouraged to take up arms, to declare themselves neutrals, and to insist upon a treaty, by which they might be restored to the benefit of the laws, and of the Constitution (18). This was carried so far, that Sir Thomas Fairfax received their proposals, and promised to communicate them to the Parliament; but General Cromwell and others, bent upon driving things to extremities, attacked some bodies of club-men, and getting the better of them, cut the poor people to pieces without mercy, which disconcerted the scheme, and frightened those who had the management of it from pursuing it as they intended (19). The reader will observe, that this was built upon the same principles with that proposition which Sir Anthony had made to the King about a year before.

[G] That he was acquitted and discharged.] These were times of infinite perplexity, and in which even men of the greatest abilities had much ado to secure themselves. It was on May 13, 1659, that Sir Anthony

The Rump afterwards appointed him one of the Committee to secure the Tower, one of the Six Commissioners for the command of the army, and Colonel of a regiment of horse (n). Soon after, with eight other members of the old Council of State, he signed a letter to General Monk to encourage him to march into England (o), which was the first direct step made towards the Restoration, as Sir Anthony's regiment of horse was one of the first that joined that General, upon his marching into this kingdom (p). It was by his influence that the abjuration oath was laid aside; and even the Noble Historian is pleased to allow, that as the revolt of the fleet under the command of Vice-Admiral Lawson, was what broke the heart of the Committee of Safety; so he is also forced to own, that this was brought about by Sir Anthony-Ashley Cooper, who gained that gallant officer (q) from his old patron Sir Henry Vane, and prevailed upon him to tell Sir Henry, when he came in person to the fleet, that he would submit to no authority but that of the Parliament. He was also very instrumental in quashing General Lambert's design, which had otherwise prevented the King's return (r); and though no doubt General Monk's intentions for the service of the King were very sincere, yet it is certain that Sir Anthony-Ashley Cooper put it out of his power to act otherwise than he did, by first procuring that great man an unlimited commission from the Parliament, and then obliging him in the Council of State, to remove such officers as they could not depend upon, and particularly Sir William Lockhart, who was Governor of Dunkirk, and to replace them by persons of whom they had a better opinion, as in that case by Edward Harley, which left no room for disputes (s). He was returned a member for Dorsetshire, in that which was called the Healing Parliament, which sat April 25, 1660, and a resolution being taken to restore the Constitution, he was named one of the twelve members of the House of Commons to carry their invitation to the King (t); and it was in his performing this service, that he had the misfortune to be overturned in a carriage upon a Dutch road, and thereby to receive a dangerous wound between the ribs, which ulcerated many years after, and was opened when he was Lord High-Chancellor, a circumstance necessary to be mentioned, on account of the scandalous reflections that were afterwards made upon it (u). Upon his return to England, and the King's coming over, he was, together with General Monk, and other great persons, sworn of His Majesty's Most Honourable Privy-Council (w). He was also one of the Commissioners for the trial of the regicides, and the reflection made thereupon by the Oxford Historian might have been spared, since nothing is more certain, than that he had nothing to do with the counsels of those, that either be-

thony-Ashley Cooper was appointed one of the Council of State, in which the executive part of the government was vested (20). Upon the 18th of the same month a charge was brought before that council against Sir Anthony and the Lord Commissioner Whitlocke, for corresponding with the King, or some of his Ministers abroad (21). It was the misfortune of this noble person, of whom we are speaking, to be as little in the good graces of Whitlocke, as of Clarendon, as will very plainly appear from the following account, which he gives us of Sir Anthony's defence (22). 'Sir Anthony-Ashley Cooper made the highest professions that could be made of his innocence, and the highest imprecations of God's judgments upon him and his posterity, if ever he had any correspondence with the King, or with Sir Edward Hyde, or any of the King's Ministers or friends; and his expressions were so high, that they bred in some the more suspicion of him; but at this time he was believed, and what followed afterwards is known.' It appears from hence, and from another passage that we shall have occasion to mention immediately, that this gentleman had no opinion of Sir Anthony's sincerity or veracity. But the question is, or at least ought to be, whether this opinion was well founded? Sir Anthony's life and fortune were at stake in this case; and, which is more, the welfare and safety of this nation: if therefore Sir Anthony had no concern or intercourse with the King, or his friends abroad, though he had concerted measures for procuring a free Parliament, in which the sense of the nation might be known, in reference to the government they were most inclined to live under, he certainly had a right to defend himself in what manner he thought proper: no doubt this was none of the most eligible methods, but perhaps it was the only method to preserve himself amongst such people. Now the fact was really thus, and this is not an apology contrived for the defence of this noble person's memory, but arises from evidence, which I will instantly produce. Many years after this, when he was Earl of Shaftesbury, and a prisoner in the tower, he wrote a letter to King Charles II. the following passage in which fully shews his principles, and from what views he promoted the Restoration (23).

The facts contained in it are very curious and very important, and I believe there will be hardly found any man so great a Sceptick as to believe, that the Earl of Shaftesbury would depart from truth, in a letter written to his sovereign, upon subjects of which that Prince was as much master as he. 'I had the honour to have a principal hand in your Restoration, neither did I act in it but on a principle of piety and honour: I never betrayed, as your Majesty knows, the party or councils I was of. I kept no correspondence with, nor I made no secret addresses to, your Majesty; neither did I endeavour or obtain any private terms or articles for myself, or reward for what I had done, or should do. In whatever I did towards the service of your Majesty, I was solely acted by the sense of that duty I owed to God, the English nation, and your Majesty's just right and title. I saw the hand of Providence that had led us through various forms of government, and had given power into the hands of several sorts of men, but he had given none of them a heart to use it as they should: they all fell to the prey, sought not the good or settlement of the nation, endeavoured only the enlargement and continuance of their own authority, and grasped at those very powers they had complained of so much, and for which so bloody and so fatal a war had been raised, and continued in the bowels of the nation. I observed the leaders of the great parties of religion, both laity and clergy, ready and forward to deliver up the rights and liberties of the people, and to introduce an absolute dominion; so that tyranny might be established in the hands of those that favoured their way, and with whom they might have hopes to divide the present spoil, having no eye to posterity, or thought of future things.' The accusation which occasioned this note hung in the House of Commons till the 14th of September, 1659, and then we have the following account of it from an author before cited (24). 'Sir Anthony-Ashley Cooper voted not guilty of the accusation against him, of having correspondence with the King. The question was not brought against me for the same matter, there being no ground for it as there was for the other.'

(24) Whitlocke's Memorials, p. 683.

(x) Rawleigh Redivivus, p. 52.
Wood's Ath. Oxon. vol. ii. col. 722.

trayed or shed the blood of their Sovereign (x). Upon the approach of the coronation, the King his master thought fit to raise him to the dignity of the peerage, and, by Letters Patent dated April 20, 1661, created him Baron Ashley of Winborne St. Giles's, with very honourable mention of the share he had in bringing him back to his kingdom (y) [H]. He was soon after made Chancellor and Under-Treasurer of the Exchequer (z); and upon the death of that loyal old Peer, and his great friend and patron, the wise and worthy Earl of Southampton, he was appointed one of the Lords Commissioners (a) for executing the office of High-Treasurer. He continued in the counsels and in the confidence of the King his master, during the happiest part of his reign, and stood as high in his favour as any of his Ministers. He was afterwards made Lord Lieutenant of the county of Dorset (b); and on the twenty-third of April 1672, he was created Baron Cooper of Pawlet in the county of Somerset, and Earl of Shaftesbury (c). At this time the Lord Keeper Bridgeman parting with the Seals, he was, on the fourth day of November, raised to the great and envied post of Lord High-Chancellor of England (d), which office he executed, as even his enemies allow, with equal ability and integrity [I]. In his other capacities, of a Minister and Privy-Counsellor, he has been variously spoken of, and it would require a volume to enter into the merits of the question, and to discuss fairly and impartially what has been said, and what might be said, on both sides. In this article, however, we cannot be expected to enter into any such field; and shall therefore be content with observing, that from the public records of his discharge of these offices, particularly his speeches in Parliament upon the swearing in the Lord High-Treasurer Clifford, his successor Sir Thomas Osborne and Mr. Baron Thurland (e), we must conclude him one of the ablest men, and one of the most accomplished orators, this nation has ever bred. The short time that he was at the helm was a season of storms and tempests, and it is but doing him strict justice to say, that they could not either affright or distract him. Whatever he did he did with his might, and there was a spirit and dignity in his administration, which that government could never recover after he left it (f). He was the soul and genius of the Ministry while he made a part of it; but whether he did not carry things too high, and out

(f) Memoirs; and A just Vindication of the Earl of Shaftesbury, p. 13.

[H] In bringing him back to his kingdom.] We have already shewn, from as good authority as can be desired, that this noble person, as he acted very cautiously on one side in the management of that nice affair, behaved also very disinterestedly on the other. Whitlocke very frankly owns, that he was ready to have gone to the King with proposals, and what he blames this great man for, was an intention to restore the King, without making terms (25). It was, however, the judgment of Lord Ashley, that this was the only right way of acting; for he thought that any terms so made would alter the Constitution; and what he chiefly aimed at by bringing back the king, was reviving the Constitution, which, from the experience of successive changes, he judged would be a blessing to the nation. Sir Philip Warwick tells us in his Memoirs, that himself, Sir Orlando Bridgeman, and Sir Geoffrey Palmer, met Mr. Annesly, afterwards Earl of Anglesey, Sir Anthony-Ashley Cooper, and Sir William Morrice, before the Healing Parliament sat, by which his Majesty was very well informed of their good intentions for his service (26). The same writer informs us, that General Monk was tampered with by the French Ambassador, and great offers made to support him, in case he had been susceptible of French counsels; and acquaints us, that it was upon the appointing of a new Council of State, the names of some of which he gives us, and amongst them Sir Anthony, that the old republicans began to fear the calling back of the King (27). There is also extant a letter to Admiral Montague, afterwards Earl of Sandwich, from Sir Anthony-Ashley Cooper, upon Lambert's defeat, which plainly shews his sense of things in general, and of that seasonable stroke in particular (28). But the words in the preamble to his patent are so full and express, that they need not any authority to support, or commentary to explain, them. In this his Majesty takes notice (29), 'that he had in sundry respects manifested his loyalty to King Charles I. and his great affection to his country in the late perilous and difficult times, and likewise to him, by his prudent and seasonable advice and consultation with General Monk, in order to his restoration, in consideration of which acceptable services he created him to the degree and dignity of a Baron.'

[I] With equal ability and integrity.] He resided, during his continuance in that employment, at Exeter-house in the Strand, and proceeded from thence to Westminster, with all the solemnity possible; for it was

his opinion, that ceremony and state were both useful and necessary to keep up the credit of great offices (30); for to use his Lordship's own words to Baron Thurland, Reputation is a thing of consequence to magistrates as well as merchants. He wore an ash-coloured silk gown, richly laced, and did not at all alter his garb upon his accession to that high seat of judicature. He was desirous of cutting business short, and of avoiding forms, in which we are told, that the Lawyers gave him so much trouble, that to be able to proceed, he was forced to return to them: however, he was as expeditious as it was possible, and his quick penetration enabled him to see very far in a short time, and what he saw, his eloquence made every body else see; so that whatever he decreed was so plain, and so perspicuous, that there needed no learning to perceive he was in the right, nor was it possible to puzzle things again so much as to create a doubt that he was in the wrong (31). This gave him a high reputation at that time; so that Mr. Dryden, to beget an opinion of his own impartiality, in that most invidious character which he gave of his Lordship, was forced to throw in a fine compliment upon his integrity in the distribution of justice (32). It was a point of too great consequence to be omitted, and it seems was then too well understood to be misrepresented. Some attempts have been since made to lessen his character, as a Chancellor; but whoever considers them attentively, and observes that they are destitute of facts, and published at a great distance of time, will not be much moved by them (33). Another writer, immediately after his Lordship's death, speaks of his behaviour thus (34): 'With what prudence, candour, honour, and integrity, he acquitted himself in that great and weighty employment, the transactions of the Court of Chancery, during the time of his Chancellorship, will best testify. Justice then ran in an equal channel, so that the cause of the rich was not suffered to swallow up the rights of the poor, nor was the strong or cunning oppressor permitted to devour the weak or unskilful opposer; but the abused found relief suitable to their distress, and those by whom they were abused a severe rephension, answerable to their crimes. The mischievous consequences which commonly arise from the delays, and other practices of that court were, by his ingenious and judicious management, very much abated, and every thing weighed and determined with exact judgment and equity.'

of the reach of all other capacities but his own, it would favour of rashness to determine (g) [K]. When the King had taken a resolution, as he was apt to take such resolutions without consulting others, of changing measures, the Chancellor very quickly discerned it; and as he knew it was for his safety, so he thought it no diminution to his honour, to follow the example of his Prince, and therefore he changed in time, in which his enemies say he had a very great dexterity; and, on the other hand, his friends believe, that he made a virtue of necessity, and when he saw that his great parts could be no longer serviceable to his Master in office, he thought it very allowable to make use of them to save himself (b): and in this it is no small commendation, that he retired with credit, where it would have been the highest point of wisdom in any other man to have escaped ruin (i). The Duke of York was apprehensive, from his conduct in Parliament, that he should find him in many respects uncomplying, and was therefore very earnest with the King to remove him, which however his Majesty was not much inclined to do, because he had a great opinion of his skill in finding out expedients, and of diverting dangers before things came to extremity (k). At length, however, that point was carried, and Nov. 9, 1673, the Earl of Shaftesbury resigned the Great-Seal, but with some particular circumstances, with the knowledge of which the reader cannot be displeased (l) [L]. After he had thus

(i) Rawleigh Redivivus, p. 37.

(l) Echard's Hist. of Engl. p. 393.

[K] *It would favour of rashness to determine.* All that is said, either in our general histories, or private memoirs, of the conduct of the Earl of Shaftesbury while in power, and as it were at the head of the administration, is liable to many objections, and ought therefore to be read with much circumspection. Such as have written direct apologies for him, of which there are several, will have every thing to have been not only well and wisely, but uprightly and virtuously done, which, perhaps, is more than ought to be advanced in favour of any Minister (35). On the other hand, such as make no secret of their dislike to this great man, very seldom shew the least scruple of painting him in the blackest colours; and both discover how far they deviate both from impartiality and truth, by running into palpable absurdities, and visible contradictions. A few instances seem to be requisite, that it may appear we have collected the materials of this article with that caution and care which its importance demands. There were three great strokes which distinguished the period of his ministry, and it is not a little difficult to form a right judgment of his behaviour in any one of them. The first of these is as to his shutting up the Exchequer. In reference to this, Sir Joseph Tyley's manuscript (36) positively affirms, that the measure was of Lord Ashley's contrivance, but that it was picked out of him when heated with wine, and in a free conversation by Sir Thomas Clifford, who, by that artifice, got himself advanced to the Peerage, and to the high dignity of Lord Treasurer of England. An honourable author affirms the direct contrary; he compares the Earl of Shaftesbury and the Lord Clifford to a sub-sheriff and a sheriff; the former, he says, had the authority, and the latter carried the wand (*). Both these stories cannot be true, and it is highly probable that neither of them are so. The Earl of Shaftesbury was not a man to be over-reached, and Lord Clifford had too great a capacity to stoop to any direction. It is most likely, that they acted in concert; and though it may be very true, that the Earl of Shaftesbury was ambitious of being Treasurer, yet he might be prevailed upon to give way to the Lord Clifford, because the very measure required the assistance of a Chancellor, and none of the great men in that administration were capable of exercising that office but the Earl of Shaftesbury. The Earls of Clarendon and Southampton had mutually supported each other in those posts, and we may very reasonably suppose, that Shaftesbury and Clifford proposed to follow their examples. Indeed it is certain they did follow them as long as they were in power; and whoever considers the speeches made by the Chancellor Shaftesbury, at the admission of Lord Clifford, and his successor, the Lord Osborne, to the office of Treasurer, will see such a manifest difference as will give no small weight to this conjecture (37). The second great stroke was, the declaration for Liberty of Conscience, in which both these great Ministers were equally concerned, though with very different views, for Lord Clifford was then a concealed, and not long after a declared, Papist: the Earl of Shaftesbury was desirous of obliging the Dissenters. The former was for maintaining this Declaration, even

against the opinion of Parliament; the latter, finding his master wavering, gave up the Declaration, that he might put himself at the head of the Protestant interest. They both acted, considering the circumstances under which the Declaration was framed, like wise Statesmen; and, when they came to divide, each of them shewed a steadiness to his principles, not in the least unworthy of a great politician; so that Lord Clifford retired with credit, and the Earl of Shaftesbury kept his power when he lost his post; and when no longer able to rule a Court, shewed his dexterity in becoming the ruler of the people (38). The third great stroke was peculiarly his, and that was, the issuing writs during the recess of Parliament, in virtue of his office, and making use of his interest in the country to procure elections in consequence of those writs, agreeable to the views of his administration. Father Orleans, who had his lights from King James, applauds this measure, and acknowledges as well the candour as the capacity of the Chancellor, in respect to his master's service (39). The honourable writer before-mentioned gives us quite another account. He tells us (40), the Chancellor did it to bring in his own creatures in Dorsetshire more especially, and to keep out the friends of Col. Strangeways, whom he disliked for many reasons, but most for being a very loyal gentleman. It happens unluckily, that he entirely overturns his own system, by acknowledging, that all the persons brought in by Shaftesbury's interest, were Royalists (41). However, the House of Commons turned them out again without the least struggle, either on the part of these new members, or of the Crown. Shaftesbury said upon this, that if the King would not support his Chancellor, his Chancellor could do little in that capacity for his master's service. Upon the whole, it seems to be pretty clear, that the Earl of Shaftesbury was in hopes the Court would have prosecuted the Dutch war with such success, as to have carried the glory of the English flag to the utmost height, promoted the English commerce in its largest extent, and have sacrificed that kind of bigotry, which he judged to be the bane of the Protestant Religion, in which case he thought the power of the Crown, and the grandeur of the people, must have stood upon the same basis; but finding that other schemes were bringing upon the carpet, though not by the King, but rather the Duke, he chose to make a short turn, and to comply with those who could save him, instead of continuing to play a desperate game in conjunction with such, as, to make their peace, might be tempted to make him a victim (42).

[L] *With the knowledge of which the reader cannot be displeased.* We have this relation, which is pleasant enough in its circumstances, and these are so much the more credible, from their agreeing exactly with the characters of the persons mentioned, from Mr. Archdeacon Echard, which we shall give the reader in his own words (43). 'Soon after the breaking up of the Parliament, the Earl was sent for, on a Sunday morning, to Court, as was also Sir Heneage Finch, Attorney-General, to whom the seals were promised. As soon as the Earl came, he retired with the King into the closet, while the prevailing party waited in triumph

quitted the Court, he continued to make a great figure in Parliament: his abilities enabled him to shine, and his inclinations did not incline him to rest (*m*). In 1675, the Lord Treasurer Danby introduced the Test Bill into the House of Lords, which was vigorously opposed by the Earl of Shaftesbury, who, if we may believe a great Prelate, distinguished himself more in this Session than ever he had done (*n*), which is somewhat singular, considering he had long before attained the reputation of being one of the greatest Speakers of that age. In this indeed he shewed his parts, and contradicted the character that some had given him, of being an indiscreet Orator, by insisting, for a full hour, on the folly and impropriety of condemning all resistance by an express law (*o*). He shewed, that as government could not subsist if men might resist as often as they were displeased; so liberty must be lost, if in no case resistance was lawful. He observed, that a King might be in the hands of a faction, and then it would be treason to oppose what had the sanction of his name, though it was to rescue his authority. He delivered this discourse with his usual ease and freedom, though he knew that every word he said was watched, and his enemies had the mortification of finding, that he could say what he pleased, without putting it in their power, how much soever it was in their will, to hurt him (*p*). A dispute between the two Houses, occasioned an unexpected prorogation, by which the bill was lost. There ensued upon this a recess of fifteen months, and when the Parliament met again Feb. 16, 1676-7, the Duke of Buckingham argued, that it ought to be considered as dissolved. The Earl of Shaftesbury was of the same opinion, and maintained it with so much warmth, that together with the Duke beforementioned, the Earl of Salisbury, and the Lord Wharton, he was sent to the Tower, where he continued for thirteen months, though the other Lords upon their submission were speedily discharged (*q*). In order to be delivered from his confinement, he applied himself to the Court of King's-Bench, where, after his Counsel had done speaking, he argued his own case with much eloquence and wit. He was notwithstanding remanded to the Tower, and, at the next meeting of Parliament, this application was magnified into a great crime by the then Lord Treasurer Danby, who very soon after was obliged to have recourse to the same method for his own deliverance, and felt very sensibly the weight of those severe doctrines, which he took so much pains to establish upon this occasion (*r*). At length the Earl of Shaftesbury made a full submission, and, upon an address of the House of Peers, the King was pleased to discharge him (*s*), and the precedent made in his case was afterwards reversed (*t*). He managed the opposition to the Earl of Danby's administration with such vigour and dexterity, that it was found absolutely impossible to do any thing effectually in Parliament, without changing the system which then prevailed. The King, who desired nothing so much as to be easy, resolving to make such a change, dismissed all the Privy-Council at once, and formed a new one: this was declared April 21, 1679, and at the same time the Earl of Shaftesbury was appointed Lord President (*u*). This was one of the best received, as well as one of the most popular measures, in his whole reign, and was equally acceptable to the people at home, and to the natural allies of this nation abroad (*v*). It had not however long the good effects that were expected from it, which was owing to the factions at Court; and those quickly rose to such a height, that the Earl was removed from that high employment on the fifth of October following (*x*). He had drawn upon himself the implacable hatred of the Duke of York, by steadily promoting, if not originally inventing, the project of an Exclusion Bill. In respect to this he was indeed immoveable, notwithstanding he knew the King would never consent to it, and though most of his friends were inclined to accept the expedient offered by the Court, of providing against what they feared, by establishing legal limitations. It is not our business to determine in so nice and important a point; but this we may have leave to say, that his Lordship's reasons were clear and weighty, allowing his principles to be well founded (*y*) [*M*].

'triumph to see him return without the pufse. His Lordship being alone with the King, said, Sir, I know you intend to give the seals to the Attorney-General, but I am sure your Majesty never intended to disappoint me with contempt. The King, who could not do an ill-natured thing, replied, God's fish, my Lord, I will not do it with any circumstance that may look like an affront. Then Sir, said the Earl, I desire your Majesty will permit me to carry the seals before you to chapel, and send for them afterwards from my house. To which his Majesty readily complied, and the Earl entertained the King with news, and other diverting stories, till the very minute he was to go to chapel, purposely to amuse the courtiers and his successor, who he believed was upon the rack for fear he should prevail upon the King to change his mind. The King and the still Chancellor came out of the closet talking together, and smiling, and went together to chapel, which surprized them all, who could have no opportunity to inform them-

selves what was to be expected; and some ran immediately to tell the Duke of York all their measures were broken; and the Attorney-General was said to be inconsolable. After sermon the Earl went home with the seals, and that evening the King gave them to the Attorney-General, a man of great parts and abilities, with the title of Lord Keeper.

[*M*] *Allowing his principles to be well founded.* It was a misfortune to the Earl of Shaftesbury, that those who were angry with him have transmitted to posterity the history of those times in which he lived, and of that government in which he had so large a share. As for instance, Sir William Temple having come in by the interest of the Earl of Arlington, and being afterwards supported by that of the Lord Treasurer Danby, could not avoid feeling a distaste to one who left the former, and opposed the latter; and of this there are visible marks in those passages of his Memoirs, where the Earl of Shaftesbury is mentioned (44). The Bishop of Salisbury was very intimate in his turn with

The discovery of the Popish plot opened a way for subverting the Earl of Danby's ministry, and the general opinion seems to be, that this induced the Earl of Shaftesbury to push that matter, not only with vigour but vehemence. There is nothing plainer than that he was the author and promoter of all the prosecutions that followed thereupon, as well in the inferior Courts, as in Parliament; with a view of quashing the Popish party entirely, and of excluding the Duke, which were the points he had most at heart, and which, without doubt, he pursued with unrelenting severity (x). Upon the King's summoning a Parliament to meet at Oxford, March 21, 1680-1, he joined with several Lords in a petition to prevent its meeting there (a), which however failed of success. He was present in that Parliament, and strenuously supported the Exclusion Bill, which however was thrown out in the House of Lords. He is likewise said to have used his utmost endeavours to have reconciled his Majesty to that measure, but without effect (b). It is no wonder that such a conduct as this should inflame the Duke and his friends against him, and not long after, an occasion either offered or was found, to make him feel the weight of their resentments. Upon the dissolution of that Parliament, and his return to London, one Bryan Haines applied himself to him, under pretence that he could make still clearer discoveries than hitherto had been made of the Popish plot, and the murder of Sir Edmund Bury Godfrey, provided, that for this service, he might obtain a pardon (c). But when this man was brought before the Privy Council, he gave quite another account, and boldly charged the Earl with endeavouring to suborn him (d). Upon this information his Lordship was apprehended on the second of July 1681, and after being examined by his Majesty in Council, he was committed to the Tower, where he remained upwards of four months, notwithstanding he petitioned, and took every other legal method to obtain a trial, or to be admitted to bail according to the *Habeas Corpus* Act (e). At length, on the twenty-fourth of October, 1681, a bill was presented to the Grand Jury at the Sessions House in the Old Bailey, against him, for high-treason, and the witnesses were examined in open court. They certainly testified enough, or rather too much: for, on the one hand, the evidence they gave was very incredible in itself; and, on the other, their characters were so infamous, that even a probable story would scarcely have deserved belief upon their deposition (f). But what was chiefly relied on, was a paper found in the Earl's study, which contained the draught of an association: yet it was neither written, or so much as marked, with his hand; and though it contained many strange things, yet it was full of the highest

the Earl of Shaftesbury, as well as other great men of those times, but had the misfortune to be upon bad terms with him afterwards, by bringing the unfortunate Lord Stafford to charge Shaftesbury at the Bar of the House of Lords, with being a friend to the Papists a little before he suffered death (45). The Hon. Roger North had his reasons also for disliking him, which he tells us very fairly; speaks upon all occasions as an enemy, but as an enemy declared, and therefore the less to be feared (46). It cannot be asserted, that when these writers relate facts concerning this noble Lord, they do not deserve credit; for as men of sense and reputation, that is due to whatever they relate, as a thing known: but these remarks, and many more that might be added, are sufficient to take off the edge of their censures, to lessen the credibility of their conjectures, and to keep the reader from having an implicit faith in the characters they have drawn of a man they did not love, and that chiefly, because he opposed those who are the heroes of their respective works, such as Lord Halifax, Lord Danby, and Lord North. As to the point of the Bill of Exclusion, it is generally mentioned as an instance of the Earl of Shaftesbury's dislike to monarchy, and those who opposed it are magnified as men who were best affected to what was, at that time, esteemed the English Constitution. One of those writers says, that the Earl of Shaftesbury never denied his changing sides, but, on the contrary, took a pleasure in relating the many turns he had made, and in shewing that he made them at the proper times (47). It might have been added, that he valued himself likewise upon never betraying those he left, and upon quitting parties without leaving his principles. He had a good opinion of King Charles the second's inclinations, and thought his affairs were prejudiced by carrying the dead weight of a Popish successor. This he thought necessary to be removed, and thought the only way to remove it, without prejudice to the monarchy, was to exclude the Duke of York, and pass on to the next heir. He judged that such a law, would be no improper instance of the absolute power of a King and Parliament, might provide for the safety of the subject, and yet leave the power of the Crown entire, without tinging the Con-

stitution with the least colour of a common wealth (48). How far he might act in this from his personal resentment against the Duke of York, what views he might have of re-establishing his own power, or what schemes he might be drawn into after the dissolution of the Oxford Parliament, are out of the case. We are speaking of the grounds upon which he promoted the Exclusion, and how far they were reconcileable to his former principles, of which the reader, from what has been said, may very easily settle his judgment. As for Lord Halifax, who was the great patron of the limitations, he made no scruple of owning, that he meant thereby not to limit the successor only, but to lessen and curtail the prerogatives of the Crown. He carried it so far, if we may believe the Bishop of Sarum, and there is not the least colour for disbelieving him, as to insinuate, that a Popish King was a blessing, as it afforded an opportunity of putting all his successors under these restraints (49). Now granting these accounts to be true, there cannot be any thing clearer than that Shaftesbury continued a Royalist, though at the head of an opposition, and that Lord Halifax acted, or affected to act, upon the maxims of a common-wealth's man, when in the service of the Court. The reasons why Shaftesbury always rejected the scheme of limitations were, first, because he thought it was not for the benefit of the subject, that the prerogatives of the Crown should be lessened, but that the abuse of those prerogatives by Ministers should be punished; and therefore he conceived it unjust, that the English Monarchy should suffer for the fault of the Duke of York; and secondly, he thought limitations impracticable, because, if the person limited came to be King, and had a Parliament to his mind, those limitations might be as easily and as legally repealed as ever they were enacted. It is evident, that neither of these objections lay against his scheme of the Exclusion; for that would have left the Monarchy sound and entire, and have placed such a new head as would have always maintained his own title, and must have governed by law, in order to have it effectually in his power to do that; which would have been an advantage to the nation, rather than an inconvenience.

zeal for the preservation of the King's person (g). Upon the whole, the Jury thought fit to return the bill *Ignoramus*. This occasioned a very high controversy, many asserting that this was inconsistent with their oaths, and others, who took themselves to be as good judges, maintaining as positively, that, consistently with their oaths, they could not have found another verdict; and several things were published on both sides (b) [N]. It is certain that

great

(g) Remarks upon the new Project of Association, where the Association is printed at large. (b) Rawleigh Redivivus, P. ii. p. 121.

[N] Were published on both sides.] The reader will find a full account of the proceedings against the Earl of Shaftesbury, upon this bill of indictment, in its proper place (50), and will there see what was sworn against him, and by whom. The great design of the Court was to make it evident to all the world, that the King could not obtain justice, even for the highest offences committed against him by a subject, from the manifest partiality of the Grand Juries in London, disposed and packed by malecontent sheriffs. The proof of this was supposed to depend on the manifest strength of the evidence offered to prove the facts laid in this indictment, which it was alledged the Grand Jury could not reject, without breach of their oaths (51). On the other hand, it was insisted upon, that the Grand Jury being sworn to bring in a true verdict, they could not, in their consciences, return *Billa vera*, where the evidence was inconsistent, given by infamous witnesses, and made up of absurd and incredible relations; in short, that a Grand Jury was bound to return *Ignoramus*, notwithstanding any evidence, when they, in their consciences, saw reason not to believe that evidence (52). To this purpose, a strong and bold piece was written, as a certain great Prelate informs us, by the learned and ingenious Mr. Somers, afterwards Lord Somers, and Chancellor of England (53). As for the Association mentioned in the text, the same Prelate tells us, and indeed it is very probable, that it was put into the hands of the Earl of Shaftesbury when the Parliament sat at Oxford, in which an Association had been proposed, as a necessary security against the apprehensions of Popery, and the dangers arising from a Popish Successor after the Exclusion Bill was rejected (54). Thus much is certain, that the Association was not mentioned in the indictment, but was offered as a supplemental and corroborative proof of what was sworn against his Lordship by the witnesses. There was another strange circumstance attended this, that one Mr. Wilton, who, on the part of the Earl, attended to receive back such of his papers as were seized, and were not considered as criminal, and to mark those of another nature, that it might appear they were really found in the Earl's custody; I say it was another strange circumstance in regard to this Association, that it was not indorsed as the other papers were, and that Mr. Wilton was committed for High-Treason (55). To say the plain truth, these were very dreadful times, when all parties had recourse to the most unjustifiable methods for carrying their points. Such as opposed the Government made no scruple of publishing the most bitter and injurious libels against it. On the other hand, those employed by the Court sacrificed truth and decency, without the least scruple. Marchmont Needham, who had been employed by the Regicides and the Parliament, to vilify the Royal Family in the most scandalous and barbarous manner, was paid by the Ministers to abuse and defame the Earl of Shaftesbury, which he did with all the alacrity in the world (56), and his abuse is transferred, verbatim, into the account given of this noble person by the Oxford Historian (57). It was given out, with the like design, that the Earl of Shaftesbury had the vanity to expect to be chosen King of Poland, and this made way for calling him Count *Tafsky*, alluding to the tap which had been applied upon the breaking out of the ulcer between his ribs when he was Lord Chancellor (58). It was also a standing jest with the lower form of Wits, to stile him *Shifsbury* instead of *Shaftesbury* (59). A very grave author is pleased to tell us, that when his Lordship was Chancellor, one Sir Paul Neal watered his mares with Rhenish and sugar, that is, entertained his mistresses (60); which, if true, was certainly a story that needed not to be communicated to posterity. We are told, that King Charles II. who would both take liberties and bear them, once

said to the Earl at Court, in a vein of raillery and good humour, and in reference only to his amours, *I believe, Shaftesbury, thou art the wickedest fellow in my dominions*. To which, with a low bow, and a very grave face, the Earl replied, *May it please your Majesty, of a subject I believe I am*; at which the merry Monarch laughed heartily. When parties were at their greatest height, the King would very often honour him with his conversation, and would ask his opinion upon indifferent things, which was not pleasing to the Ministers, as it carried nothing of that aversion which they would have had the world believe he entertained against his Lordship (61). In return, there is good reason to maintain, that whatever lengths party might carry him, his Lordship still retained a deep sense of that favour, with which his indulgent master had honoured him (62); and it happens a little strangely, that the author who has drawn this noble person's character in the blackest colours has, notwithstanding, left us a passage, which is the strongest proof of it (63). 'If he was a friend really to any human kind besides himself, I believe it was to King Charles II. whose gaiety, breeding, wit, good humour, familiarity, and disposition, to enjoy the pleasures of society and greatness, engaged him very much, that had a great share of wit, agreeableness, and gallantry himself. But this same superiority spoiled all; his Majesty would not be always influenced by him, but would take short turns on his toe, and so frustrate his projects: and by that, finding he could not work under him, strove, if possible, to reduce his authority, and get above him. It seems, by what was given out, that he would not have hurt the King personally, but kept him tame in a cage with his ordinary pleasures about him.'

(62) See his Letter to the King, at the end of Locke's Memoirs concerning the Earl's Life.

(63) North's Examen, p. 119.

* * [In the preceding narrative, there are two errors in point of fact, which require to be noticed. It is said that, in 1643, Sir Anthony-Ashley Cooper was High Sheriff of the county of Dorset, and chose in that quality, rather than by virtue of any military commission, to raise the whole strength of the county, in the cause of the King and the Constitution. But it appears, from the Rolls of Dorsetshire, which have been examined by a near relation of the family, that this account is not true. The mistake, of Sir Anthony's having been High Sheriff that year, arose from the active part which he then took in the public transactions of the county, as related in the article.

Another error, far less natural, and more easy to be avoided, but which, nevertheless, has been adopted by all his Biographers, is, that in 1645 he was High Sheriff of Norfolk. But with that county he had no connection, nor had he any property in it; so that he could have no pretension to exercise there the office described. The fact is, that the Sheriff of Norfolk at the time specified was Sir Jacob Astley, afterwards created Lord Astley.

Anthony-Ashley Cooper, first Earl of Shaftesbury, was so distinguished by his abilities and character, was advanced to such high stations, and took so active a part in the public transactions of his time, that his name frequently occurs in all the general histories of that period. Few, however, of the historical works that have lately been produced, record any other facts concerning him than those which are mentioned by the writers of the last century. We only meet with different representations of his character, according to the respective views and sentiments of the authors by whom his actions are related. The historian from whom we derive the most of what appears to be new with regard to the Earl of Shaftesbury, is Sir John Dalrymple. This Gentleman has ascertained two circumstances concerning him, which redound not a little to his honour. In the first place, Sir John

has

great rejoicings were made upon his Lordship's acquittal and discharge, and a MEDAL was also struck upon that occasion, which gave a subject to the satyric muse of Mr. Dryden, whose poem under that title is thought not at all inferior to any of his writings; which however decides nothing as to the fact, since Poets do not always succeed best upon the basis of truth or reason (i). The Earl, as soon as he was at liberty, endeavoured to vindicate himself by law, and brought an action against one Mr. Cradock, for speaking of him as a traitor. A rule however being made upon the motion of the defendant, that the trial should not be had before a Jury either of London or Middlesex, but in any other county that his Lordship should chuse, he thought fit to discontinue his suit (k). He resided for

has clearly proved, that the Earl, though he is always reckoned one of the cabal, had no concern in the iniquitous treaty which King Charles the Second entered into with the court of France in 1670, and by which he became a pensioner to Lewis the Fourteenth. The only members of the cabal who were privy to this treaty, were Lord Clifford and the Earl of Arlington; and it was conducted by the Lord Arundel of Wardour (64). Secondly, in the lists which Sir John Dalrymple has given of those Gentlemen who are said to have received sums of money from the French court, Lord Shaftesbury's name does not appear. Indeed, it is certain, from the best authority, that he refused large offers from that court; and his integrity in this respect is acknowledged by our historian (65). Whatever were the Earl's faults, he was above being bribed to act against the interests of his country; nor would he condescend to accept of any gratifications from the King of France, even when others of his party thought they might honestly do it, for the purpose of more effectually opposing the arbitrary designs of Charles the Second.—Another circumstance redounding to Lord Shaftesbury's honour, mentioned by Sir John Dalrymple, is, that his Lordship promoted the *Habeas Corpus* Act, that great palladium of the personal liberty of the subject (66).—Sir John has, likewise, taken notice of a remarkable instance of the Earl's popularity, in the latter part of his Life. This was in 1681, when the Grand Jury returned *ignoramus* to the Bill for High Treason that had been preferred against him; at which time the acclamations in the court were so great as to last an hour (67).

In these few things Sir John Dalrymple has borne an honourable testimony to Lord Shaftesbury's memory; but, in almost every other respect, he has been very severe upon his Lordship, and hath not only retailed the charges commonly urged against his character, but has loaded it with fresh accusations. Speaking of his being raised to the Peerage, upon the Restoration, Sir John says, that it was an honour afterwards ill requited by him (68): but surely the dignity conferred upon Ashley Cooper could afford no just reason why he should not oppose the measures of Charles the Second, when he found them to be arbitrary and tyrannical. Another point animadverted upon, is Lord Ashley's having assisted at the trial of the Regicides. "The most cruel circumstance," observes our Historian, "in the trial of these persons was, that several of the popular party, of whom Ashley Cooper was one, sat as their judges, and doomed them to die for that rebellion to which they had incited them (69)." Though we are far from approving of Lord Ashley's conduct on this occasion, we think, at the same time, that it was by no means so malignant as is here represented. There is something unjust in thus singling out his particular name, and exposing it to censure, when others were equally guilty, and ought, therefore, to have been mentioned. But it is not a fact that Lord Ashley doomed the Regicides to die for a rebellion to which he had incited them. He did not himself engage in the parliamentary cause till his endeavours to serve the King had, through misrepresentation, proved wholly ineffectual. When he did engage in that cause, he continued in arms but a very little time; and there is not the least shadow of a reason for believing that any of the persons in question were influenced by him in the part they took against Charles the First. Besides, it was not for their being concerned in the grand rebellion (as it is commonly cal-

led) that he joined in condemning them, but for their having been Regicides; for their having been the active and immediate instruments in bringing the King to the block; an event which Sir Anthony Ashley Cooper, in conjunction with the rest of the Presbyterians, must have regarded with the utmost abhorrence.

In the progress of his history, Sir John Dalrymple asserts, without hesitation, that it was by the advice of the Earl of Shaftesbury that Charles the Second seized the issues of the Exchequer (70). He ascribes to the Earl all the unconstitutional measures which had been adopted previously to his putting himself at the head of the opposition to the court (71); and yet Sir John had before acknowledged that his Lordship, while in power, was supported by the people, because he pretended a reverence for their rights (72). Nay, our historian has not scrupled to represent Lord Shaftesbury as the contriver of the Popish Plot. His note upon the subject is too curious to be omitted. "It has been much doubted," says he, "whether Shaftesbury contrived the Popish Plot, or if he only made use of it, after it broke out. Some papers I have seen convince me he contrived it, though the persons he made use of as informers ran beyond their instructions. The common objection to the supposition of his contriving the plot, is, the absurdity of its circumstances. When Shaftesbury himself was pressed with regard to that absurdity, he made an answer which shows equally the depth and the irregularity of his genius. An account of it is in North's Examen, p. 95. "A certain Lord of his confidence in Parliament, once asked him what he intended to do with the plot, which was so full of nonsense as would scarce go down with *tantum non* ideots: what then could he propose by pressing the belief of it upon men of common sense, and especially in Parliament?" "It is no matter," said he, "the more nonsensical the better: if we cannot bring them to swallow worse nonsense than that, we shall never do any good with them (73)." It is much to be lamented that Sir John Dalrymple has not produced the papers which convinced him that the Earl of Shaftesbury was the contriver of the Popish Plot. Amidst all the curious and valuable letters and memorials which compose the second volume of Sir John's publication, nothing could have been of greater importance than the production of these papers. If they had been published, and if they had been found undeniably to ascertain the fact which Sir John Dalrymple supposes them to prove, they would not only have for ever fixed, without controversy, the flagitiousness of Lord Shaftesbury's character, but would have cleared up one of the most obscure and intricate parts of the English history. As to the anecdote related by Roger North, it does not come up to the point; not to mention that he was a very prejudiced writer, and that every one, who is acquainted with the world, knows what little stress is often to be laid on the stories which are told on the authority of certain Lords, or other nameless persons. Till, therefore, the papers in question shall be produced, and till it shall appear that they contain not merely surmises, but undoubted facts, we must be permitted to pay no regard to Sir John Dalrymple's opinion. It is acknowledged, that the Earl of Shaftesbury prosecuted, with great violence, the persons who were accused of being concerned in the Popish Plot; nor have we any intention of attempting to vindicate his conduct in this respect. At the same time, we perceive

(70) *Ibid.* p. 33.

(72) *Ibid.* p. 32.

(73) *Ibid.* p. 43. note.

many years at Thanet House in Aldergate-street; but finding his health decay, his spirits declining, and the times growing still more and more tempestuous, to which we may add, that those who were his bitterest enemies were now in the zenith of their power, he thought it high time to seek for some place of retirement, where, out of the reach of their endeavours to injure him, he might wear out the small remainder of his life in peace (1). It was with this view, that in the month of November, 1682, he embarked for Holland, and arriving safely at Amsterdam, after a very dangerous voyage, he took a house there, proposing to live in a manner suitable to his quality, being visited by persons of the first distinction, and treated with all the deference and respect that he could desire; but being seized by his old

(1) Kennet's and Echard's Histories.

ceive no sufficient reason for questioning his belief in the reality of that plot. In such a belief, however mistaken it might be, he only concurred in sentiment with the wisest and best men of that period, with the nation in general, and with the solemn declarations of the two Houses of Parliament. That he was the contriver of the plot appears to us to be altogether incredible. If this had been the case, how could a fact so atrocious and important have escaped, for such a length of time, the most complete detection? No one had more bitter enemies than the Earl of Shaftesbury; and they would have rejoiced in every opportunity of exposing his character and actions. Nor would such an opportunity have been wanting, if he had been guilty of the crime with which he is charged. The plot grew into discredit; several of the informers, and particularly Titus Oates, were severely punished for the testimonies they had given; and yet it never appeared, in the course of the evidence, that the contrivance of this famous conspiracy originated in Lord Shaftesbury. We have much personal respect for Sir John Dalrymple, and are fully sensible of the value of the historical information contained in his memoirs; but we must be permitted to say, that he is sometimes too precipitate in his decisions.

Since the preceding reflections were written, we have had the pleasure of finding them confirmed by the opinion of Mrs. Macaulay Graham. This ingenious Lady observes in general, that the whole plot contains such low absurdities and palpable contradictions, that it is impossible it could be invented, or adopted by any man of parts or education (74); and with regard to Lord Shaftesbury in particular, she has the following remark. He "has been accused of forging the circumstances of the Popish Plot. But in all our historical researches, we cannot find any traces either of the Earl's having been the original contriver of those circumstances deposed by Oates and Bedloe, or even of aggravating the contrivance of others: and if this had been the case, it is impossible, considering the low and corrupt characters of the witnesses, and the malicious vigilance of the court, that he should have escaped detection (75)." The same justly celebrated female historian has made a series of reflections on the Popish Plot, which are so impartial and judicious, that the insertion of them will probably afford a gratification to our readers. Nor can they be regarded as foreign to the subject of the present article, since Lord Shaftesbury took so active and capital a part in the proceedings relative to the plot.

"It is, says Mrs. Macaulay Graham, the violence, the virulence, and the want of candour in all parties, which have deceived the judgment of all the historians who have written on these times. Mr. Hume enumerates every circumstance which is the most favourable to the Papists, without making any mention of all those variety of incidents which confirmed the doubts even of the most scrupulous men of these times, and led them to believe, that many circumstances of the plot were true, though many were added, and others much magnified; and then he pronounces, that the party formed against the King and his brother were composed of a populace so credulous from prejudice, so blended with religious antipathy, as implicitly to believe the most palpable absurdities, and conducted by leaders so little scrupulous, as to endeavour, by encouraging perjury, subornation, lies, impostures, and even by shedding innocent blood, to gratify their own furious ambition, and subvert all legal authority. That there

are such individuals in all parties, to the shame of human nature, it must be acknowledged. But Mr. Hume, who makes very slight animadversions on the depraved conduct of the other party, of the wicked use they made of witnesses, whom they acknowledged to have been corrupt and perjured, might have taken into consideration that unhappy facility which attends all vulgar characters, in the believing every report which they wish to believe; and, in particular, if such report should gratify the views of avarice, ambition, or the keener feelings of resentment: that the Earl of Shaftesbury, and several others, were at this time well acquainted with the intentions on foot, not only to procure a toleration, but a re-establishment of Popery in this kingdom as the national religion, and that, with the desire of giving a general alarm to the public, they might be led to believe that there was something at bottom more black than appeared on the surface of things, and which might induce them to go on in their endeavours to unravel the mystery; and that even the manifold inconsistencies and absurdities contained in the narratives, instead of discouraging them, might serve only as farther incentives to discover the bottom of the plot, and might be considered as objections which a more complete information would fully remove.

"These are the grounds of justification, or at least palliation, for the warmth with which the popular leaders prosecuted the plot, which may lead to some useful observations, that may assist us to unravel that maze of intricate circumstances and incidents, which, by their opposition to each other, hold the judgment in suspense, and prevent the candid mind from proceeding to any decisive determination on this very obscure part of the English history. It is to be remembered, that Charles had not only favoured all the ambitious views of France, but had actually entered into a conspiracy with the French court, to destroy one of the chief supports of the Protestant interest, in the reduction of the United Provinces: that he had actually supported that part of the demands of France, which provided for the re-establishment of Popery in Holland, by refusing to make a peace with the States General, till they had complied with all the exorbitant conditions offered by the haughty Lewis: that he had actually entered into a treaty, by which that monarch was to supply him with men and arms to subdue the liberties of his own subjects, and to re-establish Popery in England; and that he had pledged his faith, to avow to the whole world his own conversion to the see of Rome: that his brother, the presumptive heir to the crown, had, with more integrity, though less policy, avowed his conversion: that both the brothers had married Papists, and by their respective marriage contracts, the Romish religion was openly celebrated in the royal palaces of England: that by the legal protection given to the family priests, and the connivance to other individuals of this order without number, to frequent the metropolis, and disperse themselves all over the kingdom, the great work of conversion was carried on with such success, and with such countenance from the court, that it alarmed the fears of the church, and induced them to put the nation on their guard against the impending evil. With these apparent dangers the Duke of York, and his Secretary, with other inferior emissaries, were employed in carrying on criminal correspondences with the courts of Rome and Paris, to take advantage of the favourable crisis, and to lend their assistance towards the rooting out the pestilent northern heresy. The Jesuits in England had their

correspondence with the brotherhood all over Europe; and, with their patron in Rome, under whose authority, and by whose direction they proceeded in all things, had their stated times and places of rendezvous, had held their general assembly, agreeably to summons, on the very same day in April, mentioned by Oates, in the Duke of York's own house, according to what this Prince confessed to Sir John Reresby: and, in addition to these circumstances, the Dukes of York, to cover the retreat of those priests and jesuits who were deepest in the secret, made a private voyage to Holland. It is affirmed in one of the trials of the Papists, that Ewers, who is often and very materially mentioned in Dugdale's evidence, was one of these priests; and candour must acknowledge, that it is difficult to conceive why a Secretary of State should order the Mayor of Dover to arrest and detain Norris, together with his companion, unless it was apprehended that the party had still some secrets not known to the public. From all these circumstances it is highly probable that Oates, though not so much in the confidence of the leaders of the party as to be entrusted with any plans or schemes which they had formed for the entire conversion of the English, and the bringing its Church into obedience to the See of Rome, had heard enough from the inferior emissaries to be convinced, that there was some grand design carrying on, which was to be fatal to the Protestant cause, and that stirred up by resentment for the contempt with which he was treated, and the poverty in which he was suffered to remain, he had made up in invention for the want of knowledge of particulars; and that Bedloe and the whole crew of informers, had all grounded their several depositions on what they had observed to be the common talk and expectations of the party, viz. that Protestantism in England would be soon extirpated, and the Romish religion prevail. Turberville, some time before he thought of following the trade of a witness, told Dr. Lloyd, afterwards Bishop of St. Asaph, that this opinion was current among all the Papists; also that a great deal of blood would be shed before it could be brought about; and all the converts from Popery, whether they acted the part of witnesses, or not, frequently mentioned this circumstance in their private discourse.

"It is possible that the most extraordinary and the most incredible parts of the depositions might arise from the extravagant conceits of the inferior Papists, who endeavoured in this manner to account for the sanguine hopes which their leaders had of rooting out, in a short time, the northern heresy; and, in regard to the evidence so circumstantially given in of the design of killing the King, it is more than probable that it arose from some very imprudent expressions of a warm resentment which the party had conceived against his Majesty, for the having broken his word in regard to the avowing his conversion, and the taking measures for the re-establishment of Popery, according to his treaty with France; and the continual assertion, that his Majesty had deceived them, I think may very fairly be applied to the King's having taken the money from France on this pretence, and the afterwards refusing to fulfil the conditions on which the money was given.

"Can any man of candour say, that a conspiracy to re-establish Popery as the national religion is not proved by Charles's first treaty with France, and by Coleman's letters? and will not any man of candour acknowledge, that such a conspiracy was justly the object of public concern? All the injustice, therefore, which accompanied the prosecution of the plot lay in the iniquity of the bench, and in the iniquity of those who endeavoured to divert the storm of public resentment from the proper objects to the inferior emissaries. With such encouragement as the King's being a concealed, and his brother an avowed Papist, this sect must, agreeably to their religious opinions, have acted criminally if they had not made a full use of the opportunity to destroy heresy and restore the

ancient constitution of the Church of Christ: and though the corruptions of interest might mix with the designs of the leaders, the generality of the party were, undoubtedly, actuated by the laudable motives of conscience and pious zeal. All the criminality lay on the side of the King and his brother, who, by the basest treachery and the most flagrant breach of trust, had formed a conspiracy against those people whom they were bound by every law, human and divine, to protect. It was against them and against them only, that the resentment of the nation could, with any degree of justice, fall. To reduce their power within safe and salutary bounds, should have been the general and particular concern of every sect of Protestants; and to this grand object the wisdom of Parliament ought to have been alone directed. But in any attempts of this nature it is plain that the Commons would have been forsaken by the High Church-party and the House of Lords; and in consequence of such a desertion by the majority of the nation. In this light we are to consider the Popish sufferers as victims sacrificed by the court to appease the wrath of the people; and, on the other side, as victims to the policy of the deep intriguers in the opposition, to expose the guilt of the court. The ways, it must be acknowledged, to obtain this end, by procuring evidence through the temptation of a reward, were infamous: yet, to the reproach of modern times, this snare for the lives of the innocent, and for the consciences of the corrupt, is a practice which still prevails in the administration of Government, and is still supported by the wisdom of the bench, as a lawful, a laudable, and a necessary expedient to obtain justice on public delinquents (76)."

To return to Sir John Dalrymple: that historian, in some other respects, bears very hard upon the memory of Lord Shaftesbury, and not always, in our opinion, with sufficient reason. In his account of the Earl's death, he says, on the authority of a letter written from Holland, that he was full of suspicions and fears; that he would not sleep, except in his cloaths, that he might be ready to start up; and that the passions which agitated him must have made a strong impression upon those who saw him; for they imagined, that, even when he slept, he kept his eyes open (77). Sir John, however, has afterwards acknowledged, that he laid an undue stress upon this letter; and that if he had known the character of the writer, (one Massal) to have been so bad as he since found it to have been, he certainly should not have given credit to any thing said by him (78).

Mrs. Macaulay Graham in several respects follows Sir John Dalrymple, in the accounts she occasionally gives of Lord Shaftesbury's conduct; though in others she differs from that historian. One instance to this purpose we have already seen. Another occurs in her representation of the motives by which the Earl was actuated in quitting the service of King Charles the Second; and as she has hence taken occasion to enter pretty largely into a description of her views of his Lordship's character, we shall transcribe the passage.

"At this period of time, says she, the Earl of Shaftesbury's conduct is so mysterious, that it has given rise to various conjectures, which appear almost equally improbable and groundless. It has been represented by some writers, that he was disgusted by the King's timidity, and was determined to abandon the service of a Prince who had not the resolution to carry any hazardous enterprize into execution; by others, that he was offended with the not having his irregular writs supported by the royal authority; and some of the royalists carry their prejudices so far as to assert, that he had conceived a hatred to the royal brothers, and entered into the intrigues of the court, with the intention of betraying its councils, of exposing it to the resentment of the injured public, and thus laying the foundation of such jealousies between the King and his people, as might end in the change of government, or in renewing those civil distractions which

His body being embalmed was transported to England, and the corps being landed at Poole in Dorsetshire, the Gentlemen of that county, out of their extraordinary regard to his memory,

which he had found favourable to his views of interest and ambition.

"The assertion, that Shaftesbury was disgusted with the King's timidity, is, I think, contradicted by plain matters of fact; which shew that his Majesty kept firm to his purpose of subduing the refractory spirit of Parliament, till after the period when Shaftesbury, by a bold and unexpected stroke of policy, threw off the odium he had incurred from his intrigues with the court, and secured his personal safety by a timely opposition to those measures which he had approved in the cabinet. That Shaftesbury should take any great offence at the want of support to his irregular writs, is not very likely; because the King had, as far as lay in his power, exculpated his Minister, by declaring to the Parliament that they were issued in obedience to his command; and the last assertion stands on no grounds of probability, since it is plain, that the Earl had not imbibed any of those republican prejudices which war against a tranquil submission to the government of an individual, or any of those fixed notions in religious matters which could tend to the making him uneasy under the legal establishment. It was from the provocation of a personal disgust only, that he first left the royal party. He had been patronized by Cromwell, and was a firm supporter of his usurpation: he was active in the introducing monarchy again into the kingdom; was raised by the reigning family to the dignity of a Peer; and his services, as had been those of many of the warm royalists, were not forgotten: on these reasons he could have no provocations adequate to the contracting such a deep resentment against the royal brothers, as should engage him in such dark and dangerous projects of revenge.

"It appears from the whole tenour of Shaftesbury's conduct, that he was a turbulent and an ambitious man; that he prized his personal power and interest superior to any of those objects which affect the general happiness; but he was incapable of that mean avarice which subjects men to criminal and dishonourable actions, on the lucre of pecuniary gain, and was the only individual of the Cabal who refused the accepting a bribe from the French King. As the Earl of Shaftesbury's abilities were great, his expectations were sanguine; and in all probability he entered into the treaty with France, in the hopes, by such a compliance with the King's favourite project, to direct the counsels of the cabinet, and become the sole Minister.

"The whimsical and absurd design of altering the religion of the country, the folly and extravagance of which Shaftesbury's understanding would immediately have pointed out, he was an entire stranger to: the scheme of subduing Holland, and lulling the suspicions of the nation asleep, on the King's growing greatness, by national acquisitions, though highly criminal, did not in speculation appear impracticable; and the authority of the Prince is never terrible to an ambitious Minister, who is flattered with the idea that he shall be able to render it personal to himself.

"On this view of the subject, Shaftesbury engaged in the attempt of subverting the constitution of his country, with all that daring spirit of enterprize which is peculiar to men who are sensible of the superiority of their genius; and he was undoubtedly encouraged in the undertaking by the divided state of the nation; the persecution under which the Non-Conformists groaned, which would readily incline them to support that power which offered them protection; the important concessions made to the prerogative; the compliant, if not corrupt, conduct of the Parliament; and that general spirit of submission which possessed the whole nation.

"The very unexpected ill success of the war, which occasioned the necessity of applying to the Parliament before the progress of power was brought to a sufficient maturity, the Duke's injudicious declaration of his religion, which explained to the whole nation the meaning of that mysterious conduct in

VOL. IV.

Government which had puzzled the politicians, and, in all probability, discovered to Shaftesbury the secret intentions of the treaty, gave a very different aspect to affairs than what the first appearances had carried; and in addition to these reasons for altering the plan of his conduct, the Earl of Shaftesbury found himself engaged in the most hazardous enterprize, with men whose abilities were inferior to his own, who were envious of each other's interest with the King, who were not united by any tie of mutual confidence, who were quarrelling among themselves, and who had all more the ear of the Sovereign than the Chancellor, who had the mortification to find himself not equal in royal favour with the rake Buckingham, the impetuous bigot Clifford, or that dull, yet profligate tool of power, Lauderdale. These were undoubtedly sufficient reasons for the Earl of Shaftesbury to take shelter under the shield of popularity, from those evils which an inferior understanding could easily foresee. By his not carrying his courtship to the popular party so far as to part with his high office, it appears that he intended, either by favour or fear, to preserve, if possible, his place in the Administration, and to direct his future conduct on the principles of preferment, or fierce opposition, as times and incidents should advise (79)."

In the relation of the Earl of Shaftesbury's death, Mrs. Macaulay Graham has inadvertently been led to copy Sir John Dalrymple's mistaken account of that transaction; and she has accompanied her narration with a reflection on his Lordship, which we must regard as more severe than just. "His furious temper," says she, "united to his great capacity, had done the cause of liberty and the friends of the constitution so much mischief, that he may justly be said to be the author of that short-lived, though ruinous power of the royal brothers, which proved so fatal to the most illustrious characters of the age: an eminent proof that the love of action, so inseparable to exalted virtue, is a very mischievous quality when it is not governed by benevolence and discretion; and that when the mind is left a prey to the tyranny of unruly passions, the extent of mental abilities and the vigour of imagination, by exalting our desires, and enlarging our power of committing evil, and attracting the envy of mankind, becomes a real misfortune, and serves only to render us more distinguished, though less pitied objects of wretchedness (80)." A little after, our female historian expresses herself with greater candour, and, in our opinion, with greater truth. "It is also proper," she says, "to observe, considering the manner in which the Earl's character has been blackened, and the many faults which it is necessary for an historian to have observed in his conduct, that whilst he possessed the high office of Chancellor, his decrees were equally remarkable for justice and integrity; and as he was the only man among the Cabal who had a sufficient sense of honour to withstand the corruptions of French bribery, even when countenanced by the example, and encouraged by the permission of his Sovereign, it may justly be inferred, that the exceptionable and vicious part of his conduct, as a Minister and Patriot, neither lay in the baseness of his heart, or the defect of his judgment; and that the keen and galling passions of ambition and revenge, were the great corruptors of a noble nature (81)."

Mr. Macpherson's character of the Earl of Shaftesbury, whether strictly just or not, must be allowed to be drawn with a masterly hand. It occurs in the account which that historian gives of the Cabal. "The Lord Ashley," says he, "whose name stands fourth in the Committee, was first in abilities and extraordinary talents. Bound by no principle, and restrained by no ties, his uncommon parts having room to play, appeared in their utmost force to the world. Bold and intrepid in his counsels, yet full of address in his manner, he could

mory, came uninvited, and accompanied it to Winborne St. Giles's, where he was interred with his ancestors (n); and, in 1732, a noble monument, with a large inscription to his honour,

"execute with confidence, whatever he had planned with art. Naturally restless in his temper, he loved trouble from its amusement, and though ambitious, was fond of confusion, more as a field of action, than as the means of acquiring power. His knowledge of human nature was very extensive. He was acquainted with the tempers of men, and commanded them through the channel of their ruling passions. Without the reputation of constancy, he gained the confidence of parties through their opinion of his talents; and though he deserted measures frequently, he never betrayed his friends. He was an eloquent speaker; but more subtle in his argument, than solid in his judgment; indefatigable in business, but versatile and changeable in his schemes. Measuring the rules of policy by his own variable passions, he was attached to no political principle, to no particular system of government. Now a republican, now all for monarchy; to-day a supporter of liberty, to-morrow the slave of absolute power: and thus, though regularly under the dominion of his insatiable desires, he seemed always inconsistent with himself. During the first years of Charles, the attachment of the nation to their Sovereign deprived him of a field for exerting his abilities, which were only calculated to shine in times of tumult and confusion. He continued in office, more through the influence of the Earl of Southampton, whose niece he had married, than from any opinion of his political consequence. When Buckingham acquired influence, he attached himself to his counsels; and this near approach to Charles, was the means of discovering to him talents, which he deemed suitable for executing his schemes (82)."

(82) History of Great Britain, vol. i. p. 134, 135.

Of all the writers that have characterised the Earl of Shaftesbury, Mr. Horace Walpole is the most severe. This Gentleman, after his account of the Earl of Rochester, thus introduces the subject of the present article. "As Lord Rochester was immersed only in the vices of that reign, his was an innocent character compared to those who were plunged in its crimes. A great weight of the latter fell to the share of the Lord in question, who had canted tyranny under Cromwell, practised it under Charles the Second, and who disgraced the cause of liberty by being the busiest instrument for it, when every other party had rejected him. It was the weakest vanity in him to brag that Cromwell would have made him King: the best he could hope for was not to be believed; if true, it only proved that Cromwell took him for a fool. That he should have acted in the trials of the Regicides was but agreeable to his character—or to his want of it. Let us hasten to his works: he was rather a copious writer for faction than an author; for in no light can one imagine that he wished to be remembered." Mr. Walpole, after giving a list of the Earl's writings, which consist chiefly of speeches made in Parliament, concludes as follows. "One cannot but observe with concern what I have before remarked, that writing the life of a man is too apt to instill partiality for the subject. The history of Lord Shaftesbury in the Biographia is almost a panegyric; whereas a bon-mot of the Earl himself was his truest character. Charles the second said to him one day; 'Shaftesbury, I believe thou art the wickedest fellow in my dominions.' He bowed, and replied, 'Of a subject, Sir, I believe I am (83).'"

(83) Catalogue of Royal and Noble Authors of England, vol. ii. p. 48, 49, 56.

Such is the account which Mr. Walpole has given of the Earl of Shaftesbury; and it will easily be imagined, that we have not inserted it by way of approbation, but of censure. Nor could even a severe censure of it be imputed either to a want of justice or of candour. Mr. Walpole, who is so exquisite a judge of painting, ought to have understood better the drawing of a moral picture, the delineation of a character. In his representation, the Earl appears not only destitute of virtue, but of ability: and yet his Lordship's bitterest enemies have acknowledged,

that his talents were of the first order. They have equally acknowledged, that he never betrayed his friends, and that he stood firm against the allurements of bribery. As to the story of his bragging that Cromwell would have made him King, let those believe it, who are capable of giving credit to all the partial and prejudiced anecdotes, which, upon very doubtful authority, have been recorded to his disadvantage.

Extremely different is the treatment which the Earl of Shaftesbury has received from the judicious Rapin. That historian, while he relates the actions of the Earl with fidelity, whether favourable or unfavourable to his memory, has accompanied his narration with reflections which are equally the dictates of truth and of candour. Upon occasion of his Lordship's quitting the service of the court, and becoming the leader of the opposition, M. Rapin has made the following remarks.

"The Earl of Shaftesbury from this time was always in the head of the country party, and caused the King to undergo great mortifications, as will hereafter appear. But I must give here a very material caution to those who read father Orleans's history, or such English or foreign authors as espouse the King's cause. All these writers paint the Earl of Shaftesbury in very black colours. He was, according to them, the greatest villain that ever lived; his wickedness was answerable to the extent of his genius, and the depth of his penetration. He was perpetually contriving how to torment the King and Duke of York, or rather to ruin them irrecoverably. He was not only the head but the soul, of his party, by which they were actuated. In short, every thing transacted afterwards by the Parliament against the King, is solely imputed to him, and it is artfully insinuated, that, had it not been for such an agent, the nation would have remained in tranquility, and the Parliament, content with the King's favourable answers, and gracious promises, would have been quiet, and attempted nothing against the court. Thus, according to these writers, all the measures and precautions taken afterwards by the Parliament against the designs of the court, were entirely owing to Shaftesbury's malice and revenge. It is easy to perceive, that their design is to cause to vanish the grounds of the Parliament's fear and complaint of the conduct of the court, by insinuating, that these complaints were frivolous, and the effects of Shaftesbury's vengeance, who, they say, directed both Houses of Parliament, or rather had them entirely at command. For my part, I am no way concerned to vindicate the Earl of Shaftesbury's honour, but believe myself obliged to remark, for the more easy discovery of the truth, that the project of the Cabal to render the King absolute, and introduce Popery, is of unquestionable certainty. The authors just mentioned, scruple not to own it, and should they deny it, the thing would not be less true. Consequently the Parliament coming to a full and exact knowledge of this design, which was only suspected before, had all the reason in the world for their fear and caution against the King and his Ministers. This being granted, let the Earl of Shaftesbury have been a villain, or an honest man; let him have betrayed the King's secrets, and acted only through a spirit of revenge; let his fear of the Parliament be the sole motive of his engaging in the country party against the King; or let him have acted from a principle of honour and duty, in order to save the Church and State, the thing itself remains the same. The good or bad qualities of the Earl of Shaftesbury did not cause the Parliament to have more or less reason to fear the designs of the King and his Ministers. If they were prejudicial to religion and the state, as cannot be denied, the Parliament had reason to take the best measures to prevent them. Why therefore are these measures, these precautions, ascribed to Shaftesbury's malice and artifices, since there was another and more natural cause. Before the Earl of Shaftesbury appeared in the party contrary to the court, the Parlia-

honour, was erected by his worthy descendant, the late Earl of Shaftesbury (o). His Lordship married three wives; the first, Margaret, daughter to Thomas Lord Coventry, by whom he had no issue; secondly, Frances, daughter to David Earl of Exeter, by whom he had

Peerage, vol. ii.
p. 383.

Parliament had begun to take these precautions, though the court's designs were yet but suspected: they were better informed by the Earl of Shaftesbury: why therefore is it supposed, that after this information, they suddenly relinquish their former motives, and act only with a view to serve as instruments of Shaftesbury's revenge? This is not even probable, and yet the authors abovementioned lose no opportunity of reproaching the Earl of Shaftesbury, and ascribing solely to him all the mortifications the King afterwards received. Besides the reader's instruction, my design, in what I have said, is to hinder such as have read, or shall read the other historians, from thinking it strange that I do not every moment exclaim against the Earl of Shaftesbury's conduct, as if he were the sole author of what was done against the King; and that I content myself with saying in a word, this Lord used all his interest and credit to break the measures of the King and his Ministers (84)."

M. Rapin had before observed, that Sir Anthony Ashley Cooper was one of the greatest geniuses England had produced for many years; and that this is the testimony equally given him by friends and enemies (85).

In the British Biography, the writer of the article concerning his Lordship has summed up his character in a few words, and with exemplary candour. "The Earl of Shaftesbury," says the Biographer, "was a man of very great abilities, profoundly skilled in the laws and constitution of his country, and one of the greatest Statesmen and most accomplished Orators of the age in which he lived. He has been much censured for his ambition, and the mutability of his conduct; and it must be confessed that his behaviour, when in power, was, in many instances, very exceptionable; though it may, perhaps, be doubted, whether there is sufficient foundation for the severity with which he has been treated by some ingenious writers (86)."

Biog. vol. vi. p.
169.

We shall add the portrait that has been drawn of our famous Statesman by the late Mr. Granger. "The great talents of the Earl of Shaftesbury, and his exact knowledge of men and things, contributed to render him one of the first characters of his age. But the violence of his passions, and the flexibility of his principles, prompted him to act very different, and even contrary parts. This was in some measure owing to the changes in the times in which he lived; but is more to be attributed to the mutability of his character, which ever varied with the interests of his ambition. When we consider him as sitting in the highest tribunal of the kingdom, explaining and correcting the laws, detecting fraud, and exerting all the powers of his eloquence on the side of justice; we admire the able Lawyer, the commanding Orator, and the upright Judge. But when he enters into all the iniquitous measures of the *Cabal*, when he prostitutes his eloquence to enslave his country, and becomes the factious leader and the popular incendiary; we regard him with an equal mixture of horror and regret (87)."

(87) Biog. Hist.
of Eng. vol. iii.
p. 362, 363. second edition.

It may here be remarked, that it is now decisively known, that Lord Shaftesbury did not enter into all the iniquitous measures of the *Cabal*: nor is it true that he prostituted his eloquence to enslave his country. Whatever may be thought of one or two of his speeches, which he delivered officially, when Lord Chancellor, it is certain that his abilities as an Orator were usually exerted in the cause of liberty, and to preserve the kingdom from becoming subject to civil tyranny and religious persecution.

These are the various representations which have been given of the Earl of Shaftesbury's character; and most of them, we see, are highly to his disadvantage. Sir John Dalrymple observes, that every thing has been written against him, and nothing for him (88). This is not strictly true, as is evident from Collins's
